30,000 ACRES

IRRIGATED

Government Land

In Nevada

NOW OPEN FOR

HOMESTEAD

UNDER THE NEW

IRRIGATION LAW

The United States Government Constructs the Canals, Reservoirs and Lateral Ditches to the Land, and Maintains them for 10 Years at a cost of

**ONLY \$2.50 AN ACRE
PER YEAR.**

This includes Water. After 10 Years Water and Canals Belong to Homesteader.

Land Close to Railroad and Good Markets Can be Secured By

**ACTUAL SETTLERS
ONLY.**

Mr. L. H. Taylor, the United States Engineer in charge of work, says: "It is likely that most of those settlers who desire, can find employment for themselves and teams on the canals during at least a part of their spare time for the next two or three years."

RENEW!

Now is the time to renew your subscription for the **INGLENOOK**. If you have not already done so, hand your subscription to one of our regular appointed agents. If it is not convenient for you to do this send your subscription direct to us.

The **INGLENOOK** for the coming year promises to be the best of its history.

We have several very interesting serials promised written by authors of more than ordinary ability. As the Inglenook family already know, Bro. D. L. Miller will write a series of articles on "Kodak and Pencil South of the Equator." This is a territory which our periodicals have never had the privilege of presenting to the public and the articles will be intensely interesting since they are to be copiously illustrated from Brother Miller's own camera. Essays will be solicited during the year that will deal directly with the interests of the young and rising generation. The editorial department will be aimed directly at the issues of the day without any disposition whatever to dodge them. Our current news department will be prepared with the busy man in view, knowing that his time is valuable, and assist him very much in keeping him in touch with current events. Since the wants and needs of the home are more or less neglected a strong effort will be made to make the Home Department a useful medium. The Christian Workers' and Reading Circle Topics will take the place of Nature Study as a result of a popular vote of the Nook family. The Q & A Department of course will be what you make it.

New Names

We have added almost 2,000 new names to our list in the last few months. Many new ones are now being added daily. We are pleased to be able to report so favorably. We believe further that merit is the only sure foundation on which to build, and we attribute to this the wonderful growth of the Inglenook these last few months.

The features that have made so many new friends for us ought to keep all old ones. We do not believe that there is one of our old subscribers that will want to do without the Inglenook the coming year. We are sure we would dislike very much to lose one of our readers. We intend to make the paper so interesting and instructive the coming year that you cannot afford to be without it.

The Farmers Voice

The Farmers Voice is a first class farm paper now being published at this office. It is one of the best papers of its kind published. The subscription price is 60 cents per year. In order to accommodate our many farmer friends we have made special arrangements with the publishers, so that we can furnish the paper to you the coming year for only 25 cents. That is, send us \$1.25 and we will renew your Inglenook for another year and send you the Farmers Voice for one year. We promise you that the Voice will not be sent you longer than the year, unless you renew. This is an excellent opportunity to secure a good farm journal at a small cost.

Be sure and don't forget to renew for the **NOOK**. Send on your subscription **NOW**.

Brethren Publishing House,
ELGIN, ILLINOIS.

CUT THIS OUT

Of every Nook for six months, send us the **26 LION HEADS** and we will send you any one of our sixteen "**HOME TREATMENT**" Remedies **FREE**.

Send for descriptive list and make your selection. Live agents wanted. Profitable business.

RHEUMATISM CURED

Our latest and finest remedy for Rheumatism, Sciatica, Gout, Stiff and Painful Joints, etc., is **TONGA** Tablets, which removes the uric acid from the blood and cures Rheumatism permanently. A trial box only 50 cents.

REWARD

Getting strong, gathering flesh and regaining nature's healthy glow of countenance is the reward that comes to the sick and feeble from using

Dr. Peter's Blood Vitalizer

That sterling root and herb-remedy. The success of the BLOOD VITALIZER is the talk of whole neighborhoods. Thousands can subscribe to the sentiments expressed by Mrs. N. Vreedvold, of Grandville, Mich. She says:

"We could not get along without the BLOOD VITALIZER in our family. It has also done me lots of good. Since I commenced using it, it seems as if I have completely changed. Besides being strong, my flesh is coming back and I am getting my old-time healthy color."

Such is the testimony, in a thousand varied forms, which reaches the proprietor of DR. PETER'S BLOOD VITALIZER in each day's mail.

DR. PETER FAHRNEY,

112-114 South Hoyne Ave.

CHICAGO, ILL.

READY FOR THE NEW YEAR

Just the thing for the Christian Workers,
Reading Circle and Sunday School Work

The Ingleenook Has returned to the original idea of Annual Conference. It has **TWO FULL PAGES**, edited by **Elizabeth D. Rosenberger**, replete with an exposition which will be exceedingly interesting to all **CHRISTIAN WORKERS** on account of its completeness and convenience.

SPECIAL REDUCED PRICES TO SUNDAY SCHOOLS
AND CHRISTIAN WORKERS' SOCIETIES. . . .

In clubs of five or more, the papers all being sent to one address, we will furnish the INGLENOOK for **20c per copy per quarter**.

A large number of schools are already using the INGLENOOK for the advanced scholars. Here is an opportunity to introduce the INGLENOOK in your school or Christian Workers' meeting. Nothing better could be secured for the young people. Address,

GOSPEL SONGS and HYMNS

No. 1.

Has a wonderful sale, and the book still LIVES. We are receiving orders daily for this book and have sold more than 40,000 copies since it has been published. There is only one reason for this. It is simply because

THE SONGS AND HYMNS IT CONTAINS STILL LIVE.

This book is used by thousands in the Sunday school, young people's meeting and general song service. It contains 208 pages and sells at 30 cents each, or four for \$1. Send your orders to

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

THE INGLENOOK

VOL. VII.

JANUARY 3, 1905.

No. 1.

WE'LL UNDERSTAND.

Not now, but in the coming years,
It may be in the better land,
We'll read the meaning of our tears,
And there, some time, we'll understand.

We'll catch the broken thread again,
And finish what we here began;
Heav'n will mysteries explain,
And then, ah then, we'll understand.

We'll know why clouds, instead of sun,
Were over many a cherished plan;
Why song has ceased when scarce begun;
'Tis there, some time, we'll understand.

Why what we long for most of all,
Eludes so oft our eager hand;
Why hopes were crushed and castles fall,
Up there, some time, we'll understand.

God knows the way, he holds the key,
He guides us with unerring hand;
Some time with tearless eyes we'll see;
Yes, there, up there, we'll understand.

Then trust in God through all thy days;
Fear not, for he doth hold thy hand;
Though dark thy way, still sing and praise;
Some time, some time, we'll understand.

If a man has the right stuff in him, it's bound to come out. That's what makes some men's noses so red.

❖

The Bible tells us that after creating man, God rested; but since creating woman, neither God nor man has been able to rest.

❖

It is rather inconsistent for a minister to admonish his congregation to watch and pray, and then proceed to preach them to sleep.

❖

The man who gets up in meeting on Sunday and tells his brethren what a wicked old sinner he is, usually spends the other six days in proving the assertion.

THE CRUISE ON THE MEDITERRANEAN.

BY D. L. MILLER.

Chapter III.

At Constantinople we separated from our English friends of the "Argonaut," they to continue their voyage to the Black Sea, the Crimea and Sebastapol, the scene of the remarkable siege in the war between Russia on the one side and Turkey, England and France on the other; and we to go on our way down to Jaffa by the sea. The fiftieth anniversary of the charge of the Light Brigade, made famous by Tennyson's poem, occurred October 25th, and the "Argonaut" was to reach the place in time for the passengers to take part in the semi-centennial of that event. On the 24th day of October, 1854, through a misinterpretation of an order, and the blunder on the part of some one in authority, the British Light Brigade, composed of scarce seven hundred horsemen, rode down into the jaws of death. The officer in command at first refused to sacrifice his men, but when the order was repeated he led them in a dashing charge against the Russian batteries at Balaklava. When the charge was over the mounted strength of the Brigade was 195. The rest lay dead and wounded in the valley of death. All because the precepts of the Prince of Peace had been violated, and in the violation someone made a terrible blunder.

We secured passage on the French steamer "Ore-

BRIDGE AND MOSQUE, CONSTANTINOPLE.

noque," bound for Beirut, and while our quarters were less cleanly and comfortable than on the Steam Yacht, we had no occasion to complain. The French boats are old but are the largest and best ships on the Great Sea, at least this can be said of some of them. Recently the Italians have added some very comfortable boats to their line, and now one may have choice of French, German, English, Russian, Italian and Turkish steamers reaching most of the ports of the Levant.

The evening of October 21st we shipped anchor and quietly, without a single regret, pulled away from the

City of the Sultan. A few hours previous we had an interesting and at the same time most provoking experience. In changing boats we had placed all our belongings in the "Argonaut's" steam launch and our party was taken to the landing only a few steps from the French steamer. Notwithstanding the fact that we were going directly on board, the dock officials, in hope of a bribe, insisted on having us open our trunks and grips. After going through a number of them and finding they had nothing but their pains for their trouble they got even with us by making extra charges to the amount of 150 piasters (a piaster is about five

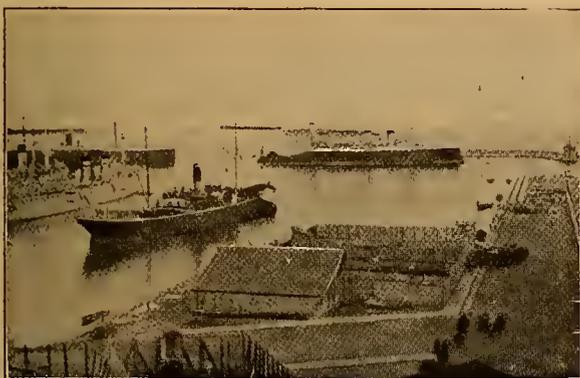

GENERAL VIEW OF BEIRUT.

cents of our money in value), and then after examining our passport amidst the greatest possible noise and confusion and the least possible order we gladly escaped and found ourselves safe on board the ship. By the time we got through some of our party were exceedingly nervous and this was not the occasion of any surprise for it was a most trying and annoying experience.

As we most gladly sailed away from the old city the shades of evening enveloped land and sea with a veil of twilight at first, and then the curtain of night cast its sable folds about the city and hid it from view. But from the gently sloping hillsides, bordering the Golden Horn, came the flashing lights of the great town. Yes! "Stamboul is beautiful to look upon—from the ship," I said, and turning away lost sight of the capital of Mohammedanism, I hope forever.

In the early hours of the next morning we passed the formidable looking but harmless Turkish fleet, a fit symbol of the Sultan's power let us hope, and the frowning guns of the fortifications that guard the Dardanelles, the plain of Troy with its classical as well as the more modern memories as the life and work of the Apostle to the Gentiles came in close touch with it, and threading our way among the numerous thickly populated islands of the Ægean sea, one among the picturesque bodies of water in the world, we cast anchor the same afternoon in the beautiful harbor of Smyrna.

As compared with Constantinople, Smyrna may be called a very clean city, and yet when compared with many of the cities and towns of Europe it has nothing to boast of. But it is a relief to come here after visiting the capital of Turkey. Our stay was much too short, for we had but three hours ashore. It was my purpose, had not our plans been thwarted by the strike, to have remained here several days while the boat we should have arrived on made the round trip to Constantinople. But as is known our plans miscarried and we arrived some ten days late. Our friends had

HARBOR OF BEIRUT.

been notified of our earlier arrival and no opportunity offered to apprise them of the delay. Much to our regret we failed to meet those we very much desired to see, among whom were the families of our missionary, Dr. Yeremian, and Bro. Chirighotis now in college at Mount Morris, Ill. I went ashore and while waiting a moment at the post office for mail met Elder Fercken's cousin with whom I was well acquainted. I also met Mr. Phaedros, son of my old guide, now dead, who accompanied Elder Lahman and myself on our visit to the Seven Churches of Asia in 1893, and Mr. Langdon, who rendered me most valuable assistance five years ago.

Smyrna is easily the first city in Turkey so far as trade and commerce are concerned. It has special interest to the Bible student because it was the site of one of the seven churches of Asia; its first bishop, Polycarp, a disciple of the beloved apostle John, was burned at the stake in the streets of the city A. D. 155 and the spot where the martyr died is pointed out to travelers to-day. The facts concerning the death of the good bishop are well established, but there may be some doubt as to the exact place where he suffered death in this most cruel manner.

The trade of the city is much larger than that of Constantinople, and it is the chief market in the East for figs, raisins, opium, carpets, rugs, wool and licorice root. It has the distinction of being the largest fig market in the world and is far ahead of any other

town in the exportation of licorice root. The root is indigenous to the soil and is found in large quantities in the valleys in the neighborhood of Alaschier, the ancient Philadelphia, and at Laodicea. Large numbers of peasants are engaged in digging the root, and large fortunes have been made in handling it.

In the season trains of camels arrive daily laden with bales of carpets and rugs from the interior, hundreds of miles distant, with great sacks of figs and opium, and bundles of licorice root, and the business streets present a lively appearance in the busy season. Some of the finest rugs in the world are to be purchased in Smyrna, but are made in the interior. The city has a population of more than a quarter of a million souls, and it is stated that more than 20,000 men, women and children in the city and surrounding country are engaged in the manufacture of carpets and rugs at an average daily earning of twenty cents. Many of the workmen are skilled laborers and artists in their way, and produce rugs which command very high prices in the retail markets of the world.

Among the passengers on the *Orenoque* was a Turkish official with his wives, children, mother-in-law and a beautiful Circassian lady on their way to Beirut, where the girl was to marry the son of the governor of that part of Syria. The Turk was a fine-looking man with pleasing face, a kindly eye and a smile for all his friends. He seemed devoted to his wives and children, and would have been the last man to have been suspected of ferocity, but I am told that in time of massacre the mildest faced Turk is the most brutal and ferocious. A remarkable departure from the customs of the past was noticeable in this party of Moslems. The ladies appeared on deck and in the dining

JAFFA BY THE SEA.

room with unveiled faces. This is such an unusual innovation and departure from a custom prevailing long before Rebecca covered her face when Isaac came to meet her that it attracted general attention. The progressive party in Turkey favor unveiling the face, thus freeing the women from the slavery of an ancient custom, but it is looked upon by the orthodox as a shameful departure from the ways of the mothers.

"Behold!" they say, "our mothers wore the veil all the days of their lives; no stranger ever looked upon them uncovered, and who are we that we should depart from the ways of our fathers and mothers! Allah is good and great and also just, and he will punish these shameless ones."

To all outward appearances the Turkish husband was pleasant and agreeable to all his wives alike; they had a table to themselves and chatted together and appeared to be having a pleasant time. The intended bride was dressed in richest silks and her large, dreamy eyes and beautiful face attracted the notice of many of the passengers. Arriving at Beirut we found the wharves decorated for the reception of the distinguished party. A number of small boats, decorated with star and crescent, filled with officials and friends, many of them carrying beautiful bouquets of flowers, came alongside the ship and aboard to welcome the expectant bride and her company. Among the number was the groom. Before meeting him she followed the ancient custom so far as to veil her face. I was told that the wedding would take place in the evening, that there would be a great marriage feast, and that the rejoicing and feasting would continue several days as became the social position of the high contracting parties.

We had several commercial travelers with us introducing English and German goods in the East. I was wishing I might meet an American engaged in the same business. I am sure our cotton goods, boots, shoes, etc., would find a ready sale in the Levant. A Greek gentlemen said; "Why don't you bring American shoes here? I am sure they are much better than those the natives make; bring them! bring them!" One of our table companions, an Englishman, representing Stevens Ink Company, had been everywhere, knew all the steamers, the best and the poorest, and had a most entertaining way of telling all sorts of odd experiences which had befallen him in his travels. He was the first Englishman I ever met who could out-talk a genuine New England Yankee, and I am sure he could do this and give the Yankee a good fair start. He was most genial and companionable and helped to while away the long and otherwise tedious dinner hour on board the *Orenoque*.

OUR NEGRO POPULATION.

As a result of requests for information from all over the country, the Census Office has issued a bulletin on "Negroes in the United States," containing statistics with regard to the extent, character and condition of the negro population in the several states of the Union. The summary of the results given in the bulletin is in part as follows:

"The number of negroes in the United States (including Alaska, Hawaii and Porto Rico) is 9,200,000, perhaps a larger number than is found in any other country outside of Africa. Nearly nine-tenths of the negroes in continental United States are found in the Southern States. The largest number of negroes living in compact masses are found in certain urban counties, several of which lie outside of the great cotton-growing States. The four, each having over 75,000, are the District of Columbia, Shelby county, Tennessee, containing Memphis; Baltimore City, Md., and Orleans parish, La., coextensive with New Orleans.

"The district in which the proportion of negroes is greatest lies in the Mississippi alluvial region along both banks of the Lower Mississippi, where five-eighths of the population is negro, the maximum being in Issaquena County, Miss., with more than 15 negroes to each white person. The center of the negro population is in DeKalb County, Alabama, about four miles from the western boundary of Georgia, and 33 miles south of the southern boundary of Tennessee.

"In the country districts as a whole, the negro males outnumber the negro females slightly and in the cities the females outnumber the males decidedly. This disassociation of the sexes between city and country is far more marked among the negroes than among whites and has increased since 1890.

"Among negroes 44.5 per cent are illiterate. The percentage of illiteracy has decreased rapidly since 1890, when it was 57.1 per cent. Illiteracy among negroes is about seven times as common as among whites, and this ratio between the races has not altered materially in the last ten years. Illiteracy among the Southern negroes is about four times that among Southern whites. If the per cent of illiterates should fall in each succeeding ten years by as great an amount as it did between 1890 and 1900, an improbable assumption, it would reach zero about 1940.

"There was a decided increase between 1890 and 1900 in the proportion of marriages among young negroes. This increase of early marriages was yet more marked among Southern whites of both sexes and was probably due to the great prosperity of the country just before 1900.

"There are nearly 4,000,000 negroes in the United States engaged in gainful occupations. These persons, who may be called breadwinners, constitute 45.2 per cent of the total negro population, while for the total white population the per cent is 37.3 and for the Southern whites 34.2."

ONLY what we have wrought into our character during life we can take with us.—*Humboldt*.

STATE REFORMATORY SERVICES.

BY S. W. GARBER.

THIS institution is located at Pontiac, Ill. It is an institution of considerable magnitude, designed as a home and school for boys who have been convicted of crime, also many wayward and reckless, seeming to have no home or any one to care for them, find a home here. At the time of our visit there were about thirteen hundred inmates.

Upon our arrival we were conducted to the reception office, in which were many specimens of work done by the boys—pen and pencil work, literary work and from the Industrial Department tools showing the highest art in workmanship and finish. Having read the rules governing visitors, about two dozen having assembled, we were conducted by guards to the vast auditorium, being seated upon an elevation we could look out upon the empty chairs below. Upon signal the doors on each side opened, and to a strain of music the inmates came marching in. The manner in which they entered, were seated, and dismissed proves that system is order, though compulsory and under attending guards it is economy of time. Each one as well as the visitors were supplied with a copy of the *Sunday Messenger*, which contained the lesson and hymns for Sunday, Jan. 25, 1905. This is a weekly paper devoted to the interests of the inmates of the institution, we supposed published and printed there. The inmates were dressed in dark gray, having a neat and clean appearance, walked erect and looked up. Their countenances, instead of gloomy and sullen as we expected, were bright and looked as if ready to give vent to cheerfulness. They seemed to have one privilege: that was to give applause to the music and witty remarks of the speaker. Many of the boys ranging in ages from five years to twenty-one years showed indications of marked intelligence, but Oh! the sources of evil influences that captivate the youth.

The Program of Services.

1. All Stand and Sing Song, "Come to the Savior, Make no Delay."
2. Lord's Prayer,By Chaplain
3. Music,By Orchestra
4. Responsive Reading of Lesson. Matt. 5: 1-16.
5. Solo,By young lady
6. Bowed heads in Prayer.
7. Music.
8. Address by Chaplain, "Wait on the Lord." Psa. 27: 14.
9. Instrumental Music.
10. Benediction.

As we tried to make a sketch of the address we gathered the leading thought which was given only in an indirect way, which was this: "Boys, wait for your time of release."

Decatur, Ill.

CLASS AVES.—ORDER GALLATORES.

Individual—Cranes.

LATE in the Autumn when the chilling blasts from the regions of eternal snow are beginning to be felt in more southern latitudes, bringing with them myriads of the summer visitors to an Arctic climate—vast trains of ducks, geese, etc., to seek again their winter resorts beneath a milder sky,—then may be heard in the vicinity of our inland lakes and streams the harsh voice of the Whooping Cranes, as they pass swiftly overhead, in companies of from ten to fifty. While migrating they fly high into the air, but when near the spot where they purpose to search for food, they gradually descend, wheeling around in circles over the place until they reach the ground. Here they present a graceful and elegant appearance, the old birds in particular being stately and beautiful objects. The plumage is mostly of a snowy whiteness, except the primaries and the primary coverts, which are nearly black. This bird is quite unknown as a resident or even a transient visitor in the Eastern and Middle States, its haunts being confined to the South and West. It winters as far south as Mexico, and breeds from Oregon northward to the Arctic regions.

Their food consists of the roots of plants, which they dig up with great labor from the mud of shallow ponds which have dried up during the Summer; they also resort to the plantations of sweet potatoes, and dig among the hills for a few roots which may have been left in the ground by the farmer. They will also feed on small reptiles, such as frogs, toads, lizards, small snakes, snails and grain.

They are said to be extremely wary birds, and very difficult to approach, the least rustling of leaves or the cracking of a stick under foot being sufficient to alarm them, although they may be at a considerable distance. Their sense of sight and hearing is so keen, that they will hear the approach of a hunter at a great distance, and will discover him long before he can see them. When once aware of his advances, no matter how cautious he may be, they will generally prove too much for him, eluding all his attempts to gain access to them.

The Whooping Crane stands in height about four feet, and is principally confined to the Mississippi Valley. It seeks its food in the wild uplands, feeding upon insects and plants. About thirteen inches of the windpipe are twisted up in a hollow of the breast-bone, thus giving to the voice a sonorous, trumpet-like tone.

Another of the Crane family inhabits the Northern part of the Mississippi Valley and is rather blue in color and is often called the Blue Sand Hill Crane.

HIS CONSCIENCE.

BY J. GRANT FIGLEY.

A Twentieth Century Allegory.

THE days came and went and were swallowed up in years, yet they brought not happiness or peace to Gardener Tracy. By day he sought to fight off the madness of despair that seemed to be clutching and binding his brain with white-hot bands. By night he wandered forth and sought by the gaming table, the saloon, and other places of questionable character to drown the cries of outraged innocence, and betrayed confidence and love. In sleep, dark, formless shapes haunted him. He dreamed that he was young again and free, that all was good to him, that all the future was before him, and that naught but happiness was his.

His lost wife (lost because she had fallen dead at his feet, killed by his heartless, cruel words of separation) then floated before him in fleecy, angelic robes, in a shining cloud of light, and sorrowfully looked upon the wretched something that he saw was himself and yet *was* not. He sought to go to her and she beckoned him on, and on he followed, yet wondering all the while thereat that he could so easily speed through space among the clouds and strange shapes that were on every hand. Dark clouds enveloped him and seemed to have hands that clutched his throat and hair, and sought to stay him on his course. But he willed to be free and the clouds sped away, and afar in the distance he could see his wife beckoning him. And on he went until it seemed to him that he had sped to the uttermost parts of space. He seemed to see the earth a mere speck in the distance, and then as on he rushed past stars and suns and legions of worlds, all was lost in the distance, and still onward he sped, into the blackness of darkness of space and infinitude. But where was his wife who had been beckoning him? The shining light by which he knew her was nowhere to be seen. *He had lost her!* Around and about him was thick darkness, and he groaned in the anguish of his heart. And his groans were echoed and re-echoed through all the silent regions of darkness. He prayed and moaned and cursed, and raved, as a madman, and the silent depths sent him back only the wailing echoes of his own words. Still on and on he drifted alone! alone! And he reviewed as in a mirror the events of his life, and he saw wherein he had done good and felt wherein he had done wrong. The past rose before him as a picture and showed him to be what he was, and what he should have been. And he thought to himself as he thus drifted a wreck on the seas of *his own soul*, that there yet may be hope for him. He was young yet and all the world was before him. And then the

thought came to him that he was dead, and yet was alive. In vain he tried to solve the question. He had argued himself into the theory that death ended all, and here he was more alive than ever, it seemed to him, but O the horror of it, the horror of it! Was he thus to be tormented by his thoughts *alone, forever?* And there he drifted, it seemed to him for ages, and his only answer to his shouts and entreaties were their wailing echoes. And shudderingly he would awake and find it all a dream, yet the dream *itself* was but a *shadow*.

Again he slept and again he dreamed. He was with Cora, the loved and forsaken one, for whom he had broken his young wife's heart. Then the awful scene of the burning theater wherein she had lost her beauty and was made a hopeless cripple, flitted before him, and he saw himself carrying the suffering Cora from the building. And he saw her lying almost lifeless, disfigured and agonized, in her little cot in the hospital, and he saw himself tearing away from her poor burned arms and leaving the building. And he saw a trail of greenish fire that followed him and licked up hungrily the imprints of his footsteps, and seared and scorched whatever it touched, till he had reached his home. And as he slept this terrible flame enveloped him in its many arms, and breathed its scorching breath upon his face, and it seemed that he awoke to fight away the monster that was roasting his brain. And it laughed at him, did this Flame *borne of himself*, and more tightly wrapped him in its fiery folds. He cried and moaned and cursed that it might leave him, for his pain was greater than he could bear. His flesh was burning and its fetid odors made his soul sick, and his bones felt as rods of white-hot iron, and his every breath was smoke and flame. He was racked with the most exquisite pains, burning yet unconsumed. And his Fire-Demon mocked him, and hugged him the closer. And in his shrieks for mercy he awoke and found it a dream that was not *all* a dream.

And again this wretched man, made wretched by his own hand, fell asleep and saw himself on board a ship sailing grandly across the ocean blue, and the sun was shining brightly through heaven's ethereal blue, and the air was balmy as the most beautiful spring morning. As he leaned over the rail contemplating these things, a sudden chilly wind swept over the vessel, and looking up he saw a small gray cloud coming down from the sky, toward the vessel, and it grew in size and came nearer and nearer. And the air was filled with its moaning sounds, and then as its icy breath struck deeper and deeper through him, it turned away and plunged into the green blue waves of the ocean, and eagerly, hungrily drank up the water, and higher and higher rose this horrid typhoon, child

of Futen, the Wind God, and it churned the ocean into foam, defying Indra, the God of the Atmosphere. And the ship staggered on, while around and about and upon it the Storm King breathed his icy breath; and deeper sank the typhoon into the ocean's vitals, and then angrily shot aloft and filled the air with its horrid shape. And it shook its hoary locks angrily and filled the ship with the flakes. And then it burst and the ocean sank back again, and the ship staggered on, creaking and groaning in every joint. For she was dashing through an icy spray that fastened upon her, and the Wind God laughed in glee as he rushed through her rigging, and danced along her decks, and entered her cabins. And Gardner Tracy could not hide from him, for he singled him out and smote him to the bone and marrow with his icy breath, and he dashed the salty spray upon him, and blew clouds of snow—great clouds of snow—into his eyes, and froze the tears that tried to well up, as he struggled to pray for God to let him die, or take away this plague. And the Wind-God smote him sorely with the great hail that fell in clouds, and he longed for Oblivion to come to his relief, but the Ice-King froze the words upon his tongue, and on and on he drifted in the frozen ship upon the freezing sea. And he awoke and was glad it was only a dream.

And again he slept and again he dreamed. He thought he was in a foreign land, traveling, and was intoxicated with the beauty of the scenery and the grandeur of the whole country. He passed through Hiero-Salem, that wondrous city of old, and saw where the Man of Sorrows had expiated the sins of men upon the cross, and onward he pressed towards his somehow unknown destination. But Tasko, the bandit, is upon his track, and he is taken captive and tied to a horse and for many days he is a prisoner. Then Tasko loosens him from the horse, and beats him with stripes until he falls fainting. Then Tasko orders water to be thrown upon him to revive him, and that salt be rubbed into his wounds. And he moans with anguish and begs Tasko to let him go, or kill him for pity. But Tasko only laughs and with his knife cuts out his tongue and strikes out his eyes. Then with another horrid, ghoulisn laugh, Tasko and his men leave him to his fate. And as he wanders many days over burning sands, blind, speechless, ready to die, dying a thousand deaths, yet still living. And the sun beats down fiercely upon his uncovered head until his brain seems on fire, and he begs in his soul for water to quench his awful thirst, but none is found. And in his delirium he fancies he is Isaac Ahasuerus, the Jew, and that he is suffering forever for his wicked act one day in Hiero-Salem, when the Man of Nazareth was going up to his crucifixion, and he mocked him and struck him. Was he not tarrying till Jeshu came

again? He would soon come and take away the awful curse! And still he wandered on and reached an oasis where he lay down to rest and there he found a pool of cool, fresh water. And when he stooped to drink, it sank away when his parched and bleeding lips touched it, and naught was there but hot and scorching sand! And in his agony he wept tears of blood, and smote his breast, and cursed himself and his God, and in this awful anguish he awoke and found it was all a dream.

And the days came and went, and Gardner Tracy dreamed other dreams, and knew not that he was but exploring the recesses of his own soul; knew not that his dreams were not dreams, but the promptings of an inner and hidden self, striving to bring him to a realization of his lost condition and to prepare himself for that which otherwise must surely come to him if he *truly* did not repent, but in vain. And in the depths of his misery he groaned aloud as did one of old.

“Let the day perish wherein I was born. Let that day be darkness; let not God regard it from above, neither let the light shine upon it. Let darkness and the shadow of death stain it; let a cloud dwell upon it let the blackness of the day terrify it. As for that night, let darkness seize upon it; let it not be joined unto the days of the year; let it not come into the number of the months. Lo, let that night be solitary; let no joyful voice come therein. Let them curse it that curse the day, who are ready to raise up their mourning. Let the stars of the twilight thereof be dark; let it look for light, but have none; neither let it see the dawning of the day. Wherefore is light given to him that is in misery, and life unto the bitter in soul, which long for death, but it cometh not; and dig for it more than for hidden treasures; which rejoice exceedingly, and are glad when they can find the grave? Why is light given to a man whose way is hidden, and whom God hath hedged in? For my sighing cometh before I eat, and my roarings are poured out like the waters. For the thing which I greatly feared is come upon me, and that which I was afraid of is come unto me. I was not in safety, neither had I rest, neither was I quiet; yet trouble came. When I lie down, I say, When shall I arise, and the night begone? and I am full of tossings to and fro until the dawning of the day. When I say, My bed shall comfort me, my couch shall ease my complaint; *then thou scarest me with dreams, and terrifiest me with visions*; so that my soul chooseth strangling, and death rather than my life. I have sinned; what shall I do unto thee, O thou preserver of men? why hast thou set me as a mark against thee, so that I am a burden to myself?”

And so we leave him alone with his conscience.
Bryan, Ohio.

OUR ALPHABET OF GREAT MEN.

BY OLIVE MILLER.

B.—Bacon, Lord Francis.

I ONCE heard read in one of the delightful Pansy books an amusing incident about the subject of our sketch.

In a certain school the teacher was accustomed to give out subjects for essays once a month. One evening she gave to Fanny Rhodes the topic, "Bacon." Poor Fanny hated essays worse than any of the others, and on hearing the subject she fairly groaned. But she did the best she could, and at the close of the month brought her essay to class to read. She was among the first to be called upon and thus she began:

Bacon.

"The subject assigned to me this month is bacon. I do not know that much can be said on this subject. Everybody knows all there is to say about it. It is simply the flesh of hogs, salted or pickled or dried."

At the close of the sentence the pupils were in such roars of laughter that Fanny's voice was completely drowned. "Oh, Fanny," said the teacher, "did you really think I meant *pork*?"

"Why, what else did you mean?" exclaimed Fanny.

"I thought of course you would understand that I meant Lord Bacon."

"Lord Bacon," said poor Fanny, "why, I never heard of him."

And so I suppose the next month found Fanny studying the life of this great man who possessed one of the greatest minds of any person in the world's history.

He was born in London during the reign of Queen Elizabeth. That was nearly three hundred and fifty years ago. Isn't that a long time to be remembered? His father was keeper of the seals for the Queen and his mother was a noble and learned woman who was very strict with her boy.

During his childhood he often met the great lords and ladies who lived at the queen's court. History says he was somewhat of a pet and the queen delighted to call him her Little Lord Keeper. No doubt his association with learned people caused him while yet a child to show wisdom far beyond his years.

When he was only twelve years old he was sent to Trinity College at Cambridge. Here he studied philosophy and when he was only fifteen years old he wrote a paper against the philosophy of Aristotle,—rather a difficult subject for a boy of his age, was it not? But it was so in all his studies. At an age when most boys are just entering upon serious study he had already been over the ground: his mind was fixed and his opinions were formed. The field of his future already lay open before him.

One of the rules of Trinity College was, that the students dared not speak to each other during school hours except in the Latin, Greek, or Hebrew language. All students who disobeyed the rules of the college in any way were brought together on Thursday evenings at seven o'clock and flogged for their offenses, in the presence of the undergraduates. It would be interesting to know in what language Bacon conversed with his fellow-students and whether he was ever punished by his teachers.

After he left Cambridge he was appointed to go to France with the English minister, and for three years he went from city to city of that kingdom in the train of the English ambassador.

But after while his father died and he returned to England. He began the study of law at Gray's Inn. He became one of the greatest lawyers England ever had, and wrote books which the lawyers of to-day study carefully. But it took him twenty-five long years before he succeeded in convincing the people how great he was. His uncle, Lord Burghley, was very jealous of him, and by working against him continually, made it very hard for him to gain the queen's favor and the high opinion of the people.

But after the queen died, King James came to the throne of England. He was very kind to Bacon until Bacon made some bad mistakes, and then the king imprisoned him in the Tower. It was only for two days, but he came forth in ruin and disgrace and never afterward returned to court. Five years afterward he died.

He was a man who depended all his life upon the favors of the king or queen. When they looked kindly upon him he was happy and prosperous, but when they turned their backs upon him, his outlook was gloomy indeed. We cannot help thinking how much better is the character of a man who carves his way alone, independent of princely favors. Then, too, he lived in a princely style that was far above what he could afford and this kept him always in debt. So we see that with all his greatness and wisdom he made some mistakes that it would be well for us to avoid.

Besides his books on law and philosophy he wrote a large number of essays, and as I read some of these, I see thoughts which are quite easy enough for boys and girls to understand. I will give some of these thoughts and perhaps some of you will choose them for memory-gems at school.

"Good thoughts, though God accepts them, yet towards men are little better than good dreams, except they be put in act."

"A man that is young in years may be old in hours, if he have lost no time; but that happeneth rarely."

"Young men, in the conduct and manage of actions, embrace more than they can hold, stir more than they

can quiet; fly to the end, without consideration of the means and degrees; pursue some few principles which they have chanced upon absurdly. Men of age object too much, consult too long, adventure too little, repent too soon, and seldom drive business home to the full period, but content themselves with a mediocrity of success. Certainly it is good to compound employments of both."

"Virtue is like a rich stone, best plain set."

Bacon was a lover of the beautiful, as we see from the following extract from "Gardens":

"God Almighty first planted a garden; and indeed it is the purest of human pleasures; it is the greatest refreshment to the spirits of man; without which buildings and palaces are but gross handiworks; and a man shall ever see, that, when age grows to civility and elegance, men come to build stately, sooner than to garden finely; as if gardening were the greater perfection. I do hold it in the royal order of gardens, there ought to be gardens for all the months in the year, in which severally, things of beauty may be then in season." And he then goes on to name and describe the hundred different plants which he would select, all in their season. Surely there was no limit to the different subjects that this great man had met and mastered.

North Manchester, Ind.

LOCUST EATING.

WE read in the Bible that the food of John the Baptist was "locusts and wild honey." A great deal of pains has been taken by commentators to prove that it was not what we call locust, but the fruit of the wild carob tree, that John ate with the honey that he found in the wilderness where he lived.

But I do not think that anyone who has traveled in Arabia, found rest and shelter in an Arab's tent, and been a guest at his hospitable board, would thus judge of what the Bible means by "locusts." In Turkey, Persia, Arabia, and all that region of country, locusts—genuine, *bona fide* locusts—have been eaten from remote antiquity; and to this day they form an important item of food used by the common people. The Bedouins collect them in immense quantities, and after a partial drying, pack them in sacks. Then at their convenience, when the season for collecting is over, they steam the insects in close vessels over a hot fire, winnow them in broad baskets to remove the legs and wings, and then pulverize between flat stones. When wanted for food, they are only moistened with a little water, just as the Arabs do in preparing their date-flour, and then the repast is all ready.

The Moors boil or fry them, seasoning with salt, pepper and vinegar; and they pronounce them even

superior to quails and pigeons. The Hottentots make from the eggs a delicious soup; they also roast the locusts over a slow fire, and eat them as we do caramels or bonbons. Dr. Livingstone says he used them at first from necessity, when deprived of all other food; "but, strange to say, grew daily more fond of them, and at last preferred them to shrimps or oysters."—*St. Nicholas*.

A FOSSIL EGG.

VERY few eggs in the fossil state have ever been found. Several unearthed in New Zealand are only shells preserved by reason of their thickness and strength. Eggs found in tertiary rocks of Auvergne, France, many thousands of years old, are shells filled with hardened mud. Another fossil egg, thought to be that of duck, has been discovered in South Dakota.

A while ago a prospector hunting for placer gold in the gravels of the Gila River broke a piece out of one side of a small stone which he had struck with pick. He was surprised to see within a smooth inner core which looked like an egg.

He carefully removed the mass of hard calcareous rock in which it was imbedded, and exposed a perfect typical egg. In size it is 2.44 by 1.57 inches, and its shape indicates clearly that it belongs to the class of water birds.

Comparing it with the egg of birds of the present time it is found to correspond closely with the type of egg laid by the cormorant. In physical structure the shell is practically indistinguishable from the shell of birds' eggs of the present time. As the minute tracings of the shell are reproduced on the inner surface of the rock which enclosed it, it is assumed that the egg was completely incased in the limestone very soon after it had been deposited in the nest.

The limestone matrix has kept the specimen in a very fine state of preservation for untold centuries. The egg has been opened and found to contain a tarry material resembling natural asphalt. All the evidence collected indicates that this asphalt-like substance is a part of the original contents of the egg, which has become bitumenized.

* * *

DANGEROUS CATERPILLARS.

THE hairs of the brown caterpillar, which is the caterpillar of the brown-tail moth, are full of tiny barbs so extremely small that they are quite invisible. The barbs catch in the human skin and break off. This causes the skin to itch enough to lead the person to scratch. Inflammation follows, and sometimes this produces an eruption that is even worse than the blistering caused by poison ivy.

SAVING VOLTAGE.

BY HENRY B. BIXLER.

To any one interested in electrical engineering and in the proper application and use of the terms used to explain the practical operation of electrical machinery, the errors however slight, are quickly noticed.

It is of one of these errors, contained in the Oct. 4, number of the *Nook*, that I have special reference to and which I intend to correct.

To begin with, let us have an explanation of some of the terms used in this science, so we can better understand what is to follow in this correction. Voltage is the unit of electrical pressure and is measured in volts. It is sometimes expressed as Electro-Motive-Force, and is abbreviated E. M. F. Voltage has nothing to do with the amount of electricity, simply the pressure. The unit of electrical quantity is the *ampere*, and is measured in *amperes*. This is the amount of current contained along a wire or produced by a generator. Resistance is always present in conductors of electrical current and is measured in *ohms*, as the *ohm* is the unit of resistance.

Power is spoken of in watts, and is the product of the current and voltage. Thus, W equals C , multiplied by E . Again C equals E divided by R and E equals C multiplied by R , and R equals E divided by C when E , is current, E , is E. M. F., R , is resistance, and W , is watts. A kilowatt is one thousand watts and is written $K. W.$ There are 746 watts in one horse power. Now we have some of the principal terms that are used, and will now apply some of them to the correction of the article in question.

On all electric railway lines, the voltage on the line is kept as nearly a constant pressure as possible, usually at 550 volts.

The average city street car, requires between 50 and 100 amperes to start the car motors and this current is delivered to them at a pressure of 550 volts at the moment the current is turned on. The voltage will remain at this pressure, provided the generators at the power house are of sufficient capacity to supply the full amount of current required, which if they are not will cause the voltage to drop and the amperage to rise. This lowering of voltage, can be plainly noticed by the dimness of the lights in the car, which will again be bright as the car is "under way." While the voltage cannot be saved, the current can, and the application of the current at the proper time, and a careful regulation of the amount turned on, is what makes the smoothness of the running of the car. A car requires a great deal more current to start it, than it uses to keep up the speed when it is once in motion. There can also be more current wasted, in

running down hills with the power on, than is required to take the car up the next grade.

A careful motorman is never seen running his car down hill with the power on, as he knows he is not only wasting expensive power, but is not getting any more speed on the car.

So after all, it is not the voltage that is saved, but the saving of current, that is the great question which concerns owners and managers of power lines.

One more correction is necessary, to an error in the answer to the question "What makes the wheels of a street car go around," in the same number of the *Nook*. The answer states, "The rails are charged and the current after passing through the motors, is carried back to the generators through the trolley wire over head or by the third rail." Now the rails are not charged, and the current is carried *out* along the trolley wire and after passing through the motors is returned to the generators along the rails which form the return current. Neither is the trolley wire charged, beyond the point where current is required. For instance, take a railway, one mile long, and using a single car. Suppose this car to be starting on the track, just 100 ft. from the generator. The wire is only carrying current as far as the car and the rails are bringing it back, while beyond the car the line is "dead" so long as there is no connection between the trolley wire and the rails or earth. But when the car is at the extreme end of the track and power is turned on, the entire line is charged, as the current must flow to the motors, along the conductor for that purpose, the trolley wire, never the service rails.

CHARITY.

BY LAVINA KALEY.

In a town near Springfield, Ohio, there lived a large family of nine in a little cottage, near an open place in the forest, which had been cleared away for plantation the spring before.

The family was poor and had no means of support except for the mother to seek employment in the busy city of Springfield.

The father had died just after the field was cleared, and had left them just enough for the funeral expenses.

Harry the oldest child was a boy of fourteen, who went about the farm work as happy as one who did it only as a pleasure.

His sister Anna, who was thirteen years old, helped him about the farm, and was also, bright, happy and industrious.

Emma, the next younger child of eleven, was house-keeper while the mother was away.

Tillie was ten years old and would help her older sister very much by taking her younger sisters and brothers out for a walk after school hours and telling them about the wonderful fairies in their dreams.

One day while the younger children were at school Emma was in the house doing the week's washing. It was Monday, and Tillie did not have any school on account of the teacher's illness. Tillie was out under the shade trees thinking how poor they were when she saw a little girl of her own age, whom she at once recognized to be an old friend of hers, whom she had not seen for five years.

This girl's mother was rich and had always helped them in every way.

When she found their condition she gave them money and everything they were in need of, and they lived happily for many years.

1515 Chicago Ave., Evanston, Ill.

TARDINESS.

BY ANNA G. OBRECHT.

THE effects of tardiness are numerous; perhaps more so than we can at first comprehend.

So often it is looked upon as a small matter and we do not look at its effects and influence as seriously as we ought.

Let us consider for a moment the reflection we are throwing upon the world. The superintendent announces Sunday school to begin at ten o'clock. Next Sunday it is half past ten before Sunday school commences and some of the young people, or rather some of the boys, that should have been in the Sunday school have been there and gone. For this to continue from time to time causes lack of interest in the work. It robs the Sunday school of its time. It only has one hour each week; no time to spare. The teacher hurries to do an hour's work in half an hour's time.

To have pupils come in late affects the school by stopping the interest. The teacher has to go over and explain what has been said and done. Then too, the pupils are not all so interested but what some will stop to see who is coming in.

The superintendent is not always to blame for the tardiness. Of course there are some who ought to be prompted a little, but if the pupils are not there how can the superintendent commence when he hasn't any one with whom to commence.

Those who have reached the years of accountability, who know right from wrong and who are always tardy have themselves to blame more than anybody else.

In our homes if we expect company at a certain hour we prepare ourselves and are ready for them. Now why can't we, as a Christian people, respect the God

whom we are trying to serve by being at the house of worship ready for work at the hour appointed? Of course there are exceptions to all rules and at times it cannot be helped.

We should be like the wise virgins who had oil in their lamps and were ready.

Let us do our small part as well as we can and the reward will certainly be great. Perhaps being on time at Sunday school and encouraging others is part of the work set for us to do.

We all know that the mission of the Sunday school is to bring the young people, in particular, to the house of worship and to create in them enthusiasm for the work and love for God.

Let us then make a greater effort to be on time at all services, realizing that we are working for God, and a nobler work we cannot find.

Harlan, Iowa.

THE FIELD MOUSE.

"THE mouse is not only one of the chief dreads of womankind, but it is an all-round nuisance in many instances," said the man, "and I was just thinking of a report made recently which gave international prominence to this wee pest of the home. The mouse is made the subject of a consular report from La Rochelle, France, and a good plan for getting rid of the member is suggested. Among other things the Consul says that to destroy these pests people formerly resorted to asphyxiation by filling the burrows with smoke, or to drowning by pouring water into them, or to sowing poison about the fields. The latter proved dangerous to domesticated animals. At the present day another method is used—infection by a microbe that is deadly to rats and mice only. In 1893 Dr. Danysz, while studying the habits of field mice, observed that large numbers of mice died from disease. He collected virus, made cultures, and assured himself that these cultures produced the disease in healthy rats and mice. These experiments were made on a large area, nearly 200 acres, and seemed conclusive to the experts. This method of destruction has been recently commenced and carried out systematically on a surface of 2,800 acres. The French Parliament appropriated 295,000 francs (\$56,935) to be used for the destruction of the mice by virus. Maybe the mouse will get into American politics some day. The mouse might be made an issue, so we can get a Government appropriation to exterminate him. The women, no doubt, would favor the plan."

EXACTNESS in little duties is a wonderful source of cheerfulness.

IRRIGATION'S PART IN THE WORLD'S FAIR.

BY GUY E. MITCHELL.

OF the hundreds and thousands of people who have viewed with amazement the magnificent fruits and grains from the western States exhibited at the St. Louis Fair—far more notable in size, appearance and yield than anything they ever saw in the east—how many of them ever realized the cause of this effect? How many of them have thought out the wonderful fact that these products were born upon lands which a few years ago were useless deserts, but now made fertile by the art of irrigation?

No "irrigation exhibits" of prominence were in evidence at the World's Fair, as such, yet in everything agricultural they formed a leading part and their withdrawal would have left huge gaps and have taken away the best. Had the products of the dam and the ditch all been labeled

"Grown by Irrigation"

the irrigation exhibit would have been a very big one. And it seems to me that this would have been a good thing. The west is proud of its irrigation; why not thus call attention to its superiority of production?

Fabulous Grain Growths.

In grains and grasses Colorado's exhibit led easily, though splendid showings were made by other arid states—Oregon, Washington, Montana, Utah, California—but the Centennial State showed one hundred different kinds of grasses and one hundred and thirty varieties of grain. It had oats eight feet tall and timothy heads eight inches long. It took three hundred and forty prizes and eighty-nine gold medals. And its separate fruit exhibit included almost all the products of America except the truly tropical.

Oregon had Mortgage Lifter Wheat, seven feet tall. Think of a wheat field in which an army of six foot men would stand concealed. And snow white onions six inches across. And Idaho and Utah and New Mexico, and all the west, set forth a dazzling display of irrigated apples and plums, peaches and grapes of color, size and beauty which it would take a book to describe.

But ahead of all the west in the extent and variety of her exhibit stood California—California, that vast strip of golden land reaching from Oregon to Mexico and including the vegetable wealth of the tropics.

The Products of a Great Empire.

Fruit is the main stay of the Golden State and two hundred and fifty thousand dollars is represented in her showings at St. Louis. The great Palace of Agriculture is the largest building of the Exposition, covering sixteen acres and it seemed as though I would never get outside of the domain of the California ex-

hibit. Single counties made a showing creditable for a State. Such things caught the eye as a life-size elephant of English walnuts, the State Capitol building constructed of almonds, the famous Lick Observatory done in dried fruits and big enough to contain several families. The wine exhibit took the Grand Prize above all foreign competitors. The most luscious and enormous pears, peaches, oranges, lemons, grapefruit, plums, cherries and all kinds of huge vegetables were stacked in rich confusion, alongside of great branches and clusters of fruits of all kinds showing how things can grow under irrigation. The grape bunches of California are almost of the biblical kind requiring two men to carry a single bunch. No man can carry the product of a single vine.

Government Irrigation Dam.

Practical methods of irrigation were demonstrated at the Government building by a model of the Salt River Valley in Arizona, showing the great government dam now under construction in the mountains and the system of ditches and laterals by which the water is distributed onto the farms and orchards below. Real water was running through these ditches. This great work of Uncle Sam's in Arizona is progressing rapidly, I was told by Engineer Savage whom I recently met in Montana. A cement mill, to make two hundred thousand barrels of cement needed in the masonry, is completed, a one hundred thousand dollar mountain road to convey the dam material from Phoenix is finished and most remarkable, the river itself has been carried through tunnels around the dam site, and is furnishing some thousand electric horse power with which to build the dam. This is to be used to construct the giant works and thus the river will build its own dam and form a reservoir the greatest in the United States.

Giant Pumping Machinery.

Of all sizes and classes were the irrigation pumps exhibited in the farm implement department of the St. Louis Fair; but more striking than these were the windmills. These busy machines, rearing their tall heads above the surrounding buildings and whirring gaily in the breeze formed a striking example of man's ingenuity in harnessing the elements. The highest of these, built by one of the largest windmill manufacturers, spread its galvanized steel wings one hundred and twenty feet in the air and with a moderate wind pumped forty thousand gallons an hour. The water gushed up like a fine artesian well and supplies a ditch to irrigate a good-sized farm.

Irrigation's Future.

What will be the next irrigation exhibit at a World's Fair? Some say that for many years to come, this is the last of the big international expositions. If this be so, and it should be fifteen or twenty years before

another great Fair, when one does come, its irrigation exhibit is likely to overshadow everything else in agriculture. The west is at the beginning of great things. The government has undertaken the work of national reclamation of the desert and is pushing the work rapidly. Vast engineering works—huge dams and canals are being constructed in the western states and territories and as the work proceeds the people will realize its wisdom and worth and it will be pushed forward still faster. As Engineer Savage remarked "It is an entrancing work, is it not; this creating of homes for men out of desert waste?"

And so twenty years from now, if the course of wisdom is pursued and the government irrigation work continues along right lines and is kept pure of politics and of graft, we may see a west with nearly double its present population and the splendid products of American irrigation reaching to every nook and corner of the world.

ENJOYMENTS.

BY GRACE LONGANECKER.

MANKIND in general enjoy a good meal, when hungry and blissful repose, when fatigued, but they do not all love to go a-fishing and a-hunting.

Not long since, I had occasion to dwell near a lake, a locality in which fishing and hunting were extensively engaged in as a pastime. As it was so very uninteresting to me, the thought came to mind, "different people have different enjoyments and how well we are known by our enjoyments."

We sometimes think we are known by our employments; of course we all know the saloon-keeper, but sometimes people engage in occupations not of their choice.

Still, it remains to be proven, that we are not known by our enjoyments. "For where your treasure is, there will your heart be also." A thing we enjoy, pleases us, cheers us and makes us happy.

One loves to visit yonder battlefield where death reigns and human victims are trampled underfeet, to kill yet more and widen the curse; while another dear soul loves to care for the wounded and lead them to him who said, "For all they that take the sword shall perish with the sword."

One loves to visit the rich and enjoy their luxuries; while another seeks the poor and helpless and comforts the fatherless.

Jesus, in speaking of innocent children, rich or poor, said, "Whosoever receiveth one of such children in my name, receiveth me."

One loves to go to places of merriment and pleasure, in the society of the vulgar, and laugh until they about

"split their sides," (as they say); while another enjoys spending the same time in reading some good book or hearing some good concert or lecture. I've often heard people say they had no good time because, "there was no fun." Did Jesus ever laugh? One loves to go to the lost, to save; while another enjoys injuring his brother, till he finally be lost. Liking to perform missions of love is noble.

Truly blessed are they who love to do kindly deeds, as Jesus, the Savior of mankind, filling all the air with their sweet influence.

"How sweet 'twill be at evening
If you and I can say,
Good Shepherd we've been seeking
The lambs that went astray;
Heart-sore and faint with hunger,
We heard them making moan;
And lo! we come at nightfall
Bearing them safely home!"

Hartville, O.

EGYPTIAN LOCUSTS.

We may be thankful that we do not have the Egyptian locust. One of the Department of Agriculture explorers, who has been investigating the flow of the Nile and the great British government irrigation works, reports meeting with the African locust as follows:

"The sheiks at each village came out gravely to salute us, except at one place where our arrival was simultaneous with that of a swarm of locusts. The insects were on the wing, not in a great cloud, not thick, but spread over a large area. When the approach of the locusts was heralded by a watching 'rowarra,' or gardener, the entire population, men, women and children, started out, armed with sticks and brush, to literally beat off the invaders. Smudges were built and lighted and every inducement was made to the locusts to move on. Fortunately, for this particular village, at least, they did so. The locust of Africa, like all true locusts, is similar to the common grasshopper, but is about three inches long.

It flies like a bird, keeping on the wing over great distances, and in such numbers that a swarm spreads devastation where it lights. It eats voraciously, devouring any green thing, and a swarm can absolutely strip an oasis in a short time. Hence their advent is regarded with consternation, as they can utterly destroy a date crop in a few hours, and this means famine, the dates being exchanged for all the necessities of life."

The "locust" of the United States, known popularly as the seven-year, the fourteen-year locust, etc., is not a locust at all, but a cicada. It does little damage as compared with the true locust.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Ingleook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

MARRIAGE LICENSE.

ALMOST without exception all forms of licenses require applicants to possess certain qualifications necessary to eligibility. The teacher's license cannot be had without an examination of the applicant, by the proper authorities for the purpose of gaining a knowledge of his ability. The license is granted, if granted at all, when the authorities are satisfied that the applicant is in possession of such knowledge as entitles him to the degree, or office, commanding such privileges as he desires.

A certificate of proficiency, in the medical profession, is not obtained without years of study and actual practice in human anatomy and *materia medica*. The applicant must have knowledge of the mechanism of the body, the functions of all parts, their uses and abuses, remedies for diseases, and a lot of other things peculiar to their profession. Pharmacy has been reduced to a science which demands that her professors have sufficient knowledge to administer poisonous drugs with safety, and fill the M. D's. prescription with accuracy and reliability.

An apprenticeship for several years must be faithfully served before the applicant takes charge of his engine, shop, office or other places of equal responsibility. There are some licenses that may be bought and paid for with money, which, practically, is the only consideration. For instance, the saloon-keeper's license; he pays the price which satisfies the law, opens his shop and begins business without any regard to his character or the character of his business or anything, further than that he pays the money. Almost the same thing is done in the case of the marriage license. The only thing required is to pay the officials a few dimes and he issues the papers. As a matter, of course, the law fixes a certain age, but that can be

adjusted with a little backsheesh. If the couple in question cannot obtain a license in one State, they may elope to another or be married on the Mississippi river, or retreat to the lakes. And many who fail to get licenses at all, even though there be no lines of eligibility to cross, succeed in living together a term of years without being married; and those who are married a few months or years, and cannot or do not agree, may relieve themselves of the sore affliction by paying some magistrate a tip to "call it off."

Now, the question is, why not reduce it to a system? Why not have a real and literal examination to obtain license for marriage? Why should not congress make, or cause to be made, a set of questions which shall be fully and completely answered by the bride and groom respectively, the answers to which should be examined and graded by a competent set of men and women who have made a success of married life, determining from the answers affixed thereto, by the contracting parties, their fitness for such obligation.

Let them both be examined as to age, education, religion, occupation, etc. Let the husband, about-to-be, show himself able to support a wife and a willingness to do the same. Let the wife demonstrate to her superiors that she deserves the good home of a good husband and is able to reciprocate the demonstrations of his respect in all her domestic relations. Let no point be overlooked that might, in any way, be neglected by either of the parties, and afterwards develop into unpleasantness, dissatisfaction and divorce. The world is becoming cognizant that the divorce question is one of the greatest evils of the day. It has been treated lightly and sneeringly, but its magnitude is arousing public suspicion, and well it may. If some precaution is not taken, eternity only will tell the result. If some one has a better remedy for the evil, let us hear what it is.

* * *

MONUMENTS.

THERE is an inclination on the part of the people of different nations to want to remember great men with a block of cold marble, in some conspicuous place. France has sixteen hundred statues of Napoleon and three hundred of Joan of Arc.

In this country nearly every great man that we ever known must be remembered by a monument, rather than what he has written in the hearts of the people.

We shall not attempt to censure the idea of remembrances or a grave mark, but instead of putting thousands and hundreds of thousands of dollars of money into a piece of marble by which the people are to remember the acts and words of a great man, how much better it would be to use that money for some charitable purpose, as the Cooper Union, various libraries,

colleges, universities, etc. Thousands of people have seen the Washington monument and yet who remembers George Washington on account of it? Practically none. He is remembered because of the great life he lived.

General Grant's services to the nation stand out much more prominently on the pages of history than upon the marble which bears his name. And now we are spending a half million dollars for our late martyred President, whose name is revealed throughout the nation and whose face is familiar to every school-boy; whose works and words are in the mouths of students, lawyers and statesmen; whose character lies deeply entrenched in the hearts of his countrymen. Why rob the country of so much money to place in his honor a piece of lifeless stone, cut from the bowels of the earth, that means nothing but extravagance and injudicious expenditure of the peoples' money? It cannot magnify his name, office or life's work; it cannot benefit him in any way; it does not even reflect respect upon his family. Rather than add, it detracts from the deference paid to the life of this great American. It lends its influence to encourage the young man of to-day to some great act in life, in the hope that in the end he may have erected to his honor a similar obelisk, rather than live a life that will make his character ineffaceable in the hearts of his people.

A real monument of life is built up, stone by stone; each day a stone! We are the artistic builders of our own monuments. What has been added to yours in 1904? What plans have you made for next year to add to the beauty of the monument you are erecting? Don't tell me that you are erecting none. That man doesn't live who is not slowly but surely engraving his own photograph on the hearts and lives of those with whom he associates. And the broader his horizon and his circle of influence, the more photographs are being imprinted upon the souls of those who follow him, to a greater or less degree.

If it is an epitaph you are working for, young man, don't worry about that. Very few men have died but what have had a grander epitaph than they deserve; a larger monument than they ever built. Let one thing be your aim—be sure you deserve the respect and honor which is already shown you!

* * *

INCONSISTENCY.

RECENTLY we have noticed in several exchanges that many of our smaller cities are having trouble with the various railroad companies about the location of livestock pens inside the corporation. The people become offended at the obnoxious odor arising from these pens and the sanitary commissioners declare them

a nuisance. Strong efforts are being made to have them removed from the town because they are not only very disagreeable, but are considered to be extremely dangerous from a health standpoint. No sooner is a proposition like this set on foot than every business man and quite a majority of the residents rise up in arms and stand by in defense until they accomplish their purpose; and in nine cases out of ten these pens are removed according to the wishes of the people. But now comes the inconsistency.

These very same men will, year after year, permit a man or set of men to locate one or more saloons right in the business part of the city, and the closer and the more of them, the better, seemingly. No difference how many remonstrances are circulated for the expulsion of these places. No difference how loudly these men profess Christianity or how high they stand socially, they are poor, wretched, miserable moral cowards. They don't dare to say a word against it; they don't care to sign a remonstrance; they don't dare to cast a vote against it; they even threaten the minister if he preaches against intemperance, and yet will cry until their throats are hoarse about the hogpen being too near the center of the town. Now if they are really anxious to be consistent in the matter the thing would be for them to put the hogs in the saloons and then remove them outside of the city limits and open the doors so the poor hogs might have a chance to escape, because it is reasonable to suppose that hogs would be very glad to free themselves from such environments. The only kind of hogs that love such places as these are the hogs that have made themselves such, and not the real hogs of nature. Instinct has taught all of God's creatures not to take things that are harmful to themselves, and man is the only one of his creatures who willingly and deliberately violates these laws and is perfectly willing to abide by the consequences.

* * *

There is great variation in individuals of the same race, and the essential characteristics of any individual may be duplicated in an individual of wholly different race. If, however, the averages of the occurrence of certain features in a considerable number of individuals of a race are taken, these features are found to be constant. The interesting fact is brought out that the more mixed the race the greater the variation. Thus the variations in the white race of the United States are the greatest, whereas those in the Mayas are the least, which corresponds with the fact that the whites are a complex racial mixture and the Mayas nearly pure. There is a suggestion that all the individuals of an absolutely unmixed race would have the same general characteristics in the lines on the hands and feet.

Current Happenings

MEASURED in dollars the 12,000,000 bales of the 1904 cotton crop are worth less than the 10,000,000 bales of the 1903 crop. The difference in the total value is enormous. A pound of raw cotton which last February sold for seventeen cents is worth only eight cents now. Cotton is selling at forty dollars a bale now, as compared with seventy to seventy-five dollars a year ago. At that rate the total value of the 1904 crop will be less than \$500,000,000, while the 1903 crop sold for over \$700,000,000. It is paradoxical that as one result of the increased industry of the Southern planters they receive \$200,000,000 less. If they had planted less, cultivated less and allowed the boll weevil to flourish they would have been better off. The immediate effect will be to discourage Southern enterprise and to diminish the value of international exchange of the United States' principal article of export. The consumers of the world will be the beneficiaries.

A SHIP owner, Sir Donald Curie, has extended the usefulness of the university of Edinburg, Scotland, by a donation of \$125,000.

It has been reported that long distance telephones, in and out of Chicago, will be operated through the Illinois Company's wires and tunnels. This system of telephones is supposed to be owned and operated by a company that will compete with the Bell Telephone Company.

WHILE experimenting on new inventions Henry Mitchell, at Hammond, Ind., lost his entire eyesight and had his body somewhat mangled. The accident was caused by an unintentional ignition of smokeless powder. Mr. Mitchell is an inventor of some note.

A TREATY of peace between the Government of Paraguay and the Revolutionists has at last been signed. President Ezcurra and General Ferreira came on board the Argentine warship La Plata and drew up the papers. Some of the terms of the treaty are, first, concessions to the Revolutionists, second, resignation of President Ezcurra, and, third, election of Senator Guana to the presidency.

THE Newport Iron Foundry and Machine Company, at Newport, Ky., has been dynamited five times in the last two months. The nuisance is supposed to have been committed by strikers.

WESTERN cattle ranch men are losing a great quantity of stock by a new and very strange disease. The animals affected act very much like they have been poisoned; but the strange feature of the case is, the disease seems to be contagious. So far no help has been found.

A GENERAL uprising in St. Petersburg occurred a couple of weeks ago, caused by the great desire, on the part of the common people, to have the war ended. Peace was restored by the very brave action of the policemen, who, it is said, acted very humanely and avoided brutality as much as possible.

AN exciting scene was witnessed in one of the churches in Grand Rapids, Mich., when an Italian, by the name of James Delatto, who was suffering from dementia, brought on by typhoid fever, entered the crowded house and terrorized the worshipers by wielding an ax in a desperate manner, chopping the pipe organ to pieces, and smashing the furniture in general. By the greatest efforts of policemen, who were summoned, he was overpowered, the ax taken from him and he was safely landed in the hospital. He was shot in the head somehow during the trouble, from which it is thought he will recover. They estimate the damage sustained was about \$1500.

OUT of the one hundred thousand children, under fourteen years of age, in Boston, nearly nine thousand do not attend any school.

ONE of the piers of the Santa Fe bridge at San Francisco, Cal., has been wrecked by the action of a recent series of earthquakes.

A TREATY of arbitration between the United States and Italy was signed by Secretary Hay and the Italian ambassador Moron Mayor Des Planches.

CHARLESTON, W. Va., adds one more to the long list of disasters for 1904. In the giving way of the suspension bridge, thirty children, six teams and drivers who were on the bridge, at the time, were dropped into the water. Several bodies have been recovered, but the exact number of lives lost will not be known for some time.

MISS ACHAH M. ELY, professor of mathematics at Vassar college, died recently of apoplexy.

THE battleship Massachusetts is lying at the League Island navy yards. Several of the men were working in her engine rooms, repairing the vessel, when a man-hole blew out, killing four men instantly and injuring several others.

* * *

WITH a trolley towing plant established on the banks of the Nile to draw dahabiyehs (canal boats) to and fro, the modernization of Egypt may be considered as tolerably complete. The forty centuries which, as Napoleon told his soldiers, stood on the top of the pyramid looking at them as they marched past, are, no doubt, still there, keeping their long vigil, but whatever may have gone by beneath them, they have never yet looked forth on an electric trolley and towing apparatus to multiply from ten to thirty times or more the flotillas and commerce of the Nile, exceeding all the efforts of Amentohep or Psammenitus. The apparatus may not be so spectacular as the pyramids, but it promises to be much more useful to Egypt.

* * *

IT is reported that an eastern syndicate, representing seven hundred millions, is seeking control of every telephone appliance factory in the country. The Interstate Independent Telephone Association of America is taking steps of precaution to prevent such an action. It is to be hoped that matters will so adjust themselves that air and sunshine will be left out of the combination.

* * *

THE trusts may control the ice trade in the summer time, when only the rich can enjoy this luxury, but they have been unable to pass any decision to keep the poor from enjoying it in the winter.

* * *

THE failure of the Oberlin bank has greatly embarrassed a number of students of the college at that place, who had money deposited in said bank. Their holdings are said to aggregate \$25,000.

* * *

THE worst fire in the history of Minneapolis recently occurred in which \$16,000,000 worth of damage was done.

* * *

THE oldest ship in the American navy, the frigate Constellation, has recently been thoroughly overhauled and recommissioned at the Brooklyn navy yards.

* * *

MANY bookstores have been opened in Moscow and St. Petersburg by Count Tolstoi where books can be had by the poor people at a very cheap rate. He also contemplates opening libraries for the accommodation of the poor. This sort of education will be hard on Russia's ignorance and superstition.

A LATE census of the city of Berlin shows that they have upwards of 2,000,000 population, exclusive of the adjoining suburbs which contains 750,000 persons.

* * *

CAPTAIN MILLS of the American Liner, Philadelphia, has protested against reckless target practice off Plymouth. He says that on approaching the harbor, for the safety of the passengers and crew, he was compelled sometimes to stop and other times to sail under full head to avoid disaster.

* * *

WILLIAM CORNELL GREENE, known as "the copper king of Mexico," is rated as the largest land owner in America. His holdings in Arizona and in the state of Sonora, Mexico, amount to 2,000,000 acres, including some of the most valuable copper-producing land on the continent. It was while raising cattle in Arizona that he became interested in some mines which Senator Clarke of Montana and other big copper men refused to purchase. The products turned out to be enormously rich, and now Greene is many times a millionaire.

* * *

PENNSYLVANIA, which makes more than half of the iron used in the United States, produces less than two per cent of the iron ore mined. Ohio, which comes next to Pennsylvania as an iron-maker, mines less than 0.1 per cent of the total. In both cases the ore is brought to the fuel; and this is the policy in this country. Only in Alabama are the ore and fuel found together.

* * *

THE great Simplon tunnel under the Alps consists in reality of two tunnels or tubes, the object being by this form of construction to provide for ventilation, the trains in each tube moving only one way and thus acting as a piston in forcing out dead air and sucking in fresh supplies. Fans are also used, and by this means it is expected that the tunnel will be perfectly ventilated. Similar plans are being carried out by the Pennsylvania railroad tunnel under the Hudson. These are facts that may have an important bearing in solving the problem of ventilation in the subway. It probably would be possible at comparatively small expense to make partitions between the various lines in the tunnel and thus make them ventilating tubes. Reënforced by electric fans, these fans ought to solve the air problem of the subway.

* * *

A BLIZZARD, going at the rate of seventy-two miles an hour, passed over the North Central states Tuesday night, doing great damage to telephone and telegraph wires which was a great hindrance to news dispatchers.

HOME DEPARTMENT

There are nettles everywhere,
But smooth, green grasses are common still;
The blue heaven is larger than a cloud.

—Mrs. Browning.

* * *

MAKING PATENT LEATHER.

JAPANNED leather, generally called patent leather, was first made in America. A smooth glazed finish is first given to calfskin in France. The leather is curried expressly for this purpose, and particular care is taken to keep it as free as possible from grease. The skins are then tacked on frames and coated with a composition of linseed oil and umber in the proportion of 18 gallons of oil to five of umber, boiled until nearly solid and then mixed with spirits of turpentine to the proper consistency. Lampblack is also added when the composition is applied in order to give color and body. From three to four coats of this are necessary to form a substance to receive the varnish. They are laid on with a knife or scraper. To render the goods soft and pliant each coat must be very light and thoroughly dried after each application. A thin coat is afterward applied of the same composition of proper consistency, to be put on with a brush and with sufficient lampblack boiled in it to make a perfect black. When thoroughly dry it is cut down with a scraper having turned edges, when it is ready to varnish.

The principal varnish used is made of linseed oil and Russian blue, boiled to the thickness of printer's ink. It is reduced with spirits of turpentine to a suitable consistency to work with a brush, and then applied in two or three separate coats, which are scraped and pumiced until the leather is perfectly filled and smooth. The finishing coat is put on with special care in a room kept closed and with the floor wet to prevent dust. The frames are then run into an oven heated to about 175 degrees.

* * *

COTTON PICKING.

COTTON picking to-day is much what it was a century ago. There has been no gain or improvement in the method. The slave darkey of ante-bellum days could pick as many pounds of cotton as the free darkey of to-day. A fair average day's work for a picker is about 100 pounds of seed cotton. Allowing 130 days for the harvesting season, each picker working steadily would

thus gather 13,000 pounds of seed cotton as his share of work. In 1903 the total Southern cotton crop amounted to 10,205,073 bales, which was only a slight increase over the average for the past five years. To gather such a crop within the harvesting season of 130 days, it would therefore require 1,088,000 laborers if each one picked his quota of 100 pounds of seed cotton per day. The cost of paying this army of pickers at current market wages in the South would amount to more than 10 per cent of the total value of the whole crop. According to statistics last year the amount paid for picking the crop approximated \$70,750,000. What other crop in the country requires such enormous expenditures for gathering? Not even the tea crop of China and India, where picking is done entirely by hand, equals this stupendous item. The tobacco and sugar cane crop likewise must be gathered by hand, and no adequate machinery for harvesting them has yet been invented; but in their case nothing like ten per cent of the total valuation of the crop is expended in the harvesting. The fiber of the cotton plant is the wing of the seed, and it is soft and fleecy, ready to be blown away by the wind. To pick this fiber requires expert manipulation of the hands that can separate it from the boll without injuring the fiber itself. The gathering of the cotton from the boll with the fingers is not difficult, but to invent machinery to do this is complicated.—*Scientific American*.

* * *

STOOPING.

STOOPING habits and round shoulders are sometimes, or indeed, often treated by mothers bracing back the shoulders by means of straps. Now, an authority on the treatment of deformities has lately been decrying the use of such things. He says they weaken the muscles which connect the shoulder blades to the body, and when the straps are taken off the muscles in front of the body tend to pull forward the chest and make the deformity worse. There is great reason and sense in this view of matters and mothers should, therefore, be very cautious in their use of all such appliances. If a girl or boy has a tendency to stoop, the habit should be corrected by proper gymnastic exercises and by the drill which is now practiced in every well ordered school. It is a much more satisfactory thing to correct a habit gradually, by proper use of the muscles, than to bind up one set of muscles to their detriment.

NUTRITIVE VALUE OF FOODS.

IN twenty pounds of potatoes there are three and three-fourths pounds of nutriment; in twenty-five cents worth of fat salt pork there are three and one-half pounds of nutriment; in the same value of wheat bread there are two and one-fourth pounds; in the neck of beef, one and three-fourths pounds; in skim milk cheese, one and three-fourth pounds; in whole milk cheese a trifle more than one and one half pounds; in butter, one and one-half pounds, and in smoked ham and leg mutton about the same; in milk a trifle over 1 pound; in mackerel, about 1 pound; in round of beef, three-fourths of a pound; in salt codfish and beef sirloin, about one-half of a pound; in eggs, at twenty-five cents a dozen, about seven ounces, and in fresh codfish, about six ounces. A quart of milk, three-fourths of a pound moderately fat beef, sirloin steak, for instance, and five ounces of wheat flour, all contain about the same amount of nutritive material; but we pay different prices for them, and they have different value for nutriment. Milk comes nearest to being perfect food. It contains all of the different kinds of nutritive materials that the body needs. Bread made from the wheat flour will support life. It contains all of the necessary ingredients for nourishment, but not in the proportions best adapted for ordinary use.

* * *

VALUE OF APPLES.

APPLES, in addition to being a delicious fruit, make a pleasant and valuable medicine. A raw apple is digestible in an hour and a half, while boiled cabbage requires five hours. The most healthy dessert that can be placed on a table is a baked apple. If eaten frequently at breakfast, with bread and butter, without meat of any kind, it has an admirable effect on the general system, often removing constipation, correcting acidities and cooling off febrile conditions more effectually than the most approved medicines. If families could be induced to substitute apples, ripe and sound, for pies, cakes and sweetmeats, with which their children are frequently stuffed, there would be a diminution in the total sum of doctors' bills, in a single year, sufficient to lay in stock of this delicious fruit for the whole season's use.

* * *

WHAT IDLENESS DOES.

MANY young people think an idle life must be a pleasant one, but there are none who enjoy life so little and are such burdens to themselves as those who have nothing to do. Those who are obliged to work hard all day enjoy their short period of rest and recreation so much that they are apt to think that if their

whole life were spent in rest and recreation it would be the most pleasant of all. But this is a sad mistake as they would soon find out if they made a trial of the life they think so agreeable. One who is never busy can never enjoy rest, for rest implies relief from previous labors; and if our whole time were spent in amusing ourselves, we should find it more wearisome than the hardest day's work. Recreation is only valuable as it unbends us; the idle can know nothing of it. Many people leave off business and settle down to a life of enjoyment, but they generally find that they are not nearly so happy as they were before, and are often glad to return to their old occupation to escape the miseries of indolence.—*Sel.*

* * *

OLD SOUTHERN REMEDIES.

WHAT is one man's food is another man's poison, but it is vouched for by an old Southerner that the following remedies will benefit seven out of ten persons:

For alcoholism try buttermilk. It will kill desire for whisky.

Whey will greatly relieve dropsy.

Calomel applied to cuts or sores relieves pain and heals wounds. Not too much and don't get wet.

Kerosene will cure sore throat. Consumptives should try it. Take a tablespoonful at a time. Hold the nose.

Bathing head in cold water every morning will prevent one from taking colds easily. Better commence in the summer time.

Ice applied between the shoulders and back of head will stop bleeding at the nose.

Balsam apple applied to dog bite will carry relief.

Keep cut onions in all sick rooms. Onions will turn black where contagious diseases exist and disinfect the room.

Try cold water for tired feet.

* * *

THE moral coward—the man who is afraid of life, afraid of its depths and its heights, its valleys of humiliation and its peaks of vision, its significant experiences of whatever kind—is incapable of developing character. All these are the ripening experiences of the soul. We must expect them, as the apple expects the noonday blaze and the midnight frost. It is childish to shrink from the intensities of life. Why do we live if not to meet life's requirements and bear its fruits?—*James Buchanan.*

* * *

It is a good plan to give the orchard an annual pruning from the beginning. If it is not given, especially during the first stage of growth, some of the limbs will become crowded and others will grow misshaped, and there will be an increased difficulty in securing a good shaped tree afterwards.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

CIRCLE AND CHRISTIAN WORKERS' PROGRAM.

Sunday, January 15.

Topic.—Ask, Seek, Find.

Text.—For every one that asketh receiveth; and he that seeketh, findeth; and to him that knocketh it shall be opened. Matthew 7: 7, 8.

References.

1 John 5: 14; Matthew 14: 20; Acts 4: 31; James 5: 17; Luke 18: 1-5; Psalm 145: 18; Luke 1: 1-13; Matthew 21: 22; Luke 11: 13; Matthew 18: 19, 20; Matthew 6: 5-9; John 16: 23-27; Hebrews 4: 16; Psalms 40: 1.

"The Soul's Sincere Desire."

There is no doubt about it, we have all at some time or other so earnestly desired something that it was easy to take it to the Lord in prayer; and sometimes we were given our heart's desire; and at other times we thought that God neither heard nor answered our prayers. We used to be puzzled about it when we were younger, before we knew that it was not best to arrive at conclusions too soon in regard to our prayers. Our part lies in being true and sincere, and then waiting patiently, trusting God and believing. We should remember too that the great men and women of to-day are those who take time to pray, who put prayer first. There are two parts in prayer; first, there is God who is able and willing to give us the richest gifts, and just as surely there must be as the second factor, the person who is willing to receive. God never crowds, nor compels us to accept things; but there must be an open hand and heart and life through which God can give what he longs to give us.

One Prayer Answered.

It was at an obscure little church in England that the subject of a revival meeting was discussed. A poor shoemaker and his wife, who could not attend church regularly, because of ill health, were yet much concerned about their neighbors' welfare. So for weeks before the revival began these two prayed earnestly every day that God would bring conviction to the hearts of their friends and convert them. When the meetings began, there was but a small attendance and no interest, but in a few evenings the Holy Spirit came in all his power, and many souls turned to Christ. The shoemaker had the joy of knowing that every soul for which he prayed, had responded to the call, and was rejoicing in the Lord.

Prayer of John Knox.

Some one overheard John Knox, the Scotch reformer, praying for his country, "O Lord, give me Scotland, or I die," he said. Again and again he made this petition, on his bended knees. And God did give him Scotland, religious liberty was assured, and the bonds of intolerance and superstition were broken.

Our Daily Bread.

We repeat it often, "Give us this day our daily bread." And the promise is, "Ask and ye shall receive," yet more of us say, "Give us this day our daily bread," expecting that a loaf will be placed right in our hands as soon as we are done praying. Yet we sometimes act as if we expected some of our other prayers to be answered that way. God gives us energy and muscle and understanding so that in some way we can procure the loaf of bread. And God expects us always to do our part towards answering our own prayers.

Once when Jesus met some people who were coming to talk with him, he asked, "What seek ye?" And He asks us the same question while he holds for us the richest gifts. And then we ask him for some little trifling things, when he is longing to give us wonderful blessings. The disciples in the upper room put the will of God above everything else, and Pentecost came of that prayer.

Pray About It.

"Have we trials and temptations?
Is there trouble anywhere?
Jesus knows our every weakness,
Take it to the Lord in prayer."

Is there any trouble, is there anything that worries you, and yet you feel that it is too small a matter to pray about? Just remember that if it is a matter of sufficient importance to worry you, you can pray about it. Talk about it to Jesus just as you used to talk to your mother about your childish troubles; and then thank him for the help he gives you.

Topics for Discussion.

1. Jesus answered one prayer on the cross. Luke 23: 41-43.
2. Confessing our sins to God. Judges 10: 10-15; Job 7: 20.
3. Why should we observe Family Prayer? Acts 10: 2.
4. Thank God for his blessings. Eph. 1: 15, 16; Luke 25: 53.

BUREAU OF EMPLOYMENT.

Sister Mary E. Shickel of Broadway, Virginia, says, "I have read all the books in our former Missionary course, excepting a part of one, and I read seven books out of the older courses. I am now reading 'India, a Problem,' and consider it fine. A few weeks ago, I went to Bridgewater to hear Dr. Forest lecture; he has been a missionary in India and his talk on 'The Hurt of India' was very interesting. I will be pleased to receive my certificate."

The Circle wants to help. We used to discuss the matter of supporting our own missionary, but we have learned that there are so many places where a little assistance at the right time is required, that we have determined to help every good work so far as we can. Supporting orphans, in India, and giving money to assist in building orphanages was part of our work in the past. This is still necessary. How much can we do this year?

"Uncle John, won't you come to the meeting this evening?"

"O, I guess not, I am getting too old for Young Peoples' meetings."

"But we want you there too, we want the older members of the church too," went on the pleading voice of a young sister. And she was right; in these meetings where our boys and girls do most of the talking and singing and praying, we want the older members too. The young people appreciate your presence, the meeting is more interesting, and if the elder or one of the deacons can give a two-minute talk before the meeting closes, into which he crowds love, sympathy, and encouragement, it will prove to be another bond uniting the old and the young members of our church. Loyalty and love one for another go hand in hand. Our young people should attend all the general services of the church and our older brethren should find time to attend the Circle and Christian Workers' meetings.

Sister Mary R. Hoover of Spencer, Ohio, says, "May grace, mercy and peace be with all of the household of faith. I am glad to be able to send even one name every now and then; of course I would be glad to send more, but even one who will become interested in carrying out the great commission is that much gain for Christ."

Brother Henry E. Ward, from Overbrook, Kansas, sends us good news, "The spirit of missions is growing and moving upon members of the Circle at this place. Several have read the greater part of the first year's course. We are laboring to increase our membership, and hope that we will soon be able to support a missionary in some field; we feel that we want to obey Christ's command. I am glad to send you twenty-

seven new names. Brother Charles M. Ward is president, Brother Charles O. Hoover, secretary, Brother John H. Oxley treasurer, and Henry E. Ward, local secretary."

(Go and do likewise, for your church needs just such a Circle.)

Brother Charles A. Bame of Dayton, Ohio, met with the Circle at Covington, Ohio. The church was filled, and the interest intense, while Brother Bame spoke to them on "God's Greatest Question." He referred to some great questions puzzling the minds of scholars and scientists, then he said the greatest question is the one asked centuries ago,—“What think ye of Christ?” The whole address was a masterly plea for the young people to increase their faith, and their love for Jesus of Nazareth. Brother Bame has also given this address before the Y. M. C. A. of Dayton.

NEW NAMES.

- 2568 Russel Hankins, R. D. No. 1, Bringham, Indiana.
- 2569 Frank Holsinger, Flora, Indiana.
- 2570 Della Holsinger, Flora, Indiana.
- 2571 Vesta Myers, Flora, Indiana.
- 2572 Mrs. Philip Kingery, Flora, Indiana.
- 2573 Charles M. Ward, Overbrook, Kansas.
- 2574 Charles O. Hoover, Overbrook, Kansas.
- 2575 John H. Oxley, Overbrook, Kansas.
- 2576 Henry E. Ward, Overbrook, Kansas.
- 2577 Stephen Ward, Overbrook, Kansas.
- 2578 Calvin Ward, Overbrook, Kansas.
- 2579 Ezra A. Ward, Overbrook, Kansas.
- 2580 Sarah A. Ward, Overbrook, Kansas.
- 2581 B. O. Hoover, Overbrook, Kansas.
- 2582 Clarence Hoover, Overbrook, Kansas.
- 2583 Lloyd Hoover, Overbrook, Kansas.
- 2584 M. E. Hoover, Overbrook, Kansas.
- 2585 Otis Hoover, Overbrook, Kansas.
- 2586 Lizzie Postma, Overbrook, Kansas.
- 2587 Dessie Postma, Overbrook, Kansas.
- 2588 Clara Postma, Overbrook, Kansas.
- 2589 Allie Kinzie, Overbrook, Kansas.
- 2590 William A. Kinzie, Overbrook, Kansas.
- 2591 Elva Miller, Overbrook, Kansas.
- 2592 Myrtle Hilky, Overbrook, Kansas.
- 2593 Callie Hertzog, Overbrook, Kansas.
- 2594 Ida Metzker, Overbrook, Kansas.
- 2595 Alice Davidson, Overbrook, Kansas.
- 2596 Grace Badsky, Overbrook, Kansas.
- 2597 Jessie Badsky, Overbrook, Kansas.
- 2598 Bertha Behrens, Overbrook, Kansas.
- 2599 H. W. Behrens, Overbrook, Kansas.

RECEIVED CERTIFICATES.

- Mary L. Cook, Prairie Depot, Ohio.
- A. G. Crosswhite, Flora, Ind.
- Fannie Myers, Flora, Ind.
- Mrs. E. E. Blickenstaff, Flora, Ind.
- Myrtle Cline, Flora, Ind.
- Josephine Hanna, Flora, Ind.
- Mary E. Shickel, Broadway, Va.

OUR YOUNG PEOPLE

GEOGRAPHY CLASS.—Chapter IX.

Cork, Ireland.

Dear Mr. Maxwell:—

Agnes was taken sick day before yesterday and since Marie has to act the part of nurse, Miss Merritt suggested that we boys must write this letter; that's one of the things we didn't expect to do, but there are so many things that we see over here that I think would be of interest to you that girls and women don't know anything about; and I believe we'll take advantage of this opportunity.

We sent the girls from Queenstown to Cork on the train and Roscoe and I came on a "johnny car," as they call it here. The right name for it is "jaunting car." If I can get a snapshot of one of those vehicles I'll send you a picture; they look a good deal like a two-wheeled cart which we have at home, except that they have a seat on each side, over the wheel; each one of these seats holds two passengers who must necessarily face the side of the road. The driver sits in front, almost astride the horse, with his feet on the shafts. There are no other vehicles in Ireland, no top buggies, no carriages, in fact, no four-wheeled vehicles of any sort; even the drays are built after the pattern of the jaunting car.

As we came along the road we noticed that it was a fine macadamized highway. In fact, all the roads we have seen in Ireland so far are of the best stone roads we have ever seen. At the side of the road you invariably find a stone wall, in most cases whitewashed and overhung with laurel or bay-leaf, with an occasional weeping-willow. The land is undulating, not enough so as to be mountainous, but picturesque. And as Ross said yesterday, "There is a valley between every two hills." On the top of many of these hills are to be seen ruins of old castles that have been there for centuries, and to see these dotted over the hill tops, clad in their garments of gray, overlooking the green hills mirrored in the crystal bosom of scores of lakes is a scene that is simply entrancing.

To make a deeper setting for this picture, let me suggest that you imagine an occasional farmhouse, which is invariably laid of stone or brick and the ever present whitewash, covered with a thatched roof, "and de ol-fashioned chimney at de end." Of course none of these houses are built in more than one story. When they need more room than is furnished by a single apartment they join another one to that, and it is a fact that

"They kept the pig in the parlor
And that was Irish too."

Ross and I nearly die laughing sometimes as we ride along the road, for almost every time we pass one of these farmhouses three or four little freckled-faced, bare-headed, half-clad descendants of Erin follow us at the top of their speed, in the cloud of dust made by the johnny car, crying at the top of their voice, "Tuppens-hapeny-fur-a-scramble-sur," which translated into the United States would be, "Two pence half-penny for a scramble, sir." One penny is two cents in our money and is about

as big as one of those old-fashioned coppers Pa used to have, and of course two pennies would be four cents and the "hapeny" is a half-pence, which is one cent in our money. All figured, "Tuppens-hapeny" would be a nickel. So these children were really saying, "Throw a nickel down in the dust just to see us scramble for it and to see who will get it."

We amused ourselves for miles by occasionally throwing a penny or "hapeny" in the dust. It is fun alive to see our girls count their money when they go shopping;

JOHNNY CAR.

they try to convert everything into United States money. While Ross and I try to tell them all the time that they shall reckon in pounds, shillings and pence.

Miss Merritt has a quarter, a dime and a penny in the United States money in her chatelaine. Almost every day she takes these out and looks at them and reminds us that she doesn't want to forget what real money looks like.

It is too bad that none of us are given to art. I would like to sketch for you some of these farmers with a jag of hay about as big as a boy could carry with a rope, on one of these double length johnny cars with a little donkey hitched to it, not much bigger than a Kansas jack rabbit, and working in a field containing not more than a quarter of an acre, and stacking the hay in cocks instead of stacks.

By the way I was going to tell you that when we took the girls to the depot at Queenstown to come to Cork, we had a time getting their tickets. In the first place we couldn't find the ticket office. Finally Miss Merritt saw a sign above the door that said "Booking office," and suggested that that might be the place. We weren't abroad to be baffled by trifles, so we bolted in and put on a brazen front and called for three tickets to Cork. "Faith, and whut class duz yez want?" said the Celt behind the desk. Ross pulled down one corner of his old slouch hat, shut his left eye and whispered, "You're up against it, ain't you, Ock?" The Celtic blood rushing through his veins car-

(Continued on Page 24.)

The Q. & A. Department.

Why do tempting dishes make the mouth water?

In the *Journal de Psychologie*, M. Mayer treats of the influence of the mind on bodily secretions. We know that a tempting morsel of food makes the "mouth water," and that stories or memories can bring tears to the eyes. Observations on dogs have shown that the nature of the saliva secreted at the sight of food depends on the nature of the food. The stomach secretions of the dog are also excited by the sight of the food. Some dogs, however, of a "cold, positive temperament," not illusioned by chimeras or what is out of reach, patiently wait until the food comes to their gullet before their mouths water or the gastric juices are provoked. It is assumed that what holds for dogs probably holds for men. The observations appear to show the importance of eating food that pleases and avoiding what displeases or disgusts. They also run counter to the psychological theory of the emotions according to which the psychological phenomena are caused by organic changes. This may be the case with some emotions, for example the feeling of hunger, but for emotions properly so called, it is rather the other way about.

* * *

What was the Star Route fraud?

Star routes are those mail routes which are marked with a star in the postal route books. On them the mail is carried on horseback or wagons, owing to lack of railroad or steamboat facilities. In 1881 it was charged that there was a "ring" to defraud the government, and in 1882 a number of officials, including United States Senator Stephen W. Dorsey, Second Assistant Postmaster General Thomas J. Brady and others were arrested. It was charged that they conspired to obtain contracts for one hundred and thirty-four star routes at \$143,169, and then had the compensation increased to \$662,808 by increasing the number of trips beyond what the localities required and by claims of faster time on the trips. Some of the prisoners were found guilty and some acquitted. The trials lasted over a year, and ended in a statement by the Department of Justice that no Government officials were involved in the frauds.

* * *

How can I secure a copyright on a word or phrase to be used for advertising purposes?

Apply to the library of Congress, Washington, D. C., and enclose fifty cents for recording the copyright and fifty cents additional for a certificate

Were it possible for a hole to be drilled directly through the center of the earth, and were an iron ball dropped through this aperture, would it stop as soon as it reached the center of the earth, or would it oscillate until it finally stopped at center?

This is absolutely a matter of theory: no practical test could be made. First, the earth could not be penetrated because of distance, rotation, molten interior, and water. Second, it would be impossible to drop any substance a distance of four thousand miles, which would be the minimum in this instance, without friction sufficient to raise the temperature to melting point. But laying aside all practical possibilities for the advantage of theory, the Nook is in favor of the theory that the ball would not stop at the center, but would pass by the center and oscillate until it would finally seek a place of equal resistance and attraction, which, of course would be the center of the earth. This theory is true provided momentum assists gravity in gaining velocity. If gravity alone is responsible for the mad flight of the body in question, theoretically, it would stop immediately upon reaching the center.

* * *

If two bricks were dropped through the air, one on top of the other, the top brick weighing three pounds when at rest, would the top brick, in the fall, push down with the three pounds of weight on the lower brick while they are falling?

That depends entirely upon the consistency, size and shape of the two bricks. If the specific gravity of the under brick is not so great as the upper one, and furnishes more resistance, then of necessity the top brick would assist the other in falling by the addition of its weight. If the top brick is larger than the lower one, or has a peculiar shape, which will furnish resistance, it might even detract from the power of gravity of the lower one, but if the two bricks are of the same size, shape and density they will have no effect one upon the other. However, the top brick will be inclined to rest upon or near the lower brick, because the lower brick displaces the air in front of the upper one so that it is not necessary for the second one to submit such a degree of resistance as the lower one.

* * *

Who was the first Postmaster General of the United States?

Samuel Osgood, of Massachusetts, who was appointed by Washington in 1784.

* * *

To whom can I send mineral water to have it analyzed?
To any analytical chemist.

MISCELLANEOUS

ried an inspiration in the form of a suggestion to his witty brain that we were from "the land of the free and the home of the brave." And he gave vent to his feelings by saying, "Air yez furm Amolicky?" Ross fairly snorted in my face, and of course I had to pull my chin down long and admit his proposition. Then he explained, at some length, that first-class passage would be three cents a mile; second-class, two cents; third-class, one cent, and fourth-class cheaper yet. At this juncture the girls became sufficiently interested that they took part in the inquiries, and we deduced a few facts. We found that the first-class accommodations were about like our finest parlor cars in America, second-class like our ordinary coaches, third-class something like a caboose and fourth-class like a box car, with no seats.

This being the terminal of the railroad we were afforded the opportunity of examining one of these coaches. The coaches are built the shape of ours at home, only they don't have doors in the ends. There are three partitions across the coach, which divide the coach into four separate apartments, entirely disconnected with each other. One of these apartments is finished for ten first-class passengers, the next for second, the next for third, and the fourth apartment is set apart for those who smoke, and you may rest assured that this one is always full. So the difference in the fare only means a difference in accommodations and not that anything is gained in point of time. The girls chose third-class, and rode the entire distance, sixteen miles, for 8d (eight pence—sixteen cents).

We wished afterwards that we had taken a boat and sailed up the river Lee. The scenery is simply delightful, but we got to see some of it from the johnny car. We may make a round trip yet when Agnes gets over her homesickness, for I think that is all that is the matter with her.

We arrived in Cork in due time and found the girls waiting there for us at the depot. The hotels were all full on account of an exposition in the city, and we finally succeeded in getting lodging with a Mr. Fitzpatrick, one of the railroad officials, at No. 8 Hackett's Terrace. We ate supper at a dirty Irish restaurant. The girls were a little inclined to stick up their noses, but Agnes slowly said, without a smile, "You might as well walk up to the rack and take your fodder." We teased each other with asking to have the butter passed, which thing was wholly wanting.

By the way, I must close this letter and make arrangements for to-morrow's itinerary. By proxy,

Oscar and Roscoe.

P. S.—Miss Gertrude is preparing an article for the Mayville Times.

(To be Continued.)

WE are not sent into this world to do anything into which we can not put our hearts.—*John Ruskin.*

SOME THINGS WE NEVER SEE.

A sheet from the bed of a river,
A tongue from the mouth of a stream
A toe from the foot of a mountain,
A page from a volume of steam.
A wink from the eye of a needle,
A nail from the finger of fate;
A plume from the wing of an army,
And a drink from the bar of a grate.
A hair from the head of a hammer,
A bite from the teeth of a saw,
A race on the course of study,
And a joint from the limb of the law.
A check that is drawn on a sand-bank,
Some fruit from the jamb of a door.

FIGHT WITH A BIG WILD CAT.

FARMER John Hillegas, of Sigmund, Penn., discovered that a dozen of his chickens had been killed during the night, and set out with a hound to seek the marauder. The hound soon ran down a wild cat, and after a furious battle went home with his tail between his legs.

Hillegas returned to the scene of the dog's defeat and found the cat perched in a tree. He fired at it, and the cat leaped on his shoulders, sinking its teeth and claws into his flesh. He shook it off and tried to strike it with the gun, but only succeeded in breaking the rifle in two, and the cat promptly made a spring for his throat. Warding it off with his arm, he finally succeeded in striking it with the barrel of the rifle and breaking its back. A second blow beat out the animal's brains. The cat weighed 12 pounds.

SLOW TRAINS IN SPAIN.

TRAINS in Spain are certainly slow. A rate of 10 or 12 miles an hour is considered a good average of speed for every day travelers. When the Spanish officials wish to show visiting foreigners what they really can accomplish in the way of rapidity, they offer express trains which dash madly across the landscape at an average rate of 15 or 18 miles an hour. In one way this proves an advantage, for the traveler sees a great deal more scenery for his money than if he were rushed past it swiftly.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground, others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,
Cadillac, Mich.,
DISTRICT AGENT

or

BRO. JOHN A. MILLER,
Brethren, Mich.,
RESIDENT AGENT

Michigan Land Association.

\$7.95 for this large handsome steel range

without high closet or reservoir. With 1246, high, roomy, warming closet and reservoir just as shown in cut, \$11.95. Reservoir is porcelain on inside, asbestos covered on outside. Heavy cast top with 6 full size cooking holes. Large roomy oven, regular 8-18 size. (We have 9 styles of steel and cast ranges with much larger and smaller ovens, sizes to suit all.) The body is made of cold rolled steel, top and all castings of best pig iron. Grate; we use improved duplex grate, burns wood or coal. Nickel band on front of main top; brackets and tea shelves on closet; band and ornament on reservoir; oven door, etc. Are highly polished, making the range an ornament to any home.

OUR TERMS

are the most liberal ever made. We will ship you any range or stove, guarantee it to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it in every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for double our price, you can return it to us and we will pay freight both ways, so you won't be out one single cent.

CUT THIS "AD" OUT and send it to us and we will mail you our free Stove Catalog. It explains our terms fully, tells you how to order. Don't buy a stove of any kind until you get our new large Stove Catalogue for 1904 and 1905 and see our liberal terms and the lowest prices ever made.

EQUITY MFG. AND SUPPLY CO., Chicago, Ill.

\$2.95 for this Oak Heater

just as illustrated. Burns hard or soft coal or wood. Has draw center grate, corrugated fire pot, cold rolled sheet steel body, heavy cast base, large cast feet door, ash pit door and ash pan, swing top, screw draft-regulator. Polished urn, nickel top ring, name plate, foot rails, etc. We have heating stoves of every kind: Hot blast, air tight, the kind that retails for \$3.00, for 90c. Base burners at 1/2 the regular price

MATTHEW HENRY COMMENTARY ON THE BIBLE

PRICE GREATLY REDUCED.

Catalogue
Price,
\$15.00

Our Special Price
f. o. b. Elgin,
Only \$7.95

It is surprising that, in this labor-saving and time-saving age, the ever popular Matthew Henry's Commentary has not before been issued in convenient volumes. Two features of this new edition call for special attention: First, the moderate size of the volumes; second, the large size of the type (larger than any previous edition). Other features are the excellent printing and substantial binding.

"Biblical students who are most familiar with the very best commentaries of this generation are most able to appreciate the unfading freshness, the clear analysis, the spiritual force, the quaint humor, and the evangelical richness of Matthew Henry's Exposition of the Old and New Testaments. Ever since we have been engaged in the ministry we have found our appreciation of this work increasing with our years."—The N. Y. Observer.

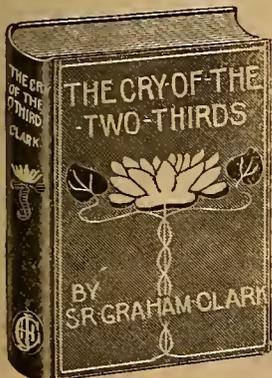

"There is nothing to be compared with old Matthew Henry's Commentary for pungent and practical applications of the teachings of the text."—The S. S. Times.

We have now reduced the price of this commentary until it is within reach of all. Every minister and Bible student who does not already have a set of these books ought to take advantage of this special offer. You cannot afford to let this offer pass without due consideration. Better send your order at once. Price, only \$7.95.

Brethren Publishing House, Elgin, Illinois.

THE CRY OF THE TWO-THIRDS

By MRS. S. R. GRAHAM-CLARK.

A great story with a great purpose. It is a book for every family where there are boys and girls. It is as fascinating as it is powerful. It will be read and reread and shape character and conduct for life.

It has been called the "Uncle Tom's Cabin" of the liquor traffic. If you want your boys and girls to shun the evils of the liquor traffic get this book for them to read. Do not wait until the horse is stolen before you lock the door. Order the book now.

It contains 678 pages of clear type, laid paper, elegantly bound in handsome cloth, only \$1.50.

\$22.00 BUYS OUR "FAIRY QUEEN" CUTTER

Handsome,
Durable.

Here is an exceptional opportunity to obtain a very handsome and durable cutter at a wonderfully low price. It has called forth admiration from everyone who has seen it. It is light and nobby in appearance, yet made of good material and guaranteed to give satisfactory service. You can not buy it from your dealer at anywhere near the price we ask. Body is large, roomy and comfortable, with extra high back; made of the best air seasoned timber. All joints are reinforced, screwed, glued and plugged. Gear is made of the best selected material, full braced and strongly ironed; braces, bolts and clips from the best wrought steel, hand forged. Best grade hardened steel channel shoes, securely bolted to the runners. Painted in the highest style of the art, highly polished, neatly striped and ornamented. Body black, or Brewster green with black mouldings. Gear black, green or carmine; fully striped. Upholstered in Portland Plush. Full spring back and spring cushion; cushion and back are removable; curved back with slide wings and nickel plated dash rail and arm rails; neat foot steps and nicely trimmed shafts with shifting rail.

Keep Warm

Wear one of our heavy fleeced-lined coats and be comfortable even on the coldest days. We have many different kinds of zero weather coats at prices far lower than you can buy the same quality for at retail stores.

Our heavy black duck coat, dark tanned sheepskin lining, ...\$2.75

Heavy weight, sheep pelt lined ulster. 10 ounce waterproof duck on outside, brown shawl sheepskin collar. The bargain of the season. Warm as toast,\$4.35

Black Dog Coat. Made of genuine New Zealand Black Dog skin. Quilted lining, leather arm shields. A large, warm, serviceable coat at the remarkably low price of \$15.00

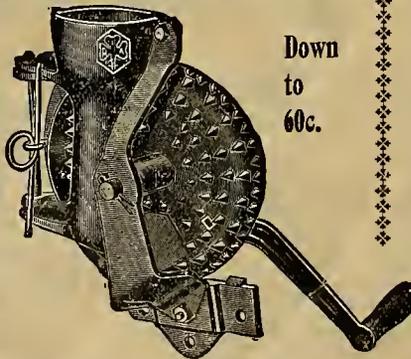

For a complete line of Men's and Women's heavy Winter coats and furs write for our catalogue—it's free. The finest lines to select from in the country. Honestly made, reliable goods—no imitations. When the quality of the goods is considered the prices are lower than those of any other firm. Don't buy until you have seen our prices.

MAKE A LIST

Of the articles you would like to purchase and note the prices, and then turn to our No. 63 Catalogue and from our mammoth stock select a list that will suit you in every way—and will save you from 15 to 25 per cent.

When You Buy

direct from us you save all dealers' and middlemen's profit. We guarantee every purchase to be satisfactory—your money cheerfully refunded if you wish it. We will appreciate the opportunity to send you our new catalogue free, with our compliments. Will you ask us for it now while you think of it? A postal will do.

"Little Giant" Corn Sheller

Well made in every way, easy running, removes all corn from the cob. It is so simple in its construction that it is impossible to get out of order. This machine deposits the corn in the box on which it is mounted, and the cob on the outside. Capacity, about eight bushels per hour. Weight, 13 pounds. Order Number F100. The most useful and economical implement that a farmer can have.

A Chiffonier Bargain

The unusual beauty of this Chiffonier is at once apparent to even the most casual observer. The design is chaste, without being severe, and the whole effect is a marvel of elegance.

Made of mahogany or golden oak, dimensions of top, 20x24 inches; mirror of beveled plate, 10x14 inches. Has a swell top drawer, two compartments underneath and three drawers below. Mounted on casters.

The variety of bedroom furniture we can supply is enormous and comprises all the latest designs. Our prices are lowest consistent with values.

WHY NOT COME TO THE
LAGUNA DE TACHE GRANT
 FRESNO COUNTY, CALIFORNIA,

Where Pumpkins, Corn and common crops grow, as well as every kind of California fruit?

Come and visit the Brethren who are living here and see what they have done in the past two years.

Nearly 600 sales made since we put this land on the market and over 2,000 people now living on the grant where there were but about sixty a little over five years ago.

This does not look like a temporary boom, does it? Must be something solid behind all this. If not, five years ought to show up the weakness, but instead of weakening the Laguna and its various interests are growing stronger all the time.

If you are thinking of coming to California to make a home you cannot afford to overlook this place.

We still have plenty of good land with abundant water for irrigation. The price is from \$30.00 to \$60.00 per acre, terms, one-fourth cash, balance in eight annual payments.

COLONISTS' RATES

will again be in force March 1 to 15, 1905.

From Chicago to Laton,	\$33.00
From Mississippi River to Laton,	\$30.00

NEW PICTORIAL EDITION OF The Holman Self-Pronouncing Sunday School Teachers' Bible

Containing New Copyright Helps and Embellished with Eighty Beautiful Full-page Photographs of Bible Lands Distributed Throughout the Text.

The Only Pictorial Teachers' Bible Published.

The photographs from which these views were made were taken but recently, and they therefore give correct representations of the present appearances of places made memorable by the sacred and historic associations of Bible times.

In addition to the foregoing series of superb photo-views, these Bibles also contain all the popular Aids and Helps to the Study of the Bible described elsewhere, and **Fifteen Beautiful Maps in Colors**, with an Elaborate Cross-line Index. These Maps are entirely new and were engraved expressly for the Holman Editions.

BOURGEOIS TYPE, 8vo. Size, 5¼x-7¾x1½ inches.

(For specimen of type see No. 8.)

Printed on Fine White Paper.

- 8810 Egyptian Morocco, divinity circuit, round corners, red under gold edges,\$2.40

A German Teacher's Bible on a New and Improved Plan

The Only German Bible of the Kind Ever Published. "Scripture Explained by Means of Scripture through the Medium of Confirmatory Texts."

It differs from other German Bibles in that it gives, in the most important instances, either the full or the slightly abbreviated explanatory or elucidating texts in the narrow side columns on the outer edges of the page, as well as numerous references of the kind usually employed in Reference Bibles. In addition to the foregoing invaluable features, this Bible contains: A Concordance; A History of the Bible; The Great Heathen Nations Mentioned in the Bible; A History of the New Archæological Discoveries in Bible Lands; A History of the Jewish People; Weights, Measures, and Coins of the Bible; Geography and Topography of Palestine; A list of Scriptural Names and their Meanings; and Eight (8) Splendid Maps in Colors, in German text (just published).

TEACHERS' BIBLES WITH THE APOCRYPHA.

- 3512 Egyptian Morocco, divinity circuit, red under gold edges,\$4.00**
- 3530 French Seal, leather lined, divinity circuit, red under gold edges,\$4.50

TEACHERS' BIBLES WITHOUT THE APOCRYPHA.

- 3412 Egyptian Morocco, divinity circuit, red under gold edges,\$3.50
- 3430 French Seal, leather lined, divinity circuit, red under gold edges,\$4.00

...THE...

Union Pacific Railroad

In Connection With

San Pedro, Los Angeles & Salt Lake Railroad

EXPECT TO BE RUNNING THROUGH TRAINS BETWEEN CHICAGO AND LOS ANGELES VIA SALT LAKE CITY EARLY NEXT SPRING.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonaugh, Colonization Agent, Omaha, Neb.

The Sterling Democrat

PUBLISHED EVERY FRIDAY AT STERLING, COLORADO.

TO DEVELOP THE VALLEY

The Penna Land, Water and Cattle Company Organized and Incorporated Under The Laws of Colorado to

DEVELOP AND STORE WATER

Cultivate Land and Raise Cattle and Hogs in the South Platte Valley Along Line of U. P. R.

It now develops that the recent visit of Mr. J. H. Otto, president of the Equity Company of Chicago, Ill., and Lancaster, Pa., will result in the organization of a company of eastern and residents of Colorado, who own land in the South Platte valley. The company will be known as the Penna Land, Water and Cattle Company, and will be incorporated under the laws of the state of Colorado. It will have for its object the placing of thrifty Dunker farmers on land now owned by Mr. Otto and his friends, to the end that the land may be brought up to that high state of cultivation which prevails in the eastern states. The company also intends to install pumping plants at various points in the South Platte valley along the route of the Union Pacific road to develop an additional water supply. Reservoirs will be constructed at suitable places to conserve all surplus water from the company's ditches, as well as that developed by the pumping plants, believing that there is more than enough water flowing to waste in the South Platte river every winter than is necessary to water all the lands during the summer months.

The introduction of the eastern farmer will also bring a large number of graded cattle and hogs into the valley to be fattened on alfalfa hay and beet pulp from the Sterling sugar factory.

The splendid showing made by Colorado at the St. Louis exposition, where her agricultural products took the lead in first premiums and gold medals, and the Associated Press dispatches telling of the building of the Sterling beet sugar factory, have turned the eyes of many eastern farmers towards the South Platte valley for lands.

The fact that Mr. Otto is a native of Lancaster county, Pennsylvania, probably accounts for the adoption of "The Penna Land, Water and Cattle Company" as the title for the new corporation. The people of the South Platte valley extend a hearty welcome to the new company and wish it all kinds of success in its undertaking.

There will be services at the Brethren church at 11 A. M. and 7 P. M. every Sunday till further notice. Everybody cordially invited.

J. H. Gordon, pastor.

A PLAIN LETTER.

Just a plain letter from a plain woman - not the kind that sits in the lap of luxury and neither weaves nor spins, but one of those of God's creatures who is glad of the privilege and ability of working. Her letter breathes such a spirit of truth and sincerity and reveals to the eye in such an unobtrusive way the noble character of "one who toils" that it is well worth reading.

Saddle River, N. J., Aug. 25.

Dr. Peter Fahrney,

Chicago, Ill.,

Dear Sir:-

"I thank you for your kindness. I am, God be praised, again in good health. I owe it all to your wonderful medicine. I am recommending the Blood Vitalizer to all my friends, even in Holland. I cannot praise it enough. I am again able to do five or six washings and ironings a week. It seems almost marvelous. My present health and strength is a surprise to those who knew me when I was sick. I hope you may live for many years yet to come and manufacture such good medicine for the people.

Yours very gratefully,

MRS. C. GROUT.

Dr. Peter's Blood Vitalizer is a remedy for the mother, the housewife, the home, in fact, for everybody. It gives health, strength and happiness. It is supplied direct to the people. Write to Dr. Peter Fahrney, 112-114 S. Hoyne Ave., Chicago, Ill.

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime.

THE NEW YEAR MINE.

Oh, every year's a hidden mine;
Stoutly up and work it:
What, though anxious toil is thine?
Never think to shirk it.

Half the mine, as I am told,
Harbors dust and ashes;
Half the mine is precious gold—
Ah, how bright it flashes!

Sink the shaft of Lazy Mind,
(What a dreadful bore, sir:)
Dust and ashes you will find,
That, and nothing more, sir!

Sink the shaft of Earnest Heart—
So the treasure glances.
Gleaming gay in every part
Where your pick advances.

See, my lad, the New Year mine,
Bright with promise flashes!
Will you dig for treasure fine,
Or only dust and ashes?

—AMOS R. WELLS.

Auburndale, Mass.

CRUISING ON THE MEDITERRANEAN.—Chap. 4.

BY D. L. MILLER.

AFTER passing the plain of Troy on our way to Smyrna, described in my last letter, we cruised for two full days among the beautiful islands of the Ægean sea, following and crossing again and again the line of Paul's voyage after his return from Macedonia to Troas accompanied by Gaius, Timothy, Aristarchus, Sopater, Secundus, and other brethren who had determined to accompany the apostle on his journey into Asia. It is a matter of record that they remained five days at Troas, where Paul preached his long sermon, continuing even until after midnight, and then, after breaking bread early in the morning of the second day of the week, they separated, Paul to walk to Assos, for he was minded to go afoot, whither his traveling companions preceded him by ship, and where they "took him in and came to Mitylene. And we sailed thence, and came the next day over against Chios; and the next day we arrived at Samos, and tarried at Trogyllium; and the next day we came to Miletus." After the most interesting meeting with the elders of Ephesus, at the last named city, and Paul's most tender and touching charge to them, with the last prayer at the seaside, and the last tearful farewell, for they were to see his face no more in the flesh, the record says:

"And it came to pass, that after we had gotten from

VATHY AND HARBOR, ISLE OF SAMOS.

them, and launched, we came with a straight course to Coos, and the following day unto Rhodes, and from thence unto Patara: And finding a ship sailing over unto Phœnicia, we went aboard and set forth. Now when we had discovered Cyprus, we left it to the left hand, and sailed unto Syria, and landed at Tyre."

The details given of this voyage are so explicit that it is the easiest possible matter to follow it after a lapse of over eighteen hundred years.

We had two perfect autumn days, Saturday and Sunday, October 22 and 23, for this most interesting cruise. The sky was clear and the sea as smooth as

a mill pond; the sun shone brightly all the day and the full moon made the nights ravishingly beautiful. We were not out of sight of land until we "discovered Cyprus and left it on the left hand and sailed unto Syria." To the west we watched the sun sink away into the sea and then turning to the east saw the full-orbed moon coming up from the waters. Those who had the privilege of witnessing the sight will never forget it. We sat on deck of the ship into the late hours of the night and almost begrudged the time

QUAY AT VATHY, SAMOS.

spent in sleep, that took us away from the beauties of the scene. Our course took us by Troas and Assos, and then sailing over against Chios the next day we came to Samos where we cast anchor and had the privilege of going ashore. I have passed over this route several times before and have always been impressed with the accuracy of the description of Paul's voyage, but after reading it have always found myself wishing there was more of it.

Vathy, the capital of Samos, is a beautiful little city, with a population of six thousand, pleasantly situated on the slopes of the hill bordering the sea. The "Orenoque" cast anchor a quarter of a mile from the quay and we were taken ashore in small boats manned by Greeks. The city contains the Governor's house, or palace as it is called, Government buildings and the house of parliament only recently completed at the cost of the modest sum of fifty thousand dollars. The streets of the city are kept scrupulously clean, the houses are well built and newly painted, and altogether it is in striking contrast with the filth and foul smells of the Turkish capital. *It is not a Turkish town.* The little Greek church which we entered, for it was the Lord's Day and the house of prayer was open for worshippers, is a model of cleanliness and comfort.

Aside from the fact that Paul was once at this place the little island of Samos has a very interesting history. Every lover of liberty and true progress will

rejoice to know that in part at least it is free and independent of Turkish rule. Ever since the year of 1826, when Greek liberty was assured, Samos has been semi-independent. For this privilege they are compelled to pay the Sultan an annual sum of ten thousand dollars, and that ruler has the right to appoint the governor, who, however, according to the treaty, must be of the orthodox Greek faith. The island has a population of some fifty-four thousand Greeks and seventy Turks. All of the latter are officials looking after the Sultan's interest. The present governor is a Greek by birth, a member of the orthodox church, is well educated, speaks English fluently and is regarded as a good man and a judicious ruler. He has a liberal education and spent some years at the capital of the United States.

The climate of Samos leaves nothing to be desired, if the voice of the natives is to be taken in evidence, for they tell you with all gravity that their island has the most salubrious climate in the world and that it is never too cold or too hot. The vine is cultivated ex-

course the grape raising area of the island is small and the production of wine limited.

Tobacco of a very fine quality is also grown to some extent, and cereals, the semi-tropical fruits, with figs and olives are also produced. The soil is fertile and the people of the island appear to be prosperous and happy. They have neither army nor navy to support. The island is policed by the natives, but these have

GOVERNOR'S HOUSE, VATHY, SAMOS.

tensively and the wine, which is one of the chief products, is of such fine quality and excellent flavor that it is never sold to the general market. It finds its way to tables of the royalty of Europe and to the most fashionable clubs and hotels in London and Paris. This makes the cultivation of the vine very profitable to the people of Samos. On a former visit to Samos, in 1898, our ship took on board a hundred or more large casks of wine for transportation to Europe. Of

VATHY POLICEMAN WITH FLAG.

little to do, as the inhabitants have the reputation of being well behaved and of peaceful disposition.

For some time after sailing away from Samos we had the beautiful little island and its interesting capital astern, and after losing sight of it we had other places of equal interest in full view. To the left we passed the coast line of Asia Minor, and with our glasses could easily distinguish the site of Miletus, where Paul called the elders to him, and farther inland the ruined city of Ephesus, the site of one of the seven churches of Asia. But perhaps more interesting than all these is yonder rocky islet known so long as Patmos, whither the beloved apostle, St. John, was banished by the Roman emperor Domitian, A. D. 94, and where he had the wonderful apocalyptic vision and wrote the book of Revelation.

"I, John, who am also your brother and companion in tribulation, and in the kingdom and patience of Jesus Christ, was in the isle which is called Patmos, for the word of God, and for the testimony of Jesus Christ.

"It was in the Spirit on the Lord's day, and heard behind me a great voice, as of a trumpet, saying, I am Alpha and Omega, the first and the last: and, What thou seest write in a book, and send it unto the seven churches which are in Asia; unto Ephesus, and unto Smyrna, and unto Pergamos, and unto Thyatira, and unto Sardis, and unto Philadelphia and unto Laodicea."

Patmos is but twenty-eight miles in circumference, and has a population of some four thousand, most of them Greeks, but they are under Turkish rule. There is but little fertile land on the island, and what is there is planted in vineyards and pasturage for sheep. Sheep herding and vineyarding are the chief occupations of the inhabitants.

A cave over which a Greek church has been built is pointed out as the place where St. John is said to have had his home and where he wrote the message declared unto him by the Lord. Thousands of pious pilgrims, mostly Russians, visit the island annually for the purpose of meditation and prayer, and no little

POLICEMEN AT SAMOS.

revenue comes to the dwellers from this source. The island is well worth a visit because of the sacred associations connected with it. It is situated some twenty miles from Samos and about thirty from the coast of Asia Minor.

Very early in the morning of the next day we discovered the island of Cyprus to our left, and passing on that side of it we continued in a straight course to Beirut in Syria. Here we found a ship, "The Portugal," ready to depart for Jaffa, and we went aboard and set sail for the city by the sea. At Beirut our five traveling companions left us to make an overland journey from that place to Jerusalem.

In the evening we loosed from Beirut and in the early morning of the next day cast anchor in the open sea a half mile from Jaffa. The sea was smooth and we made our sixth landing at the city of Peter, Dorcas and Simon the tanner with the greatest possible comfort. It was very unlike some of our previous landings when the sea was rough and we had some very trying experiences. Here at Jaffa our cruise of the Mediterranean ended. It continued for the space of two weeks and our ship's log showed that from Mar-

seilles we had made in round numbers twenty-eight hundred miles. The voyage was a most pleasant one and at its conclusion we had occasion to thank the Giver of all good for his watch care over us.

* * *

THE TRUE STORY OF MARY AND HER LITTLE LAMB.

ONCE upon a time, long ago, before most of our grandmothers were alive—in fact, when the last century was only six years old—there was born, in a quaint little one-story house that stood among the trees of a quiet farm in America, a little girl, who was named Mary.

This little Mary Sawyer grew into a bright and cheerful child, with a great love for dumb animals. From the very time she could toddle after her father through the barnyard, every four-footed thing on the farm was her friend. Animals always love those who love them, and little Mary was quite as safe in the stall of a spirited horse, playing with a baby colt, as she would have been sitting within doors nursing a rag doll.

One raw March morning, when Mary was seven or eight years old, she went out to the barn to see her father feed the cows, as she usually did, no matter how cold it was, nor how early. In the sheep pen they found two wee baby lambs. The mother had cared for one of them, but had pushed the smaller and weaker one aside. The poor creature was almost dying, and as Mary looked at it her eyes filled with tears.

"Q father!" she said, "please let me have it for mine own, and take it into the kitchen. I will treat it better than its mother does."

At first he said no, but he could not help giving way to his tender-hearted little daughter's pleading, and at last said she could take the lamb if her mother was willing.

Mary ran to the house, where she did not find it very difficult to get her mother's consent.

She wrapped the lamb in a warm shawl and held it snugly in her arms near the fire, and tried to tempt it with some milk. It did not seem to grow any stronger, and the young nurse was almost in despair.

Both her father and her mother told her that her efforts were of no use, the lamb would certainly die; but Mary had made up her mind not to leave her little charge as long as it breathed. When night came she begged leave to sit up with the lamb in her arms. Just before morning it was able to drink a little milk that the child had warmed. Worn with her night of nursing, Mary went to sleep, and when in the early morning her mother came into the kitchen, she found the two little ones cuddled together fast asleep.

From that time the lamb grew steadily stronger. Mary kept it in the house until it was able to run about,

and by and by when it was sent to the farmyard it always followed her whenever she came out of the house. The little girl took great pride in her pet's appearance. She used to tie up its wool with gay ribbons, and sometimes she and her brother Tom would dress it up in a shawl, and then they thought it was the "funniest looking thing that ever was."

One morning, just as Mary and her brother were starting for school, Mary remembered that she had not said good-morning to her lamb. She called to it as she walked down the garden path, and, bleating a joyous answer, it came running to her side.

"I tell you what we'll do," said Tom, who had perhaps more than his share of love for boyish mischief. "Let's take it to school."

"Very well," said Mary, who saw no real good reason for leaving her little woolly friend behind. The lamb trotted happily along by her side, and they reached the schoolhouse early, before the teacher came, though some of the pupils were standing at the door. At first Mary did not know what to do with her pet. But then the idea came to Mary that the lamb could hide under her seat. The little thing had such trust in its young mistress that it stayed where she placed it, under the seat, covered with her shawl, and was soon fast asleep. It was so quiet, indeed, that Mary, busy with her book, forgot it until she left the place to say her lesson to the teacher. Then a clatter of little hoofs on the bare floor quickly reminded her that the lamb was with her, and, as usual, was following her every step.

Of course the other children all laughed and giggled, and poor little Mary, blushing and much ashamed, was sternly reproved by her teacher.

"Take that animal out of the school at once, Mary Sawyer," she said. "I am surprised that you should bring it here. Never do such a thing again."

It happened that a lad of seventeen, who was preparing for college, had stopped at the school to rest during a long walk, and he was much amused by the affair of the lamb, which happened during his visit to the school.

The next day he went over to the farm where Mary lived, and handed the little girl, who was playing with her pet, a piece of paper, on which were penciled these lines:—

"Mary had a little lamb,
His fleece was white as snow;
And everywhere that Mary went,
The lamb was sure to go.

"He followed her to school one day—
That was against the rule;
It made the children laugh and play
To see the lamb at school.

"The teacher therefore turned him out;
But still he lingered near,
And waited patiently about
Till Mary did appear."

Thus it was that the verses that have been said and resaid to baby ears over and over again for half a century came to be written by a bright, fun-loving boy, who never wrote anything else that any one knows of. Although the verses became quite popular in the neighborhood, and were printed in a newspaper soon after they were written, they did not become very widely known until after they appeared in a volume, called *Poems for Our Children*, published in 1829. It is believed that Mrs. Sarah Joseph Hale, who got up the volume, added the last two verses, which run:—

"Then he ran up to her, and laid
His head upon her arm,
As if he said, 'I'm not afraid;
You'll keep me from all harm.'

"'What makes the lamb love Mary so?'
The eager children cry.
'Oh, Mary loves the lamb, you know,'
The teacher did reply."

Little Mary, the heroine, did not like all this, and often wished that the verses might have remained private. But when one considers how much pleasure and amusement many little people have got from the oft-repeated words, it seems that it was best after all that they should become known, particularly as Mary grew into a very good and useful woman, and is gratefully remembered by those who knew her for her sweet character and noble work as matron of a hospital.

We are sorry to say that the lamb came to an untimely death. Mary was out in the barn one day watching the cows, and the lamb was at her heels. As Mary and her pet passed by a cow it turned furiously and gored the lamb. It was a fatal injury. In speaking of it, long years afterwards, when she was an old lady, Mary said,—

"I shall never forget the agony and appeal in the lamb's eyes as they turned to mine. I gathered the little creature in my arms and held it until it died. I have had many troubles in my life, but never have I experienced keener grief than when my dear little lamb died in my arms."

Mary would not wear the stockings which her mother knitted from the soft, warm fleece of the lamb, but carefully preserved them as a precious remembrance of her pet.—*The Little Chronicle*.

PRODUCTION OF GOLD.

THE total production of gold from the mines of the world for 410 years, or since there has been any record of the same kept, is officially given at \$10,693,236,302. The total production of gold from the mines of the United States since its discovery is given at \$2,539,503,140. Of this the Eastern and Southern States produced \$32,492,648, leaving \$2,507,010,492 as the amount of gold produced by the mountainous country west of the meridian of Denver.

HOW BARREL STAVES ARE MADE.

BY D. Z. ANGLE.

SEVERAL times during the past summer we visited a stave factory in operation at Wayne City, Ill. This building occupies about two acres of ground, including the machinery, timber to cut, and space for rick-ing up the staves. The main building, where the sixty horse-power engine is located, is about forty feet wide by sixty feet long. Under this roof is the rip saw, the equalizer, the stave cutter, an emery wheel, a grindstone, three and one-half feet wide by six inches thick, which is run by belt the same as the other machinery, and is kept going constantly.

At the south end of the building are eight air-tight steam boxes, which hold about twenty-five cords of wood. The wood is hauled on the ground, cut in blocks three feet long; also logs of different sizes and lengths, and variety of species but mostly hickory, gum, sycamore, oak, and elm. Some of the sycamore logs are of immense size; we found one four feet and four inches across the big end.

There is a separate engine and saw for cutting up the long logs. For the three-foot wood they pay two dollars per cord. These blocks are cut first by the rip saw into smaller sections, which are placed in the steam boxes and left there over night. This steaming takes the sap out of the wood. The steam is obtained from the engine, a night man being required to attend to this work. In the morning these blocks are ready to cut; the men carry them to the equalizer, which is nothing more than two circular saws, one on each end of a three-foot crank and running at high speed. After going between these saws every block is cut off the same or equal length. From here the blocks are handed to the stave cutter, who feeds them to a long knife some three feet in length. This knife swings back and forth, something like the pendulum of a clock, and cuts a stave each time it swings forward. And it doesn't swing very slow either to cut twenty-five cords of wood a day. The bolts probably average fifty staves each, but we heard of one making one hundred and eight staves. This is a dangerous place, as the man who does the feeding, with a little carelessness, might quickly lose a finger or two. A man on the opposite side of the cutter receives the staves as they are cut and lays them on a frame from where they are taken and put on a two-wheeled cart; then they are hauled away and stacked up and covered with sheds for protection from the weather.

After drying some time, the staves are taken down by boys and carried to the jointer. This machine is operated by one man alone. He cuts the staves very rapidly, in the shape we see them when made in

barrels, that is, wide in the middle and narrower at the ends. The operator does this at two strokes, cutting first one side of the staves, then the other side. At the same time he grades them by throwing them in several different piles. This grading requires much care and attention, as some of the inferior staves might be placed with the better grade.

But it is indeed remarkable how fast the men can work and apparently make no mistakes. One person takes the staves and places them, one by one, on a frame, fifty in a bunch, tying it up neatly, and then ricks these bunches up ready for shipment to some barrel factory. This isn't very desirable employment, especially around the engine, the saws and the stave cutter. Recently the belt wheel, which runs the rip saw, broke and two pieces flew off; one broke through the oak board siding and landed out in the yards. No one happened to be in the way to get hurt. Another time a man would have fallen on the rip saw if it had not been for a fellow workman, who caught and thus saved him from an awful death.

However, none of the twenty men have been seriously hurt during the six months the plant has been running at this place. It will probably stay here for several years, or until all the available timber has been cut into barrel staves.

Later on if the Editor permits, we may give the Nook readers a short article, describing the butcher block factory, located in the same town.

Mt. Vernon, Ill., R. F. D. No. 7.

MAN'S PHYSICAL MACHINERY.

THE average weight of an adult man is 140 pounds, six ounces.

The average weight of a skeleton is about fourteen pounds.

Number of bones, 240.

The skeleton measures one inch less than the height of the living man.

The average weight of the brain of a man is three and a half pounds; of a woman, two pounds, one ounce.

The brain of a man exceeds twice that of any other animal.

The average height of an Englishman is five feet nine inches; of a Frenchman, five feet four inches, and of a Belgian, five feet, six and a half inches.

The average weight of an Englishman is 150 pounds; of a Frenchman, 136 pounds, and of a Belgian, 140 pounds.

A man breathes about twenty times a minute or 1,200 times in an hour.

A man breathes about ten pints of air in a minute, or upward of seven hogsheads in a day.

A man annually contributes to vegetation 124 pounds of carbon.

The average of the pulse in infancy is 120 per minute; in manhood, eighty; at sixty years, sixty. The pulse of females is more frequent than that of males.

The weight of the circulation blood is about twenty-eight pounds.

The heart beats seventy-five times in a minute; sends nearly ten pounds of blood through the veins and arteries each beat: makes four beats while we breathe once.

Five hundred and forty pounds, or twenty-four hogsheads and four gallons, or 10,782½ pints, pass through the heart in twenty-four hours.

One thousand ounces of blood pass through the kidneys in one hour.

One hundred and seventy million holes or cells are in the lungs, which cover a surface thirty times greater than the human body.

* * *

HABITS OF LIZARDS.

The Little Reptiles Are Good-Natured and Fond of Frolicking.

WHILE the abandonment of their eggs in an apparently heartless manner leads to the supposition that they are indifferent to the welfare of their offspring, which is true, it is somewhat interesting to notice how very tolerant they are of the petty annoyances to which their own or another's young subject them. My observations on this point were made from a number of young, and old, confined in a roomy Wardian case, but probably what I saw there holds good among the lizards in their native haunts. I am sure it did among the many living on the old trestle at May's landing. Often a little lizard, and sometimes two, would perch upon the head and back of an adult, and be allowed to sit there fully an hour. The sharp claws of these youngsters seemed at times dangerously near the eyes and ears of the patient old one, but it offered no resistance, and, when I forced such burdened lizards to move, it was always with a deliberateness that suggested that they were really averse to disturbing those resting upon them.

Again, adults would often rest upon each other in what appeared to be a most uncomfortable manner for the one beneath, often pressing the head of the latter into the sand, and completely blinding it for the time; yet I never saw the slightest evidence of ill-humor, not even when being fed. Often it happened that some sleepy fellow would quietly snap up the fly toward which another lizard was cautiously crawling, yet no fight ensued. Anything more trying than this to humanity can not be imagined, yet the lizards took every occurrence as a matter of course.—*Christian at Work.*

FOOD ADULTERATION IN EUROPE.

CONSUL-GENERAL GUENTHER, Frankfort, reports: An article on the adulteration of food products is going the rounds of the German press. It is stated, for instance, that the ordinary liver patty is made into fine "Strassburger" pate de foie gras (a goose-liver patty) by means of borax and salicylic acid and finely chopped and cleverly distributed pieces of black silk, representing truffles.

Cosmos, a German paper, guarantees the fact that under the label of canned lobsters the soft parts of the cuttlefish and crabs are sold.

In Paris snails are, of late, very popular, and the adulterators mix them with lungs of cattle and horses. Even entirely artificial snails are manufactured. The shells, recoated with fat and slime, are filled with lungs and then sold as "Burgundy" snails.

Lovers of fresh rooster combs are imposed upon by a substitute cut out of hogs' intestines.

Chopped artificial truffles are made of black rubber, silk, or softened leather, and even whole truffles are made out of roasted potatoes, which are given a peculiar flavor by adding ether.

Fish spoiled in spite of ice and borax is treated with salts of zinc, aluminum and other metals. Rubbing the fish with vaseline to give it a fresh look and coloring the gills with fresh blood or eosin—a coal-tar color—is resorted to. The latter is also used to intensify the red color of inferior crabs.

Imparting a greenish color to oysters is another adulteration. An oyster requires about one month in the beds to acquire the greenish color. As this is too long a time, the dealers help them along with artificial color.

The chemists in the Paris municipal laboratories have shown that tomato jelly is adulterated with turnips, and powdered pepper contains a large admixture of powdered hard-tack.

* * *

WHY FROGS ARE COLD.

MANY boys have probably wondered why frogs are cold to the touch, and some of them look upon these little creatures with a sort of horror, believing that they have no blood. But such is not the case, for they have not only blood, but they possess nerves and can feel. Perhaps if this were more generally known there would not be so many heartless boys who seem to take special delight in torturing frogs and toads. According to scientists, frogs are cold blooded because they consume very little air. It is the same with fishes. Without a plentiful supply of air there is not much animal heat, because combustion is slow.

DRUG STORES IN SWEDEN.

BY A. W. VANIMAN.

IN America, almost every little village has a drug store, and the time was when almost any one could set up a drug store without any restrictions. But now in the most of the states, a person must pass a required examination before he is allowed to take charge of a drug store where prescriptions are filled. The drug store is a private enterprise, and the owner of a drug store can sell it at any time to any one he may see fit. But such is not the case in Sweden. No man can sell a drug store to any one he may choose. The drug business is under the control of a committee who determine where drug stores may be located and who shall have the right to control them. This strictly speaking refers to apothecary shops, or in other words, places where physician's prescriptions are filled, and where poisons are sold.

When a man dies or wishes to leave the business of keeping such a store, this committee determines who shall have the right to the place. This is determined by the length of time a man has been in the business of filling prescriptions anywhere in Sweden. They take turn like in the railroad business. The person taking charge of the place is under no obligation to purchase the stock of the former proprietor but may set up in another building, in the same vicinity. He may buy the old stock and continue at the same place if he sees fit, but is under no obligations to do so.

There are very few drug stores in Sweden in comparison with America. In Malmö a town of nearly seventy thousand inhabitants there are four drug stores besides several stores where the heavier classes of drugs are sold, but no poisons. There is talk of locating two more in the city, and when it is done the committee will determine the vicinity where they are to be located. No one can purchase any poison at a drug store without a prescription from a Swedish physician. Sometime ago the writer desired to have a prescription for a liniment filled and because it had about a teaspoonful of chloroform in it they refused to fill it in that form, and although they well know that he is a practicing physician in America it was just the same. The law is extremely strict on a druggist who sells poisons without a Swedish doctor's prescription. One can think that such experience is a little humiliating for an American. But such is the way of the world, one must adapt himself to his surroundings. A physician of our acquaintance has very kindly offered to put his name to any prescription we might want to have filled.

As compared with America, physicians are few. There are thirty-nine physicians in Malmö, while in a

city of its size in America one would expect to find at least two hundred. So far as my observation goes they never prescribe their own medicines even at the bedside, but write a prescription. And the druggists have a great deal to do. One drug store here, where we are well acquainted, often fills three hundred prescriptions per day. When a prescription is filled it is handed back and one finds it also written on the label. So when one picks up a bottle of medicine he can see what the medicine is, provided he is acquainted with the Latin name of the medicine. Patent medicines are used somewhat but nothing to the extent that they are in America. It is probably that much better for the people. Many persons take medicine more from habit than from absolute necessity.

A large proportion of people can wait patiently for nature to cure a disease if they are taking some medicine, where it would be very difficult to do this if they did not feel that they were at least doing something to help the case along. But it is encouraging to see that physicians are prescribing less medicine and teaching people more hygiene and right living.

Malmö, Sweden.

* * *

THE COUNTRY HOME AND ITS ENVIRONMENT.

IN every home, whether in city or country, three things are absolutely essential to health; viz: pure air, pure water, and pure food. We have seen in previous articles how both the food and water are often contaminated; also how the atmosphere is rendered impure. Let us now consider some of the causes that are at work, at least in country homes, to create local miasms and beget disease. For example, the farmer who is about to build a house, may decide to locate it near a stream of water; though this may be stagnant a good part of the year, with green scum floating on its surface.

In a large per cent of all our states, the wind blows from the south or southwest during most of the summer months, and sometimes in the winter; so that if the farmer builds his home on the north or east side of a sluggish stream, the breezes will blow over the stagnant water, and carry the germs of malaria directly into the house and yard. It would be better therefore to put the residence on another side of the stream, and if possible a little distance away from it. Or if there is a stagnant pond near by, would it not be well to avoid any contagion that might be generated by it? The location of a barn or stable is also an important matter in a country home; for unless it is kept exceedingly clean, the exhalations given off from the stable and elsewhere, might be blown right into the house.

Then there are pig pens, cow lots and poultry yards to be located. There is a best place for these, and

to insure the health and comfort of the family it should be found. Most important of all, however, is the source of the water supply. If a well is to be dug, and the water used for drinking and cooking purposes, the farmer should try to locate it in such a way that impurities from the barnyards, stables, vaults or privies (not to mention cow lots, pig pens and the like), cannot find access to it. I have seen more than one case of typhoid fever in farm places and in towns and villages, where the well stood very near the privy and also to the barnyard.

Even in our cities, especially in the wild and woolly west, the most obvious rules of health and sanitation are apt to be disregarded. I have known families who made considerable pretense, in their persons at least, to neatness and style, who not only kept chickens in their back and front yards (with every spear of grass eaten off), but in winter these fowls were housed in the cellar. When we consider that the atmosphere in basement apartments can easily be carried all through the house, this of itself ought to be an objection to keeping poultry in them.

I once lived next door to a lady (worth a good many thousand dollars), who had a compost heap not merely in her back yard, but at the kitchen door; chickens' heads and feet, and other things still more objectionable went into the pile. In the large front window facing the street there were pies, cakes and candies, with other tempting confections, which she sold to the best class of people. These individuals could not of course look over a high fence into the back yard. Not every dweller in cities, nor even in country places, observes the same neatness and order in the back yard that is generally displayed in the front. And yet, I know people who think more of their back yards and take better care of them than they do of the little patch at the front door, because they go into them oftener, to get the fresh air and sunshine.—*Susanna W. Dodds, M. D., in Health Culture.*

* * *

MISTAKEN HOSPITALITY.

THE dietic value that insures the richest reward is but scantily honored with the fewest supporters—to wit, moderation in eating. Every detail in our meal-time environment is equipped with a gluttonous incentive of some kind. All our food auxiliaries have but one mission, and that is to keep the desire to eat in active working order after the wants of nature are satisfied. Most of our kitchen practice with the cookery book tempts the victims of knife and fork folly into the same self-indulgent direction.

The pungent imps of the cruet confuse and demoralize our natural instincts; till we become so blind and so deaf to the warnings of nature, we are easily cajoled

into a fool's paradise of false flavors where thousands prematurely perish from overeating.

The health-defying hospitality of mistaken friends is another stumbling-block in our path, and one, too, of the most formidable kind. A foe in friendly guise is difficult to overcome.

When the entreating voice and pleading look accompany the thing we would avoid, we shrink from employing our usual methods of defense. How can we meet with a frown, an error the whispers of love? For instance, "Do have another piece. Mother made it on purpose for you." Then again, "What! Not have a taste of Sarah's cake? She made it because she knew you were coming." Another time, "It's no use saying 'No.' You've got a long walk before you, and another slice won't hurt you." But there, all my readers know these meal-time importunities by heart, for all in turn become victims to this very common form of mistaken kindness, to which, at times, we yield, much to our discomfort.

How can we lessen the frequency of this social sin? Eating to please others, irrespective of our own personal needs, is a physiological transgression of the worst kind.

To be invited to do so is a form of temptation very common with the fair sex, who are swayed more by impulse and emotion than by the dictates of wisdom. Will this social failing be one of the weaknesses of the coming woman?

I guess this wonderful creature we talk so much about will present the same delightful tangle of perplexing contradictions, so well known in the present day only in another, and perhaps a more trying form.

It is much to be regretted that feminine love and kindness so often find expression in something nice to eat. All boys and girls—almost without exception—are the greatest sufferers from this very natural form of mistaken kindness. Pastry and sweets are the articles usually selected. Grease-soddened tarts and cakes are the dietetic fiends that early in life impair the digestive powers, pamper the appetite and vitiates the taste. And in addition they teach the young how to spend their odd pence foolishly, and also help them to acquire the pernicious habit of eating between meals. For granny calls at all times and so does Aunt Fanny, and they never come without bringing "something nice" for the little ones. And if mother remonstrates she is stopped at once by the assurance: "It's very light, dear; it can't hurt him." If all these kind-hearted persons would only purchase fruit instead of pastry, the evils of which we complain would cease.—*Health Culture.*

"THE man who knows when to stop will not lack for opportunity."

INDIAN SCHOOL EXAMINATION.

BY W. B. STOVER.

Examination Questions, with best answers given, of an examination of the children in the orphanage at Bulsar, India, Nov. 5, 1904.

1. What is the first argument that the Bible is the Word of God?

Many of the writers of the Bible have at times healed the sick, opened the eyes of the blind, and raised the dead. If God were not with them they could not have done this.

2. What is the second argument that the Hindoo books are not divine?

They speak of many gods, and they show lack of wisdom on every hand, they not only commit sin, but delight in the same. If they were of God, it would be not this way.

3. What is sin?

Doing what God has commanded not to do, and not doing what he has commanded to do,—this is sin.

4. Tell the different actions of repentance.

Sorrow for sin, hatred for sin, complete turning from sin.

5. How obtain forgiveness of sin?

“Without the shedding of blood is no remission.” Christ is the one sin-offering for all the world. But if a Christian sin, his way to pardon is a complete repentance, restitution, and asking pardon in the name of the Lord Jesus Christ.

6. What evils come from lying?

If a person who tells lies should tell the truth sometime, no one would believe him. He who departs from the truth loses all honor, closes the door of opportunity against himself, and sins against God.

7. What is prayer?

Prayer is coming to God, confessing sin, asking pardon, praising God and worshiping him. Prevailing prayer is in the name of the Lord Jesus.

8. What are the two great commandments?

“Thou shalt love the Lord thy God with all thy heart and him only shalt thou serve,” and “Thou shalt love thy neighbor as thyself.”

9. What is the first necessary thing in establishing Christianity?

The first thing is to be a good Christian yourself, then do what you can to bring others into the whole truth with yourself.

10. What advantage would it be to have all the world become Christian?

If all were to become true Christians, war would cease, quarrels, fights and jealousy and lying and theft

would cease. Criminal courts and jails would close, and this earth would become like heaven itself.

* * *

AN OSTRICH FARM.

NOT the least interesting feature of a visit to the “City of Angels” is an excursion to the ostrich farm situated some miles north of the town. The road leading to it runs along the bank of the Los Angeles river. There are low hills to the left, and beyond the river the mountains seem veiled in a soft, peculiar haze.

At the farm the keeper of the ostriches offers his services as a guide, and proffers his whole stock of information for the small consideration of twenty-five cents per capita. The birds are confined in alfalfa yards about fifty feet square—a male and female in each enclosure. It was once thought that the ostrich could not be tamed, but this was found to be a mistake, for since the experiment of farming for feathers has been made, the ostrich has become domesticated. If, by chance, a man stands near an ostrich it will possibly pull the buttons from his coat, for it is inordinately fond of hard substances. The gizzard of an ostrich was once opened, and it was found to contain nearly one thousand stones, varying in size from a pea to a walnut. Some of the ostriches, when holding their heads up in the air, were nearly nine feet high, and weighed at least three hundred pounds.

The ostrich is plucked about every seven months. It is first driven into a corner, and its head covered with a coarse sack. Two men, by means of a board, hold him in position, while the third does the plucking. The California ostrich yields about twenty-five plumes from each wing. The feathers of the male bird are black and white; those of the female gray and brown.

The wings of the ostrich are of no use for flying, as the plumes float loosely about quite unlike the firm, compact feathers of flying birds, but when running the ostrich uses his wings like sails. Also in walking he spreads them out with a fan-like movement and when engaged in waltzing, an exercise which these birds delight in, the spread-out wings of the female give her the appearance of a ballet dancer as she whirls round and round in a most amusing dance.

The egg of an ostrich is as large as thirty hens' eggs, and is said to weigh about four pounds. The color is yellowish-white, slightly mottled. In Africa the shells are used as water buckets. The African cooks the egg by placing it upright on a fire, while through a hole in the upper part he stirs the contents with a stick.

A young ostrich just out of the shell is about as large as an ordinary hen. It has a long, soft neck, prettily striped in light and dark brown; its legs are very long, its eyes large, brown and expressive.

The ostrich sits upon the eggs for six weeks, but it is relieved at night by the male, who assists in the process of incubation. If the female is not on time in the morning he sometimes goes after her and drives her back to her nest. The ostrich is occasionally used to ride upon, and surpasses the horse in speed. He has very opposite characteristics, being bold, yet gentle, stupid yet cunning; he is an epicure, but also a gourmand; he can see afar off, yet he stumbles over obstacles near by.

Upon being chased he does not keep on in a straight line, but foolishly runs from side to side and finally in despair hides his head in the sand, as if thinking himself unseen because his own eyes are hid. Perhaps this habit caused Job to say of this ancient bird that "God depriveth the ostrich of wisdom; neither hath he imparted to her understanding."

It is possible that ostrich farming may become a profitable business in this country. Three hundred acres of grazing ground will support some thirty-five ostriches very well. Lucerne, or alfalfa, a perennial of the clover family, furnishes an excellent food for them, and possesses the advantage of withstanding seasons of drought, so that the day may come when "farming for feathers" will not be so small an occupation with us as it is at present.—*Belle P. Drury.*

* * *

"HOBSON'S CHOICE."

DID you know that this familiar phrase, "Hobson's choice," preserves the memory of a very good and useful man?

Thomas Hobson was born in 1544; he was for sixty years a carrier between London and Cambridge, conveying to and from the University letters and packages, also passengers. In addition to his express business, he had a livery stable and let horses to the University students. He made it a rule that all the horses should have, according to their ability, a proper division of work and rest. They were taken out in regular order, as they stood, beginning with the one nearest the door. No choice was allowed, and if any man refused to take the animal assigned him he might go without any. That or none. Hence the phrase, "Hobson's choice."

In the spring of 1630, the plague broke out in England. The colleges of Cambridge were closed, and among the precautions taken by the authorities to prevent infection, Hobson was forbidden to go to London.

He died in January, 1631, partly, it is said, from anxiety and fretting at his enforced leisure. Hobson was one of the wealthiest citizens of Cambridge, and did much for the benefit of the city, to which he left several legacies. His death called forth many poems from members of the University, officers and students, among them two by the poet Milton, when a student at Christ's College.—*Wide Awake.*

JEWISH SOLDIERS IN THE CZAR'S ARMY.

AN interesting side light is thrown upon the far eastern war and upon the question of Russia's relations with its Jewish subjects by an incident reported by John F. Bass, staff correspondent of the *Daily News*, in a letter from Manchuria published yesterday. While visiting one of the Japanese hospitals after the battle of the Yalu Mr. Bass saw a number of the Russian wounded. "Do you speak German?" some of these men were asked. "We are Jews," was the reply, "and all Jews speak German." A large number of them, Mr. Bass adds, were Polish Jews, who had fought much better than their commanding officers had done.

The fact speaks eloquently of the patience and obedience of the Jewish people in Russia and of the injustice and ingratitude of the treatment they have received at the hands of the Russian government and the Russian people. Summoned to arms as subjects of the empire, the Jews are doing their duty loyally in Manchuria. Such a spectacle should shame even the tyrannous bureaucrats who have permitted the Jewish outrages into compelling measures of reform on behalf of these persecuted people.

LARGEST FILTRATION SYSTEM.

PHILADELPHIA now has nearing completion the largest filtration system in the world. This will include four plants with capacities of two hundred and forty-eight million, sixty-five million, twenty million and twelve million gallons. The consumption is two hundred and twenty-nine gallons per capita daily, but it is hoped to reduce this by the meter system to one hundred and fifty gallons. The plants would then have sufficient capacity for a population of two million three-hundred thousand if ample clear water storage were provided. The largest of the two small plants will have preliminary filters, as the water is not subject to much sedimentation. The slow sand filtration system is used, the plants having five, eight, eighteen and fifty-five basins each. They range in size from sixteen feet by sixty-four feet to one hundred and forty feet by two hundred and fifty feet, and are five and one-half to six feet deep. The raw water entering at the bottom passes upward through three inches of coarse gravel, ten inches of screened furnace slag, one and one-half inches to three quarters inch in size, twenty-four inches of slag three quarters inch to one quarter inch in size, and nine inches of compressed sponge. There will be a pumping station with six vertical triple expansion engines of twenty million gallons capacity.

* * *

People are very poor who have nothing they cannot lose.

A RIVER THAT LOSES ITSELF.

THERE is a beautiful little valley in Eastern Washington Territory that is considered one of the most singular sections of that part of the country.

This is the Spokane valley, so narrow for its length that it is scarcely more than a rift among the mountains that surround it. It is thirty miles long, and from three to nine miles wide, and through it runs the wonderful Spokane river which loses itself in such a remarkable way. One can scarcely find a lovelier lake than the Cœur d'Alene in which the river takes its rise, and from which it flows down into its own green valley, carrying with it, as it seems, the lovely scenery of beautiful Idaho, in which the lake lies.

What struck me as very remarkable, was the fact, that, though several large rivers that drain the western water-shed of the Cœur d'Alene mountains pour immense floods of water into the lake, its only outlet, the Spokane river, is but a brook in size and receives no tributaries of any account until below its curious falls. Here is where the river loses itself. It flows from the lake scarcely more than a brook in size, runs for thirty miles without much increase in volume, when suddenly it swells into a mighty river half a mile wide, whose surging, roaring flood sweeps on to the falls over which it plunges.

Where this wonderful increase of volume comes from, is one of the mysteries of the river. Men, learned in the phenomena of nature, think that the water all comes from the lake, but that from the time of its rise until the water suddenly surges into the river bed, *the river loses itself*; that is, its upper waters sink down through the gravelly soil, and then rise to the surface again, after a flow of thirty miles.

The scenery in the vicinity of the river is very lovely. The valley is surrounded on all sides by the Bitter Root Mountains and from where the river rises close under the timbered mountains of Idaho, until it takes its final leap into the cañon, its course is one long stretch of enchanting views. But at the falls it reaches its highest beauty, not only in the loveliness of the surrounding hills, but in the magnificence of the falls themselves, and the grand and curious aspect of the river.

Just here, where the river is half a mile wide, it is divided by islands of green basaltic rock, against which the water rushes in swift rapids; but the islands standing immovable, break the great body of the river, and divide it into three wide streams of passionate waters, that, curving toward each other, re-unite and empty their floods into one common channel. Here, for several hundred yards, the waters foam, and toss, and churn themselves into whirling rapids, and then throw themselves headlong into the cañon below.

If you could stand upon the rocky ledge below the lower waterfall and watch this war of waters, this heaving and struggling of the great river within its rocky channel,—ah, how you would feel! and then lift your eyes to the gently sloping banks, so green and peaceful in the light of sunset over it all—can you imagine anything fairer?

I think, if you could see it thus, with the grand flow of waters near you, and the grand setting of mountains so far off, you would wish to stay forever in the pretty little town that lies like a lovely picture in its magnificent framing of water and rock-work.

The town of Spokane Falls is as bright and busy a little city as you can find in the great West. It is built upon a gravelly plateau that slopes gently to the river, and a future of much commercial and manufacturing importance evidently awaits it, owing to its great water power, which is nearly thrice that of the Falls of St. Anthony, at Minneapolis.

Then, too, its wonderful beauty of location, its fine climate and productive soil, together with the mineral wealth of its mountains, which are threaded with valuable veins of ore, go to make the city of Spokane Falls one of the richest in natural gifts to be found in our wide country.

HINDOO MUSIC.

BY MARGUERITE BIXLER.

THE word Veda means "Knowledge." There are four Vedas found in the sacred books of the Hindus, each of these consisting of three parts. The Rig-Veda, contains 1,017 hymns of praise of the personified powers of nature. The Yajur-Veda contains hymns and text arranged for sacrifice ceremonies. The Sama-Veda contains many of the hymns of the Rig-Veda rearranged for worship. The Atharv-Veda is composed of verses used as magical spells for calling down or turning off evils. All the Vedic hymns are believed to have been given by the gods, having no human authorship.

I wish to quote some very interesting statements concerning music in India, from Mr. Telang, a Brahman musician, who was interviewed while in the United States.

"Few people know anything about our Indian music, and those who know that such a thing exists imagine that it is purely a matter of tom-toms. Travelers have heard the roll of the tom-tom, the *tasha* or the *pakh wag* commingle with the shrill scream of the sanai, or reed, in some Hindoostanee village. They think that is all our music, and in so doing forget that our *vina*—a stringed instrument with six wire strings—is one of the oldest musical instruments in the world. Our *sitar* is as melodious as your mandolin, which

it somewhat resembles; and our *sataniz*, which when played with a bow, is every bit as soft and humanlike in its tones as your violin. A good Hindoo musician will draw as many as seven separate notes from one string without sliding his finger up or down the gut, or wire. He effects the change by simply pulling the string slightly with his hooked finger, and thus increasing or decreasing the tension at will, and changing the notes by the consequent increase or decrease in the number of vibrations. I have never seen any of your Occidental performers being able to do anything like that, but every good musician in my country has to. Our Sanskrit works on music are as deep as yours, but our written score, our note-system, is not good. It provides a separate character for each note in the whole compass of melody. Owing to our closer subdivision of the chromatic scale, it has been almost impossible for us to adopt your system of writing music. It is hoped that Indian music will soon be transcribed in the European manner.

E. Akron, Ohio.

UNANCHORED.

BY HOPE NEWCOMER.

OUT upon the great ocean is a large vessel ploughing the deep; it is nearing the shore.

Now it has reached the landing and many people are rushing back and forth across the deck; suddenly a great wind rises and the waves begin to roll yet no one fears, for they think the vessel is strongly anchored. Nevertheless in a few seconds, with one or two great sweeps the wild waves have carried the vessel far out into the sea, tossing and playing with it as though it were a bunch of thistle down.

Now the people were left standing upon the shore; some wishing to board the vessel; others having been severed from friends so quickly and with no farewell, watch the wind and its prey with anxious eye. They see the ship sink and rise time after time till at last it is dashed upon the rocks, a wreck.

A life boat is immediately sent out, which brings many back to shore alive, among whom is the captain, who tells the frantic crowd that he had forgotten to anchor the vessel and thus it was wrecked.

Perhaps out upon the sea of life our boat is adrift, tossed by the winds of many doctrines, causing only a pleasant sensation to us being rocked in the cradle of the deep. We wish not to be called sober and long-faced Christians and all such names by unprofessing people; but rather to enjoy the pleasures of this world for a season.

At last at an unexpected moment the heavy black clouds roll, the wind rises, and the breakers roar, tak-

ing our little boat with great speed farther and farther from shore.

Finally the great wave of neglect has dashed it upon the rock of unbelief and our boat is wrecked. Only because after having landed it at the shore of Christian faith we left it unanchored.

Lanark, Ill.

NORTH POLE.

A NEW scheme for a north pole expedition was described by M. Charles Bernard at a meeting of about fifty men of science held in the house of the Prince of Monaco, in Paris, recently. M. Bernard explained at length why the only feasible and rational route of penetration of the Polar Sea was a little north of that followed by Fram. The expedition ought to start from a Norwegian port, cross the southern portion of Barent's Sea, take in dogs at Karabola, coast along Yalmal, ship its coal at Port Dickson, transported thither by special steamer, pass at the end of the summer along the Peninsula of Taimyr, arrive at the end of the autumn at the islands of New Siberia, and then, instead of going northward, as did Fram, manage at all costs, even if it be necessary to winter in the Laikhoff or Bennett Island, to reach a point on the one hundred and fiftieth degree of east longitude. Thence the ship or ships need only drift with the ice. M. Bernard urges the utility of having the expedition composed of two vessels in touch with each other by means of wireless telegraphy. The expedition should take three years, but should be provisioned for five. It would not cost more than \$300,000. The assembled company signed a memorandum declaring this expedition to be of scientific utility.

INTELLIGENCE OF DOGS.

A SHEPHERD in Scotland, to prove the value of his dog, which was lying before the fire in the house where we were talking, said to me in the middle of a sentence concerning something else: "I'm thinking, sir, the cow is in the potatoes." The dog, which appeared to be asleep, immediately jumped up, and leaping through the open window, scrambled up the turf roof of the house, where he could see the potato field. He then, not seeing the cow, ran and looked into the byre, where she was, and finding that all was right, came back to the house. The shepherd said the same thing again, when the dog once more made his patrol. But on the doubt being uttered a third time it got up, looked at its master, and when he laughed, growled and curled up again by the fire.

THE papers described a brutal prize fight go through the mail at pound rates.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

IRRETRIEVABLE MISTAKES.

THERE are two kinds of mistakes. There are mistakes which can be corrected, and then there are ir-retrievable ones. Of the two kinds perhaps the latter is the more serious for this reason, that when once committed they can never be altered. The mistakes which belong to the former class are oftentimes mended by the one who has made the mistake, when attention has been called to his error, and by so doing he teaches the lesson that all men are subject to mistakes. Further, by admitting and acknowledging his wrong, he regains the respect and influence he has lost. It makes him have more charity for others who have gone astray.

Mistakes of this class have really been helpful to the world. The wigwam of the savage contrasted with the brownstone front on Madison Square shows how men have improved by mistakes. Mr. Kennedy, one of the best architects in the State of Indiana, says of the hundreds of bridges which he has built, no two have ever been made alike, and in all probability the ones he will build in the future will differ from each other, since he expects to improve each time by failures, short-sightedness and mistakes in the preceding ones.

Sadness comes and comes to stay, generally, when we learn of mistakes that have been made that are ir-retrievable. We pause to think a moment of the innumerable thousands who have wept, and even died, because some one has made the awful mistake of introducing the liquor traffic into our country. What the temperance societies may do, ultimately, is yet unknown. But whatever the result may be, the horrible deeds that have already gone down on record can never be corrected. The sorrows, deprivations and deaths, the wretchedness, misery and woe, the debauchery, ignominy and crime can never be supplanted with loyalty, worship and sacrifice, with time, means and talent, with incessant effort, ceaseless toil and united energy.

What has been done is done forever. Good deeds may be done henceforward and forever, but they are the results of the moments in which they were committed. They are not related to or responsible for evil deeds of other days and years. A hasty word spoken cannot be covered up by a thousand good ones.

A gentleman who once ordered a boy to pluck the feathers from a dead goose while going home, upon reaching home ordered him to retrace his steps and pick up the feathers which the wind had blown hither and thither. The boy at once saw that his task was impossible, his steps were irretrievable. So it is with our words and hasty deeds. When a word has once escaped the lips it immediately sets sail upon the turbulent, tempestuous sea of gossip and unkind criticism, and in spite of all the life preservers which charity can cast from the deck, or all the oil that love may pour on the troubled waters, or the efforts of the life-boat of hope, it invariably is kept out of reach of all these means of salvation by the angry elements. The inhabitants of this sea greedily feast upon these mistakes that satisfy their wicked appetites, by gnawing at the very vitals of the unfortunate one who has made the mistake.

For one of this kind of mistakes Moses was forbidden to enter the promised land, David was not allowed to build the temple, and Judas hanged himself.

* * *

PUTTING IN TIME.

NOT many people are living who have not heard the expression, "I can put in the time some way." We mean that while we are waiting for some one or something we will be doing something or other, and we do not exactly know what, but that we will while away the intervening time in some fashion.

Did it ever occur to you that no one puts in time with a definite plan? At a railway depot the man who is "putting in time" walking up and down the platform, looking up the railroad track both ways, counting ties and telegraph poles, etc., is aimlessly occupying time. A strange minister at church is often solicited to "take up the time," and he puts in his time very similar to the man at the depot; he walks up and down his subject, looking both ways up the track and sees nothing coming.

The very expression itself begs the question and is an admission on the face of it that time is being put into something. The question is, Into what is it being put? Evidently it is being put into a hole—the big, black, bottomless pit of vacuity. Nothing ever comes out of that pit, though hours of precious time often flow in. The pit of nothingness is one of the most greedy maws in the universe, and yet one of the least profitable. Time is far too valuable to be

thrown in here. Time is one thing that man cannot make, or ever hope to make, but he has plenty of it at his command, whether he asks for it or not, whether he pays for it or not, or whether he uses it or not. But he has it only once; once that it is in his hands he must use it, or lose it; it is there, but not to stay; it is constantly on the move, like the sand in the hour-glass. Though it is given most freely, paradoxical as it may seem, it is given most grudgingly—a second at a time, and not for a king's ransom a shred more than a second at a time.

More than that, time is an essential element of which everything else is made that has any value. It is the universal solvent sought by all the philosophers and inventors of the world. By wisdom and prudence it may be transformed into innumerable entities which are of incalculable value. No one would think of poking diamonds into a rat hole or dollars through a crack in the floor, and yet the same individual has been guilty of pouring precious time, by the hour, into this sea of oblivion. The only way to overcome this fault is to have a plan ready, because, as a matter of course, you will have no time to go after it when you need it.

Time is the most volatile and effervescent of all substances. You can put it into a book, an essay, a sermon, Sabbath-school lesson, prayer meeting topic, the Word of God, a letter of friendship or business, a plan for to-morrow, next week or next year.

The success of a man does not depend upon the hours between whistles or bells. Any business man is supposed to begin and quit on time and be faithfully and diligently employed during work and study hours, but success largely depends upon the use of the hours outside of the daily program or, in other words, success depends almost entirely upon how we "put in time."

* * *

IN HIS OWN COIN.

IN the early history of the Jews we have an account of two characters, Haman and Mordecai, who, by virtue of conditions, were avowed enemies. As a matter of course, the one who had power to change conditions didn't want them changed; the one who was powerless, so far as the change of conditions was concerned, would have given all he possessed for the betterment of conditions. The climax was finally reached in the preparation of a gallows for Mordecai by Haman; not that Mordecai deserved to be hanged, but that Haman might be avenged. When execution day came it so happened that conditions were changed to the extent that Haman actually was hanged on the very gallows that he had prepared for Mordecai.

This is only one case of a thousand, some of which the world knows and some of which it will never know, where the fundamental principles of this law have been fully carried out.

The very fact that Haman wanted to hang Mordecai revealed the fact that conditions existed in his breast that showed him to be an eligible applicant for the gallows.

When Nathan went to David for the adjustment of a certain matter, in which it required the decision of the king, David readily passed sentence on his own life for the reason he thought he was passing sentence on someone else. When Nathan told him, "Thou art the man," he began to realize that he had simply been hanged on the gallows that he had prepared for another; or, in other words he was getting pay "in his own coin."

In all probability this is what the Savior of men referred to in his great constitution of the church, the sermon on the Mount, when he said, "Judge not that ye be not judged, for with what judgment ye judge ye shall be judged." No doubt this moral advice was given to allow men to escape execution of their own mandates, because many men have passed judgment upon themselves in condemning others.

All the examples illustrating the fulfillment of this law were not given in olden times. Our age seems to be replete with demonstrations strikingly similar; so much so that one of our modern philosophers has dressed the thought in the words, "He who digs a pit for another, falls into it himself."

It is not within the scope of this article to discuss whether such things happen or whether they are wrecks which naturally result from a broken moral law, or whether the Omnipotent carefully guides such actions to a common destiny, but it is written rather as a finger-board pointing to the fact above mentioned that, "history repeats itself," and what was written thousands of years ago for the good of mankind is good for us to-day, because people of different ages, surrounded by similar conditions, are liable to be benefited by the same auxiliaries.

Some one has said that "It is a long lane that has no turn," nevertheless there are such lanes. Again it is said, "Truth crushed to earth will rise again." It lies buried a long while sometimes, yet it finally rises. Again, "With what measure ye mete it shall be measured to you again." It so happens occasionally that considerable time passes before your coin returns, but when it comes it is generally recognized to be your own coin. So don't set traps for another that you would not be perfectly willing to be found fast in yourself. Don't build a gallows for another that you would be ashamed to have your body found hanging upon.

Current Happenings

Two collisions between ferry boats on Long Island Sound, near New York were caused by a dense fog and a drizzling rain which hung over those waters.

THE Americans do not possess all the patriotism in the world. A Spanish lady recently refused \$300,000 for a portrait of a famous Spaniard, and sent the American millionaire away disappointed. She afterwards bequeathed it to the Spanish museum.

A BAND of Macedonian gypsies, who are believed to be a horde of thieves, have, of late, been visiting England. The policemen are kept busy in keeping the tribe on the move. The gypsies say, "People very kind; police no good." It has been hinted in a round about way that they will accept a bribe of \$250 to leave the country. Strange that so soon they have "caught on" to the English tips.

IN a dense fog which darkened the streets of Paris, six people were killed in a collision between cars. A score of others were injured.

IT is reported from Alcazar, a town about sixteen miles from Tangier, Africa, that the tribesmen have surrounded Alcazar and threaten to sack the town unless the French consul and one of the British subjects are handed over to them.

ONE of the greatest blizzards in fifteen years passed over the northern part of the United States last week destroying many oil derricks, houses and other property through Indiana, Ohio and Pennsylvania.

THE blizzards of the north merged into drenching rains farther south. From the Ohio river to the Gulf, for thirty-six hours the land was completely soaked. At Nashville, Tenn., the mercury fell nine degrees an hour for a while.

DURING the past week many parts of the United States have experienced some very disagreeable weather. The New England coast was visited by one of the worst blizzards in many years. New York, Massachusetts and Rhode Island were right in the path of the storm and a great amount of snow fell in these states.

THE Russian Baltic fleet has arrived at Cape Good Hope. This the first time for a long while that the Russian fleet has been in real good hope.

THE magnificent home of William Patterson, the distiller, at Anchorage, a suburb of Louisville, Ky., was burned quite recently with its contents. The loss is about \$60,000, partially insured. Had the distillery burned it would have been money in pocket, instead of the dwelling which took money out of pocket.

A FREIGHT engine and four cars were wrecked near Ft. Wayne, Ind., by a couple of fourteen-year-old boys who threw some rails across the track to see what would happen. They were arrested.

TEN earthquakes took place, the last one very severe, at Panama and frightened the residents so badly that they camped in the streets.

HON. W. B. INNES, of Vancouver Island, who has been for some time a member of the British Columbian legislature for Albernia, is candidate for the governorship of Yukon.

PHENIX, Ariz., a city of fifteen thousand inhabitants, deserves some public sympathy. At least one-third of the population are thin, wretched, homesick creatures, many of them consumptives of the hopeless type, and in many cases utterly destitute. Emphatic protests are being made by the residents, who are natives and who own property, against sending into their midst these invalids who are past recovery. In a good many places physicians in their meetings have deliberated upon this subject and decided that it is not best to continue this practice.

THE business district of Sioux City, Iowa, suffered a two million dollar loss last week, which consisted of almost two entire blocks. One man lost his life.

THE supply of food is said to be running short in many towns between Evansville, Ind., and Paducah, Ky., where the supplies are brought in by boat and the blocking of navigation makes their situation more serious.

PETER, the King of Servia, has signed the new press law abolishing the freedom of the press. This is one step downward in the scale of civilization.

THE drought which has prevailed in Illinois, Indiana, Ohio and Pennsylvania has been broken recently by a liberal downpour of rain.

ABOUT a million messages are said to be sent over the world's telegraph lines every twenty-four hours. It is sixty years now since the first telegraphic message was sent by the Morse system from Baltimore to Washington. This is evidence of some progress in the last half century.

THE board of health in Mexico denies the reports given out regarding starvation, and disease in the northwestern part of the state of Sinaloa.

ABOUT a mile of gas pipe lines of the Kansas Natural Gas Company was blown up by masked men. The farmers of the section through which the line passes are hostile to the company, on the grounds that it is a foreign corporation. To date no arrests have been made.

HUGH KELLY, an employe of the Hudson Coal company of New York, while at work up on the top of a thirty-foot trestle, up which big steel cars, each carrying fifty tons of coal, are run from the barges, met with a serious accident. Kelly had charge of the cars, fastening the brakes, before they were emptied into the chute, and while thus engaged, Thomas Haggerty, another employe, who was a life-long friend of Kelly, pulled the lever which releases the coal from the bottom of the car. Kelly fell with the coal thirty feet and was buried under tons of it. A long piece of gas pipe was shoved down through the coal and fortunately reached the entombed man. He was rescued and found that he had clinched his teeth like a vise on the end of the gas pipe. An examination by the physicians proved that his injuries were fatal.

A CARRIER pigeon bearing on one of its legs the inscription "A. C. H. 396," arrived in Utica, N. Y., Dec. 21. The bird is thought to be the property of Adolph C. Harn, a pigeon farmer, who went to Southern California, about a year ago, taking his pigeons with him. If this is so, the long flight of the bird is unparalleled.

RECAPITULATION OF THE ORIENTAL WAR.

Five Causes.

1. After Boxer disturbance, powers agreed to maintain territorial integrity of China. Russia reserved right to occupy Manchuria, evacuating at the restoration of peace. Russia failed to evacuate when peace was obtained, to which Japan objected.
2. Japan feared that, in case Russia absorbed Manchuria, she would also absorb Korea.
3. Russian occupancy of Korea would vitally restrict commerce and peaceful activity of Japan in Korea, which is her best field.

4. The unquestionable evidence that Russia fully intended to technically fulfill the last will and testament of Peter The Great.

5. The war-like preparations of both countries, during their peaceful diplomatic negotiations.

A Synoptic Review.

1. February, 1904, the engagement of the Russian and Japanese fleets.
2. March, 1904, the blockading of the harbor at Port Arthur.
3. April, 1904, the first great naval battle; Makaroff killed.
4. May, 1904, first land engagement.
5. June, 1904, great naval fight and the surrounding of Port Arthur by the land forces.
6. July, 1904, general assault by land and sea.
7. August, 1904, the retreat of Russian forces and capture of outer forts.
8. September, 1904, heavy skirmishing on land and water.
9. October, 1904, tunneling and explosion of mines.
10. November, 1904, capture of 203-Meter Hill.
11. December, 1904, destruction of fleet in Roadstead, and recapture of last line of forts.
12. January, 1905, final surrender of Stoessel.

Czar's Sacrifice.

Beside an inestimable loss of prestige and influence the surrender of Port Arthur means to Russia the loss of: Buildings, fortifications, etc., \$207,000,000; ammunition and guns \$6,000,000; fleet destroyed \$78,000,000; sundry expenses \$9,000,000; total \$300,000,000. Original garrison 40,000 men; present garrison 12,000 men; sick and wounded in hospital 15,000 men; killed and died of wounds 13,000 men; total dead and disabled 28,000 men.

Mikado's Sacrifice.

The Japanese loss is difficult to determine. To say the least, it is a dearly bought prize. It is estimated that General Nogi had 185,000 men. His total losses, by sickness, wounds and death, according to best authority, are 70,000 men. Having received 40,000 reinforcements, leaves him at present 155,000 men.

All things considered, Russia has not fallen, neither has Japan, only Port Arthur; it is only the beginning of the end; it may require a longer time for Russia to retake Port Arthur than it has for Japan to secure it. In the world's great catalogue are to be found the sieges of Troy, Sedan, Jerusalem, Constantinople, Babylon, Vicksburg, Richmond, etc., but nowhere do we find one that compares with Port Arthur in powers of endurance against an eleven-month siege of long range rifles, machine guns, mortars, high-power guns, Gatling and Hotchkiss, and the most modern patterns of mines, torpedoes and electrical appliances.

HOME DEPARTMENT

LIFE.

BY CHAS. J. CONNER.

LIFE, so wonderful, so grand, so infinite; the tide of ambition, the flood of hope, the love of conquest. Mystery of mystery! To live, to die, and then to live again a better, brighter, fairer, grander life, this is the life of man,—the Life immortal.

As we listen to nature singing her celestial song; as we look at the universe and wonder at its grandeur, we do not think how much sweeter is the song of life, how much grander is the harmony of immortal souls.

Born; so comes into this world, this mighty sphere, a soul endowed with intellect, love, faith and hope to solve the problem of life.

What hopes are centered in the loves that bear the firstborn child? What ecstasy doth entwine the hearts that see their own? What love doth hold in constancy each vital part, born, then rocked upon the pillowed bosom with tender words of love? The child awakens to life from mystery's dream, the arbor of fond hopes to carry forth the crown of life and rule in its own kingdom, king of kings until the Master calls it home.

Its first lesson from nature's school, a mother's love, embodies all the stage of infancy; then from the tender bud of babyhood there blooms to childhood myriads of visions of a world of ecstasy. In this frail bark, ere he sets sail upon the stormy sea of life, he builds little ships that are the guiding boats through life's long voyage. Ships of simple truthfulness, and honest love—childhood's bark, heaven's best reflection, life's sweetest poetry fades into oblivion. Just entering upon the sea we behold the youth full of hope and love, imagination and desire; the student with bubbling honors breaking fast; the soldier seeking laurels in the field, and the lover with unconscious vows. The sea rolls high, the storm is on, and no more the calm and peaceful waters of the past. Life's bark adrift! A wreck upon the rocks, another, still another; but look! Amid the storm-swept sea a bark glides onward, another, still another. They have passed the rocks and are still sailing in the deep and tranquil waters of manhood. Fragments of wrecks still float about the sea.

Our hero has learned the dangers of the rocks, the storms and the tempest, and now sails out upon the deep a better mariner. The bravest mariner will anchor ere he thinks his voyage half spent, knowing that

the lighthouse in the sea no more shows the rocks; he looks for another light to guide him,—the Light of Divine guidance, and hopes for the better land upon the golden shore. He looks back and thinks of his childhood days, with love and reverence. Enriched with his cargo, he journeys slowly back again to the shore, where he first built his ship when a child; he anchors there and lives his childhood o'er again in the sublimity of old age. Once again he enjoys life's sweetest poetry, heaven's best reflection.

As his children gather round, he sees himself in younger years; he lives his childhood over again in their pastimes, and shares alike their joys and sorrows.

He has journeyed o'er the sea of life and now views with tender love the destiny of man. Death? no, there is no death. What we call death is but the entrance to the higher life,—the life immortal. He views what millions never see, old age, the golden sunset in the autumnal sky. The sun slowly sets; some last rays still linger on the by-gone shores. He looks backward, and as he bids us farewell, life's bark glides on unseen to a fairer, brighter land, a better home. The sun has set, more beautiful with thought, more perfect with reason, more sublime with unity, more noble with sacrifice, the soul departs through the unseen gates of Eternity.

Elgin, Ill., 510 Highland Ave.

A NATION OF HOUSEKEEPERS.

A FAVORITE fling of the French at the English has always been that the latter are a nation of shopkeepers. An English woman has now called Americans "a nation of housekeepers." During a recent visit to this country she was struck by the fact that so many American women of means and refinement either "do their own work" or actively superintend the domestic arrangements, taking a pride in this duty. Our friend was surprised to learn that "an American woman will spend the forenoon in cooking or dusting or cleaning, then dress herself like a duchess and sally forth to the meeting of a fashionable club, where she is to read a learned paper, like as not, or else call a carriage and make a round of social calls. And her standing does not seem to be impaired in the least by the fact that during part of the day she has done the work of a menial, nor has it affected her own personal attractiveness."

No other woman has done so much as the American

to emphasize the dignity of labor. The snobbish idea that good work, of whatever kind, can possibly be a disgrace has never gained much foothold in this country. What more noble and useful work could there be than making a home comfortable for its inmates? It is a work that demands the highest degree of skill, and it is one that too often, unfortunately, must be intrusted to incompetent servants. The American woman does take a pride in looking well after the affairs of her household, nor does the fact in the least impair her effectiveness along other lines of endeavor. The average American housewife is much more of an "all-round woman" than her English sister. It is not surprising that her versatility should be the subject of admiring comment.

THE POWER OF SILENCE.

JOSH BILLINGS said: "Silence is a hard argument to beat." Sometimes silence is the severest rebuke, the most scathing expression of the deepest feeling. A Boston correspondent of the *Providence Journal* relates an incident which illustrates the power of silence, and conveys at the same time several valuable lessons:

One of the guests at a dinner party of gentlemen was known to have been at one time a chronic drunkard, although, after a severe struggle, he had succeeded in breaking away from the dreadful habit of intemperance. His only safety lay in total abstinence, and although on this occasion wine was abundant, he did not taste it.

At length it occurred to the host that a practical jest would be amusing, and by his direction, the waiter filled the tumbler of this guest with gin instead of water, and there being no reason for suspecting the evil, the dipsomaniac raised it to his lips. The instant he tasted it, he comprehended what he had done, and without a word, he set his glass down, and left the room. His nearest neighbor, astonished at his unceremonious leave-taking, turned to see what was the matter, when the grins of the waiter called his attention to the still full tumbler. He took it up, examined the contents, and understanding in turn the cruel joke that had been played, followed the example of the victim, and with only a glance of indignation, by way of farewell to the host, he, too, left the room and house. His neighbor in turn sought and found the explanation of this singular breach of etiquette, and the action of the others having furnished him a clew to the sharpest method of expressing the indignation any right-minded man must feel, he, in turn, contemptuously left the table.

To cut the matter short, every guest in turn departed in utter silence, until the giver of the feast was

left to digest as best he might this bitter, but most richly merited rebuke upon his outrageous conduct. It is a satisfaction to be able to add that this dipsomaniac had the courage and presence of mind to get into a carriage and drive home at once, where he remained until he had conquered the cravings excited by the taste of alcohol he had unwittingly taken.

A HEAVEN OF OUR HOME.

Not long ago a man was called to an educational position of great honor, one that involved larger social obligations than he and his wife had been accustomed to meet. She shrank from the new duties which would be laid upon her, chiefly from a sense of not having kept pace, intellectually, with her husband during their years of married life. Their income had been small, and she had been her own housemaid as well as a devoted mother to their three boys. This left little leisure for reading or study, and she was conscious that her husband had outstripped her in mental growth. When she expressed her misgivings to him he replied, "Never mind, my dear, you have made a heaven of my home." The answer shows something more than mere conjugal tenderness. It reveals a principle in human development. This woman, no less than her husband had made solid gains in the years they had lived together. Over against his riches of intellect she could place a wealth of graces in character which fitted her to adorn any social position. In making a heaven of their home she had grown strong in patience, tact, sympathy, unselfishness and the wisdom that comes from daily communion with God. These qualities have a positive value that is too often overlooked nowadays. Ambition for self-development is characteristic of the modern woman but she is prone to consider books, travel and cultivated society as the only means to this end. Yet the making of a home that is like heaven to husband and children is really a more efficient aid to true culture, because it exercises the soul as well as the brain.

We cannot all have full brains but we can all have full hearts. And being well equipped in our hearts, if we are not well equipped in our heads to impart instruction to our pupils, we are at least well equipped to inspire them to learn themselves. Many an ignorant mother has inspired her boy to reach out to heights of knowledge of which she had never so much as heard.

"There's so much bad in the best of us,
And so much good in the worst of us,
That it hardly behooves any of us,
To say anything of the rest of us."

3. Women, Heb. 11:35
4. Many Others, Heb. 11:13
5. Others, Heb. 11:32
6. Us, Heb. 11:40

IV. Glorious End, 1 Peter 1:4

* * *

For January 22, 1905.

Topic.—The Journey Heavenward.

Text.—For here we have no continuing city, but we seek one to come. Hebrews 13:14-21.

References.

Psalm 1:1; 1 Samuel 15:18; Numbers 9:23; 2 Corinthians 5:7; Mark 6:8; Revelation 3:21; 2 Peter 1:11; Revelation 7:13, 14; John 13:36; Hebrews 10:34; Acts 7:55; Matthew 8:11.

Journeying.

If we could see this large company of pilgrims that are traveling homeward we would think of John's vision,—“a great multitude which no man could number, of all nations, and kindreds, and peoples, and tongues, who stood before the throne, and before the Lamb clothed with white robes, and palms in their hands.” You and I are not alone in this narrow way, there are many other pilgrims. Whatever trials and difficulties you may have, are common to other pilgrims too. Read again the story of our journey to heaven in Pilgrim's Progress. “I beheld then that they all went on till they came to the foot of the hill Difficulty, at the bottom of which there was a spring. There were also in the same place two other ways besides that which came straight from the gate: one turned to the left hand and the other to the right, at the bottom of the hill; but the narrow way lay right up the hill and the one going up the side of the hill is called Difficulty. Christian began to go up the hill. The other two came also to the foot of the hill. But when they saw that the hill was steep and high and that there were two other ways to go; and sup-

posing that these two ways might meet again with that which Christian went, on the other side of the hill; therefore they were resolved to go in those ways. Now the name of one of those ways was Danger, and the name of the other Destruction. So the one took the way which is called Danger; which led him into a great wood; and the other took directly up the way to Destruction, which led him into a wide field, full of dark mountains, where he stumbled and fell, and rose no more.”

Only the narrow path leads straight to the Celestial city, but we step aside because it seems easier, the meadows are green and restful, the narrow path becomes wearisome, but in the green meadows lurk dangers of every sort. Right up the side of the hill Difficulty are traveling heroes, men who are ready to endure all things for Jesus' sake.

“Lead, kindly Light, amid the encircling gloom,
Lead thou me on;
The night is dark, and I am far from home
Lead thou me on.
Keep thou my feet, I do not ask to see
The distant scene, one step enough for me.”

—Henry Newman.

Walking with Jesus.

Does Jesus walk with you? If you are keeping close by his side your work will be easier, your cross lighter, and every day will mark the milestones nearer heaven. Is there no lesson for us in the unstinted way Jesus gave himself daily for others? Does it not seem as if Christ gave as much of himself before he came to the cross as he gave on the cross? O this cheap discipleship! It keeps us from church on rainy Sundays; it is afraid of a headache if it teaches a Sunday-school class; it never has time to call on the sick, or on a stranger. What does more to hurt the influence of the church, than the church members who are always hunting for the easiest place where they can give the least of themselves in Christian service! It is different when we walk with Jesus.

Some people are hunting crosses with no nails in them.

A Parsee Pilgrim.

As a lad of eighteen, belonging to a wealthy family and the *only* child spared out of seven he was specially loved. As a youth, a great mathematician, he went to Esplanade College against the will of his relatives. Here he watched the life of one of his teachers, an

English clergyman; to use his own words, "I longed for some show of temper, some little word of anger, but there was none. Through buffeting and abuse in street preaching, he was always gentle, and though I spurned the Christian religion, I respected its humble follower." But this teacher became ill, and his successor was unkind, and selfish and harsh. One morning with home work correct, at the head of his class of fifty-four—a place he kept for five years—he was told in anger, "Go down to the bottom of the class." This made him angry, "What for?" he asked, stamping his foot. "Because I told you to, you insolent youth," was the reply. "I will leave the college" said the student, but as he took his place at the foot of the class, who should he see standing before him, but the dear old clergyman who had just come in for a moment. He understood the situation, but not wishing to blame the teacher publicly, he only said, "I am so sorry that this has happened, go to my study please, and wait until I come, it may be hours for I am going to a sick bed; but do not go away until I see you. It was four in the afternoon when the student first went up and as hour after hour went by he still lingered, for on a table near the window he had found the Bible. He commenced reading at the fifth chapter of Matthew; the stars came out in the sky and still he read on to the tenth chapter. When the clergyman came he found a kneeling figure, and thinking he was asleep, he touched him. The face was lifted, then came the thrilling words, "Thy God shall be my God."

Then came persecution. His parents starved themselves to death, his wife committed suicide, *he* the idolized, the son of so wealthy and old a family had become a Christian dog, better death than such degradation. He stood alone by Christ's side, the first one of the Parsees, but he has been followed by 90,000 more. Imprisonment, perils by water, attempts to poison him, storming, had no power to turn him back. For fifty-five years, an earnest Christian using voice, talent, and money for Jesus to the very last. He died August 14 1894.

Learn More About Our Destination.

Some of us are near our journey's end, others are only starting out; all of us should be anxious to learn more about heaven. The journey there will take but a few years, then we shall remain in heaven. Read again Revelation 10 and see what God is making ready for the weary travelers. What treasure shall we lay at the feet of Jesus?

"Dying! ah it is easy
To slight the Master's call—
To sit with folded hands and sing,
O, crown him Lord of all."

"But where are the gems to lay at his feet,
Which may sparkle some day in his crown complete?"

Topics for Discussion.

1. Who is our guide in this journey? Psalm 73: 24.
2. When will earth's travelers finally be separated? Matthew 10:30; Matthew 10:49; Matthew 3:12.
3. If we travel as servants of Jesus, what shall be our reward? John 12:26; John 17:22.
4. What net is spread for the feet of pilgrims? Proverbs 29:5; Psalm 17:4.
5. Those who stop, and turn aside, are condemned. 2 Timothy 4:10.
6. Why do we look to God for sustenance on this journey? 1 Kings 19:7.
7. Do we know the length of our journey? Nehemiah 2:6; Psalm 39:5.
8. How shall we walk heavenward? 1 Thesalonians 2:12.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter X.

IRELAND.

BY MISS GERTRUDE MERRITT.

Dear Mr. Maxwell:—I notice the boys wrote you a real nice letter the other day while I was waiting on Agnes. Since that we have been doing a great deal of running around, and the sights we have seen and the lessons we have learned have almost driven all the homesickness from Agnes and we are just getting along fine.

One of the funniest things we have seen since we have been in Ireland, was what they called the "Chutes." It was down at the Exposition grounds and was one of the novel ways of getting money from the crowd. They had a platform built about sixty feet high, and an inclined plane extending from this platform down to a beautiful lake below. On the platform above was some machinery that would pull a little truck from the water, up this inclined plane to the platform. Upon the truck was a nice little row boat. Five or six young men and women would pay "tuppens-hapeny" each and get in this boat, be drawn to the platform where they would change boats and trucks, and, at a given signal they would "shoot the chute," which means that they would descend on the other side of the incline at a wonderful rate of speed and dash into the water like a king fisher. When the boat would strike the water it would dive three or four feet under the water.

The sides of the boat were built so that it would throw the water away from them, rather than allow it to light in the boat. The boat would jump like a frightened steed, attempting to throw its rider. After two or three wicked jumps it would settle down on the bosom of the water and lose it momentum in the distance. When it had spent its force one of the party would pick up their oars and row back to the place of starting. It was the wildest fun I ever saw. The girls would just scream like they were being murdered, when they were going down the chute, and sometimes when the boat would tip a little to one side, as it struck the water, they would get as wet as drowned rats. Oscar and Roscoe tried for half an hour to get us to try it, but we were fully satisfied with the experience of the others.

We had a ride this afternoon in a johnny car, out to Blarney Castle; and we had a good time looking at the fine scenery and studying the history of old Ireland. I will not attempt a description of Blarney Castle, because you remember that there was a nice description of it not long since in the Inglebrook. I believe it was some time in the fore part of September. After seeing that picture in the Inglebrook, I made up my mind I would know it when I saw it, and sure enough I did.

As Roscoe told you in his letter, Miss Gertrude has been writing an article for your paper, on Ireland, and she read the article to us to-day while we were resting on the top of Blarney Castle. We think it is good and I will enclose it in this letter that you may print it next week.

If you see Raymond Tracy, Elsie Mills, or Mr Maynor, or any of our friends tell them we wished so much for them to-day. Pardon this short letter for we are busy these days.

Respectfully,

Marie.

DISMISS the early centuries with the thought that their history is mostly legend. The real history of Ireland begins about the ninth century, when the Danes invaded this land, captured the capital city, and as the result part of Ireland became subject to Denmark.

Some time after this an Irish king by the name of Malachy defeated the Danes and another defeat soon followed, under the leadership of one of the kings of the Munsters by the name of Brian Boru.

About the close of the eleventh century the Danes reoccupied the territory. Some time during the year eleven hundred and seventy, the Anglo-Saxons, under Henry II. king of England, made a splendid feast at Dublin for the chiefs of the Irish. By this strategy he was able to form an allegiance and forced upon Ireland the yoke which made her, for all time to come, a part of the British Empire.

The patriotic Irish were continually feeling that they were oppressed by foreign rule, and they desired a government of their own. In 1664, an army of eighteen thousand infantry and cavalry attempted a siege of Dublin which resulted in failure. But three years later the renowned Oliver Cromwell, with his parliamentary influence, defeated the army of the English king and ascended the throne of England. With his army of thirteen thousand he came to Dublin, and unto this day the poor people of Ireland point to the ruins of castles, churches and monasteries and say in all gravity, "These have been in ruins since the time of Cromwell." It reminds one of the way the people of England find a climax for their sorrows by pointing back to the time when Napoleon Bonaparte spread dismay and ruin, throughout the cities of Europe.

In 1689, James II., a devout Catholic who claimed to be the rightful king of England, came to Ireland, held a parliament in Dublin, ordered nearly all the Protestants out of the city, erected a mint and made a great quantity of money from old guns, refuse metal, etc., with which he attempted to pay his numerous debts, and compelled the people to take this spurious money or be hanged. A Protestant king arose in England, called William III. and defeated this king James II. He then entered Dublin in great triumph and pro-

(CONTINUED ON PAGE 48.)

The Q. & A. Department.

Why does a woman take the name of her husband when she is married?

The custom which makes it proper for the wife to assume the name of her husband at marriage is involved in much obscurity. A recent authority advances the opinion that it originated from a Roman custom and became common after the Roman occupation of England. Thus, Julia and Octavia, married Pompey and Cicero, were called by the Romans Julia of Pompey and Octavia of Cicero, and in later times the married women of most European countries signed their names in the same way, but omitted the "of." In spite of this theory it is a fact that as late as the sixteenth and the beginning of the seventeenth century a Catharine Parr signed her name without any change, though she had been married twice. We also hear of Lady Jane Grey, not Dudley, and Arbella Stuart, not Seymour. Some think that the custom originated with the scriptural idea that the husband and wife are one. This was the rule of law as far back as 1268, and it was decided in the case of *Bon vs. Smith*, in the reign of Elizabeth, that a woman by marriage loses her former name and legally receives the name of her husband.

❖

In the Geography Class serial, I notice that Marie Stewart writes about the second saloon. What does that mean?

On all first-class ocean steamships passengers are divided into first, second and third class whose accommodations vary according to the price they pay for them. The best accommodations are for the first-class passengers and cost twice as much as the second-class. Their rooms are called first cabin state rooms and their dining hall first dining saloon. The place for second-class passengers is called the second cabin and their dining room is called second saloon. We presume that Marie referred to the fact that they were traveling second-class.

❖

What kind of wood lasts the longest?

Some interesting experiments have been made to ascertain which wood lasts the longest. It was found that birch and aspen decayed in three years, willow and chestnut in four years, maple and red beech in five years, and elm and ash in seven years. Oak, Scottish fir and Weymouth pine decayed to the depth of half an inch in seven years; larch and juniper were uninjured at the end of seven years. In situations so free from moisture that they may be practically called dry the durability of timber is unlimited. The

roof of Westminster hall is more than four hundred and fifty years old.

❖

How is ventriloquism accomplished?

The words uttered by the ventriloquist do not come from the abdomen, as was formerly believed, but are produced in precisely the same manner as ordinary articulation, the difference in sound being caused by the mode of respiration. A very full inspiration is taken, and then the air is expired slowly through a narrow glottis, while the diaphragm is kept in a depressed condition, the thoracic muscles alone being used to empty the lungs. The ventriloquist adds in the deception by scarcely moving his lips; and by directing the attention of the auditors to the object that is supposed to be doing the talking.

❖

What is the size and length of a sea lion?

Sea lion is the name applied to several species of large seals of the family Otariidæ. They have harsh hair without under-fur. The young are of reddish-brown color, but the mature are of a yellowish brown. Two species are found in the Bay of San Francisco. The largest are thirteen feet long, the shortest seven feet, the latter is the ordinary sea lion of the menageries and zoölogical gardens. It is called *zalophus*, has a slender, dog-like head and emits a bark or howl. The bigger sea lions have a thick head and a deep bass growl, with a prolonged, steady roar. Other species are found in South America and Australian seas. The walrus is sometimes called a sea lion.

❖

What are the names of the fins of a fish?

Usually there are eight fins in all; the pectoral, one on each side just behind the head; and a pair of ventrals, immediately beneath constitute the pair of fins. Those named singly are, (1) the first dorsal, on the fore part of the spinal column. (2), the second dorsal immediately following; (3) the anal just opposite on the ventral surface, and (4) the caudal, which is commonly called the tail. Ventrals, however, are often missing.

❖

What is meant by a minority president?

A minority president is one who was elected by a majority of the electoral votes, but received a minority of the popular votes. Hayes received 250,935 fewer popular votes in 1876 than Cleveland in 1888, but received 55 more electoral votes. The term minority president is also applied to a chief executive whose party is in the minority in Congress.

MISCELLANEOUS

IRELAND.

(Concluded from Page 46.)

ceeded with great ceremonies to St. Patrick's Cathedral which stands until this day.

In the beginning of the last century the parliaments of England and Ireland passed the Union Act, and ever since the English flag has floated over the castle of Dublin.

In 1803, the same year in which our dear old Ohio was admitted into the Union, a young barrister by the name of Robert Emmet headed an insurrection against the English government and paid the penalty of his rashness a short time later by death, on the scaffold in the streets of Dublin. The Irish all over the land, in many ways, perpetuate the memory of Robert Emmet.

In 1867 another conspiracy against the government was discovered and over nine hundred arrests were made in a few hours. Since that time agitation upon agitation has troubled the hearts of the patriotic Irish and abuses, both real and imaginary, have been imposed upon them until revolution has come near visiting them several times. And, at the present time England is imposing upon them annually the support of fifty thousand troops for which they absolutely have no use, and which they very much detest and despise. Until a recent session of parliament, the Irish could not own their land, but were subjected to high rentals by landlords, which made it impossible for them to exist, were it not for sons and daughters in the free land of America, who are continually sending money to the loved ones at home.

Our two boys, Mr. Clarke and Mr. Stewart, by inquiry, have found that the purchase price of ordinary land is five pounds per acre, which would be twenty-five dollars in our money, and that the farmers actually pay two pounds per acre annually (\$10) which is two-fifths the purchase price. So it is easily figured that in two years and a half the rentals would equal the market value. So these poor tenants are compelled to pay forty per cent on the value of the land for the use of it. Let the American farmer, who hardly clears three per cent upon his investment, tell us how these men can make a living for their families under these conditions, remembering at the same time that their staple crops are potatoes, mangels and hay. May the

time soon come when these honest peace-loving, industrious people will enjoy free government of their own in a land where nature has done her best.

Dublin, Ireland.

(To be Continued.)

MODERN HONEYMOON EPITAPH.

A little miss.

A little kiss.

A little bliss.

A wedding that is splendid.

A little jaw.

A little law.

Back home to maw.

And lo! the trouble's ended.

—Elgin H. S. Mirror.

SIX TO ONE.

A WELL-KNOWN English surgeon was imparting some clinical instructions to half a dozen students. Pausing at the bedside of a doubtful case, he said: "Now, gentlemen, do you think this is or is not a case for operation?" One by one the students made their diagnosis, and all of them answered in the negative. "Well, gentlemen, you are all wrong," said the wielder of the scalpel, "and I shall operate to-morrow." "No, you won't," said the patient, as he rose in his bed, "six to one is a good majority; gimme my clothes."—*Med. Age.*

HOW TO MAKE SCANDAL.

"TAKE a grain of falsehood, a handful of runabout, the same quantity of nimble tongue, a sprig of herb backbite, a teaspoonful of don't you tell it, six drops of malice, and a few of envy. Add a little discontent and jealousy, and strain through a bag of misconstruction; cork it up tight in a bottle of malevolence and hand it out on a skein of street yarn; keep in a hot atmosphere; shake it occasionally for a few days and it will be fit for use. Let a few drops be taken before walking out and the desired result will follow.

That man greatly lives,
Whate'er his fate or fame,
Who greatly dies.

—Young.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground, others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

MATTHEW HENRY COMMENTARY ON THE BIBLE

PRICE GREATLY REDUCED.

Catalogue
Price,
\$15.00

Our Special Price
f. o. b. Elgin,
Only \$7.95

It is surprising that, in this labor-saving and time-saving age, the ever popular Matthew Henry's Commentary has not before been issued in convenient volumes. Two features of this new edition call for special attention: First, the moderate size of the volumes; second, the large size of the type (larger than any previous edition). Other features are the excellent printing and substantial binding.

"Biblical students who are most familiar with the very best commentaries of this generation are most able to appreciate the unfading freshness, the clear analysis, the spiritual force, the quaint humor, and the evangelical richness of Matthew Henry's Exposition of the Old and New Testaments. Ever since we have been engaged in the ministry we have found our appreciation of this work increasing with our years."—The N. Y. Observer.

"There is nothing to be compared with old Matthew Henry's Commentary for pungent and practical applications of the teachings of the text."—The S. S. Times.

We have now reduced the price of this commentary until it is within reach of all. Every minister and Bible student who does not already have a set of these books ought to take advantage of this special offer. You cannot afford to let this offer pass without due consideration. Better send your order at once. Price, only \$7.95.

Brethren Publishing House, Elgin, Illinois.

\$7.95 for this large handsome steel range

without high closet or reservoir. With large, high, roomy, warming closet and reservoir, just as shown in cut, \$11.00. Reservoir is porcelain on inside, asbestos covered on outside. Heavy cast top with 6 full size cooking holes. Large roomy oven, regular 8-13 size. (We have styles of fitted and cast ranges with much larger and smaller ovens, sizes to suit all.) The body is made of cold rolled steel, top and all castings of best pig iron. Grates we use improved duplex grate, burns wood or coal. Nickel band on front of main top; brackets and tea shelves on closet; band and ornament on reservoir; oven door, etc. Are highly polished, making the range an ornament to any home.

\$2.95 for this Oak Heater

just as illustrated. Burns hard or soft coal or wood. Has drawn center grate, corrugated fire pot, cold rolled sheet steel body, heavy cast base, large cast feed door, ash pit door and ash pan, swing top, screw draft-regulator. Polished urn, nickel top ring, name plate, foot rails, etc. We have heating stoves of every kind. Hot blast, air tight, the kind that retails for \$3.00, for \$0.00. Base burners at 1/2 the regular price.

Write for CATALOGUE

OUR TERMS

are the most liberal ever made. We will ship you any range or stove, guaranteed it to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it into your own home and use it 30 full days. If you do not find it to be exactly as represented and perfectly satisfactory in every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for double our price, you can return it to us and we will pay freight both ways, so you won't be out one single cent. **CUT THIS "AD" OUT** and send it to us and we will mail you our free Stove Catalogue. It explains our terms fully, tells you how to order. Don't buy a stove of any kind until you get our new large Stove Catalogue for 1904 and 1905 and see our liberal terms and the lowest prices ever made.

RENEW!

Now is the time to renew your subscription for the **INGLENOOK**. If you have not already done so, hand your subscription to one of our regular appointed agents. If it is not convenient for you to do this send your subscription direct to us.

The **INGLENOOK** for the coming year promises to be the best of its history.

We have several very interesting serials promised written by authors of more than ordinary ability. As the Inglenook family already know, Bro. D. L. Miller will write a series of articles on "Kodak and Pencil South of the Equator." This is a territory which our periodicals have never had the privilege of presenting to the public and the articles will be intensely interesting since they are to be copiously illustrated from Brother Miller's own camera. Essays will be solicited during the year that will deal directly with the interests of the young and rising generation. The editorial department will be aimed directly at the issues of the day without any disposition whatever to dodge them. Our current news department will be prepared with the busy man in view, knowing that his time is valuable, and assist him very much in keeping him in touch with current events. Since the wants and needs of the home are more or less neglected a strong effort will be made to make the Home Department a useful medium. The Christian Workers' and Reading Circle Topics will take the place of Nature Study as a result of a popular vote of the Nook family. The Q & A Department of course will be what you make it.

New Names

We have added almost 2,000 new names to our list in the last few months. Many new ones are now being added daily. We are pleased to be able to report so favorably. We believe further that merit is the only sure foundation on which to build, and we attribute to this the wonderful growth of the Inglenook these last few months.

The features that have made so many new friends for us ought to keep all old ones. We do not believe that there is one of our old subscribers that will want to do without the Inglenook the coming year. We are sure we would dislike very much to lose one of our readers. We intend to make the paper so interesting and instructive the coming year that you cannot afford to be without it.

The Farmers Voice

The Farmers Voice is a first class farm paper now being published at this office. It is one of the best papers of its kind published. The subscription price is 60 cents per year. In order to accommodate our many farmer friends we have made special arrangements with the publishers, so that we can furnish the paper to you the coming year for only 25 cents. That is, send us \$1.25 and we will renew your Inglenook for another year and send you the Farmers Voice for one year. We promise you that the Voice will not be sent you longer than the year, unless you renew. This is an excellent opportunity to secure a good farm journal at a small cost.

Be sure and don't forget to renew for the **NOOK**. Send on your subscription **NOW**.

Brethren Publishing House,
ELGIN, ILLINOIS.

CUT THIS OUT

Of every Nook for six months, send us the **26 LION HEADS** and we will send you any one of our sixteen "HOME TREATMENT"

WHY NOT COME TO THE

LAGUNA DE TACHE GRANT

FRESNO COUNTY, CALIFORNIA,

Where Pumpkins, Corn and common crops grow, as well as every kind of California fruit?

Come and visit the Brethren who are living here and see what they have done in the past two years.

Nearly 600 sales made since we put this land on the market and over 2,000 people now living on the grant where there were but about sixty a little over five years ago.

This does not look like a temporary boom, does it? Must be something solid behind all this. If not, five years ought to show up the weakness, but instead of weakening the Laguna and its various interests are growing stronger all the time.

If you are thinking of coming to California to make a home you cannot afford to overlook this place.

We still have plenty of good land with abundant water for irrigation. The price is from \$30.00 to \$60.00 per acre, terms, one-fourth cash, balance in eight annual payments.

COLONISTS' RATES

will again be in force March 1 to 15, 1905.

From Chicago to Laton,	\$33.00
From Mississippi River to Laton,	\$30.00
From Missouri River to Laton,	\$25.00

Make your plans to start for California March 1st and you will be in time to buy land and put in a crop.

Write us for free printed matter and local newspaper. Address

NARES & SAUNDERS, = Laton, California.

From Missouri River, 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

MEN OF LEARNING,

Leaders of nations, in fact all sorts and conditions of men bear witness that, unless a man is physically strong, his mental capacity is more or less diminished.

To be strong, quick and alert mentally means that you must be possessed of good health--the two conditions go hand in hand. To be at our best, we must see that our blood, the life stream, is pure and vigorous. It is not an arduous or difficult task. All that is needed is an occasional "purifying process" by means of a reliable herb remedy, such as DR. PETER'S BLOOD VITALIZER.

A JUDGE WRITES.

Berlin, Mo., October 15, 1903.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—Inasmuch as the past season has been an extremely healthy one, I have not had as large a sale on the BLOOD VITALIZER as previously. It has been successful in all cases where it has been used. I have not used anything else in my family for over ten years except the BLOOD VITALIZER. It is the best medicine we have ever found, and never expect to be without it as long as it is possible to get it.

Yours very respectfully,

J. H. CAMPBELL, Ex-Judge County Court.

DR. PETER'S BLOOD VITALIZER holds an unbroken record of success, extending back over 100 years, as a blood purifier and health builder. It is not for sale in drug stores, but is supplied to the people direct through special agents appointed in every community. Address,

DR. PETER FAHRNEY,

112-114 South Hoyne Ave.

CHICAGO, ILL.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

No 3.

THE STEPS THAT COUNT.

Lyrical Liner.

There's a wondrous sight o' hills to climb as we'uns
trudge along,

And it does seem like the way is rather rough;
We become almost too weary, sometimes, for a smile or
song,

And conclude this world, on us, is pretty tough.
But there's one thing sure about it, if there were no hills
at all,

In life's journey, we could never climb up higher;
And it does seem mighty nice that, to the aim above us all,
Ev'ry upward step will always bring us nigher.

Yes, these blessed hills were meant to lift us higher as
we go,

While our foolish dread is tuggin' so at them,
Climbin' hills before we come to them, as some one's
said, although

'Tis a folly which we, in ourselves, condemn.
I feel sorry for the weary tramp, from door to door,
that asks

Wherewith, still, to take him through to nowhere, then,
But the laborin' man, with health an' heart a-plyin' duty's
tasks,

With the step that counts, a man among true men.

I cannot feel bad for him, for he is gettin' all the good
Out o' effort, there is in it, while the man.
Trampin', takes the steps but gets there not a whit more
than if he stood

Like a stump in some great field, for lack o' plan:—
For as many steps count minus, trampin' aimless like, as
plus,

Full as many, but they're taken just the same,
If a bee line once were taken for the highest int'rests,
thus,

Much I doubt if we as many steps could name.

Then why not, since trampin' any how, just put our steps
in line,

And take aim for sumthin' worth 'em at last,
There are many precious objects, if our efforts we'll com-
bine

To the reachin' of them, worth the task when past;
We're a-steppin' off our own land,—yes a measurin' our
own gain,

And it's worth our while to view it in this way,
For our steps will grow much lighter, and we'll step
with "might and main,"

Seein' all we step off's ours, for it will pay.

SNAPSHOTS.

Never step over one duty to perform another.

You must hunt opportunities— they won't hunt you.

The devil never likes to be told that he is a devil.

*There is as much to learn about spending money
as in making it.*

*A good way to secure happiness for yourself is to
make others happy.*

*No man prays earnestly who does not work with
fully as much earnestness.*

*No man can do one thing through a desire to please
God without wanting to do another.*

*No man ever amounts to much who hasn't got con-
fidence enough in himself to make an effort.*

*The man who does his prayerful best is a man of
great power, no matter how humble his sphere may be.*

*Sweetness that never sours will do more to smooth
your pathway through this vale of tears than consid-
erable money.*

*When you are not sure that you can be a success-
ful worker, determine that with God's help you will
be a faithful one.*

*If every man in the country would strictly prohibit
himself from drinking, there would be no need of a
prohibition party.*

*The time is at hand when we realize that "leaves
have their time to fall," and we realize also, as the
necessity for heavier clothes is made apparent,
that the fall has its time to leave, and that the chilling
blasts of winter are here.*

TUSKEGEE SKILL HELPS GERMAN GOVERNMENT IN AFRICA.

BY ROSCOE CONKLING BRUCE.

A NOTABLY interesting letter has just been received by Booker T. Washington from John W. Robinson, one of his former students, who is now in charge of the experimental cotton raising under the auspices of the German Government at Muatya, Lome, Togo, West Africa. Responsive to certain far sighted commercial interests, the German Government is determined to discover whether cotton can be successfully raised on a large scale in Africa; and, finding the difficulties many and various, asked Principal Washington to send some cotton experts from Tuskegee. This he did, placing the expedition in charge of Professor James N. Calloway. In Calloway's report for 1900-1, he outlined a policy which has been severely tested and proved sound; and, since his return to resume his duties at Tuskegee, the work, now under the charge of Robinson, has followed the principles and to some extent even the details of Calloway's report.

"In my letter to you," says Robinson to Principal Washington, "I shall deal with the subjunctive 'if' and the co-ordinate 'and.' Generally speaking I am unable to see many impossibilities in the doings of men. Of course there are conditions to be righted and obstacles to be overcome. So, after one year's experience with our undertaking here, I felt convinced that it was possible for us to accomplish our purpose; so we set to work to extirpate the 'ifs' root and branch."

"If" Number One.

The first essential to success in the work was to win over the natives to hearty sympathy with the undertaking. Such an enterprise can only be counted successful to the degree that it is supported, developed and sustained by the people. It was plain that "if" Robinson and his men could succeed in interesting the people generally so that they would feel that the industry is pre-eminently of the people, for the people, and by the people, the first "if" would evaporate.

But, at the outset it was very difficult to arouse any popular interest: illumined by costly experience, the natives distrust every proposition made them by a foreigner, and in the beginning would not even accept gifts of cotton seed. These untraveled black men feared the Greeks even bearing gifts. They argued that should they accept the seed, the foreigners would come again and claim their own with cruel usury. Certain Europeans, initiated into the mysteries of native psychology, confidently predicted that the natives would never become interested in the movement and

that on this rock the enterprise would founder. "But," says Robinson, "we worked on and already the farming districts are dotted with hundreds of native cotton farms. Now, they no longer mistrust us but come and eagerly ask for cotton seed. A conservative estimate places the incoming native harvest at the 1000 bale mark."

Of course the native methods are antediluvian and grotesque, and they cultivate cotton exclusively as a secondary crop. But, the foreigners are contented, at the outset, to let them follow if they must, their own lights; the process will advance from the known to the related unknown, from shortsighted habits to improved methods. The new must, as in all other teaching, be grafted upon the old. Thus, the days of "if" number one are numbered.

"If" Number Two.

"If" the Robinson party could succeed in stimulating the people to take up the culture of cotton heartily and seriously, and then offer them a cotton plant that would pay them well for cultivating it, the experiment would have transcended the experimental stage. To extirpate this second "if" proved especially arduous; it required more than mere earnestness in general procedure. It required an amount of technical knowledge that could be distilled only from experience; it required a period of years to put that dearly acquired experience into successful practice.

"We find distributed through the colony," writes Robinson, "not less than three distinct species of *Gossypium* (cotton), with some hybrids and varieties but none of these are indigenous and having been left in a neglected state for centuries, are not far removed from the wilderness of nature, and, even when put under the best culture, are not particularly profitable.

"The seeds imported from America are not able to survive the vastly changed climatic conditions. Here is our greatest obstacle. Our course was plain; if we did not have a plant that exactly suited us, why, we had to make it—that's all! And that is the principal cause of my remaining in Africa so continuously and so long."

To an American cotton planter it would, perhaps, not seem impracticable to manufacture an appropriate soil; but, in Togo, West Africa, there was no decently behaved climate, and he would probably defy any man to manufacture climate. But, in effect, that is what Calloway and Robinson have been attempting—to make a climate to please their plants. Or, more exactly they have been trying not to construct a climate but a cotton plant neatly adjusted to the Togo climate. The production of a commercial plant is certainly more important than difficult. Through cross-breed-

ing and selection with close, and infinite care over and over again, Robinson is now obtaining results that are auspicious.

"Our present Togo seeds," says he, "yield about 400 pounds to the acre and the character of the fruit and the arrangement of the stalk made it very expensive to harvest. Besides, the stalk strives to imitate a tree and, proportionately to its size, is not prolific; moreover the lint is not good. But, this cotton is the peer of American middling. We are attempting to develop a plant that will yield 1,000 pounds seed cotton to the acre, with a lint equal in quality to fully good middling or to Allen's 1 $\frac{7}{8}$ inch staple."

There will be in cultivation this year some 4000 acres which, according to the present yield, will produce 1,600,000 pounds seed cotton or a little less than 1,000 bales, but the same area, if planted to a more prolific plant, would produce not less than 2,000 bales; and, if the lint brings 22 per cent more in the market one can see how greatly the incomes of the colony would be augmented. Such a plant is forthcoming.

Through selection and crossing of *Gossypium Hirtutum* var, Russel Big Boll, and *Gossypium Redigossim*, a new variety has been educed which is satisfactory in every essential respect. More hardy than the average American plants, and is 50 per cent more productive than the average native plants. A sample of the lint from this new variety was submitted to the Chamber of Commerce in Berlin and pronounced good in every way, and in January, 1904, was able to command about 20 cents a pound. Thus, "if" number two is about to take wings.

Other "Ifs."

There are other minor "ifs" that are receiving similar attention: as far as Muatya Lome, Togo, is concerned, the whole race of "ifs" will soon be extinct as the dodo!

Principal Washington admonishes every one of his students to labor earnestly, quietly, soberly, discharging his duties in a way that will eventually make him influential in his community. "Being faithful in small things," says Robinson, "is one of the principles of Tuskegee. It has become natural for me to be faithful, it matters not how insignificant the service. But, one may be faithful in a capacity which, strictly speaking, is not his duty. Living up to this principal of faithfulness, I find myself to-day possessing much influence in the work in which I am now engaged.

"In order to make secure the work begun and to insure a normal and well balanced progress for the future, it was recommended to institute along with the present undertakings what I am pleased to call our Cotton School and Plant Breeding Station. At this school are gathered young men from all over the colony

who come for a two years' course in modern methods of farming. These boys, forty-five in number, represent the most substantial and progressive classes. The land used for this purpose is 250 acres in extent. Such an institution seemed to me necessary to the wholesome progress of the undertaking."

At the beginning some skeptics did not believe in the wisdom of the cotton expedition, but now interest and enthusiasm are running high. There will soon be in operation three ginning and pressing stations, run by steam power and many others including a dozen or more hand gins.

John W. Robinson is the quality of man Tuskegee educates and trains honest, plucky, patient, resourceful, alert, industrious, with a passion for serving other people.

Tuskegee, Ala.

TAKEN UNAWARES.

BY MARY I. SENSEMAN.

THERE are few people who have not done the wrong thing at the wrong time, and knew it afterwards. And the few who did not wish, when they knew, that they had done the right thing, need a great deal of pity.

We laugh, when a smile would do; or smile, when a placid countenance is in order. We have our mind filled with something else and do not hear a question or remark at our side, or stare, or simper, or scold, or interrupt a person speaking.

It was involuntary. Afterwards we knew it was an insignia of ill-breeding. The thing that prompted our action came unexpectedly. We cannot foresee that somebody will be awkward, and then we are awkward to notice it.

The key to correcting the foolish actions is "think." Bind that key on the nerve cells that control reflex action. Teach them to ask advice of the brain instead of sending haphazard orders. We shall have to get ourselves into the habit of slipping into the other fellow's place in order to act towards him with best good effect.

To think, we have to be thinking. Be thinking of the work at hand, of the person or company in whose presence we are. The result will be that symbol of self-control, tact.

Covington, Ohio, R. R. 3.

IN all nature's vocabulary there is no such word as stagnation. There is progress and there is retrogression, and each is a movement. She knows no other road, and on either of these two paths all creation move.—*W. D. Little.*

SOME FAMOUS WOMEN.

BY OLIVE MILLER.

Rosa Bonheur.

IN the year 1822, in Bordeaux, France, there was born a child who was destined to become the greatest artist among the women of the nineteenth century. Her full name was Marie Rosalie Bonheur (Bonur) but she was always known simply as Rosalie or Rosa. The story of her life is very interesting, but nevertheless it is one of hard and ceaseless labor.

Her father was a landscape painter of considerable talent, but finding it very difficult in those early days to secure sale for pictures he moved his family to Paris. But even here he was obliged to teach rather than develop his own love for painting. Although Rosa had several brothers and sisters who were artists, she was her father's pride and it was to him a labor of love to teach her the first principles of art and to train her in drawing from life, thus developing in her a sureness of eye that served her well in all her work. She early showed great fondness for pets and animals and soon began to paint pictures of them.

At the age of eighteen her mother died, but although this must have placed new responsibilities upon her, she continued her work without interruption. That same year she exhibited her first pictures at the Salon, one a painting of sheep and goats, the other rabbits nibbling carrots. These pictures were not executed in a large, well-lighted studio, such as she owned in later years, but in an old attic which Rosa and her father had fitted up for this work. About this time her father married again and the children found in their step-mother a wealth of love which compensated as far as possible for the loss which they sustained in the death of their mother.

After the painting of the rabbit picture, every year Miss Bonheur sent pictures to the Salon, and each year she showed remarkable progress. At the age of twenty-seven she produced her "Le Labourage Nivernais" or "Tillage in France," for which she was awarded first medal. But the greatest of all her paintings, and the one that has brought her greatest renown is "Marché aux Chevaux" or the "Horse Fair." To paint a horse is not easy, much less to give it its finest colorings and to show its muscular strength and graceful beauty. People stood before this great picture in silent wonder, feeling it was a masterpiece of its kind. It was exhibited throughout England and France and was finally brought to America by Mr. A. T. Stewart. Later it was bought by Cornelius Vanderbilt and is now in the Metropolitan Museum in New York City. Surely America is proud to count

this picture among her art treasures. Other paintings of note are "Haymaking Season in Auvergne," "On the Alert," and "A Foraging Party."

After her father died in 1853, she taught a drawing-school for young ladies, besides spending much of her time traveling through the Pyrenees Mts., visiting England and Scotland and different parts of France. She always brought back with her new materials for her work.

At the end of ten years she bought an estate at Fontainebleau, and here she spent the remainder of her life in deep seclusion. The house in which she lived is a rambling structure, situated in the village of By, at the head of a row of cottages all whitewashed and picturesque. Across the road stretch the broad fields, replete with rustic scenery. The house itself was built of brick and stone and dates back to the eighteenth century, as is shown by its queer gables, massive chimneys and dormer windows. It seems to have been enlarged from time to time as fancy dictated. A high wall surrounds the house, and through a small grating in this wall one could catch glimpses of fine, large dogs, alert and active. But other than this of the enclosure was barred from sight. Rarely was a visitor admitted, but if one was so fortunate as to gain an entrance, a cordial welcome greeted him. Devoted servants in blue peasant dress guarded the mistress with jealous care, and she in turn proved her affection for them by a constant kindness.

She had several studios, all on upper floors, the one to the front commanding a fine view of the Seine in the distance. From the side wings one had a view of the large parks in which she kept her animals,—lions, deer, chamois, besides all the inhabitants of the farmyard. These animals knew their mistress and watched for her morning visits, when she lingered to study their every graceful movement.

Her largest studio was in every way such a room as would suit Miss Bonheur's taste. The polished floor was overlaid with handsome rugs, on the finest of which generally reposed her favorite white spaniel. A few pictures adorned the walls: portraits of her father and mother and a few landscapes painted by her father. On easels and piled against the walls were pictures of all sizes and in every medium,—oil, water-color and pastel. Her greatest desire was to finish these pictures before she finally laid down the brush. To accomplish this aim, she worked early and late: even the infirmities of advancing years did not hinder her from rising at dawn. So the crowning honors which came to her in the latter years of her life were well earned.

Not far from her chateau at Fontainebleau is the palace of Fontainebleau, at one time, the favorite sum-

mer home of Napoleon III and Princess Eugenie. The Princess was a warm admirer of Miss Bonheur, and begged Napoleon to bestow upon her the cross of the Legion of Honor. But as this title had never yet been bestowed upon a woman as a recognition of talent alone, Napoleon's counselors were opposed to the act. This was in 1864, but the next summer, during the absence of the Emperor, Eugenie acted as regent. Her first act, after going to her palace for the summer, was to drive through the woods to Miss Bonheur's chateau, and surprising her in her working blouse of blue, she pinned upon her the cross and bit of ribbon that made her Knight of the Legion of Honor, the highest honor that the Imperial Government could bestow.

But in 1893, in recognition of the excellency of her work at the Columbian Exposition, she was awarded the title of Officer of the Legion of Honor, a distinction unsurpassed by any woman painter of her time. She died in 1899 at the advanced age of seventy-nine years. And yet, after all, she had accomplished in the realm of art, she declared she had enough in mind to fill two or three lifetimes!

THE BLIND CAT.

BY MAUDE HAWKINS.

SOME people will argue that dumb animals never think, but I am convinced that they do and not only that, but they exercise a great deal of reasoning power. To illustrate: let me tell you of an old blind cat that once belonged to our household.

Before her affliction came she was very devoted to a full grown offspring of hers which was several years old. But nevertheless it was cared for by the mother cat, as tenderly as when it was a little mewling kitten. It took all this care, as a matter of fact; it was quite contented and took life easy, generally. Many were the fine mice and birds that she feasted upon,—the product of her mother's powers and industry.

But there came a time when the mother's usefulness in this world ceased, for alas, she found herself in total blindness. Then, even before any of the family had discovered her misfortune, the conditions were reversed. The trophies of the hunt were brought by the younger cat, and laid reverently at the feet of the mother. Indeed she seemed to realize from the first that she was under her special care, and she must be eyes for her as well as a provider. For on no occasion would she allow her to wander away alone. And at night when they were put outside to seek their own bed in the barn, she would walk by her side, guiding her with many a pur or mew till the place was reached,

and she saw her safely snuggled down for the night's rest.

Here the old cat slept until called by the younger one. And no amount of coaxing or calling by any member of the family could induce her to arise till summoned by her faithful nurse, often after having taken an early ramble through the fields in search of prey. She would invariably call her when meals were about to be served in the house, and in many ways showed her solicitude for her welfare.

No child could have been more kind or looked after the comforts of a dear, beloved parent more faithfully than did this cat. Finally the old cat in the absence of her tender guide, wandered to the street and was run over by a passing wagon. All night the kitten wandered and worried about her. This I know by her actions in the morning. When I opened the outside door she was the first to meet me, with many cries of distress. When I went toward her to discover the cause of her grief, she would bound towards the barn, stopping now and then to ascertain if I was following her. Finding that I was still in the doorway, she would return and repeat her entreaties only to dart away toward the barn again. Finally I followed her to her bed, and there she told me as plainly as anyone could, that it was empty, by many cries and much jumping in and out of bed, and looking at me with beseeching eyes asking for help in her sad bereavement. I did not then understand her meaning, but later in the day, when we found our old friend's mangled body by the roadside, *we knew all*.

Towanda, Pa.

NEW CLOCK REGULATOR.

A NEW method of driving and regulating clocks electrically by the use of selenium cells has been devised by Herr K. Siegl. The selenium cell, by Rhu-mer, in an exhausted pair-shaped bulb, was placed in the focus of a parabolic cylinder mirror, so that the light from an incandescent lamp could impinge upon the cell whenever a second pendulum passed its lowest point, at which a slit in a card fastened on the pendulum coincided with a slit on a fixed screen. The effect on the selenium is made to actuate an electro magnet—placed just to one side off the point of the cell—so that an impulse is imparted to the pendulum at the right moment. Another selenium cell can be used for imparting motion to a series of other electrically operated clocks, which can be of the step by step type. A clock on these lines has given satisfaction and demonstrated that an electric clock without contacts can be made.

SERVE God by doing common actions in a heavenly spirit.—*Spurgeon*.

MOUNT VERNON, VIRGINIA.

BY ANNA BOWMAN.

It is a beautiful sail down the historic Potomac river, from Washington D. C., to Mt. Vernon, the home of Geo. Washington. A view of old "Fort Washington" may be had, while on the opposite side picturesque Virginia scenery charms the eye. A fine view may be had of Mt. Vernon in passing down the river to land on the Maryland side at "Marshall Hall," where our party took refreshments. From this point the boat "The Charles McAllister" conveys all tourists to the Mt. Vernon Wharf.

We found our perspiration rising with our patriotism as we climbed the hill leading to the tomb, the home and plantation of our most universally beloved President. We approached the tomb of George and Martha Washington, into which we were permitted to look through iron bars, but could not enter; the keeper told us that many years ago the gate was locked forever and the key thrown into the Potomac river. The vine-covered barn, built in 1733, stands farther up the hill; this we got permission to enter and found it to be in good repair, and still occupied by the keeper's horses. Near by stands the old coach house and we took a look at the clumsy old coach, in which we imagine we could see Washington riding in state. It is an interesting old relic, to be sure, and it gave us no uncertain sound regarding its age.

On just a little farther and we come to the deer park and the garden, each being laid out by Washington himself, and are extremely interesting to the observing eye. We enter the house in which the Washingtons lived, and look especially at the rooms in which each died, they being furnished in antique colonial style. We take a view of the quaint old kitchen, separated from the main building by a long porch, and call attention to some of the articles found in that old fireplace. Let us see whether we would enjoy domestic science of the eighteenth century.

Going through the door from the porch the fireplace is on our left, while to the right of the fireplace, the space is occupied by an old-fashioned bake oven, very much like those abandoned ones we find in the back yards of some old Virginia homes. The fireplace is eight feet long, five feet high and five feet deep. Not so small is it? In it are two large andirons (commonly called dog irons) on which are piled the huge back log, with smaller logs in front, all ready to start the fire. And should "Black Mammy" return to revive those "good old days" of fireplace cookery, she would find the tinder on the mantel, with which to strike the light, for she would not use our

method, while the young pickaninny would reach the bellows from the fireplace wall and help "blow up" the fire to start the pot boiling.

Attached to the front of the andirons on which iron rods (pointed at one end) are laid, are rods called "spitz" which are used for holding the meats when roasting. The arrangement for turning the meats while roasting is also quite interesting; the article with which this is done is called a "smoke jack." It consists of a double chain attached to the spitz, and also to a fan up the chimney which is affected by the smoke as our windmill fans are by the wind, thus turning the spitz. But when a small roast is desired a clock jack is used; it is a brass cylindrical machine which hangs from the outside center of the fireplace, and when wound up turns the article, placed on the suspended hook.

In the back part of the fireplace is found what is called "the crane"; it is an iron bar with hooks attached and hanging from these is a teakettle and three iron cook pots, varying in size, ready for a boiled dinner. Setting on either side between the andirons and the wall, are three large and one small dutch oven. We had the privilege of eating some of this dutch oven bread, and even took some lessons in baking it. I did not ask the names of the deep skillets with short legs and close covers, for I remember how we had to pet a campfire in order to get coals on which to set the oven, as well as cover the lid.

Spiders, skillets and a tripod for keeping dishes warm, as well as several kinds of toasters, are hanging on the walls of the fireplace, or standing in the corners, while the usual large shovel and tongs adorn either side.

As in the old colonial kitchen, this fireplace has its string of red peppers on its wall, while over the mantel hang bunches of dried herbs.

On the mantel beside the tinder are a coffee mortar and several iron candlesticks, while a hominy mortar sets on the hearth. These mortars are of iron or brass and the article is crushed with a heavy stone or iron very similar to the Mexican metals now in use by the Mexicans, and found in prehistoric ruins of Arizona and New Mexico.

Now you will observe there is a great difference between modern methods and those used in preparing the meals for our first president, yet they had some conveniences with which I was not acquainted, until I stood by that old fire place and wrote, while I interrogated the lady in charge, as to the names and uses of all the things found there. I am sure we would all be interested in the preparation of a meal by this old fireplace, and enjoy eating it no less, yet I wonder if it would not be harder for us to accommodate ourselves

to that way than for one of those colonial dames to take charge of a model kitchen of to-day. We would not want to go back to those days, for the work on the woodpile is too hard for our boys, and our girls would fume over the blackened pots and kettles, but if we get real hungry for an old-time meal, we can get it still; we can find the fireplace, the hoecake and all in many homes in the mountains of Eastern Virginia.

2218 Force St., Ft. Wayne, Ind.

THE ELECTRIC LOCOMOTIVE IN ACTION.

A BLACK iron monster, with reversible front and a corridor extending from end to end, and communicating with the cars it draws,—such is the general appearance of the famous electric locomotive. In non-technical language, it consists of a ninety-five ton engine on four driving axles, the motive power being produced directly, without intermediate gearing, from a powerful electric motor, developing a capacity of 2,200 horse power, which can be increased to 3,000. The method is by the third rail, a section of six miles in the open country west of Schenectady having been equipped especially for this trial by the General Electric Company, which also furnished the power for the tests. This third rail was protected by a wooden hood, so that no one could reach it unless he tried. At crossings or other places where the third rail was interrupted, the motive power was supplied by connection with an overhead wire, a trolley from the locomotive meeting it at these points by means of a pneumatic device controlled by the engineer. The frame of the locomotive is of steel, which acts also as part of the magnetic circuit for the motors. In the test at Schenectady, the center of the cab was taken up by a set of recording instruments showing speed, voltage, consumption of current, how curves are taken, and various other qualities of the locomotive. When in use hauling trains, however, this space will be occupied by a heating apparatus. According to law, there must be two men on the locomotive,—the master engineer and a helper, who will take the place of the old-time fireman. In designing a locomotive, the general features of the steam engine have been kept in mind, and valves, whistles, controllers, bells, and other devices are within easy reach of the engineer. It was the aim of the designers to secure in this machine the best mechanical features of the high speed steam locomotive combined with the enormous power and simplicity in control made possible by the use of the electric drive. The elimination of gear and bearing losses permits of a very high efficiency; and it is claimed for the new machine that it will pound and roll much less than the steam locomotive, and thus reduce the expense of maintaining the rails and roadbed. By the use of

the Sprague General Electric multiple-system of control, two or more locomotives can be coupled together and operated from the leading cab as a single unit.—From "Electric vs. Steam Locomotives," in the *American Monthly Review of Reviews* for December.

ADDS CAR OF NOVEL DESIGN.

SOMETHING entirely new in the way of railroad equipment has just been procured by the Milwaukee and St. Paul road for use on its Overland Limited trains between Chicago and Omaha. It is what is called a "composite observation" car, the idea being to furnish women passengers an opportunity of taking in the beauties of the scenery with the greatest possible amount of comfort and entirely free from the fumes of tobacco smoke. The car is divided into two main parts, one of which is divided from the other very much after the manner of a compartment sleeping car, with a lobby running down the side of the inclosed space. This inclosure is for the use of the smokers and those seeking other refreshments from the buffet.

Another noteworthy feature of the new style of car is its extraordinary strength. Throughout the car there has been placed a series of steel arches, which bind sills and sides together and strengthen the roof in a manner which renders the car almost indestructible.

The interior woodwork is all of St. Jago mahogany and presents a very rich appearance. The car is lighted with Pintsch gas and electricity. It is also furnished with electric fans by which the temperature may be moderated in the hottest summer weather.

In both the observation-room and smoking-rooms writing desks have been provided and in the observation-room library are stands on which recent periodicals are always to be found.—*Chicago Chronicle*, November 20, 1904.

* * *

A BIG ALLIGATOR.

A BIG alligator, measuring 11 feet 8 inches, which was caught at Harris's place, was brought to Pensacola, Fla., and taken to Norman's saloon. The big fellow was unloaded from the vessel that brought him to the city and loaded upon a dray on South Palafox street, a crowd collecting to watch the operation. The reptile's mouth was securely tied with a heavy rope, and he was so nearly dead that he could not resent the rough handling. Had he been in fighting trim it is more than likely that several people who incautiously grabbed him would now be under the care of a physican. The alligator was shot through the head in shallow water, making his capture comparatively easy.

AWAY DOWN SOUTH.

BY A. G. CROSSWHITE.

JUST *when* I cannot say with any degree of certainty; but it will be safe to say "once upon a time." My father was a boot and shoemaker as well as a minister of the Gospel. He was an invalid pensioner of the Mexican War; and, with his government aid and the revenues from the bench was enabled to keep the wolf from the door and preach as often as the disturbed conditions incident to the Rebellion would permit.

I was a little man of some seven summers already in possession of a fiddle, stringless and bridgeless, and now forever voiceless inasmuch as I had turned it aside from its natural use and now used it as my horse "Selim."

My sister Enuma who is now sweetly sleeping in a Southern cemetery was eight years my senior to the very day and being the first-born of a family of eight was very much devoted to father and seemed to appreciate the hard licks that must make ends meet in those perilous times when most of the money in circulation was so depreciated that wealthier children used it as thumb-paper in their books.

Flour was worth probably fifty dollars per hundred and wheat bread was only a Sunday luxury. Very little was raised on the farms for the able-bodied men were all in the war. What was gathered together by the underlings, the overlings and women was confiscated or destroyed by the soldiers. There were no restraining orders for everything was under military rule and lawlessness reigned supreme. The "Home Guards" were supposed to protect the women and children and those who were exempt because of age or physical debility. A few people of nonresistant principles chiefly the Quakers and the Brethren were exempt from military duty on the payment of a fine of five hundred dollars. But even these people were not always exempt from the murderous attacks of the "Bushwhackers" or Guerrillas. Now, this "Once upon a time" refers to a certain occasion when neither army was stationed near us.

All of a sudden we were completely taken by surprise when about a dozen or more of those dreaded "Bushwhackers" in dirty, tattered garments, big clanking spurs, their Satanic bodies girdled with ugly looking revolvers and their faces concealed by masks bolted into father's little shop entirely unbidden and demanded to know why he was not in the service. He replied that he had exemption papers and was working through much pain at times to shield the feet of some of his poor neighbors from the biting frosts

and snows of the hard winter that was already upon us

My sister was watching with supercilious glances their every movement and soon decided that she had seen some of them before. They told father that they were in hard luck and had come to relieve him of all his stock on hand. When they started to go up stairs sister decided that they should not take it and so followed the villains up much to my father's discomfort.

Father worked on with trembling hand for had he dared to expostulate with them or prevent this daring daylight robbery he would have been in eternity in less time than it takes to tell it.

Just over his head his stock of leather, boots and shoes lay concealed; but what had Satan commissioned such fiends for but to take the very bread out of the very mouths of helpless children? An unusually large supply was on hands that day and they chuckled with delight at their rich haul.

One of them opened a big sack and another one began piling in father's hard earnings and that of his neighbors as well. This was too much for sister and she began to place them out of their reach. The leader was rather amused at her pluck and blurted out in a rough sarcastic voice, "Oh, dear me, little gorgl, who are you any way?" "You know who I am," said she, "and I know *you*, too." "You do, eh?" "well tell my name if you can, little lady." "*You*," said she, "are Sam B——;" "*You* are Wash P——;" "you are Bill B——" and so on, pointing to each as she spoke. "You have something on your faces, but I know you any way, for you have been here before, and I am not going to let you have all my papa's things."

"Get away" said the ruffian, "or I'll brain you." Just then one of the men who was enjoying the scene spoke up, "Say, little miss, that's the mettle I like; you just say what you please." Nerved by this safeguard she spoke more decidedly. "Now, my papa works hard and you *shall not* take these things." With this she armed herself with a boot-tree and stood facing the thief. "Hit him" said one of his pals, "and if he lifts his finger against you he will be a dead man."

She held the unwieldy weapon ready for the final blow still cheered on by those burly back-woodsmen, little realizing what the final outcome would be. This was too much for these degenerates and they quit piling in those guarded treasures.

It would have required the bravado and heartlessness of a maniac to have struck a woman or a girl and they had to desist or break over the simplest form of guerrilla etiquette. Not contented with this she ordered them to empty their sacks which they did in double-quick time. One of them quickly stepped to

her side, patted her on the back and said in a defiant tone, "Three cheers for the bonnie lassie that dares to stand up against such men, three cheers, little girl," and away they went, God only knows where.

TOO BUSY TO LOVE.

"MOTHER'D love me a whole lot, too, if she wasn't too busy," loyally declared a small maiden, who had hungrily watched the home leave-taking of a little companion as they set off for school. "She has pretty much housework to do."

The "much housework" and other work seem to take precedence of love in many households where the members would be shocked if they fully realized the fact. Love their own? Of course they do, and all the toil is for the sake of these beloved ones, they say, and really believe. And yet the work becomes a fetich—not something for the family comfort, but something before which all else must give way, to which everything else must be sacrificed. Washing, ironing, sweeping, dusting must take their appointed course and be finished according to schedule time, whatever becomes of life's higher needs. There is no elasticity in the system, no time for tenderness or sympathy; for the hour's talk that might clear away doubt and misgiving; for comforting sore hearts or binding up wounded spirits. There are usually notable housekeepers in such households—women of whom neighbors speak admiringly, and recount the wonders they accomplish—but there is seldom any deep home spirit. Work counts for something until some dreary day when the inevitable shadow falls across the threshold, and all things change values. The tasks that seemed so important only yesterday, what do they matter?

"But oh, for the touch of a vanished hand,
And the sound of a voice that is still?"

—*Forward.*

* * *

SOUTHERN BRIMSTONE.

THE producers of brimstone in Louisiana intend henceforth to compete actively for the business in the principal markets in the United States and if possible supplant the Sicilian exporters, who have hitherto practically controlled the trade. This departure is due to the increase in production in the South and the more favorable freight rates which the producers have been able to obtain from the transportation companies.

The consumption of brimstone in the United States and in other countries as well has been steadily increasing during the last few years, but the production in Sicily has also increased and at the end of the first half of last month the accumulated stocks in that country were 289,999 tons.

The Anglo-Sicilian Company, which has controlled the market, has refused to make price concessions, relying upon the increasing demand to consume the existing surplus, but it is predicted that the appearance of competition from the southern part of the United States may have some effect upon prices. The first shipment of consequence to the North has just arrived in New York and consists of 3,000 tons. There are others to follow for that port, Philadelphia and other points in Northern and Western States.

* * *

A CAT AND A CANARY.

THE following story was sent in a letter to the editor of *Our Four-footed Friends*:

"I want to tell you a cat story (the truth of which I know) that you may use in your little magazine. Mrs. R. had a cat, a dog and a canary bird, all of which were content, and more, in the care and love of a gentle heart. The cat, Kitty, was very fond of the bird and would sit beneath the cage and listen to the singing with every evidence of pleasure and pride. Two years ago last summer Mrs. R. was in her rear yard with her flowers when Kitty came running to her, mewing loudly, and then ran back toward the house, repeating her dumb efforts. Finally Mrs. R. said: "Well, Kitty, I'll come in and see what is the trouble." As she passed in the door a strange cat ran out. The cage was on the floor and the bird was dead. And now for the real heart of the story, for the veracity of which I can vouch. The empty cage was rehung in the window; Kitty came and stood beneath the cage, looking up and mewing. For two days she stood, then she lay down; she refused food; delicacies that once she had enjoyed she did not notice. On the morning of the fourth day after the bird had died Kitty was found dead beneath the empty cage. She had loved the bird, and she could not live without it."

* * *

THE OLDEST LIVING ANIMAL.

A LONDON paper says that they believe at St. Louis they have on show the oldest known inhabitant of the globe. It is a land tortoise from one of the Seychelles Islands, off the coast of Madagascar. The reptile has been an object of veneration among the Natives for 150 years, and is believed to have been 100 years old before its giant size attracted special attention. The longest living animal is the elephant, which attains 120 years, but probably the tortoise lives occasionally to a much more advanced age. The animal at St. Louis weighs over 8½cwt., and is still strong and vigorous.

HOME is the sacred refuge of our life.—*Dryden.*

THE MOUNTAIN LION.

BY S. Z. SHARP.

(*Felis Concolor.*)

THIS large wild animal, also called cougar, puma, and panther, is found in the western part of America from Canada to Patagonia. In color it is yellowish brown or tawny above and paler underneath. It measures two and a half feet in height and about six and a half feet in length from tip of nose to tip of tail. The jaguar, *felis onca*, also called American lion, found from Texas, Mexico, Central America to southern Brazil, differs slightly from the panther in being more slender, a little longer, and having a smaller head. In color it is yellowish brown, with dark rings encircling a darker spot.

Comparing the panther with the African lioness, both close together in the zoölogical gardens at St. Louis, we noticed a marked similarity between them; both being devoid of a mane and resembling each other in size and form, entitling this denizen of western America to be called a lion.

Some authors say that the panther is becoming scarce, but the stockmen of Mesa County, Colo., claim that it is still too plentiful in this region as well as in others that border on the principal range of the Rocky Mountains. His raids upon calves and colts are sometimes quite destructive, as he will kill more than he can eat. For colts he seems to have a special fondness as many of our neighbors testify who keep their stock in summer on the mountain ranges. Not only colts, but often large horses fall victims to the rapacity of the mountain lion. We have now in our stable a large mare bearing a long scar on her side, the effect of a rent made by the powerful claws of a lion which killed her colt.

One method of securing his prey is for the lion to crouch upon a large limb of a tree and over a path followed by cattle or horses. From his perch the lion watches his prey as a cat watches for a mouse and at the proper moment springs upon its back and inserts his long fangs into the victim's neck, close to the head, causing the animal to fall down helpless. A stockman gives the following description of an attack which he witnessed, and which was made by a lioness and her two well-grown kittens upon a large horse:

"The two young lions began to play with each other at a considerable distance and just in sight of the horse. At last they gained his attention and he began to watch their maneuvers, riveting his attention upon them. Then the lioness made a long detour through the bushes, unobserved until she came behind

the horse and close to him, then suddenly sprang upon his hind limbs and with her sharp teeth severed the tendons of his hockjoint and the horse was hamstrung. The young lions then rushed to their mother to help finish the catch and begin the feast. The play of the young lions in the distance, the stealthy, hidden, approach of the lioness toward her victim, her attack at the most vulnerable part, all tend to illustrate the wonderful instinct given by the Creator to some animals to obtain their food.

Mountain lions are not easily found or destroyed. In was in 1900 shortly after his election to the office of Vice-President, that Mr. Roosevelt entered upon an extensive lion hunt about sixty miles northeast of this valley. Accompanied by skillful hunters and well trained dogs and well equipped for such an exciting chase, his efforts were crowned with decided success. On one occasion a lion being shot at several times at long range the animal would leap from the tree and run until too closely pursued by the dogs when it would run up another tree. At last two dogs caught the lion on either jaw and held him fast until the hunters came up. The dogs being well trained kept their front legs well under their bodies and out of reach of the lion's powerful claws, and thus escaped being torn to pieces. The future president quickly taking in the critical situation of the dogs, rushed up and plunged his long hunter's knife into the lion's heart. From this hunt Mr. Roosevelt returned home with the skins of nine mountain lions and those of a number of wild cats.

Fruita, Colo.

FASCINATION.

BY HARVEY H. SAYLOR.

A FEW days ago while riding into Pittsburg on a crowded trolley car, two well-dressed respectable looking ladies entered the car and on account of the crowded condition I could not help but hear their conversation which was as follows:—

I do not know what Jeannette means by keeping company with that fellow; I do not think that he is much, but he has been able to put on appearance and that fascinated her so that she thinks he is the only one.

Did you take notice last Friday evening at the party how put out and worried she was? It was simply because he didn't come; she was expecting him. He surely must not think much of her or he would come oftener to see her; possibly he has another girl or girls some place else and doesn't care much for her. Jeannette is accomplished and plays well, and could have the company of young men of worth whom she

knows; I think she is foolish. Now right here was the same thing that I so often thought about. By their conversation I inferred that he was a man of short acquaintance at that place, and it always seems so strange that a person should become fascinated by a stranger who has appearance only without any real knowledge of his real character. How low we set our ideals and how soon we are willing to make acquaintances for which we may be sorry afterwards. Boys and girls need to be impressed with the thought of high ideals and striving for them. To treat every one with courtesy, but to be slow in forming friendships. Now, here is where culture is needed. Manhood is not the gift of fortune, but the slow growth of our thoughts and actions. Each day we are making, knowingly or unknowingly the grooves in which our future thoughts will move. In many ways we are the makers of our own destinies and when people become educated fully along that line they will judge more by the true worth rather than by reputation, appearance, or popularity.

Roscoe, Pa.

COMPASS PLANT.

"SAILORS, when they're lost, get their bearings from the stars," said a Western miner. "Lost landmen, knowing nothing about astronomy, must trust to their botanical knowledge to lead them home. If I ever get lost on the prairies I look for a compass plant. This plant is a pretty common growth on the Western plains, and its leaves always point due north. If you know where north is, you are sure the south is behind you, the east on your right and the west on your left, and there is nothing for you to do but to push onward in the direction your home lies. Thus the compass plant has saved many a lost traveler from death on the plains. Woodsmen tell me that, when they get lost, they find due north by examining the tree trunks. On the side of the trunks that faces north the moss, they claim, always grows the thickest. Moss will be found, to a certain extent, all over the trunks, but on the north side there will be two or three times as much of it."

THE BOAT THE GNATS BUILD.

DID you ever hear about the wonderful boats the gnats build? They lay their eggs in the water, and the eggs float until it is time for them to hatch. You can see these little egg-rafts on almost any pool in the summer.

The eggs are so heavy that one alone would sink. The cunning mother fastens them all together until they form a hollow boat. It will not upset, even if it is filled with water. The upper ends of these eggs are

pointed, and look very much like a powder flask. One end is glued to another, pointed end up, until the boat is finished. And how many eggs do you think it takes? From two hundred fifty to three hundred. When the young are hatched, they always come from the under side, leaving the empty boat afloat.

These eggs are very, very small. First they are white, then green, then dark-gray. Then they change again to a kind of sheath. In another week this sheath bursts open, and lets out a winged mosquito. It is all ready for work. There are so many born in a summer that, were it not for the birds and larger insects, we should be "eaten up alive."—*Our Little Ones.*

CATCHING COLD.

EVERYBODY is complaining of colds just now. I think the cause is that people keep their houses too hot and dress indifferently to the temperature.

Men seldom vary their dress, but women are constantly changing from the thinnest of lace blouses, which expose the neck and chest, to fur wraps and heavy boas round the throat. Then they sit in warm rooms with big fires, and go out, perhaps, in the same clothes they wear indoors.

Sleeping with the window open and bathing the chest every morning with cold water are admirable preventives of cold, and putting on a wrap when leaving a warm room is also good.

A cool atmosphere never gives cold; it is the perpetual changes of temperature that do so.

Ladies' colds arise often from the practice of tea drinking and paying calls during the afternoon, and also from sitting in clubs in their outdoor garments.

Latterly the chorus of incessant coughs in ladies' clubs has been most distressing, and such colds must be very infectious.

WHERE WOMEN SHUN MEN.

ON a small island in the Greek Archipelago there is a colony which is composed entirely of women. It is a sort of religious order which considers it a disgrace for one of its members to even look at a man. When a fisherman approaches the island, the women pull the gray cowls of their cassocks over their heads and turn their backs. Provisions are never imported, as the women, strict vegetarians, grow their own products. Only the matron, who is annually elected head of the colony, is ever allowed to leave the island. The others remain there all their lives, taking their turn at tilling the soil, washing and housekeeping.

RECOLLECT that trifles make perfection, and that perfection is no trifle.—*Michael Angelo.*

SUNYA AND TILLIE.

BY S. N. M'CANN.

SUNYA is an old mother cat and Tillie a very motherly dog. The two were grown up together and such intimate friendship and love as they manifested is seldom seen between the cat and dog family. The two not only romped and played together, but the old mother dog treated the cat as her own little ones. The cat would take her meal of warm milk with the little puppies and would often have the privilege when the little puppies did not. The motherly old dog would lie down and let the cat nurse long after she had no milk to give. The old cat would act just like a little kitten never allowing her nails to hurt her friend. I tried twice to get a picture for the Nook of the dog nursing the cat with her little puppies, but failed, as they both seem to suspicion mischief and would not perform when the kodak was about. The motherly old dog died a short time ago and all hopes of their picture is ended so I send you these few notes. I often saw them fondling each other and the old cat nursing, as they belonged to one of our native Christians here.

Anklesvar, India.

THE SIMPLE LIFE.

BY D. Z. ANGLE.

A SHORT time ago one of our neighbors, Mr. H——, killed a beef, as we commonly term it, and not needing it all for his own immediate use, decided to retail a party of the meat direct to some of the people of Mt. Vernon. While at this business, he called at a colored man's place of residence and seeing the dark lady of the house out in the yard washing clothes he accosted her in substance as follows. "Madam, do you want any beef to-day?"

Her somewhat lofty answer was, "No sah! we done got possum and sweet taters."

Mt. Vernon, Ill.

WILD DOGS OF CENTRAL AFRICA.

THE wild dog of Central Africa, an explorer writes, is common enough. He is an ugly-looking beast, with a pied body, coarse hair, short head and large upright ears. These wild dogs play fearful havoc with game, occasionally clearing out whole districts precisely in the same manner as the red dhool of India, before which even the tiger is said to retreat.

They have a wonderful power of scent, wonderful boldness, endurance and pertinacity, and their loose, easy gallop covers the ground far more quickly than it appears to do. They usually hunt in considerable

packs, although I have sometimes met them in threes and fours. I have never heard of wild dogs actually attacking man, but they often behave as if on the point of doing so, and unarmed travelers have been literally treed by them before now.

A BABOON SWITCHMAN.

UNTIL quite recently there was a baboon acting as switch tender on one of the railroads in South Africa. He was a powerful animal, nicknamed Ceese, and was the property of a native switchman. He had been taught to turn the switch at points while his master looked on, but he soon showed such intelligence in the work that he came to do it alone, locking the rod and doing other details as well as a man. The engineer did not object to his work and had great confidence in his ability. He would often jump on the shifting engine as it passed on its way to move cars about the yard, but only after he had opened the switch for it. But as soon as the story of the baboon's work came to the ears of the officials they were forced to "bounce" Ceese for fear of popular indignation among the patrons of the road, who might object to their safety being in the hands of a baboon.

YEAR-OLD ICE CREAM.

THE leading manufacturer of ice cream said recently, "Now, this is patented." He exhibited a cream brick. "Not the size or shape, nor the way it was made, but the way of doing it up. All of us manufacturers used to pay a royalty for the privilege of wrapping this lump of cream in white paper and refreezing it, or, as we say, superfreezing it. I can put the brick away for a year, and at the end of that time it will be as good as it is now, except that the flavor will not be quite so perfect. This is the way we do up ocean steamship supplies. You know the liners take cream enough at this end to last the round trip. Can't afford to stock up with it on the other side, where it costs four times as much as it does here."

THE TETANUS MYSTERY.

PROF. PIETRO MALATESTA, of Naples has studied the phenomena of lockjaw in the crowded charity hospitals of his native city, and inclines to the opinion that microbes have for once been slandered. They do not trouble patients who have been cut all to pieces in the dagger duellos of the Basso Porte (the Naples harbor and rowdy town), while a mere scratch often brings on the deadly spasm in a few hours. The truth seems to be that the special nerves react on those of the

maxillary region, just as a blow on the head is resented by the digestive organs, or a whack on the jaw by the brain.

BEES REMOVE DEAD.

OVER 100,000 honey bees were killed during the fire at the Eureka paper mills in Bridgeport, Conn., the other day. As soon as the smoke had rolled away and the charred remnants of their homes had cooled the little insects, humanlike, set to work cleaning up.

Apparently an ambulance corps was formed, numbering several hundred bees. These began getting out of the way their dead comrades, many of them killed by stung firemen, and the way they worked suggested the work that must be going on daily on the Russo-Jap battlefields. Each bee tackled a dead one and struggled away with it, and as the field was strewn with thousands they have been employed the last few days.

A RECORD BREAKER.

THE thousand mile walk of George H. Allen from Land's End to John O'Groats in seventeen days is a wonderful achievement. A vegetarian, life-long abstainer, and non-smoker, he has done the walk in seven days' less time than it had previously been accomplished. That was last year, by Dr. Deighton, his average walk per day being 42 miles. In his first week Allen averaged 45 miles per day, in his second week 53, and in the last 63 miles per day; 177 miles were covered in the last two days. This progressive increase of pace and daily distance covered is a specially remarkable feature of the walk, and that the pedestrian finished his last day as fresh as when he left Land's End, and walking much faster. In the second week Allen covered 48 miles more than in his first, and during the last five days considerably more than during the first six days, and nearly as far as during the second week of six days. It will be a long time surely before such a record will be beaten.

A GOOD HAIR OIL.

THERE are applications to make the hair shine, but they also make it oily. It is much better to apply something which will not cause the hair to become greasy. Brushing three or four minutes with a brush that is not too stiff will make the hair glossy. So will a shampoo in warm water and plenty of soap. A good shampoo mixture to make the hair shine is made by dissolving a tablespoonful of shaved castile soap in half a cupful of hot water. Add a teaspoonful of borax and about a third of a teaspoon of bicarbonate of soda. Scrub into the hair and rinse off with many waters. In the last water put a table-

spoonful of powdered borax to a basin of water. The hair, to be glossy, must be dried and dried again. Then it must be shaken in the air and brushed until it is glossy. That is the way to produce the glossy locks that are so much liked.

EBONY AND SILVER RAILWAYS.

THE rails of the Mexican Gulf Railway are laid on mahogany sleepers, and the bridges built of white marble. In West Mexico is a line with ebony sleepers, and ballast of silver ore drawn from old mines beside the track. The engineers constructing these railways had no other material on the route, and found it cheaper to use these seeming extravagances than to import the ordinary material.

CHILBLAINS.

A REMEDY very much recommended for this troublesome complaint, and one found to be really efficacious is a tablespoonful of mustard in a hand basin of warm water, in which the chilblains are bathed before retiring for the night.

VICTOR HUGO said, that "all thinkers, all poets, all producers of nobility of soul, must be translated, commented upon, printed, published, reprinted, stereotyped, distributed, explained, recited, spread abroad, given to all, given *cheaply*, given at *cost price*."

IF you wish to rid your fowls of lice this season, take a small sewing machine oil can, fill it with coal oil, and put two or three drops on his or her head, neck and near the vent. You will be surprised to see how quick they disappear.—*Australian Agriculturist*.

TENDER feet should be bathed nightly in a strong solution of rock salt. They should be dried and powdered with boric acid. The socks or stockings ought to be dipped in a hot saturated solution of this acid and be dried without wringing.

THERE never did, and never will, exist anything permanently noble and excellent in character which was a stranger to the exercise of resolute self-denial.—*Walter Scott*.

"Not in the clamor of the crowded street,
Not in the shouts and plaudits of the throng,
But in ourselves, are triumph and defeat."

To be womanly is the greatest charm of woman.—*Gladstone*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

A TWENTIETH CENTURY REFORMER.

"I WAS born November 20, 1861, in County Cork, Ireland. I was dedicated to the Catholic priesthood at birth. I am a graduate of St. Finnbarr's College, Cork, and of St. Patrick's Theological Seminary, Carlow. I was ordained June 15, 1886. I became a priest of the Archdiocese of Chicago in 1896; and in 1900, with twenty-five brother priests, I entered upon a crusade against clerical drunkenness, grafting and immorality, which resulted in an uncanonical and invalid excommunication of me by the Papal Delegate, Cardinal Martinelli, which so-called excommunication, however, was withdrawn by him within two months.

"I became a naturalized citizen of the United States in 1901. I am now a priest of the Archdiocese of Chicago, and intend to remain so. *In the Catholic Church I was born; in the Catholic Church I have lived; in the Catholic Church I will die.*

"I have written and published a book to redeem the Catholic Church in America from destruction; to deliver the Catholic people from the control of corrupt priests and prelates, and save the American public school."

The above are the words of the Rev. Jeremiah J. Crowley, who is a Catholic priest of the Archdiocese of Chicago, who is attempting a reformation among his people.

Those who are intimately acquainted with Father Crowley, and those who have heard him speak, or have seen his book, will be convinced of the fact that he has undertaken this great work of reformation because of his great love for his mother church. He firmly believes that he was dedicated to the priesthood at birth, and that God sent him to America to save the Catholic Church from clerical drunkenness, grafting and immorality.

One thing is sure, *Father Crowley, to-day, is the best known Catholic in America.* How well he will

succeed in renovating ecclesiastical circles is written in a sealed book which will be opened in the next few weeks.

In all cases of reformation it is a difficult matter to lead people from darkness into light, because in the majority of cases, the light blinds them and they flee from the rays rather than get their spiritual eyes trained to stand the strong powers of illumination.

Father Crowley has dedicated his book, just published, to the emancipated Catholic laity of to-morrow. If the Catholic laity can be made to see the benighted thralldom, into which they have been thrown by conditions prevalent, the majority of them will rejoice at the opportunity of liberation. Any religious body, whether Catholic or Protestant, ought to be truly happy in any attempt at development along lines of spiritual and true sanctification. When anarchists make threats against the government to which they belong, when soldiers turn traitor to the army, when backsliders arraign the church, her mission and her ordinances, it becomes strikingly evident that such a warfare is waged because of prejudice, ill-will, malice and envy; but when a patriot, who rises above his fellows as did our forefathers, demands freedom, "a government by the people and for the people," or when a reformer like a Luther stands with his fortune and his life for the sanctity of the church and pleads in her behalf and seals his life-work with his blood,—when such a one shows his loyalty and love and protects her from sin and evil, from within and without to the extent of his ability, it may be well said, "He hath done what he could."

In his book, Father Crowley arraigns the parochial school and gives an array of startling facts concerning officers, teachers, curriculum, methods, and aims of the said institution, and goes so far as to show that in its character it is irreligious. He spares no words in giving an appalling account of priestly graft, drunkenness, immorality, sacrilege and crime.

If the statements be true, and they ought to be from one who stands in position to know, that the average Catholic rector of a medium sized city parish has a larger income than the President of the United States, it is time that the common people of the Catholic Church know how they are being robbed by their superiors. It is too bad that so much money is so cheerfully given and with such good intent, to be squandered in such an illegal and sacrilegious manner. He states that the *Catholic hierarchy*, not the *Catholic laity*, is bent upon destroying the American public schools, that the Vatican is hostile to the fundamental principles of American government and is attempting to establish diplomatic relations with the government of the United States.

Father Crowley is the exonerated priest of the great

Chicago scandal of four years ago. He is philanthropic; many of his friends wanted him to ask much more money for the book, but he said, "Remember the oppressed poor."

It is hoped that the attempted reformation will result in much good for the purity of the Catholic Church, for the maintenance and endorsement of the American government, and be an impetus to Christianity at large. It might be well for protestant churches to follow this example of our Catholic brother and clean house too.

❖ ❖ ❖

VERSATILITY.

It seems to be an acknowledged fact that the American people are more or less versatile. P. T. Barnum once said, "American people like to be humbugged," which is evidently correct according to statistics. Perhaps in no other country in the world do we find such a tendency for people to change religious views, and one year be found communicant of one church organization and the next year of another. Even men and women of the same religious organization are continually changing views. That peculiar fixed constancy of the Orientals is sadly wanting.

Men of science who were authorities yesterday will be obsolete to-morrow. Politicians have to be polled to ascertain, with any degree of certainty, the vote of a township and a county. It is possible for one to sit down and make a catalogue of many of his friends, who, to his knowledge, have changed occupations several times during their lifetime.

As a matter of fact, conditions modify somewhat, but generally speaking the versatility of the American people is responsible for the most part of the above-named conditions. Should the question arise in your mind whence all this changeableness and fallibility comes, remember that we are cosmopolitan and contributors to our basket of characteristics come from all parts of the globe.

The loyal sons from the Celtic Isle fill us with fun, frolic and fright; we have received from them politeness, poetry, romance, and patriotism. Many of the witticisms of the speech and press to-day can be traced to veins that carry Celtic blood.

From our Hebrew brethren, we are proud to say, we have gained that religious tenacity that is found nowhere else in the world. Their family devotion is truly commendable. They should be commended for their tireless industry and their eternal spirit of rebellion against wrong. Despondency is almost unknown among them, because they are generally optimists, backed with a great deal of courage. Their ability as financiers and economists make them world renowned.

From old Germany have come the men who have

brought to us definite thought, purpose, persistent effort, stability, economy, literature, and scientific research. Although the German language has been reduced to vulgarity through dialectic adulterations, yet their literature has done much to raise the standard of our own. The vast opportunities of broad America, to gain wealth, have not spoiled the German as an economist. He still retains his ability and privilege to keep what he has. The characteristics of firmness and stability have at times become so prominent as to be called by their rivals, stubbornness, but should not be considered so.

From the men of the French republic we have borrowed conception of thought, mental activity, logic, and thoroughly applied systems of self-government. There seems to be a genuine feeling of equality among the French that is admirable. They are not only neighbors as a nation, but as a rule make good neighbors wherever they go. They have added much to the social side of American life.

From the peninsula of Scandinavia come some of the finest specimens of physical manhood and womanhood that ever landed on our shores. While in the majority of cases the Swedes and Danes have been poor upon their arrival on free soil, yet they compose that plodding, conservative, industrious, reliable class of farmers and artisans of various kinds. They are a home-loving people of the most polite and hospitable kind. Courtesy and etiquette reign supreme in Scandinavia, and what they have contributed in this way to America is of much intrinsic worth.

From the Highlands of Scotland the echo of the bagpipe claims that part of our cosmopolitan composition, which predominates honest, vigorous, religious people of strong constitutions of body and mind, who are brusque, irascible, and who endeavor to rear conscientiously a patriotic and God-fearing family.

From sunny Italy, we have such men as Columbus, Michael Angelo, Dante, Garibaldi, and others who have brought to us magnificent qualities which our ignorance too often derides. It is not to be wondered at that among so many donations there should be some gifts that we cannot or should not use. Of course there are views religious and political which cannot be endorsed by our public. And in spite of all the good things that have been brought, there have come some relics of barbarism, monarchy, scepticism, infidelity, Clan-na-gael, Mafia, and macaroni.

Now, in view of the future American and his relation to the world and to his own country, what shall be the outcome of all this versatility? Shall we blame him for it? Nay, verily. Is there a remedy for it? Who knows?

❖ ❖ ❖

No reproof or demonstration is so potent as the silent influence of a good example.—*Hosea Ballou*.

Current Happenings

BOSTON'S NEW TRANSIT TUBE.

THE new one-mile tunnel under Boston's harbor, connecting East Boston with the mainland for street car service, which was opened to the public last week, is the first tunnel of its kind to cross an open harbor. The tube contains two tracks equipped for overhead trolley service, which is employed on the Boston Elevated railway. It is twenty-four feet wide and twenty-two feet from floor to roof. Its walls and arches are constructed entirely of concrete. It took about four and a half years to complete the work at a cost of \$3,000,000. It is now claimed that one may travel further and more comfortably for a nickel in Boston than in any other city in the world. The depth of the tunnel may be judged from the fact that the minimum of earth over it will be about five feet after the harbor is dredged to forty feet depth. The tunnel is thoroughly ventilated by means of a duct that runs through the upper part of the bore connected with electric fans. In addition to the regular fare, passengers must pay a toll of one cent, which the company collects for the city. The running time through the tunnel will average six or seven minutes, a saving of from twenty to twenty-five minutes over the ferry system.

AN attempt was made to destroy, by use of dynamite, the statue of Frederick the Great, at Washington, D. C., Jan. 10. The statue was a gift of Emperor William to the American government as a mark of his appreciation of the official and personal courtesy shown his brother, Prince Henry of Prussia, during the latter's visit to this country in 1902.

THE Union Pacific Railroad has installed, on the Kansas-Nebraska branch, some gasoline motor cars which are supposed to cover sixty miles an hour with only the expense of a motorman and conductor.

Two of the ten thousand horse power turbines at Niagara Falls, recently constructed, were set in motion last week which marks an era in the electrical development. These turbines and dynamos are the largest in the world. Each machine developed twelve thousand volts without a hitch.

ENGLAND denies that they will annex the Tonga Islands, but reports from Melbourne, Australia, say that she has already control of the legal and financial affairs of the island and that the native chiefs have consented.

THE Chicago, Milwaukee and St. Paul railway is installing observation cars which have compartments especially for women, where they are not subjected to fight their way through volumes of tobacco smoke, and where uncultured men do not occupy one seat with an overcoat and another one in the smoker themselves. This railroad is to be complimented.

NEWS has reached the press from Rosebud, Montana, saying that the Indians are in a destitute condition. An order was received there to issue no food to them, except the very young and very aged, on the theory that they were self-sustaining and that they would not work, but the facts are that the Cheyennes are willing workers but that no work was furnished them to do. Complaints have reached the Secretary of Interior, who proposes to see that matters are properly adjusted.

IN the jute mills at Chelsea, N. Y., a panic was caused by the explosion of a cylinder which killed the engineer and injured his assistant. About twelve hundred men and women were injured, more or less, in trying to escape.

GREECE will have a new chamber of deputies in the near future.

A MR. DONALD MURRAY, of England, has been operating a telegraphic instrument between London and Edinburgh, through the kindness of the postal department, as a matter of experiment for the last twelve months. It is said that he has a sort of typewriter attachment that will transmit and receive without any knowledge of the dot and dash, and that the telegraph operator will have no use for pencil, just the knowledge of the typewriter keyboard.

JUDGE WALKER has decided that Chicago is not liable for the loss of life in the Iroquois fire.

THIRTY-SEVEN bank failures and ten suicides on account thereof is the record Iowa made in 1904.

THE oldest dormitory on the college campus at Harvard, was damaged by fire to the extent of six thousand dollars, recently.

A POWDER mill explosion at Halifax did twenty-five thousand dollars worth of damage. No lives were lost.

A MOVEMENT is on foot to explore and excavate the ancient city of Herculaneum. President Roosevelt and a few of his friends at the White House, the other evening, listened to a lecture by Prof. Charles E. Waldestein of Cambridge, England, who is seeking international cooperation in the work. It may be interesting to lift old Herculaneum to view and science may be benefited by the undertaking; but surely society would be benefited if that money would be spent on extrication of some of our cities which are not covered up with lava and ashes, but with crime, riot, drunkenness and Sabbath desecration.

PRESIDENT ROOSEVELT and a number of clergymen in Washington city have begun a movement to establish some form of corporal punishment to be inflicted upon wife-beaters.

DESPERADOES stopped a passenger train near Valley Springs, South Dakota, shot the cars full of holes, and ransacked the pockets of passengers, who calmly allowed them to proceed in the good work.

JOHN C. BARKLEY of the Western Union Telegraph Company has made public the announcement that messages hereafter will be sent by the operator of an ordinary standard typewriter keyboard. The device has been worked on wire from New York to Buffalo for a week or more, and after a severe test has been pronounced thoroughly successful. The Professor claims that this new invention will put the Morse system out of business. The new system will give greater accuracy and speed, besides relieving the operator of the long, tedious task of learning to transmit and receive by the dot and dash method.

POLICEMEN in Philadelphia were obliged to protect themselves with revolvers against the assault of a crowd of Italians who were interfering with the duty of the policemen.

A NEW magazine is about to be put on the market; it is to be called "Tom Watson's Magazine." It will be a monthly. Mr. Watson was the late candidate on the people's party ticket for the presidential chair.

nowhere else
truly commensurate
men and women, sailed for Panama Dec. 27, to participate in the Panama medical congress which was to hold its fourth meeting in Panama Jan. 3, 1905.

THE army and navy get a support of ninety-seven millions while congress favors agriculture with the magnificent sum of six millions.

SOME blood-thirsty villain of the rottenest type has thrice assaulted Mrs. Henry Hower, of North Manchester, Ind., since Nov. 5. Some arrests have been made and some alibis proven. No one can guess the object of the intruder, since Mrs. Hower's character is far beyond question and always has been. Besides, though the family is in fair circumstances, they are not sufficiently wealthy to be an object of blackmail. It is purely the work of the evil one, and the good citizens of the city and the law should spare no means to see that he is properly taken care of. It is time for justice to interfere when honest, well-meaning people are not safe in their own homes.

FIVE hundred and fifty, out of seven hundred steerage passengers, that arrived last week in New York, were Russians.

FOUR convicts of the California state prison, were shot by the guards while trying to make their escape.

THREE men were killed and three injured badly in a collision of two ice boats on Lake Onondaga, New York.

NEW YORK and vicinity has received, so far, this year, twenty-nine inches of snow.

PRESIDENT ROOSEVELT is seriously considering the smoke nuisance in the city of Washington. It is to be hoped that success will crown his efforts to overthrow this deadly evil and that it will benefit the entire population. Many other still greater nuisances need most careful consideration.

CAPTAIN CHRISTIAN JENSEN, of the Silicon, recently returned to Philadelphia from Ivigtut Bay, Greenland. He brings with him some strange and interesting news. While visiting a camp of Eskimos and Danes at Arsuck, which is about ten miles from Ivigtut Bay, he had the privilege of meeting a company of men who were not only strangers to him but strangers to the people of the camp, as well. They are copper colored, and are seven, eight and nine feet tall; their features strikingly resemble the American Indians. They cannot speak the language of the Eskimos or the Danes, but they made their wants known by signs and pantomimes. The Eskimos claim that their forefathers have handed down a tradition that there were such a people in the interior of the island, but this idea had almost become legendary and mythical. They succeeded in making Captain Jensen understand that they had been driven from their homes in the interior by a series of terrible storms and cyclones. Our scientists now have a new field in which to labor.

HOME DEPARTMENT

Deeds of great men but remind us
That we need not scrimp and save
To accumulate a fortune
And go straightway to the grave;
But to go at once to Congress,
Then with prudence and with care
Make our salary and mileage
Bring us out a millionaire.

A LETTER.

Dear Sisters:—

I enjoy reading the many useful and instructive things which we all find in our much loved magazine, the *Inglenook*, and lately we have had quite a number of papers referring to our manner of doing our work, which has been very helpful, and an idea occurred to me that although all of us cannot have model kitchens, or model houses, we can make them models of neatness and order. There are some things that stamp us as good housekeepers of which I shall mention a few; the appearance of our kitchen and sleeping rooms most of all. Although our kitchen, especially during the busiest season of the year, if space is limited, cannot always be orderly, it can be clean. We should arrange shelves, nails and hooks in such a manner as to have everything within reach and yet off the floor or work table. We should always wash our dishes as soon as they are removed from the table, or we are done using them, if baking; to do this saves time and much confusion, for if allowed to stand they become dry and are more difficult to wash, and are always in our way if we wish to perform almost any other kitchen work. Each housekeeper should determine the manner of washing them for herself; my way is, to thoroughly rinse the milk, doughy or fruit dishes in cold water; and the greasy ones in hot water before beginning to wash them. I then take plenty of good hot soft water, or if that is not available a cleansed water made by taking one tea-cup of strong wood lye to every five quarts of water; first wash the silverware, or even the steel knives and forks, if those are used, and rinse and wipe. Now I would put in my soap, (as I do not think that it is any more filthy than any of the other manufactured productions, which are not any of them too clean if we could see their production. I prefer the soft soap that is homemade). I wash the glassware, rinse and wipe; then the china dishes, cleanest ones first; the tin and ironware. I give them all a good thorough rinsing with hot water. I know some folks say that this rinsing in hot water crackles the dishes but I know that it will not as my mother has dishes she has had for twenty-eight years that are not crackled and she has always scalded them. Care should be taken to pour the water over the dishes and not into them alone, as it may break the most delicate of them, especially if there is a cold draft of air in the room; but I believe that our dishes should always be thoroughly rinsed, although people who do not use soap seldom, if ever do. After the dishes, the cupboards and shelves, if there are any,

should receive attention. They should be kept free from crumbs, dust, small particles of food stored away for use, but seldom touched again until thrown away, and all other refuse which should be immediately carried away to the pigs or chickens, or if there is nothing to feed it to, it should be burned or buried. If oilcloth is used for the shelves and work tables it will save a great deal of work and is very easily cleaned with luke warm water and a little sweet milk. The stove should be kept free from dust, grease, or dough. If you prefer to keep it blacked as I do, for it stays like new so much longer; do not wash it, but scratch all particles of food off of it with a sharp knife, take a small cloth which you have for that purpose wet it in kerosene and wipe over all grease spots; then brush with an old broom, a stiff paper, an old felt hat or a brush if you have one. No matter whether you wash it or do this it should always be done after each meal. The windows should be kept clean and bright and I prefer to have the kitchen windows unshaded and allowed to be open whenever possible so as to have a bounteous supply of pure air and sunshine. The floors should be scrubbed once or twice a week if bare, but for those who can afford it linoleum is both cheap and an ornament besides saving a great deal of hard work. The washing should be done regularly every week, but each housekeeper should decide how to do it herself; anyway that she can and keep her clothes white, sweet and clean. As for the ironing some can be omitted if necessary, such as sheets, pillow cases, towels, dish towels, etc., although I prefer to iron them if I possibly can so that in case of accident everything will be in good shape to use but anyone cannot be called untidy if they do omit these things, and it is better to omit these things than the little boy's and girl's everyday clothes. I think they should be ironed anyway. If they are made plain they can be ironed double and look very nice, and good enough to wear anywhere, and then it teaches them to be just as neat and tidy at home as elsewhere, where if they are not ironed they are not fit to wear away from home, and the little ones soon begin to think that anything is good enough for home wear. So much for the kitchen work. The sleeping rooms should contain only necessary furniture, although some have papered walls; I prefer whitewashed ones, as the paper collects so much dust and poison which contains germs of disease, while the whitewash is antiseptic in itself and is more often cleaned. I do not think it necessary to allow the beds to go unmade all day long if the inner bedding is changed every week, and as soon as its occupants have left it in the morning, the covering is removed and the mattress or tick is given a thorough shaking or pounding and then allowed to lay open until the other morning work is completed. The windows should be opened both top and bottom if possible and allowed to remain open during the entire day in summer, and in winter also if possible, and if not, a portion of the time at least, so that there will be a free circulation of air, and at night I allow it to remain partially open. If one is inclined to keep the kitchen and sleeping rooms neat the other rooms are seldom in disorder; but sometimes it is vice versa and this should not be

so for the most of our time is spent in those rooms and they should have a congenial atmosphere tended to raise us above the work there confined; and in one our food is prepared, while in the other our strength and vitality is recruited. Neither should we have any rooms, or anything in them that is too good for use; nor a set time to use them as Sundays, holidays, or when company comes, but anyone should be at liberty to use them at any time, but everyone should be taught to be careful not by scolding but by kindness and example. Now, I think I hear some one say, "Oh, those dreadful boys! We never can have anything neat and tidy with those boys around." I disagree with you. One can have things just as neat and tidy if the boys are given a share in the neatness and tidy arrangements in their own rooms, and are made to feel that they are partly responsible for the neat and attractive appearance of their home. Do not have so many useless things, such as tidies, fancy pillows, sundry pieces of odd china, etc., laying around for ornament; a few tidies, cushions and rugs are all right if made for use, but those which cannot be used by any member of the family have no place there and had better be thrown into the fire, for they are but the source of a constant annoyance to them, and no end of worrying, scolding and remonstrances to you, oftentimes causing family quarrels, and is what drives so many boys and men away from their homes to low associates and the saloons for rest and entertainment. Are not our boys and husbands of more consequence than these useless things? We can teach our boys to so love home and its little attractions there, that they will be just as neat and tidy; just as careful of the nice things as the girls, and sometimes more so; and we should remember that careful boys make careful men, and that they will some day be some girl's husband, and can we bear to hear our son's wife say, "Oh, dear! my husband is so careless!" when we might have taught them better? We should not think that husband or children cannot do anything good enough for us, but should enlist their services whenever we can. Do not think that perhaps you can do it quicker and better than the children and so neglect to teach them until they are grown and beyond your control; for if you do, after they have entered life's path with its many struggles and discouragements, they will look back and blame you for that neglect and who can blame them? Can you? (I can't and I speak from experience.) As soon as their little hands are big enough give them each day some set work to do, such as carrying wood or water, setting the table, washing dishes, sweeping the floor, making their own beds, paring potatoes or apples, getting vegetables from the garden and preparing them, picking berries, stemming strawberries, weeding the garden, ironing the small common articles, small chores outside for papa, sewing on buttons, making button holes, piecing quilts and all other plain hand sewing. You will be surprised how young they can do these things and not hurt them either. I do not approve of overworking them but if they work part of the time it makes them more contented and happy, less liable to get into mischief, and they have more zeal for their play. Then again, if there is any part of your work which you can slight and not be a detriment to the sweetness and purity of your house do so, rather than remain away from church or Sunday school, or rob yourself of a chance to read so that you may be an interested companion to your husband, able to converse

upon all current topics intelligently. You can then instruct and amuse the children so that they will look to mamma as their best playmate. They would rather work and help you quite a little and have you play with them than to play all of the time and alone. Now, sisters, although all admire neat and model housekeepers, we should not be too critical of each other's efforts as we cannot always see into our sister's life, see her trials and difficulties, she may not be as neat as some but she may have too much to do, too many to do for; she may have ill-health, or she may have careless and inefficient help and not many conveniences. These things a casual observer will not notice but if she looks neat and tidy, sets a neat, tastily arranged table, allows plenty of pure air and sunshine to invade the house and is pleasant and cheerful, we must excuse any little minor points which it takes to make a good housekeeper. and think, "She does her best," that is all any of us can do. Good-bye. From a sister who wishes everyone well.

Lottie Bollinger.

Vestaburg, Mich.

DON'T BITE THREAD.

A PRACTICING dentist says this is the season of the year when his business is given a slight boom by the women who bite their threads. Only professional dressmakers and seamstresses may be relied upon to eschew this practice, and all other women who make any of their own clothes are more or less addicted to it.

The incisors are used for the purpose, but it makes the edges of several of the front teeth as uneven as a saw, and at a time, as now, when there is much sewing on summer dresses, produces a state of affairs that no dentist can remedy with any satisfaction to himself or his patrons, so that the boom is nowhere welcomed. Most women when shown the evil effects of threadbiting are horrified and make all sorts of promises of reform, but nearly all of them are backsliders.

* * *

DOMESTIC EXTRAVAGANCE.

DOMESTIC extravagance has, we are told, reached a limit, and a reaction has set in. Common sense is resuming its sway. Women, even more than men, are beginning to look toward a simpler life. We are all beginning to realize that it is not the money we spend which brings satisfaction, but what we get for it.

It would be well if families, as well as individuals and corporations, were to begin the new year by a thorough inquiry into their financial condition and prospects. A searching analysis of this kind, set down in black and white, would be edifying to many a husband and wife, and, in most cases, would not fail to simplify their method of living and consequently add to their happiness.

III. Individual Work for Individuals.

Text.—And he said, How can I, except some man should guide me? And he desired Philip that he would come up and sit with him. Acts 8: 31; Acts 8: 26-40.

References.

Ruth 1: 16; Acts 10; Acts 13: 43; Acts 16: 14, 15; Acts 16: 27-34; Acts 17: 4-12; Matthew 13: 4-19; Luke 8: 4-15; 2 Peter 3: 14; Jude 3: 20; Revelations 22: 17; 1 Peter 4: 11.

The Angel's Message to Philip.

“And the angel of the Lord spake unto Philip saying, Arise, and go toward the south unto the way that goeth down from Jerusalem unto Gaza, which is desert;” this was surely a strange messenger with an obscure message. The angel told him to go away from Jerusalem, where there were other disciples and many advantages, go south toward Gaza, and he would find himself on a road that passed through a desert; it was a discouraging outlook. There were no disciples there, there were few people, it would seem as if Philip would better remain in the villages and preach Jesus to the natives. But Philip never questioned, or even reasoned about the matter, we are only told that “he arose and went.” And so when the Ethiopian came by, reading the prophet Esaias, the Spirit said unto Philip, “Go near, and join thyself to this chariot;” and we are told that Philip ran to join him, and then they talked about the Scriptures. You and I would have been more ready to obey a command directing us to go from the desert way up to Jerusalem, because we work for

results, and we like a promising field. Let us be guided by the Holy Spirit, and go wherever he wants us to go.

He Invited Philip to Sit with Him.

The Ethiopian had come to a hard place in his reading, he could not understand the text, and he evidently believed that Philip could explain it. More than that he must have had a degree of personal liking for Philip, or he would not have asked him to sit in the chariot, it was easy to help him then, it is always easy to teach Jesus when the teacher is lovable and makes a good impression on those whom he would teach. It would be a difficult matter to lead a man to Christ, if he always crossed the street to avoid meeting you or speaking to you. Whittier tells us,—

“The dear Lord's best interpreters
Are humble human souls,
The gospel of a life
Is more than books 'or scrolls.”

The Desert Way.

I do not believe that Philip was lonely, as he went down this way unto Gaza, he had time for personal communion with Christ. Men cannot stand in the Lord's house to speak his words unto the people unless they have first waited at Christ's feet to get their message. Our lips must be touched with a coal from God's altar before we can become God's messengers to men. A special feature of the daily life in Wellesly college is the morning and evening “silent time,” marked by the strokes of the bell in which all the house is quiet. Every pupil is in her room, there is no conversation, and it is understood that all whose hearts so incline them shall spend the time in meditation and prayer. One of the greatest needs in Christian life in these days is more devotion. Philip's silent walk on the desert road left him ready to teach Jesus so truthfully that the convert was eager to be baptized at once.

Incomplete Directions.

We could not have blamed Philip if he had asked the angel what he was to do on this road that went to Gaza, the angel gave no hint of any souls to save there. But Philip had learned the lesson that one step at a time is all that God leads. We wonder why God does not make our future duty plain to us. A young school-girl is perplexed:—ought she to go to a foreign mission field, or devote herself to work at home? It will take her at least from three to five years yet

to complete her course at school. It is very clear then that her present duty is to go to school, what her ultimate mission in this world will be, God will show her in due time, just as he showed Philip.

"A single stitch in an endless web,
A drop in the ocean's flow and ebb!
But the pattern is rent where the stitch is lost,
Or marred where the tangled threads have crossed;
And each life that fails of its true intent
Mars the perfect plan that the Master meant."

He Preached in All the Cities.

We find this said of him, after baptizing the Ethiopian, he left the desert way and went to Azotus, then he preached in all the cities till he came to Cæsarea. There was a difference; he preached to many people in these cities, yet he was God's messenger just as truly when he was walking alone to teach and baptize but one convert.

"If thou hast yesterday thy duty done,
And thereby cleared firm footing for to-day,
Whatever clouds may dark to-morrow's sun,
Thou shalt not miss thy solitary way."

Topics for Discussion.

1. What message did the angel of the Lord bring to Peter? Acts 12: 7, 8.
2. What promise did Jesus make in regard to the Spirit? John 15: 26; John 16: 13.
3. What other man went out of his own country without knowing where the Lord was leading him? Genesis 12: 1-4.
4. Relate some incidents in the life of Adoniram Judson which show his submission to God's guidance.
5. Name and relate some instances of missionaries who like Philip were directed by the Spirit.
6. Jesus took the time to talk to individuals and teach them truth. John 4: 5-28.

"Who would true valor see
Let him come hither
One here will constant be
Come wind, come weather
There's no discouragement
Shall make him once relent
His first avowed intent
To be a pilgrim."

How many births are past, I cannot tell;
How many yet to come no man can say;
But this alone I know, and know full well,
That pain and grief embitter all the way.

—South India Folk Song.

I have been in India twenty years, and if I had twenty lives to live I would give them all for India. There is no work which God has given to woman which exceeds in beauty and grandeur the work which is to be done by women for the women of India.—
Mrs. J. C. Archibald.

EMPLOYMENT BUREAU.

Brother D. Owen Cottrell, who used to be our secretary at North Manchester, Indiana, is now teaching at the Maryland Collegiate Institute, at Union Bridge, Maryland. As he was our secretary at North Manchester, he could act in the capacity of local secretary, wherever he was located, provided there was work for him to do, and so we were made glad by a list of twenty-one new names from Union Bridge; he says "We are having good meetings at present. We are reading 'The Crisis of Missions,' but will begin another book soon."

At Waynesboro, Pa., the first Circle meeting was held about eleven years ago. Brother Wilbur Stover, Sister Elizabeth Howe and many others were willing workers there. And we are glad that the interest at that place still continues. Sister Sudie M. Wingert is their local secretary and she says, "We need some of the new circulars, we desire to do more Circle work." They have a "Girl's Mission Band" and "Sisters' Missionary Sewing Circle." The *Missionary Visitor* of May, 1904, has a record of their work.

Brother John W. Vetter of Pymont, Indiana, says, "We have at last got our Circle organized with Merton J. Holsinger, as president, and for secretary and treasurer, myself. I send in two more names, and an order for five new books on missions. We are anxious to learn more about this work."

Sister Amanda Rodabaugh from Daleville, Virginia says, "We have organized a little Circle, and are enjoying it very much. We are reading 'Modern Apostles of Missionary Byways.' I enclose thirteen new names."

Sister Mary E. Shickel of Broadway, Virginia, says, "I received my certificate; it is only a piece of paper, but it means *so much* to me. The books are well selected and interesting, therefore I hope to continue reading and persuade others to do so too. We have organized a Christian Workers' meeting here, and we thank God and take courage."

QUESTIONS.

What do you know about Our Missionary Reading Circle?

Have you sent for new circulars?

What is your Circle doing to help the missionaries?

How many books on missions will you read in 1905?

Are you supporting an orphan?

Do you have Christian Workers' meetings in your church?

Have you asked the Holy Spirit to guide and direct you and yours in this year?

Are your Sunday-school teachers members of the Circle?

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XI.

Dublin, Ireland.

Dear Mr. Maxwell:—

Since we wrote you we have had a little bad luck. When we were sight-seeing in the city of Cork the other evening, Miss Merritt either mislaid her purse or lost it which caused all of us more or less anxiety. Of course the boys advertised in the morning paper. It was a very easy matter to make a good description of it, for, besides a regular description that might be given any one's purse, it contained an identification check, and besides it had some pieces of American money in it; and as you may well know, Gertrude had looked at those pieces of money so many times that she knew the date on every one of them.

It might have been a serious thing, for you see it contained her American Express cheques, which, if lost, meant return for all of us, and just think of us having to give up this trip at the initial point. Of course the express cheques were perfectly safe; they were as worthless as paper until they were signed, but as a matter of fact it would have caused us some delay and trouble to have regained the amount.

The next morning the doorbell rang and two big, burly policemen stood at the door and asked the porter if Miss Merritt from "Ameriky" was there. It was no trouble for Miss Gertrude to identify herself. With her American dialect, her American friends, and her American manner of approach, the policemen were easily convinced that she was the owner of the lost property. We all had the laugh on her when the policemen asked her how much money there were in the purse. She said, there was some sovereigns, some crowns, half crowns, shillings and ha'pennies. Here the policemen took a big laugh and said: "Faith, and she's the roight gal; yez put me in moind uv th' Irishman who measured a log fur a carpenter and sed it wuz thra times th' length of his tin-foot pole, besides sivin extra fate, thra times th' length of his hammer handle, two spans and a little over."

The real royal American blood rushed to the face of our little school mistress when she saw that the joke was on herself. The lost property was restored to her, with a bow and a smile, and when she offered them a shilling each for their kindness, they again smiled and refused because they said they had done nothing only what was their duty to do.

I notice that the boys forgot to tell you in their letter that when we made our trip out to Blarney Castle, we passed Doctor Wood's Asylum for the Insane, a dairy school, and a soldiers' barracks. In one of these barracks were stationed three hundred cavalrymen and in another three regiments of infantry. It must be admitted that the British soldiers look well in their uniform. I can now understand why our school histories often spoke of the English soldiers as the "red coats." Their coats were made of the very reddest of red, but they have miserable little caps that do not half cover their heads and furnish them no protection whatever, from sun or rain. There are

fifty thousand of these troops kept annually by a tax levied upon the poor Irish, who have no more use for these soldiers than you have in Mayville.

Near Blarney Castle is a large tweed factory, a fertilizer mill, a linen factory, and a schoolhouse. This tweed factory is one of the most renowned in the world.

It seemed so queer all the time to see fields of mangels, turnips, oats, potatoes, and heather, but never a stalk of corn. The boys kept looking and watching all the time for corn, but they were not even favored with a glimpse. Rocks, crows, donkeys, stone walls, whitewashed concrete houses, dirty children, and lots of them, Johnny cars, laurel, elm, birch, and beautiful roads abound. Good horses like the one we are driving sell for about one hundred twenty dollars, and a Johnny car, like the one in the photograph that the boys sent, sells for about one hundred and forty dollars, or what they call here, twenty-eight pounds.

When we went from Cork to Dublin, which is one hundred seventy-five miles, as near as we could tell, (for they have no miles, as we know them,) we had to change cars at Mallow. This is a junction of some note and quite a town. As we were ready to pull out of the station for the capital city, ten mute boys crowded into our coupé and you may be sure we had interesting company for the rest of the journey. They ranged from six to fifteen years of age. They were intelligent little fellows without exception, but were very poor. They were being sent to a government asylum where mutes are educated. It was a sad sight to see their mothers and sisters come down to the station to see them off. Not a man was present; no doubt they were about their daily labors. Each of these boys left home carrying a bottle of milk, a bit of dry bread and a small sack containing a scanty bit of clothing, of the poorer sort. Angels and artists would have envied the picture when little brothers and sisters, both younger and older than themselves, would surround them and smother them with kisses and good-byes, entreating them not to forget to read their Bibles and pray. Each of them also had in their possession a few pennies which they frequently counted.

You know Agnes knows how to talk on her fingers to people who are deaf and dumb, and using her for an interpreter, the boys became very much interested in our party and we in them: and we succeeded in getting much desirable information from them, as to the manners and customs of the people. It is astonishing to note the percent of mutes in Ireland. We do not understand why this should be so.

When we reached the great city of Dublin our ten little mute friends quickly disappeared amid the two hundred eighty-nine thousand souls of the capital of the Emerald Isle. And we wondered, as they faded to view, what and where they would be twenty years hence.

All day long we have been furnished some of nature's best scenery; the green hills, crystal loughs, ruined castles,

(Continued on page 72.)

The Q. & A. Department.

When is Congress in session and who was chairman of the Senate Nov. 1, 1904?

Each Congress has a life of two years, the same as the term of a Representative. The present or Fifty-eighth Congress began March 4, 1903, and will end March 4, 1905. As a rule, however, Congress is never in session more than half of the time. It has two regular sessions, called the long and short one. The long session begins at noon on the first Monday of December in the odd years and continues until both Houses agree to adjournment, which occurs usually in the early part of the summer. The short session begins on the first Monday of the following December, or in the even year, and continues until March 4. Congress may adjourn sooner upon the agreement of both Houses, but this is never done. The President can call an extra session by issuing a proclamation, naming the date and giving reasons for his action. Congress may also provide for an extra session by adjourning to a fixed date earlier than December. If the two Houses can't agree as to the time of final adjournment the President may set the date. The presiding officer, or President *pro tem* of the Senate from March 4, 1903, to March 4, 1905, is William P. Frye, of Maine.

❖

What kind of ink is used on typewriter ribbons? How is it made and applied?

Melt vaseline to high boiling point on a water bath or slow fire and add as much lampblack, constantly stirring it, as will take up without being granular. Then remove it from the fire, and while it is cooling mix equal parts of petroleum, benzine and rectified oil of turpentine. To this mixture slowly add the fatty ink, constantly stirring it so as to dissolve it. The fluid ink should be of the consistency of fresh oil paint. Wind the ribbon on a cardboard, and after spreading several layers of newspaper on a table unwind the ribbon in convenient lengths and lay it flat on the paper. Stir the ink well and apply to the ribbon with a soft brush. Then rub it in well with a tooth brush.

❖

Please state what the word "Atahanam" is and where located. It is located somewhere in the world and I would like to know where?

It is the name of a river in the state of Washington, a tributary of the Yakima.

❖

What is the population of Alaska?

It is 63,502.

Who was the founder and first president of Harvard College?

Harvard College, now Harvard University, the oldest institution of learning in the United States, was founded by act of the General Court of Massachusetts, granting 400 pounds toward a school or college, October 28, 1630. The College was named after John Harvard, a graduate from Emmanuel College, Cambridge, England, who bequeathed his library and half his estate, about 700 pounds, for a college at his death at Charleston, Mass., Sept. 14, 1638. Cambridge; then Newton, was selected as the site for the college March 13, 1639. The first head was Nathaniel Eaton, who was soon deposed for ill-treating and starving the students and beating his assistant, a Mr. Briscoe. He was succeeded by Rev. Henry Dunster, the first President of the college, who held the office from 1640 to October, 1654, when he was compelled to resign on the charge of disobeying the ordinance of infant baptism in the Cambridge Church. The school had acquired a high reputation under him. Charles W. Ellis has been President since 1869.

❖

Assuming the President's wife to be the first lady in the land, who is the second lady at the present time?

This is a disputed point on which equally accomplished persons differ. In the book, "Etiquette of Social Life in Washington," Mrs. Madeleine Vinton Dahlgren says: "The second place is claimed for both the Chief Justice and the Vice President and so many good reasons may be given on either side that until a social Congress can be convened to decide this and some other controverted points, there can be no decision attained." Their wives should be respectively second and third lady.

❖

What is the significance of the name "Inglenook"?

We have answered this question before, but for the sake of the new members of our family, we answer it again. Literally, it means a cozy corner, and carries with it the significance of the family hearthstone. We apply it to our magazine because ours is a family magazine, and deals with the needs and wants of every department of the family circle.

❖

How is flint formed?

Some authorities say that flint is formed by petrification of fine sponges. When one studies the composition of these simple animals this seems very probable.

MISCELLANEOUS

THE GEOGRAPHY CLASS.—Chapter XI.

(Continued from Page 70.)

and the thatched-roofed, whitewashed country homes dotting the green hillside.

No sooner had we found ourselves in a great crowd on the streets of Dublin, than our attention was called to a procession of one hundred boys in beautiful uniform. We were told that they were Foresters, celebrating in honor of O'Connell, the Liberator of Ireland. After we were located at our hotel, we took a little stroll on the street to get acquainted for the lay of the town and walk up and down the banks of the beautiful river Liffey. On returning, strange to say, we met a Mr. Cullen, who is now a merchant in that city, but formerly owned a store in Philadelphia. Of course he recognized us at once as Americans, and said that it would afford him pleasure to show us the city. As he was born and raised here, and as he is also acquainted with American customs, no doubt he will be in position to contrast things in a way which will be intensely interesting to us, and we look forward to tomorrow with a great deal of pleasure.

I would give half a dollar for a piece of Ma's good butter, as big as my fist. Respectfully; Marie.

(To be continued.)

AMERICAN COTTON.

THE entire world produces 14,000,000 bales of cotton, of which the United States alone contributes 10,500,000 bales, or 75 per cent. Moreover, Americans are attempting, with activity and persistence, to monopolize the consumption of the raw material which they produce, and to this end they multiply the spinning and weaving mills of their country, augmenting the number of spindles and installing their factories alongside the cotton fields. The consumption of American cotton in the United States grew from 2,287,000 bales in 1893 to 3,908,000 bales in 1903, and the progress appears to have been much more rapid since then.

WOMAN INVENTS GUN.

A DENVER woman has devised a new shotgun, which is being manufactured. The inventor, Mrs. Nellie Bennett, says the new fowling piece is a decided improvement over the old shotgun, effectiveness being combined with lightness and mechanical construction to a degree never before reached by gunsmiths. Mrs. Bennett enjoys the distinction of being the crack trap

shooter of Colorado. While deer hunting on the North Platte in Nebraska recently she shot the largest specimen of pelican ever seen in that part of this country. Mrs. Bennett is associated in business with the publication of a sportsman's magazine, issued in Denver.

THE DEVIL.

We are told he does not go about like a roaring lion now;
But whom shall we hold responsible for the everlasting
row

To be heard in home, in church and state, to the earth's
remotest bound,

If the Devil, by a unanimous vote, is nowhere to be
found?

Won't somebody step to the front forthwith, and make
their bow and show

How the frauds and the crimes of a single day spring up?
We want to know.

The Devil was fairly voted out, of course the Devil's
gone;

But simple people would like to know who carries his busi-
ness on.

—Australian Exchange.

GAMBLING IN RUSSIA.

THE spirit of gambling seems to dominate all classes in Russia. Recent official statistics show that more than 2,000,000 roubles (about \$1,650,000) are each year spent on playing cards in the land of the czar.

The monopoly of the manufacture of playing cards belongs to the Czaritza Maria charitable institutions, and an income of 1,700,000 roubles (\$1,440,000) a year is procured, the cost of manufacture being only 300,000 roubles (\$250,000).

CURE FOR CORNS.

BOIL a potato in its skin, and after it is boiled, take the skin and put the inside of it to the corn, and leave it on for twelve hours. At the end of that time the corn will be much better. The above simple and useful recipe has been tried and found to be a perfect remedy.

NOTHING we can do will please God, unless we are willing to have the same spirit that Christ had.—E. P. Brown.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

Rheumatism, Kidney Trouble

And all diseases originating from impure
blood, quickly and permanently
cured with

Australian Life Tablets

Mailed on 10 days' Trial Free.

Australian Life Tablets, remove the Uric
Acid poison from the plasma of the blood.

Of all the splendid remedies ever placed
on the market, these "Tablets" have filled
the greatest want. They are suited to all
classes of people from children to adults.
They spend their force in regulating the
three great organs, Kidneys, Liver and
Stomach. Put these three organs in good
working order and the patient has little or
nothing to complain of.

OUR SPECIAL OFFER

I will mail any reader of the INGLENOOK a regular box, 30 days' treatment, on ten days' trial free. If it proves satisfactory, send me \$1.00, if not, return the box, which will only cost you 2 cents postage and you will not owe me a penny.

Australian Life Tablets contain only the active principles of pure medicine compounded from the best known herbs in the vegetable kingdom and contain no poison. Each box contains about double the medical value found in any dollar bottle of liquid medicine. All liquid patent medicines contain from 16 to 30 per cent alcohol or poor whiskey.

Mothers who feed their children liquid medicines are laying the foundation for an appetite far worse than the disease they are treating. Thousands of people are sent to drunkards' graves every year from the effects of alcoholic medicines which first laid the foundation that enticed them on the downward road. They are next to the saloons.

Mothers, is it not time to make a halt? Little by little the appetite grows, unknown to you, unconscious to the patient, until within the monster's grasp. Australian Life Tablets fills the great want in taking the place of liquid remedies for all classes of people from children to adults.

We mail it on trial free to all readers of the Inglebook, on our special offer above. Try this great remedy and be convinced. Then tell your neighbors. Address,

E. J. WORST,

200 Main St.

Ashland, Ohio.

\$7.95 for this large handsome steel range

without high closet or reservoir. With large, high, roomy, warming closet and reservoir, just as shown in cut, \$11.00. Reservoir is porcelain on inside, asbestos covered on outside. Heavy cast top with 6 full size cooking holes. Large roomy oven, regular 8 1/2 size. (We have 9 styles of steel and cast ranges with much larger and smaller ovens, sizes to suit all.) The body is made of cold rolled steel, top and all castings of best pig iron. Grates we use improved duplex grate, burns wood or coal. Nickel band on front of main top; brackets and tea shelves on closet; band and ornament on reservoir; over door, etc. Are highly polished, making the range an ornament to any home.

OUR TERMS

are the most liberal ever made. We will ship you any range or stove, guarantee it to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it into your own home and use it 30 full days. If you do not find it to be exactly as represented and perfectly satisfactory in every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for double our price, you can return it to us and we will pay freight both ways, so you won't be out one single cent.

CUT THIS "AD" OUT and send it to us and we will mail you our free Stove Catalog. It explains our terms fully, Stove Catalogue for 1904 and 1905 and see our liberal terms and the lowest prices ever made.

WHY NOT COME TO THE
LAGUNA DE TACHE GRANT
 FRESNO COUNTY, CALIFORNIA,

Where Pumpkins, Corn and common crops grow, as well as every kind of California fruit?

Come and visit the Brethren who are living here and see what they have done in the past two years.

Nearly 600 sales made since we put this land on the market and over 2,000 people now living on the grant where there were but about sixty a little over five years ago.

This does not look like a temporary boom, does it? Must be something solid behind all this. If not, five years ought to show up the weakness, but instead of weakening the Laguna and its various interests are growing stronger all the time.

If you are thinking of coming to California to make a home you cannot afford to overlook this place.

We still have plenty of good land with abundant water for irrigation. The price is from \$30.00 to \$60.00 per acre, terms, one-fourth cash, balance in eight annual payments.

COLONISTS' RATES

will again be in force March 1 to 15, 1905.

From Chicago to Laton,	\$33.00
From Mississippi River to Laton,	\$30.00
From Missouri River to Laton,	\$25.00

Make your plans to start for California March 1st and you will be in time to buy land and put in a crop.

Write us for free printed matter and local newspaper. Address

THE GOSPEL MESSENGER FOR MISSIONARY PURPOSES.

The General Missionary and Tract Committee have a plan to use the GOSPEL MESSENGER as a missionary in a very effective way. They propose to help pay for **10,000 SUBSCRIPTIONS** outside the Brethren Church.

THE PLAN.

The plan for securing these 10,000 names is to allow any one not a member of the Brethren Church, and not living in a family where there are members, to have **the Gospel Messenger from now until Jan. 1, 1906, for only 50 cents.** Or anyone interested in this plan of doing mission work may donate the paper to those not members and not living in families where there are members for **only 50 cents for the year.**

This 50 cents does not by any means pay the first cost of the paper, but the General Missionary Committee have so great faith in the Messenger as a missionary factor that they are willing to expend considerable money on making up the deficiency in order to have the paper read by those not members of our fraternity.

Send your order at once and the names will go on our list without delay. Cash must accompany each order. Always mention the fact that your order complies with the rules governing such subscriptions. Remember it is only 50 cents.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River..... 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

500 Bible Studies

Compiled by
HAROLD F. SAYLES

This new book contains 500 short, sharp, concise, Outline Bible Readings, contributed by prominent workers from all over the world. The selections cover a larger range of subjects, and will be very useful to one in private study, as well as helpful in preparing to conduct a meeting on short notice. The book will be invaluable to ministers. It will be found very helpful in preparing outlines for Bible study and for prayer meeting. It will prove a source of pleasure and profit for all Bible students.

The collection is being enthusiastically received, and is also sold at a price within reach of all. Books of this character, but containing far less material, often sell for \$1.00 or more.

The book includes a complete index of subjects arranged alphabetically. Note a few of the outlines:—

JESUS IS ABLE.

- Having been given "all power," Matt. 28:18, and having destroyed the works of the devil, 1 John 3:8, Jesus is able to,
- Save to the uttermost, Heb. 7:25.
- Make all grace abound, 2 Cor. 9:8.
- Succor the tempted, Heb. 2:18.
- Make us stand, Rom. 14:4.
- Keep us from falling, Jude 24.
- Subdue all things, Philpp. 3:21.
- Keep that committed to him, 2 Tim. 1:12.
- Perform what he has promised, Rom. 4:21.
- Do above all we ask or think, Eph. 3:20.
- Knowing his grace and power, shall we not come and say, "Yea, Lord"? Matt. 9:23. F. S. Shepherd.

THE BLOOD.—Heb. 9:22.

- 1. Peace has been made through the blood. Col. 1:20.
- 2. Justified by the blood. Rom. 5:9.
- 3. Redemption by the blood. Eph. 1:7; Col. 1:14; 1 Pet. 1:18.
- 4. This redemption is eternal. Heb. 9:11-14; Heb. 10:10-15.
- 5. Cleansed by the blood. 1 John 1:7; Rev. 1:5; Rev. 7:14.
- 6. We enter into the holiest by the blood. Heb. 10:19.
- 7. Overcome in heaven by the blood. Rev. 12:11.
- 8. Then sing the song forever to the blood of the Lamb. Rev. 5:9. Rev. J. R. Dean.

Price, limp cloth cover, 25 cents, prepaid.

BOOK AND BIBLE CATALOGUE

Is Yours for the Asking.

BRETHREN PUBLISHING HOUSE,
 Elgin, Illinois.

BRIEFLY TOLD

It is not a so-called patent medicine—not a cure-all—but a reliable household remedy, carefully compounded from medicinal herbs, leaves, roots, bark, etc., according to the prescription of a learned Swiss-German physician, which has been handed down as a heritage from father to son for three successive generations. Such is the story, briefly told, of

Dr. Peter's Blood Vitalizer

It is a remedy of acknowledged merit. It is distinctly different from all other medicines. It may have its imitations, but it has no substitute. It not only expels the disease from the body, but it creates new, rich, red blood and sound, solid, healthy flesh. It has won its way into popular favor without gaudy newspaper advertising, solely on its own merits.

It Purifies the Blood

It Acts upon the Liver.

It Acts upon the Kidneys.

It Promotes Digestion.

It Regulates the Bowels.

Quiets the Nervous System.

It Nourishes, Strengthens and Invigorates.

It Opens the Pores of the Skin and Induces Healthy Perspiration.

In short, it is a family medicine in every sense of the word, and ought to be found in every household. It is pleasant to take and absolutely harmless. It is not sold by druggists, but only by local agents or the proprietor direct.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

THE INGLENOOK

VOL. VII.

JANUARY 24, 1905.

No. 4.

THE PAST AND PRESENT.

Go to, go to, now ye that say,
The past was better than to-day;
The sky it wears as soft a blue
As formerly it used to do.
And Sol comes forth with strength of prime
As splendid as in ancient time;
And sunbeams hide among the dew
Fair jewels, as they used to do.

The tyrant Winter has its sway,
But so it had in former day—
And spring comes forth all glad and new
As lovely as she used to do.
And Summer doth her fruits bestow,
And gives her flowers to high and low,
And bids the birds to sing as gay
As ever in a former day.

The silver morn with misty veil
Reflects at night the same sweet tale—
The tale for ages she has told.
As calm and placid as of old.
Beneath her soft, her silver light
The lovers vow and give their plight—
And Cupid has not lost the art
To throw successfully his dart.

Is it of men that you would say,
The past was better than to-day?
If you will look for clearer light,
This truth will glean before your sight—
That Goodness has not lost her power,
That Kindness has as sweet a flower,
And Piety is just as broad,
As when the earth our fathers trod.

Go to, go to, no longer say
The past was better than to-day;
Put by this thought, oh, grumbling clan,
And live for God and fellowman.
If each will faithfully do his part,
With willing hand and zealous heart,
No cause will any find to say,
The past was better than to-day.

—Anna D. Walker.

SNAPSHOTS.

Some men, like wheelbarrows, have to be pushed.

*

A swindle cannot be sanctioned by calling it a church fair.

The man who is disloyal to his convictions will not be loyal to anything.

*

Honesty often gets so mixed up with expediency that it is hard to distinguish them.

*

When you feel yourself becoming ungrateful, sit down and try to count up God's mercies.

*

If the heathen are never saved, it will be the fault of stingy, close-fisted, church members, and not the fault of God.

*

The main reason why the gifted are so apt to fall is that the devil seems to give their cases special attention.

*

Money invested in a good practical education is a deposit in a bank that can never fail and that pays the very highest interest.

*

It is necessary to partake of the fruits of the spirit of St. Paul's love, joy, peace, longsuffering, patience, kindness, if we hope to attain spiritual health.

*

We are all ungrateful creatures. What man, for instance, will acknowledge that he is indebted to his clothes for his looks or his standing in society?

*

The most thrillingly patriotic and pugnaciously warlike speech I ever heard was delivered by a statesman who hired a substitute to bleed and die for him.

*

One reason why we have so many dead churches, is because they are crowded with people who try to serve God and feed swine for the devil at the same time.

*

The wagon that makes the most noise on the road is the one which has the loose spokes and the rattling boxings. Same way with the man who is all talk and no do.

OUR POSSIBILITIES.

BY O. G. BRUBAKER

“Progress, man’s distinctive mark alone;
Not God’s, and not the beasts’;
God is; they are,—
Man partly is and wholly hopes to be.”

THE above quotation from Robert Browning furnishes the theme for this paper. It is a fact, that man and man alone progresses. The horses that lived in the time of Solomon and David were just as fine and no doubt could run just as fast as the swiftest of our own time; the lilies that Jesus spoke of were arrayed just as beautifully as those that grow in our finest conservatories; the Raven that fed Elijah was just as black and no blacker than the one that stole your corn last spring. True, we have finer breeds of stock and a greater variety of composite flowers and no doubt there are sweeter warblers in the feathery kingdom than there were centuries ago but was it progress on their part or was it training on the part of man?

On the other hand God is unchangeable and is the same true God to whom men have bowed since the dawn of Creation. He has always been, is to-day and always will be the same true God. We cannot even think of *him* as improving or progressing.

The possibilities for man’s advancement are only bounded by eternity. A very superficial study of any nation will prove to the unbiased mind that man’s progress has been marvelous. The improvements of to-day as compared with those of yesterday speak volumes in favor of the above proposition.

However great man’s advancement has been in the past and however high we have ascended on the ladder of progress there are steps upon steps ahead of us, and heights unto which we may attain that are just now coming into view. Our fathers and grandfathers of a few years ago never dreamed of a Christian Workers’ Society. Some of them would have been horror stricken at the mere mention of such a thing. It is only within the last few years, or rather months, that the church has been awakening to the fact that there is a great power for good wrapped up in the souls of the young people. We have waited long, indeed too long to fully realize that the hope of the church is eventually to rest on the shoulders of the young. But now, that we have our societies, let us study our conditions and try to see some of the avenues which lie on before us and some of the possibilities that are open to us for the Master’s work.

A few weeks ago Prof. M. R. Myers in a very able address to our society in Chicago raised the question, for what does the C. W. Society stand? Did you ever stop to think seriously why we have such a society? Or did you ever stop to think

prayerfully why you are a member? In looking over the constitutions of different societies I find that they have invariably as their object and purpose, “The moral and spiritual development of the young people.” Being founded upon such a broad basis, our possibilities for the future are as boundless as space and as limitless as eternity. For who has mind so keen and strong that he can conceive of the spirit being limited in its flight toward the Eternal, or who can measure the value of one hundred young people working together, not only for their own welfare, but also for the moral and spiritual growth of his fellow-man? God himself says that one soul is worth more than the world. It is positively absurd to try to fix any boundary to the amount of work and good the Christian Workers can do.

I am indebted to Ralph W. Miller for some excellent statistics which will point out a few possibilities for us to think about. The Epworth League of the Methodist church, organized in 1889 has now 30,377 societies with a membership of 1,500,000. The Methodist church has made a total increase in membership of 1,495,478 within the last 12 years. The Baptist Young Peoples Union has also made a wonderful stride. In the last 13 years this Union has grown from one to 12,999 societies with a total membership of 699,990. The number of communicants added to the Baptist church from 1890 to 1902 was nearly 1,000,000. Other societies as the Y. M. C. A. and the Y. W. C. A. have equally as good records, but these are sufficient to prove that young people are a wonderful power for good when well organized. What has been accomplished by other societies, can to a great extent, be done by ours. To the fair minded man our outlook is very hopeful. Our educational institutions are on a par with the best in the land and our young people are rapidly taking advantage of them. But while our future seems hopeful and promising, we must be more thoroughly organized, before we can accomplish any great work. We should not be satisfied with a district organization, a state union, or even a U. S. union, but it should take in the entire world. An organization of this kind with annual, district, state, national and international conferences would give our beloved fraternity such an influx, not only of members, but also of spirituality, that she would no longer stand as thirteenth in the denominations of the world but would be among the first.

It is not the purpose of this paper to convey the idea that numbers alone count for much. We all know too well that in all departments of church work, not only of our own but of all churches, that it is the willing few who are doing the work. But God knows and *we know* that there are thousands and thousands of our sons and daughters being irrevocably lost to

our church and something must be done to save them. The C. W. society should be, and in many cases, has been the means of getting these young men and women interested in church work. Becoming interested in the work they naturally seek admission and soon become active members of the church.

While a thorough organization is still in the future, there are many possibilities open to the individual societies. What better thing could the young people do than to take up the subject of missions and make a study of them; giving at least one program each quarter entirely devoted to this subject? Some of the Reading Circle books could be taken up and read, and various divisions made of the subject and discussed at these special meetings. This is one thing that can be done, and might be the means of your own society getting enough inspiration to send one or more of its own members to the mission field. What an inspiration for work if each society in the U. S. had one of her own members in the foreign land. Such a thing is not impossible, for what others are doing we can surely do. If we can not have one of our own members in the field we can for the small sum of \$16 support an orphan in India, who may in a few short years become a man of God, and a nucleus from which church after church and society after society may spring up. No society ought to feel satisfied until it is directly responsible for some work of this kind. It is a good thing to have a home society in a home church, but it would be far better if each society had representatives in the field doing some active society or church work.

A society founded for the purpose of the moral and spiritual development of its members should not forget the literary side of its life. A paper now and then on current events giving in concise and tasty form the leading events of the day would be very helpful. The time is now upon us when we as a society and as church workers must keep abreast of the times. We cannot afford, we dare not prove ourselves ignorant of the events of the day. Closely associated with this thought is our society paper, the INGLENOOK. Inasmuch as a portion of the INGLENOOK for the next year is to be devoted to C. W. work we should take it upon ourselves to derive as much help from it as possible, and make it *the* paper of our society. By doing so this magazine will become one of the chief factors in effecting a thorough organization of the societies throughout the Brotherhood.

A library of well selected and well read books on church doctrines and history, missions and society work would surely be a good investment for any society. An investment of this kind would not only prove a source of education on these various subjects, but would also make plain the methods of doing more active work.

In conclusion; the progress of the past few years, proves, if it proves anything, that we are capable of progressing. Let us make *progress* the watchword of to-day and of the coming year, and as the spectre of the old year has faded into the shades of the Past, and the New Year with all of its glorious possibilities is upon us, as the echo of the Christmas bells are yet vibrating through the air, shall we not as a united band of Christian Workers lift our souls to God and say, "Help us to do justly, love mercy, and walk humbly with thee"?

Chicago, Ill.

THE FERN CLIFFS.

ONE of the grandest and most sublime sceneries easy accessible to the people of Clay City and vicinity, is the Fern Cliffs located in Morgan township, Owen county, Ind., a few miles north and east of Patricksburg, or about fifteen miles from this city.

These cliffs do not tower above the surrounding country but to the contrary they consist of an abrupt break in the country from the hill-lands to the hollow below, in the form of a ravine seventy-five feet in depth, a few rods wide and two hundred yards in length, which appears more to have been formed by the flow of water than by an upheaval but as the country above its course shows no marks of any stream or possible flow of water it is hard to imagine this to have been the cause of its formation. The seasons of ages have softened the surfaces of the sand rock, which at places may easily be cut with a common pocket knife, and many visitors have left their initials or names and dates of their visits there to be seen by those who follow them.

Under the projecting rocks and above that which forms the sandy floor may be seen a small seam of stone-coal from which constantly oozes fresh, clear water, making the air cool and moist, and protected from the sun as it is, makes a pleasant resort for stock during the hot dry summer days and also would serve as a protection from the storm and cold of the winter, and no doubt the dry caverns and crevices higher up the walls were, ages ago, used by the wild beasts of the forest for homes and for places of concealment.

Trees cling to the rock walls which at places have, by the softening of their surfaces and collection of decayed vegetable matter formed a thin soil surface upon which some have grown so large that several have been cut for saw-logs in the past few weeks. Beautiful long flaunting ferns hang upon the rocky walls and even spread like moss upon the cold face of the rock. When you visit these cliffs remember particularly to notice this odd freak of nature.—*Clay City Democrat.*

OUR ALPHABET OF GREAT MEN.

BY OLIVE MILLER.

C.—Cæsar, Caius Julius.

LET us take a long journey backward through the centuries of time to the year when our Savior was born,—yes, even farther back than that, to the year 100 B. C.

We want to visit the great city of Rome and learn something of the struggles that are going on there. What a strange city it is! no railroads, no telegraph lines, no Christian churches, naught but heathen temples of worship. But even though Christianity is wanting, many of the men are very learned, and their writings rank among our best classics.

We see the evidences of war on every hand—cruel, unrelenting war, that has cost the lives of hundreds of thousands of brave men. Rome has extended her dominion by force of arms until she is now mistress of all the civilized world: Asia, Africa, Greece and Spain have been forced to bow their heads beneath her yoke. Princes and kings of every race have graced the chariots of her generals for the last hundred years; the spoils of all the East have been borne in her triumphal processions. Thousands of captives have been planted throughout the provinces of Italy, and to these poor people the vicissitudes of fortune have brought the most humiliating changes. The once wealthy landowner is now a slave of the basest sort. Who knows that it is only a question of time until he will be worked to death beneath his master's lash. He is warned not to rebel against his fate, for is not the Appian Way lined with six thousand crosses upon which expired the gladiators who under Spartocus attempted to gain their freedom and in consequence met the terrible death of crucifixion?

But Rome is paying the penalty of her oppression. Dissensions among the party leaders have cost her thousands of her best citizens. The constant strife between the common and the aristocratic classes is slowly but surely paving the way for her final downfall, for verily "a house divided against itself cannot stand." She is raising a nation of blood-thirsty, inhuman men, in whom the old Roman patriotism and virtue exists, but as a tradition. The great octopus of political corruption has fastened its deadly grip upon every province of Italy, crushing the very bone and sinew of the nation and spilling its lifeblood from every pore as it struggles to maintain a shadowy existence.

It was in the midst of these perilous times that Julius Cæsar came into the world. He was descended from the great family of the Cæsars, who claimed as their ancestor Iulius, son of Æneas. So Cæsar came of royal blood, yet his sympathies were ever with the

common people. His mother Aurelia was a fine Roman matron, who had a great influence over the young Julius. His home life was quiet and pleasant. He received the usual education of the patrician youth, and was especially apt in Greek and grammar. He was early trained in the arts of war and showed much ability as a soldier.

At the age of thirteen he held his first public office as priest of Jupiter. At seventeen he was married to Cornelia, whose father, Cinna, was a leader of the popular party. From this time we find Cæsar holding public offices in the state from the lowest to the highest until he had reached the office of consul.

In the year of 58 B. C. he crossed the Alps with his armies and entered upon a series of wars in Gaul, a country that is now occupied by the republic of France. More than three hundred years before this the Gauls had swept down upon Rome and had sacked and pillaged the city. Since then they had been proving themselves hostile neighbors, and Cæsar resolved to compel them to feel the force of Roman power. In seven years time he had conquered the Gallic territory, together with the German tribes under the leader Ariovistus. He had also made two invasions into Britain, but did not accomplish much in these expeditions. He found that it was one thing to conquer the Gauls and quite another to hold them, so he set about organizing the conquered territory. At the end of two more years he was to return to Rome and again take up the consulship. But his plans were suddenly cut short. His rival, Pompey the Great who had been his friend and who was now consul at Rome, had been watching Cæsar's success with a jealous eye. Through his influence the Senate ordered Cæsar to disband his army and return home. Cæsar of course saw in this act only his ruin and public disgrace. He called his soldiers together, and explaining that they had been treated very badly, he announced his intention to move directly into Rome with his armies. Without further delay he crossed the Rubicon, a small stream which marked the boundary of the Roman province. Then moving rapidly southward he appealed to the cities along his line of march. One after another they threw open their gates to him, and when he came in sight of the Capital City his rivals had fled, leaving him in full possession of the field. Cæsar now took up the reins of government with all the powers of dictator. Terror had seized the people, for they had expected to see repeated the scenes of carnage and bloodshed that had attended the entrance of other party leaders into Rome. But they needed fear no such thing from the great and generous Cæsar. He soon gave them assurance that life and property were to be held sacred. He did, however, follow Pompey to Egypt, where Pompey was assassinated.

Returning to Rome, Cæsar began at once his re-

forms. His first act was to remove from the senate all who were found guilty of bribery or dishonorable deeds, and place in their stead men of clean purposes, so far as such men could be found. He also greatly increased the number of senators and gave them power in all questions of importance. The calendar, which was at that time very inaccurate, he had revised, making the year consist of 365 days, introducing the leap year. He also had in mind vast military undertakings which would have clinched the dominion of the Roman world for centuries to come.

But Cæsar had his bitter personal enemies and these conspired to take his life. They decided to attack him on the Ides of March, when he would be attending the Senate. Cæsar was slow to appear at his accustomed place. Tradition tells how he was depressed; how as he crossed the hall his statue fell from the pedestal and shivered on the floor. A paper was handed him disclosing the plot, but Cæsar put it away without reading it. When he had taken his place the conspirators gathered about him with their weapons as if to present a petition. He resisted the thrusts of their daggers until he saw the hand of his old friend Brutus raised against him. His words of mingled reproach and despair are familiar to us all: "Et tu, Brute?"—"Thou too, Brutus?" Wrapping his mantle about him he received their thrusts without further resistance and fell at the foot of the statue of Pompey, pierced with twenty-three wounds.

At Cæsar's funeral his friend Mark Antony delivered the oration. In graphic words he recounted Cæsar's deeds, dwelling upon his bravery, his liberality, and the glory which he had brought to the Roman Republic. When he had wrought the feelings of the people to the highest possible tension he held up Cæsar's robe, pierced with the wounds of the conspirators. This wrought the effect which he expected upon the people; in wild frenzy they vowed vengeance upon the traitors and assassins. Two years later the forces of Brutus and Cassius were cut to pieces upon the plains of Philippi.

Just what would have been the results if all of Cæsar's plans had been carried out it is difficult to say. He had in mind the subjugation of the Germanic tribes and the hordes of savages in the region of the Caspian Sea. This would have cut down the very flower of European civilization, the Teutonic race, and the English nation would never have existed. Cæsar well knew that all his plans could not be carried out in one lifetime, and he therefore secretly advocated an hereditary succession of rulers; but even though he kept these views secret, he was charged with being ambitious. Yet it was a noble ambition, for it involved what he considered the good of the country.

The contemporaries of Cæsar little guessed the far-reaching consequences of his achievements. He had

already advanced the Gauls through the centuries of civilization and paved the way for Christianity in the German provinces. In carving out his own ideals of greatness he proved how much of the public good he had at heart.

In his account of the Gallic wars he has left us one of the finest and purest specimens that we have of Latin literature. He was "Rome's peerless master of prose and her greatest statesman." "The greatest man of all the world," says Shakespeare. "He was orator, statesman, man of letters and warrior. In all these he was great, he excelled in every thing he undertook." Macaulay says of him: "He possessed learning, taste, wit, eloquence, the sentiments and manners of an accomplished gentleman." What was lacking, considering the unchristian age in which he lived to make him truly great?

NEW FOG SIGNALS.

INFORMATION has been received from the United States Consul Thornwell Haynes, of Rouen, France, concerning a valuable invention which will be eagerly accepted by seafaring interests.

Captain Basroger, of the *Stephera Worms*, a French vessel now unloading a cargo on the Rouen quays, has recently invented a very simple contrivance by which the direction of vessels in fogs can be determined.

The signal is given by a whistle or whistles emitting two sounds, one in a very high key, the other very low. These sounds, adapted to the sixteen principal points of the compass, signal the exact direction in which the vessel is going. In the diagram shown in Consul Hayne's report the high key is represented by a vertical dash, the diagram being read in the direction of the arrows.

If the ship is going north it gives a low, a high and a low whistle; if it is going west-northwest it gives three high whistles and one low or deep whistle. It is seen at a glance that all the signals from north to south by way of the east begin with a deep or coarse whistle, and all those from the north to the south by way of the west begin with a high or keen whistle. This arrangement permits one to tell the principal direction of the vessel by the first sound that strikes the ear.

The instrument proper consists of a box containing a cogged drum which, somewhat after the manner of the keys in a wind instrument, determines whether the sound be high or low. A retarder, controlled by a crank, causes the rotation of the drum, so that two sounds cannot be blended or confused. The crank turns once every second.

In sailing vessels the signals are produced by bells.

RELATION OF SUNDAY SCHOOL LESSON TO THE TEACHER AND PUPIL.

BY BLANCHE RINEHART.

THE pupil is as responsible for the position he holds as the teacher is for his. All members share an equal responsibility in the Sunday-school but not all are responsible for the same positions in the school.

The pupil and the teacher meet in the school for the purpose of studying together the Word of God. In order that this great Sunday-school work may be uniform over the land, lessons are assigned. The lesson is a portion of the Word of God and this the pupil is to study.

It is designed to give us a greater knowledge of the Bible and not only to give us a knowledge of Bible history and geography and of Bible times, but it gives us an insight into the lives of the people of past ages and gives us a knowledge of God's dealings with them and, thereby, we may better understand his dealings with us. By knowing of their trials, their temptations, their failures, their sorrows and their joys, we are strengthened and encouraged to go on in ours, and knowing that they were human like as we are and although they fell often, yet, if they willed to do the will of God and came to him with penitent heart he was ready and willing to forgive all and extended the same protecting hand over them. Though we fail often, are discouraged often, if we still purpose to do his will, he extends the same sheltering hand over us and shows us the same loving-kindness.

It teaches us of Christ, the Great Teacher, and his salvation.

The object of the Sunday school is to help children to get up higher, to help those striving for the truth, to instruct the young and old and lay foundations of Christian character.

Yet, without study, this we cannot get. We must study and study hard if we would be thus benefited. If the mission of the Sunday school is thus to prepare material for future church work, it will not be accomplished in us unless we do study.

Reading the lesson over and over and getting a general outline of it is not study. While one may receive much benefit from the right kind of reading, Paul taught Timothy that his success in the church depended on Bible study. "Give diligence to present thyself approved unto God, a workman that needeth not to be ashamed, handling aright the word of truth."

When one applies himself with zeal and interest to get from it all that is possible to get from it, then that is study. One must put hard conscientious work on it.

The question which confronts most pupils is, "How can I make this study of my lesson most beneficial?" Not all have the same opportunity for preparing the

lesson yet all can and should make opportunity for doing so. Do not wait until the last minute and then run quickly over the lesson. That would be mere reading and not even good reading at that. Begin the very first of the week; too much time cannot be spent upon the lesson. The more you study, the more you will find to be studied. The best way is to set apart a certain time each day to the preparation of the lesson. After studying the lesson, meditate much upon it for it is through meditation that its great truths will dawn upon you.

Most of us are so situated that our time is not altogether our own, there are others depending on our labor. It is true, it takes time to have a well prepared Sunday-school lesson. But we say we are so busy, we have not time to study. And that is true, working as we do, we have not time for much else. But is it right for us to spend so much time on our own work to the neglect of the Lord's? This is one thing, I think, of which all of us are guilty. We think our work is so important, it is so necessary. If we would just stop and consider, the Lord's work is just as important, even more so, but in our bustle and hurry to get on in this world we forget, we grow careless. We ought to place this work above our other work and make it more necessary.

Yet, we can read the lesson over in less than five minutes, in less than three, and, by doing so carefully, we may get a general idea of it and during the day we can think upon it. Our work is often such that it does not require such close attention and we can have our minds on the lesson and compare it with other similar lessons we have heard, we can compare it with other Bible characters and search for evidences of God's power. We can get at the central thought of the lesson and search for the hidden truths of it.

One thing of such great advantage is the discussion of the lesson in the family. Talk it over when the family is together, of an evening, or at the table would be a very good place. It not only impresses it more firmly on the mind but it brings out so many things which we might not get otherwise. I would insist that you talk the lesson over in the family because of the great benefit it will be to you.

Get help in all the ways you can and use all the helps you can find in connection with the Bible.

The abuse of helps is when one will allow them to cause him to neglect personal study. When he accepts every statement as a gospel fact. When he simply commits what the author has to say. Accept no opinion as your own until you have weighed it with the knowledge you have and tested it.

But what shall the pupil study? What must he learn in the lesson? He must get well the connections between the lessons, he must know the Bible geography, the history of the place and wherein the Lord

has had a hand in it. He ought to know the similar events. He must have a definite aim in the preparation of the lesson. Do away with this haphazard way of trying to learn whatever is mentioned in helps. He must plan his study of it.

The most essential thing is to ask God for his guidance, for his wisdom in its preparation. That is the vital thing. You cannot make a thorough preparation unless you do have his help. Although you may be able to make a fine recitation, yet, to you the lesson will lack that life-giving power which brings you in closer touch to the divine.

Solomon says if we would get wisdom and understanding,

“If thou seek her as silver,
And search for her as for hid treasures;
Then shalt thou understand the fear of the Lord
And find the knowledge of God.”

If this be our motive in preparing the lesson, then is Sunday-school work a benefit to us.

When the pupil has made a thorough preparation he is ready for the class and not before. I am speaking particularly of pupils in advanced classes. Of course, the primary pupils cannot be expected to get any more than is placed before them.

More depends upon their teacher.

The object of the recitation is not to get knowledge so much as to give it, to test the knowledge we have of it, to discuss the lesson, compare our views of it and correct them.

The pupil is there to learn; the teacher is there to help him learn.

The pupil must know his lesson when he comes to the class and enter into the recitation with heartiness and enthusiasm. This with his close attention will be evidence of the fact that he is there because he enjoys being there and not because his conscience tells him that he ought to be there when, really, his heart is in some other place. At suggestion of the teacher, he is willing to answer questions or express an opinion which shows that he has made previous preparation.

The model Sunday-school pupil will not be content to only answer the questions but will think of some of the hardest questions to ask the teacher.

With the assistance of such pupils the teacher can more effectually draw out the beautiful thoughts with which every lesson is fraught.

In fact a recitation depends largely on the pupil. More than we as pupils realize. An uninteresting recitation is not because the teacher has failed altogether, but because the pupil has failed.

If one goes to Sunday school simply to have some place to go and commit a few facts of the lesson merely that he may be able to answer a few questions, such a pupil will not derive much benefit from the class or the class derive much from him.

The lesson will be interesting only through activity of both teacher and pupil. Teacher is first as he superintends the recitation and not because of importance, for I verily believe the pupil to be the most important factor in the class. If there are good pupils, model pupils, even if there be not a wide-awake teacher there will be an interesting recitation, one that will be beneficial.

A class that knows nothing, that hears nothing, that can say nothing, and the teacher has to answer his own questions, what does it profit? They are a trial to the teacher, a disgrace to the school, and are failures in God-given opportunities.

The active pupil will aid the teacher in her attempts to make an interesting and profitable recitation and will accept her views when in accordance with sound doctrine.

Now that the pupil has recited his lessons is he ready to put in practice what he has learned?

When these lessons are learned by even young children whose minds are like wax to receive impressions, they cannot fail to give a religious character to the coming generation.

The pupil will not lay aside putting in practice what he has learned when he lays aside his Sunday clothes but will treasure up the good impressions of the Sabbath and try to make them shine forth in his life from day to day.

When he has created within himself a desire for a greater knowledge of the Word of God then has he learned his Sunday-school lesson and put it in practice.

Then is he the model Sunday-school pupil which becomes the model church member and finally a model Christian.

Boston, Indiana.

RUSSIA'S GREAT POPULATION.

ACCORDING to the latest report of the Russian Statistical committee of 1885, the gross population of the Empire was at the close of that year 108,786,235. The total urban population is given at 12,760,000, residents in 1,274 towns. The villages and parishes contain a population of 77,542,271. There are only four cities containing more than 200,000 inhabitants—St. Petersburg, Moscow, Warsaw, and Odessa. Nine towns have a population varying between 100,000 and 200,000, and twenty-three towns between 50,000 and 100,000. The total number of school institutions is 41,492, with a male attendance of 1,850,964, and of females 638,970. Of schools of agriculture and forestry there are only sixteen in the whole Empire, with an attendance of 1,156 pupils, or, say, one such school to every 5,862 of the population.—*Selected.*

COTTON is king.—*John Randolph.*

VAST FOREST WEALTH IN THE NORTHWEST.

BY GUY E. MITCHELL.

It is Being Trafficked in at the Expense of Uncle Sam.
Workings of the Forest Reserve Lieu Land Law.

Washington, Dec. 31, 1904, (Special). —Politics aside, Congress has at times succeeded in innocently doing things of incalculable injury to the country. Such has been the effect of a law passed a few years ago creating what is known as Forest Reserve Land Scrip. Few people throughout the country, especially the East, know anything of this law, yet its workings have been perhaps the most iniquitous of any land law ever administered by any government in any age. It has resulted in millions and tens of millions of dollars worth of the most magnificent merchantable timbered lands in the world passing from the government into the hands of lumber syndicates and speculators, for which little and in some cases absolutely no value has been received by the government.

On its face the forest lieu land law was a beneficent measure, and so the majority of Congressmen thought when they enacted it. It provided that where the government created a forest reserve and settlers already had their homes in that reserve, they could exchange their lands for any other public lands which they might select, the idea being that the forest reservation, by stopping further settlement, would condemn them to isolation. Then the law was made to apply broadly to all people or corporations who might hold or have filed on any land in forest reserves created or to be created.

The land-grant railroads in some instances and large land dealers and speculators held enormous tracts of land, good and bad, in the forest reserves.

How the Government is Cheated.

Where poor it was immediately exchanged for good timber lands; where good the owners, or the companies to whom they sold it proceeded to divest it of every foot of timber, and then turned it in to the government and located in lieu of it, acre for acre, tracts in the pathless forests of Washington, Oregon, Northern California and Idaho, forests mentioned by the Secretary of the Interior as worth \$50 and even \$100 an acre.

The people of the West—those who are not interested in timber steals of various sorts—are outraged at the magnitude of the timbermen's operations, not at the great legitimate lumbering industry of the West but at the evasion of the timber laws, the absolute downright fraud, stealing and perjury which is occurring in every timbered section and most of all at the reckless methods of lumbering by which entire watersheds are denuded and destroyed, thus drying

up the water resources for irrigation upon which the fertile western valleys depend for their very life.

The difficulty which the irrigator and the forest preserver will meet is this. Neither are organized. The great mass of the people would favor the abrogation of this abominable law, and the recent National Irrigation Congress at El Paso passed a strong resolution to that effect; nevertheless what is everybody's business is nobody's in particular, and the forest lieu land scrip-law is likely to continue on the statute books unless an overwhelming public sentiment sweeps it away. And indeed so well are the timbermen organized that any effort at legislation will immediately arouse a great western uproar. It will be but the protest of men who are making enormous fortunes through the squandering of the nation's greatest resource.

To Create a Lobby.

An instance of this is seen the the following imitation type-written letter which is being sent broadcast among all timber land dealers.

"Dear Sir:—

I am advised that immediately upon the assembling of Congress in December, either the Mondell bill restricting the purchasing power of Forest Reserve Scrip will be placed upon its passage, or a new bill still more disastrous will be introduced, providing that all patented lands within Forest Reservations which have not been relinquished and lieu selections made against them, are to be condemned, and owners will be forced to sell to the Government at the government price, presumably \$1.25 per acre. If this latter bill is enacted into law, Forest Reserve Scrip will be a thing of the past.

It occurs to me that all scrip dealers should unite and resist these measures vigorously. Able counsel should be retained to defeat these measures. I would be glad to have you offer suggestions, naming suitable counsel. You may depend upon me to cooperate in any movement which seems best. I am ready to contribute my proportion of the necessary funds to push this matter vigorously. Prompt action is necessary.

May I have your immediate reply?

Yours very truly,"

This letter says that "Forest Reserve Scrip" will be a thing of the past. It should be a thing of the past and this Congress about to convene should promptly make it a thing of the past. The owners of these lands included in forest reserves should be forced to sell them to the government at, not necessarily \$1.25 per acre, but at the appraised value, as is advocated by the National Irrigation Congress and by The National Irrigation Association. Many of these lands have already been denuded of their last stick of timber and are not worth fifty cents an acre.

With this forest lieu land law upon the statute books it is a question whether the creation of additional forest reserves does not become more of a menace to forestry and irrigation than a good.

We Are Facing a Timber Famine.

The most eminent forest authorities tell us that at the present rate of forest destruction there will be no forests in the United States within forty years. There is no more certain way to bring this condition about than to continue the operation of the forest reserve scrip law and the timber and stone law.

With a wise forest policy by which the title to the remaining public forest land shall remain in the government, allowing the sale of stumpage, as recommended to Congress by President Roosevelt, thus assuring a second growth of timber and the endurance of the water supply, an easy solution of this great problem is offered. It is opposed of course by timber and lumber speculators and manipulators, but the American people should open their eyes to the facts, as they frequently do when abuses have reached a certain limit, and make themselves heard on this tremendous question.

NO MORE SUNDAY BULLFIGHTS IN SPAIN.

SIGNS of a social and economic awakening in Spain have been many during the past months. In March, 1904, a commission appointed by the Cortes, known as the Institute of Social Reforms, succeeded in promulgating a law prohibiting work on Sundays, and enforcing the closing of all industrial and commercial establishments. In October, this body, after a heated discussion, ratified the absolute prohibition of Sunday bullfights. It was felt that a national custom so long established could not be abolished at once, but the prohibition of its observance on Sundays (the day on which nine-tenths of the bullfights took place) is considered to be the deathblow of bullfighting in Spain. The powerful Institute of Social Reforms, which has thus accomplished such a work for civilization, had also been investigating strikes in the kingdom, and has made some suggestions for bettering labor conditions, which the government is proceeding to carry out. The census of 1900, showing the population of the kingdom to be close to nineteen millions, indicates that the number of illiterates is being slowly reduced, the percentage of the population able to read and write having increased from 28½ in 1887 to 34 in 1900. Commercially, and industrially, also Spain is progressing. Reports of the Spanish railroads for the year 1903 show a satisfactory improvement, and negotiations have been almost concluded with France for building two new railroads through the Pyrenees. The figures of Spain's general trade for the year 1903 show a great improvement over all preceding years of the decade, and a number of commercial treaties, notably one with Cuba, are being negotiated. Reforms are also being carried out in the army, so drastic as to cause the resignation of

the cabinet on December 15. In the new ministry, General Azcarraga is premier and General Villar is minister of war. The death of the Princess Maria Mercedes, sister of King Alfonso, leaves the little Prince Alfonso the heir to the throne. Early in December, King Alfonso authorized his minister at Washington to sign the Spanish-American treaty of arbitration.—From "*The Progress of the World*," in the *American Monthly Reviews of Reviews for January*.

TWO NEW STATES IN PROSPECT.

THE next important business on the Senate's calendar after the Philippine improvement measure was the bill providing for the admission of two new States into the Union. Few people, either in Congress or outside of it, seem to understand how much more important the admission of a new State to the Union is than almost any other possible business that can come before Congress. Tariffs can be made and unmade, and most other matters of legislation are subject to amendment or repeal from time to time. But hasty or ill-advised action in admitting a State to the Union is irrevocable. At this very moment the whole moral sense of the community is aroused by questions arising out of the mistake that was made in admitting Utah at a time when it would have been far better to keep Utah in the territorial condition. In the Presidential election, in November, Nevada cast a total of 11,826 votes. The admission of Nevada to the Union was a fearful mistake, for which the Constitution offers no remedy. The present bill provides for the restoration of the permanent lines of the Indian Territory that had been temporarily broken up by the granting of a territorial form of government to a portion of the Territory under the name of Oklahoma. To the area thus restored the name of Oklahoma is to be given. There are people enough and other conditions justify the admission of Oklahoma as arranged for in the Senate bill, which affords due protection to the rights of the Indian tribes. The bill also unites the Territories of Arizona and New Mexico, and admits them as one State under the name of Arizona. These Territories, it is true, are not ripe for admission to the Union, whether separately or jointly; but there are some reasons why the matter may as well be settled once for all. The chief advantage in admitting Arizona and New Mexico now as a single State would be that this would end the mischievous political agitation for their separate admission,—a scheme fostered chiefly by selfish private interests. There is now good reason to believe that the Statehood bill, as duly reported from the Senate Committee on Territories, will become a law during the present session.—From "*The Progress of the World*," in the *American Monthly Reviews of Reviews for January*.

THE RELATION OF PHRENOLOGY TO EDUCATION.—Part 1.

BY H. B. MOHLER, F. A. P. I.

"THE proper training of the natural faculties is the very essence of all true education."—This being true we should know something about the location and relative functions of the primary faculties. Here, this science at once becomes simple and practical, instructive and very beneficial. In its theory there is no system of "Mental Philosophy" in vogue to-day that embodies a code of principals so rational and harmonious with the laws governing our organism.

Phrenology is not an inductive but a deductive science; all its principles being formulated from observation and established facts vested in nature. Robt. Hunter aptly says: "It is the true science of mind, because every other system is defective in enumerating, classifying and tracing the relation of the faculties."

Our present methods of education indeed differ widely from the Phrenological, and at best formulate *no* code of principles which can be utilized in the proper training of children. Dr. Geo. Otto, of the University of Copenhagen, truly says: "As the true science of mind, I consider phrenology the only one that, with a sure success, may be applied to the education of children"—and in no other way, indeed, can we reasonably account for the many differences of character and talent, these alone being traceable to the variations of temperament, quality of organization, inheritance, age, sex and conditions of mental development.

Dr. Guy of Kings Med. Coll., London truly says: "Phrenology is by far the most practical theory of the human mind, because it reduces all our mental operations to their primary law, by analyzing their several modes of combined activity." To-day, however, authors and teachers of "*Mental Philosophy*" combine these primary functions and regard them as independent forces whereas, for example, "*perception*" has at least seven distinct functions comprising its activity. In point of comparison I may here say, that every element of matter involves *quality, quantity, density, proportion, color, etc.*, and so requires the specific activity of one or more perceptive faculties, because there is a designedly definite relation existing, through which we discern the forces of nature.

"*Retention*" is a power of mind, *not* confined to a distinct psychological centre but has at least five distinct functions—as in the above. *Reflection, volition, imagination* etc., too are but combined activities of faculties comprising the *will, intellect, and esthetic* functions so that the different shades of character and talent are cast in proportion to the development of the primary faculty.

"*Memory*, however, stands in diametrical opposition as it is *not* a "*primary power*" nor has it a specific function or location as its activity belongs to and emanates from every intellectual process—thus the greater the development of any one faculty comprising the intellect, the stronger will be its memory. This accounts for its modifications of strength and weakness in our individual—for example, he lacks "*memory of dates and time*," yet has strong "*memory of words*"—another has a fine "*musical memory*" but is deficient in arithmetical and calculative power—still another is apt in recalling facts, and practical data but lacks in theory, principles, and "*higher mathematics*" which I may say, especially actuates the reflection and constrictive functions.

The above are but a few of the puzzling propositions confronting us yet our present system of education or "*applied mental science*" sheds no light on these variations of talent nor how to redeem them. The teacher is ignorant of these laws so that the grading of pupils does them an injustice as too much is dependent on partial talent or exceptional ability along special lines without regard to physiology, hygiene, physiognomy, craniology, heredity, ethics and anthropology—these seven which Joseph Cook aptly terms the "phrenological Pleiades of the mental mariner who sails in search of a correct knowledge of men."

Grand Junction, Colo.

(To be continued.)

THE AMERICAN STEEL INDUSTRY.

WHEN Andrew Carnegie and his partners started in business in Allegheny, over forty years ago, they possessed only a small forging shop, whose specialty was axles, made from scrap iron. A few years later, they built a small rolling mill in Pittsburg, where they rolled into bars wrought iron made in four puddling furnaces. During the Civil War these works paid handsome profits, so that a new plant, known as the Upper Union Iron Mills, was added, and afterward became one of the principal factors in the enrichment of Mr. Carnegie and his partners. For there they made the universal plates and the beams, channels, and other shapes so essential in bridge and building construction.

As the entire Pittsburg district at that time,—only a generation ago,—produced less pig iron in a year than the Duquesne furnaces alone now make in a month, and as all the pig iron needed for the Upper and Lower Union Mills had to be purchased at high prices, Kloman, Carnegie & Company built the first Lucy furnace, making it considerably larger than the Clinton, Eliza, and other blast furnaces already existing. A few years later, the second Lucy furnace was built. Both have been constantly improved up to the present time, with the result of greatly reduc-

ing labor and increasing the output by the means of mechanical and metallurgical devices.

One of the greatest steps in advance was the employment of chemists to aid the blast-furnace manager, and subsequently to direct the operation of the Bessemer and open-hearth steel works, in conjunction with educated mechanical engineers, whose importance also increased as mechanical appliances multiplied. To-day, the analyses and drawings of large steel works are numbered by the thousands.

What has brought about the displacement of iron by steel in less than thirty years? Principally, the cheapness and great productivity of the processes of soft-steel manufacture and the small number of men required for a large output.

Moreover, one of the greatest aids to the introduction of the Bessemer process in the Pittsburg district was the desire on the part of ironmasters to get rid of puddling, which was the cause of more labor troubles than all the other departments of their works. The puddler himself has been benefited by the change, so far as he has been able to exchange his former laborious task for the less strenuous steel processes.

Another important reason for the change to steel was the comparative excellence of the product and its adaptability to railway and engineering construction. In fact, our modern railway development and fireproof building construction would be impossible without Bessemer and open-hearth steel.—*From "Pittsburg's basic industry,—Steel," by William Lucien Scafe, in the American Monthly Review of Reviews for January.*

LIBERTY OF THE PRESS UNKNOWN IN RUSSIA.

LIBERTY of the press is unknown in Russia. Nor are the burning topics of the day ever dealt with by the journals. Current events of the most intense interest are passed over in silence. Americans may perhaps realize what this means by imagining if they can how they would feel if no newspaper were allowed to publish a true and complete statement of the ravages caused by a complete failure of the crops in five States of the Union where the population was dying of hunger; and if every journal were forbidden to criticise the President, Vice-President, the Secretary of State, the Postmaster-General, and every prominent official. But even the idea which Americans would then form of the condition of the Russian press would be inadequate. Take an instance. In 1901, there was a partial famine. People endured harrowing sufferings, children starved before the eyes of their parents, mothers died leaving helpless children dying, too, yet the press scarcely mentioned the famine. Sometimes, indeed, for weeks it never once alluded to it. Hard-

hearted indifference, it might seem to a foreigner; in truth, it was only implicit obedience to the authorities.

And even the most obedient papers may be stopped. The *Vyatskaya Gazeta*, for example, was read in proofs and approved by the censor before being published. One day, it occurred to the governor to allow the paper to appear but to hinder the people from reading it. Therefore, 43 police inspectors, 306 rural policemen, and 1,196 police watchmen were dispatched to the huts of the peasants to seek for all numbers of the journal for this year and former years! In a few days he quashed his order. Respect for law is not fostered by caprices of this nature.—*From "The Dawn of the New Era in Russia," by E. J. Dillon, in the American Monthly Review of Reviews for January.*

* * *

MARK TWAIN LONG AGO.

A Thin, Scrawny Fellow When he was a Wheelman in California.

CAPTAIN SELWYN RAMSEY, of San Joaquin City, Cal., claims the unique distinction of once having employed Mark Twain as second wheelsman at a salary of \$18 a week. Captain Ramsey is one of the old pioneers in California river navigation. He commanded the first steam packet that ever ran up the Sacramento River, and although he is over 80 years old and hasn't been on the bridge for more than twelve years, yet he still loves to talk of the good old river days.

"Yes, I used to know Sam Clemens," said Captain Ramsey to an interviewer, "and he was one of the best wheelmen I ever had. It was along in 1868. I was on the old John Wallace at that time, on the Sacramento River.

"About the time I met Clemens I was pretty hard up for help. Wages were good and lots of men deserted for the mines. All the wheelmen had to be broken in, as there were no experienced river men in the country in those days. And I was pretty glad when I heard of a young fellow who had been in a pilot house on the Mississippi. The minute I tied up in San Francisco I went right over to the United States mint, where I got his address. As soon as I saw him at the wheel I engaged him on the spot.

"Mark Twain was a thin, scrawny looking fellow then, but he was a great hand making friends, and all of us liked him: I think he was on the Wallace about five months—it's so long ago that I forget the exact time. He was a straight out and out wheelman, and he learned the river like a book. The country was pretty wild in those days, and a man had to watch out for himself, but Clemens got along with the best of them."

LEARN the luxury of doing good.—*Goldsmith.*

OUR LITTLE FRIENDS.

1.—The Dove.

THE little dove has been for thousands of years our Father's emblem of peace, sweetness and purity. He gave it a noncombative disposition and taught his other feathered friends to respect it. It occupies the same relation to the other birds with reference to war and turmoil that our Quaker friends do to us combatants in times of war. We respect their conscientious scruples and never expect them to enlist as soldiers, so we never draft them into the army.

During the many years that I have chummed with birds, I have never yet known any feathered creature to harm either a dove or its eggs. It builds a fragile nest of twigs in the crutch of a tree, and there without protection of any kind rears two and sometimes four young a year. It is left to man, made in the image of God, very often to use that little creature as a target for his shot gun.

The dove is a very valuable bird for the reason that its food is almost exclusively the seeds of noxious weeds; and also according to my philosophy because of the lessons which it teaches. No boy or girl can look at a pair of young doves sitting side by side on a limb waiting for their breakfast without being uplifted and made better.

If our God had expected that he would ever have children in his image who would wantonly destroy that bird, he would doubtless, have made it more prolific. He knew when he made the quail so heavy and delicious that it would be sought and utilized as human food, therefore he taught it to rear thirty to forty young a year. I am glad to know that at this present time in our good old Hoosier State, our Creator's theory of the dove is understood and adopted. It is a sad commentary on Christian civilization in Indiana that until two years ago his plans in that respect were ignored. It remained for Indiana school children to bring about a reformation. Two years ago they sent a man to the legislature who expressed their sentiments on that subject. The legislature acted and placed the dove on the protected list. As long as the stars shine together and school children sing and pray, just so long will God Almighty have the privilege of rearing his emblems of peace in Indiana.

You cannot ramble for half an hour in any cemetery in the United States without seeing the image of a dove chiseled on a little marble slab. It was ordered to be placed there in each instance by some broken-hearted mother in memory of her child sleeping the last sleep beneath that sod. All honor to the noble children in Indiana who led the legislature to protect the little dove. May the children of the entire country soon rise up in their might and demand

protection for God's feathered creatures, who in his plan are so valuable to man.

2.—The Purple Martin.

I have never yet known anybody to issue a proper invitation to the purple martin without the invitation being accepted that season, and he and his little wife becoming valuable summer guests. The invitation consists in the providing of a little home. The ideal is a little box made out of inch lumber, two feet long, eighteen inches wide, fifteen inches high with a little roof-shaped covering, and a partition through the center extending half way to the top of the box, making two compartments, with an entrance three inches high and two inches wide to each. The box or boxes should be placed on the top of a pole, eighteen feet from the ground, in an open space either in the rear or in front of the residence. Care must be taken to have the boxes in an open space and so far from the ground that freedom from cats is insured. It will not do to put a box on the top of a shed or in a live tree and then complain that the martins fail to appear. They are seeking to raise their young that they may work for this world, and not that they may be food for worthless cats the instant they put their little heads for the first time out of their home. The bird comes to Northern Indiana on the sixth, seventh and eighth of April each year, so if the boxes should be put up before the fifth of April, little pieces of lath must be nailed across the doors or openings and kept there until the fifth of April, else the English sparrow, our present pest and coming curse, will steal the home. The martin getting possession first will easily protect its home and children from the sparrow and all other birds until the sixth or seventh of August, after which time it does not occupy the box, but gathers itself together in large flocks and sleeps until migrating time in the tops of dead trees or on telephone or telegraph wires. The door to the box should therefore be closed on the seventh of August to remain as the protected home of a bird which will pay enormous rent for the use of fifty cents worth of material.

The martin belongs to the swallow family, and while it is no more of an air scavenger than the swift swallow it has this advantage in utility—it always stays in sight of its home, and therefore must depend for its food and the food for its children upon insects in that immediate vicinity. It is strictly insectivorous, and never eats anything, nor permits its children to eat anything, that it does not catch in the air. The strange part of its biology is its wonderful appetite for mosquitoes. From break of day until dark it is the busy scavenger of the air. Pity the day, kind reader, when no air scavengers shall visit your happy home. Five years from the sad day when they become extinct, life in our glorious country will be unendurable.

Chumming with the bird and watching it feed its young within a foot of my face hour after hour, I give you these figures as conservative. It feeds its young about 225 times a day, and each time uses from five to seventy-five little insects. I believe that the average feeding consists of ten articles, therefore the result of the day's work is two thousand mosquitoes destroyed. Suppose that you have a little colony of ten martins. The ten martins raising four children to the pair would result about as follows: 2,000 insects a day for each pair, five pairs, 10,000 insects; thirty days, 300,000 insects; a season, 1,000,000 insects.

I need not in this article call your attention to the fact that the mosquito is a very prolific insect, and that the female mosquitoes, if not given their place in the economy of nature as bird food, propagate their species very rapidly, and that therefore the blessing that comes from having our air scavengers in May and June is oft unappreciated. May the time never come when we will realize the rapidity with which insects increase in a locality where there are no birds. A thorough study of the martin, forces the conclusion that it is a purple singing machine, fashioned by our God for a practical purpose. It lives its life close to our home if we will permit it. It is an uplift to the boy or girl who sees papa and mamma martin feeding little Isaac, Mandy, Jimmy and Julia in love and kindness as they put their little heads to the open door of what to them is a brown stone front. To the man or woman who cares to study it properly it is an inspiration and a revelation.

Reader, won't you go thirty minutes before daylight in the June time, and sit quietly beneath the purple martin's home. You will hear him and his wife come out, say some pleasant words to each other and then start soaring, upwards, and upwards, and upwards into the air, presently out of sight, going together to catch the first rays of the sunlight, in praise to their God. Wait patiently, and presently you will see them circling, circling, circling back to mother earth, and just at daybreak you will hear them talking a little while on the top of their home and see them start out after some breakfast for the children.

Will you not prepare for such an experience next year by building martin boxes as suggested in the first part of this article?—*Bombay Guardian*.

* * *

FEMALE BOOTLEGGERS SLY.

THE most persistent class of bootleggers that ever infested Indian Territory is composed of a few women who have made it a vocation, says Marshal Bennett, who has had many years' experience with the outlaws of this country. A woman bootlegger can ply the illegitimate business longer without getting caught, and is harder to convict after she is caught, than a man.

It is believed that at this time there are but two women bootleggers in Indian Territory. These the officers have had their eye upon for a long time. They are morally certain that they are selling liquor all the time, but it has been impossible, so far, to catch them at it or find liquor in their possession. The cunning of a woman in this dangerous business is remarkable.

In 10 years of experience, Marshal Bennett states that he knows of but seven or eight cases where women bootleggers have been caught and convicted in the courts of the Indian Territory. This, too, in the districts where the enormous dockets of the courts are burdened with liquor cases, the number of cases of this kind exceeding two to one all other cases on the docket.

But these cases are all against men. The only woman who has been convicted of bootlegging in the western district for a long time is Mrs. M. J. Wade. She was arrested at Wagoner and sentenced to a year and a day in the Federal prison at Columbus. The officers aver that she had been selling liquor at Wagoner and other places in Indian Territory for 10 years before she was captured.

* * *

THE MARCHIONESS OYAMA.

It is an interesting fact that the wife of Marshal the Marquis Oyama, the Generalissimo of the Japanese army, is an American by education and training, although not by birth. Forty years ago the Japanese Government sent a large number of able and intelligent Japanese lads to foreign countries to study Western civilization. Then the wise men who had determined to make this change in their nation considered that men alone cannot take an effective step forward, and decided also to risk a proportion of girls of a good family in foreign lands, in order that they might be fitting companions for the after-life of the educated young men. One of these girls is now the Marchioness Oyama. She is described by Japanese people as a charming woman of great intelligence and a fitting companion to her capable husband. She was in this country for 10 years, from 1871, under the care of a clergyman and his wife. The little girl attended school for seven years and then entered Vassar College, and took her degree of B. A. there in 1881. Her essay at her graduation was on a political subject—namely: "The Policy of Great Britain Toward Japan." It attracted a good deal of attention from its ability and from its prophecy that Japan would force the world to recognize her as one of the leading civilized nations by displaying ability in commerce, the arts and government. The Marchioness wore American dress and was much liked by her college class.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

OUR LETTERS.

A MINISTER once said to your editor, "There is as much difference in people as anybody." At first this sounds rather empty, but the more you think of it and the more experience you have, the more of a truism it becomes.

There are two ways of conducting newspapers and magazines. One way is to stop the paper the minute the time is out; another way is to let the subscription continue until it is ordered stopped. We are not going to discuss which is right or which is wrong. We only wish we knew which is morally right and which is morally wrong. Hundreds of good honest people differ in their views on this point. When we conclude to stop the magazine the very week the time expires, because someone has suggested that is the proper way to do, we are sure to receive letters in a day or two which look like this:

Editor Inglenook,

Dear Sir: I didn't receive any Inglenook last week. I know my time was out three weeks ago, but I didn't get to town to buy a draft and renew my subscription. I intended to take the paper next year, but if you can't trust me a week or two for the money, I don't want your paper at all, so you can just stop it for good.

John Jones.

Of course when we receive several letters like this we are constrained to think that it is best to be lenient and wait a week or two and see if we will not receive a renewal or an order to discontinue, so we do that. Then in a few days we get another bunch of letters and they read something like this:

Editor Inglenook,

Dear Sir: I have received three papers since my time is out and your paper still continues to come; I receive it every week. I thought your paper was one which would stop when the time was out. If you had stopped it when the time was out I had expected to renew, but since I find that it is one of those papers you can never get stopped I don't want it at all. My subscription is

paid up to the present, except those three you have sent since the expiration of my subscription, and I don't expect to pay for them because I didn't order them.

James Brown.

Now, dear Nooker, if you would receive a bunch of letters like the first ones, one week, and in the course of two or three weeks you would receive a bunch like the second sample, what would you do?

We are glad to say that we do not have many people of either of these classes but there is still one, once in a while, who expects us to know what he thinks about everything. After duly considering these two phases of the subject, we have decided to allow your paper to continue for a few days, giving you ample time to renew, for some of our Nookers live out in the country and some of them live where it is very cold; and then after a reasonable length of time, if we do not hear from you, we are almost compelled to stop the paper so as to get a letter from you. We explain this to you so that you may avoid missing a single number and lose connection in any of the work.

There is another class of mail that would puzzle Grecian philosophers; this class of mail comes, generally, in the form of postal cards, which reads:

Boston, Mass.

Editor Inglenook,

Dear Sir: Please change my address to St. Louis, Mo.
J. Jones.

It is evident that this subscriber has changed locations and wants his paper changed, which is all right and which we are glad to do, but you see he forgot to tell us where he got his mail, formerly, on a rural route out of Boston, from a certain box, or at a certain street and number; in fact he did not say that he got it at Boston at all. We can only guess that from the postmark on the card. Then you notice that he signs his name "J. Jones" and in looking over our Boston mailing list, we find we have a "James Jones," a "John Jones," and a "John J. Jones." Now, since he does not give his particular address, who can tell which Jones he is? Then we either have to write him a letter and ask him, or guess at it, which is very uncertain business. When he answers our inquiry as to which Jones he is, he will say, "I have been taking your paper for years and it seems to me you ought to know me by this time," not ever dreaming that there are six thousand other Joneses scattered over Uncle Sam's territory. Always be sure, when changing address, to give both the old and the new, and give them correctly.

In the same mail we received this card:

Sweetwater, Nevada.

Editor Inglenook,

Dear Sir: Please continue my subscription to the Inglenook another year and I will remit in a few days. We like it fine.
Henry Simpson.

Our clerks hunted in the files in vain for Henry Simpson. By looking at the postmark on the card, and finding that he lived at Sweetwater, Nev., they turned back to the files and notice at that post office a certain Della Simpson gets the INGLENOOK, but there is no Henry Simpson. The next best thing to do is to write Henry Simpson and ask him if he is acquainted with Della Simpson, and we get the following information:

Sweetwater, Nevada.

Editor Inglenook,

Dear Sir: Della Simpson is my little girl and has taken the Inglenook four years; it seems by this time you ought to know where we live. Please leave the paper in her name as it always has been. Here is that dollar I promised you the other day when I wrote.

Respectfully yours,

H. Simpson.

You see, Brother Henry thought we ought to know that his name was Henry Simpson and that he could sign his name "H. Simpson" and that we could not interpret that to mean Howard, Hulda or Henrietta, and he expected us to know that the neighbors called him "Hank" and that his little girl was named Della. Such things are very familiar to each family around home, and while we are personally acquainted with several thousand of the Nookers, it is impossible to know them all and remember all of their names.

There is one more difficulty into which we fall, and yet it is not quite so common as the ones spoken of above; here is an example:

Limewood, Texas.

Brethren Publishing House,
Elgin, Ill.

Gentlemen: Please change the address of my paper from Philip Curry, of Mankato, Minn., to Philip Curry, Limewood, Texas, R. F. D. 7, and oblige.

Fraternally yours,

Philip Curry.

Now, who sees the error in this letter? This is the best letter of the whole lot of samples. Instead of addressing it to the Editor INGLENOOK he has addressed it directly to the House, which insures him much better service, because it is not delayed with editorial mail. The editor would have to simply carry his letter to the Business Department anyhow.

Again, notice how carefully he gave his full name and address where he had been getting his mail and where he wants to get it in the future, and so we know exactly how to change it; but the worst trouble in this letter is, we don't know what to change, he just said his "paper," and how are we to know whether he means the INGLENOOK, the *Gospel Messenger* or the *Missionary Visitor*?

You may think that we have manufactured these letters to suit the purpose in this editorial, but the only thing we have supplied are the names and the post offices: other material is furnished us in abundance.

What has been said has been said in all kindness in order that the readers of the INGLENOOK may have the best of service and that the clerical force in the office may be relieved of an abundance of brain-racking work that can easily be avoided, provided that when letters are written, the writer will suppose that we know nothing about his case and will tell exactly what he wants, no more, no less. Be sure and address all matters of business to the Brethren Publishing House, Elgin, Ill., while personal letters or matter regarding articles for the magazine, or the policy or scope of the paper, might be addressed to the editor if so preferred.

OUR POOR.

Not long since we made a request for a little money with which to supply the unfortunate in Pest Houses, Hospitals, etc., who want to take the INGLENOOK, but are too poor. We are glad to state here that almost the next mail brought money for that purpose, and the calls were answered.

Now we have several calls in our Office for the INGLENOOK, from young men and women who are not unfortunate, in the way of affliction, but who are so situated financially that it is impossible for them to subscribe or even renew their subscription. We are starting an "INGLENOOK Poor Fund" for that purpose, and any money sent, marked as above, will be cast into that fund and used when we are satisfied that the calls are worthy ones.

How many of the Nook family have 75 cents ready to send us, with which we can shed fifty-two rays of sunshine in the year 1905, into the life of someone who needs your assistance? Send it to the Brethren Publishing House, Elgin, Ill., and mark it "INGLENOOK Poor Fund."

"OUR Possibilities" by O. G. Brubaker, was delivered at a union Christian Workers' meeting at Naperville, Ill.

BE sure and read the letters on this page and see which one is like the one which you wrote.

EVERY man that hath this hope in him purifieth himself, even as he is pure.—1 John 3: 3.

IF he hath wronged thee aught, put that on mine account.—Philemon 18.

WHO will be the first one to start the "Poor Fund"?

DON'T fail to read "The Little Pink Sunbonnet."

Current Happenings

ANDREW CARNEGIE, to date, has assisted twelve hundred ninety libraries, seven hundred seventy-nine of which are in the United States. These are chiefly located in cities and maintained by municipal taxation. New York has a hundred nineteen Carnegie libraries, Pennsylvania has seventy. There are only four states that have not received gifts, they are, Delaware, Rhode Island, Mississippi and Arkansas. His donations now amount to thirty-nine millions.

* * *

THE famous orchestra leader, Theodore Thomas, died of pneumonia at Chicago. Mr. Thomas was born at Essen, Germany, Oct. 11, 1835, and at the time of his death was 69 years of age. He studied under New York musicians, and made his debut as a violinist in Germany at the age of ten. He was a solo violinist in New York for some years, making advancements in his musical work. He founded the Thomas orchestra in 1867 and maintained it until 1888. He moved to Chicago in 1891 and has since been conductor of the Chicago orchestra. He was musical director of the World's Columbian exposition in 1893.

* * *

JANUARY 1, the city of San Francisco was visited by a number of earthquakes. The shocks were not so severe, yet several plate glass windows were shattered and the tower of the city hall was twisted.

* * *

WM. H. BALDWIN, Jr., President of the Long Island railroad, died in his home in Locustville, L. I., Jan. 2, of cancer.

* * *

ONE hundred twenty-five little girls, employed in a paper box factory in New York, have been on a strike for two months. The strike was brought about because their wages were reduced from three dollars a thousand, to two ninety a thousand. A similar case is reported where two boys, whose ages were three and five respectively, were offered ten cents each by their mamma, if they would stop their racket and sit on a chair quietly for an hour. They at once sternly rejected the proposition, informing their mother that union prices were fifteen cents per hour for such labor.

* * *

FREDK. A. STOCK is to succeed the late Theodore Thomas as conductor of the Chicago orchestra during the remainder of the season, and probably thereafter.

* * *

PHILANDER C. KNOX, of Pittsburg, Pa., was unanimously nominated to succeed the late United States Senator Matthew S. Quay.

A FIRE at Greenville, N. C., destroyed two warehouses and several small buildings and about a million pounds of tobacco. It is supposed to have been incendiary.

* * *

J. PIERPONT MORGAN recently paid \$6,000 for the oldest piano in existence.

* * *

THE total coinage of the United States mints for December was \$709,644.

* * *

THE wildest excitement prevailed recently at Jefferson, Ohio, as a funeral procession was on its way to the cemetery; because some friends, who lived at a distance were tardy, the undertaker was asked again to show the remains; upon removing the coffin lid he noticed the least bit of moisture on the glass, which was unquestionable indication that life was not extinct. Physicians were summoned, and life restored. It was a narrow escape, but he is sound and well to-day. His name is Nathan F. Chidister.

* * *

IT is now the purpose of John Alexander Dowie to establish Zion City number two. The site has been selected in Mexico, and negotiations are contemplated which will embrace a million acres of land fronting on the Gulf of Mexico. He expects to have the city ready for formal dedication by the beginning of next year.

* * *

A TROLLEY car jumped the track at Newark, N. J., plunging down a steep grade, injuring the conductor and motorman.

* * *

THE people of Australia have a novel way of caring for the outcast. They have no almshouses or orphanages, but have receiving houses, where waifs are cared for a few days until country homes can be found. The government provides foster parents with a dollar and a quarter per week for the care of the child and for proper clothing. The child must be in school during the school age. At fourteen he begins to work; his earnings are placed in the postal savings bank. At eighteen he goes out into the world, fairly well educated with a good general idea of labor, and is practically independent. Thus for about sixty dollars a year the government makes a man or a woman out of material that would otherwise be thrown away, which will contribute to the wealth and character of the nation. They prevent the manufacture of criminals and are without the expense of courts, almshouses, prisons and reformatories.

THE Santa Fe stockholders will increase their capital stock by \$50,000,000 and will issue bonds to that amount for the purpose of building new roads and improving old lines in the southwest.

* * *

A RAILWAY tunnel at Catawissa, Pa., caved in and damaged considerable track for the Philadelphia and Reading company, it was discovered, however, before any trains were due.

* * *

CASSIE CHADWICK, in jail at Cleveland, received a pleasant call from her husband, Dr. Chadwick, who has just returned from Europe. The Doctor says he will believe her to be innocent until she is proven guilty.

* * *

A GAS jet was the cause of a fire in one of the Episcopal churches of Chicago. The jet was turned sufficiently as to ignite some decorations which soon would have resulted in a large fire. The cool-headed minister in charge, noticed the very beginning of the fire and raising his hand in benediction, he dismissed the assembly and thus avoided a dreadful panic.

* * *

FRANCIS H. NICHOLS, the American explorer and correspondent, at Thibet, who left this country in 1903, is reported to be dead.

* * *

THE tallest structure in New York City is the building of the *New York Times*, thirty-one stories high. Experts refer to this building as one of the most remarkable architectural triumphs of the world. It has one girder which weighs thirty tons and it is claimed that eighty thousand driven rivets were used. A fifty-foot railroad runs obliquely through its basement without contact at any point.

* * *

AT Mexico City, recently, while some excavations were being made for the foundation of the new national theater a water fountain was unearthed, of the most ancient style and character. It was literally covered with hieroglyphics, figures of Indian warriors, priests, etc. Many foundations of buildings were also found.

THE new scientific appliance which is expected to supplant the present stereopticon and lantern slides for the purpose of scientific demonstration known as the epidiascope has been presented to Brown University anonymously. The machine is a German product, and is the first one of its kind to be set up in this country. Its peculiarity is that it is capable of projecting opaque objects upon the screen directly, hence it is not necessary to make lantern slides, or even photographs. For example, if a watch is placed upon the carrier of the machine the screen shows the wheels going round. Also the natural colors and textures of objects are reported exactly. This will make it of great usefulness in illustrating scientific lectures to students.

SECRETARY HAY strongly recommends the establishment of a corps of student interpreters in Japan and Korea. He suggest five to be provided for the former country and three for the latter. The total cost of which is estimated at \$8,000. The communication was forwarded to the House.

HOME DEPARTMENT

THE LITTLE PINK SUNBONNET.

BY MABELLE MURRAY.

"WINIFRED, run down the walk and pick up that little pink sunbonnet. If there's anything I do hate to see it's youngin's things layin' round and I'll not have it."

It was Saturday morning and Miss Susan's busiest day. No matter how beautiful was the morning, nor how sweetly the birds sang, she had her routine of work to perform and never did her tall gaunt figure cease its motion until the last detail was looked after.

Old maids are always precise, but Miss Susan was an exaggeration, and though liked by most every one, she was nevertheless the cause of much laughter and many huge jokes.

This morning as she shook her skirts and finished brushing her boots, she saw the minister's wife coming down the avenue. Instantly the tall figure straightened, and a little frown settled over her steel gray eyes.

"Well, I hope she ain't comin' in here," she said to herself. But all in vain. The unwelcome guest came tripping up the walk, but she was a sweet little woman, with such charming ways, and such a winning smile, that very few people could ever be angry with her. And when she beamed upon her hostess with her big hazel eyes, bright and innocent, even that severe lady could not think so harshly of the golden hair that curled so girlishly under the large hat drooping with its weight of daisies.

"Good morning, Miss Brown, isn't this morning just too delightful? How glad I am that I found you at home. I really didn't expect to have such luck!"

"Indeed? I am sure you wouldn't be apt to find me any other place. Saturday is my busy day." To this the little woman made no reply.

"You see," she said, giving her parasol a twirl, "the Aid Society is going to have another meeting this afternoon at half past two, and I came to see if you wouldn't come and help us. We want to do something for the sick at the poor farm."

"Well, I don't know about that, I think I have done enough for that poor farm already, and people oughtin' to expect so much from me."

"Yes, I know, Miss Brown, and you have always been so kind to us. It was so sweet of you to take

Winifred, from the farm; by the way, how is she doing?"

"O, I don't know! She gets along mighty slow, but with all the good victuals, I can't get that poor-house look out of her eyes. I think I shall send her to school."

"Yes, Miss Susan, that would be the best thing you could do. I think she would be happier if she played with little Lucile. Saw the child on the corner as I came down. She is such a sweet little dear. Your brother's daughter, is it not?"

Evidently this was painful to Miss Susan, for her mouth twitched nervously.

"Yes," she answered angrily, "I oughtn't do a thing for his child, the way he has treated me! Left me here all alone while he went out west and invested in mines, married, his wife died several years ago, and he eight months ago, so they sent Lucile to me."

"But Miss Brown, you surely don't hold that child responsible for her father. You surely wouldn't turn her out of your home?"

"Oh, as for that, I never thought of it, none of our family ever went to a poor farm or orphan 'sylum and its only right I should uphold our pride."

That settled the argument and the minister's wife rose to go and started down the walk. "I promise I won't keep you another moment; but won't you come this afternoon?"

"Well if they think they can't get along without me, I'll come." "There that's a sweet old dear! good-bye! I am gone this minute;" she waved her parasol and hurried away.

"Winifred, come in this minute and scratch the mud off these steps. Bring in Lucile's bonnet."

From here, Miss Susan hastened into the kitchen. Soon after, the back screen door was swung open and a timid little girl entered. Miss Susan was not ready to receive her. "Lucile Sarah Brown, where did you leave your sunbonnet?" The child brushed her short curls from her face and looked at her aunt. "I—why—I don't know—I—for—get where I left my—bonnet. I've been playing on the street."

"Yes, do you think that's any place for a little girl to play? It makes me tired the way we have to wait on you. Take this bonnet and go and don't let me see you again. There—you are always in my way," stormed the angry aunt.

The child paused, "Do you really mean what you say, Aunt Susie?" "Mean what I say? Do I ever say anything I don't mean? Get out of here this

minute," and she hurried to lock the screen after the retreating figure.

As Lucy turned out of the gate, Winifred came round the corner with a scrub pail and saw her.

"Where are you going?" she called.

"I don't know."

"Then why are you going?"

"Because."

"Lucile, talk sensible, how long are you going to stay?"

"Forever."

"Did Aunt Susie send you away?"

"Yes."

"Oh, won't you stay—I love you!"

But the child only shook her head and continued on her way.

Within an hour the little house was shining and everything set to order. Dinner came, but no Lucile; one o'clock—then two, still no sign of the missing child was to be seen.

Late in the afternoon, when Miss Susie came forth dressed in her best, she missed the merry laughter of the child and the little sunbonnet that was always in the way, a great change came into her heart.

"Winifred," she cried, "bring me a handkerchief, and—and if Lucile should come home, give her some dinner and all the cream and cookies she wants." Then she whirled off like the wind as though she was ashamed of what she had said. The afternoon was spoiled for her, she could think of nothing but Lucile. She left much earlier than the other guests, and as she hurried towards her home, she walked into the office and inquired for her mail. The postmistress handed her a sealed package. Miss Susie snatched her letter and hurried away. Hastening along the quiet village street, she opened the letter with trembling fingers, a copy of the "Last will and testament of Hiram A. Brown;" and then after a few moments gave a cry. "Oh Lord, have mercy!" she whispered. "One hundred thousand dollars—and to think I sent that child away!" At every corner she seemed to fancy her brother pointing his finger at her and demanding the whereabouts of his little Lucile.

The sun had set low in the heavens and the deep shadows began creeping over the land. From the barnyards came the lowing of cattle and over the sweet fields, the fire-flies flew in great numbers.

As Miss Susie turned a corner, there lying in the road she saw the little pink sunbonnet. She picked it up quickly and looked frightened. Where could the child have gone on this lonely road? One branch led to the river, and the other to the railroad tracks! Just then, her eyes caught sight of a little figure lying asleep among the tall stalks of corn. With a low cry, Miss Susie tenderly gathered the little wanderer in her arms and folded her to her

breast. The blue eyes opened in a flash and the child struggled.

"Let me go," she begged.

"I didn't hurt your corn—really I didn't. And I was hungry—and I didn't eat one grain."

"Oh, I have been so wrong—so cruelly wrong, dear. And you must forgive me, I did not mean what I said this morning."

"Aunt Susie, will you let me have all the ginger cookies I want?"

"Yes, yes, dear."

She carried her charge home, where Winifred had supper waiting for them, then followed one of the happiest meals that had ever been eaten in the cottage for many a day.

It was well nigh midnight when Miss Susie kissed Lucile and came softly down the stairs. At the kitchen door, she stumbled over something flat and small, stooping she found it was the little pink sunbonnet.

"God bless it," she murmured with a happy smile.

"As long as I live I shall love it, for when it is here, I know that the owner is close at hand.

A WRONG SIDE OUT BOY.

JACK was cross; nothing pleased him. His mother gave him the choicest morsels for his breakfast, and the nicest toys, but he did nothing but fret and complain. At last his mother said:

"Jack, I want you to go right up to your room and put on all your clothes wrong side out."

Jack started. He thought his mother must be out of her wits.

"I mean it, Jack," she repeated.

Jack had to obey; he had to turn his stockings wrong side out, and put on his coat and trousers and collar wrong side out.

When his mother came up to him there he stood—a forlorn, funny-looking boy, all linings and seams and ravelings—before the glass, wondering what his mother meant; but he was not quite clear in his conscience.

Then his mother, turning him around, said:

"This is what you have been doing all day, making the worst of everything. You have been turning everything wrong side out. Do you really like your things this way so much, Jack?"

"No, mamma," answered Jack, shamefacedly. "Can't I turn them right?"

"Yes, you may, if you will try to speak what is pleasant. You must do with your temper and manners as you prefer to do with your clothes—wear them right side out. Do not be so foolish any more, little man, as to persist in turning things wrong side out."

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

THE MARRIAGE SUPPER.

For Sunday, February 5, 1905.

Scripture Reading,Psa. 19: 1-10.

- I. The Preparation of and Invitation to the Feast. Isa. 25: 6; Luke 14: 16, 17.
- II. The Astonishing Unanimity of Refusal. Luke 14: 18-20.
- III. The Invitation Extended and Made More Urgent. Luke 14: 21-24.
(a) Come. (b) Bring. (c) Constrain them.
- IV. What Was My Greatest Hindrance in Accepting the Invitation?

Text.—And sent his servant at supper time to say to them that were bidden, Come; for all things are now ready. Luke 14: 15-24.

References.—Proverbs 9: 1-10; Matthew 23: 1-10; Zech. 7: 8-14; Isaiah 65: 1-12; Revelation 19: 4-9; Revelation 22: 8-17; Matthew 25: 34-40; Acts 13: 45, 46; Luke 13: 26, 27; Luke 17: 26-30; Matthew 6: 33; John 14: 2; Matthew 11: 28.

Part I.—The Invitation.

An Oriental feast is not like our banquets in this country, a gathering of friends whom we are anxious to entertain. A feast in the East is really a public, not a friendly social gathering. It is given on some special occasion, such as a marriage or the birth of a son, or at the conclusion of a harvest or a vintage; then the servants are all busy for days before the feast, and the whole neighborhood is invited. The Arab or the Syrian to-day strictly observes the command given by Moses, "Thou shalt not . . . shut thine hand from thy poor brother," and takes care to feed the hungry, so all were invited and many would come to the festival room and look on. It is still customary to send a servant to tell them that all things are ready, it is easy to do this, because the guests are living close together, and they do not have time-pieces, so whenever the feast is ready the servant tells them to come.

Jesus invites us to come to him, he says "whosoever will, let him come," did you accept the invitation? He has invited your entire family, every one of your Sunday-school class, and you are the servant who should tell them to come now because all things are ready. Do not be afraid to urge them to come at once, Jesus will welcome them.

Property.

The first man had bought a little farm, he lived in the village, but his farm was in the country. Now he had accepted the first invitation given a long time before, when it did not impel them to make any sacri-

fice or give up a pleasure, but now when the servant comes to tell him that the table is ready he says that he must go out to cultivate his farm. He was courteous in his refusal but decided; among the Arabs this refusal would be equivalent to a declaration of war. To refuse this invitation was so very unusual that the point of the lesson lies here; these people almost universally accepted such an invitation with joy, and we refuse Christ's invitation. Rabelia's witches had eyes that could see things at a distance, clearly, but nothing that was close at hand; men to-day have eyes the reverse of these, they see so clearly the farms, or the business, that they cannot see heaven and eternal life and so they reject our Lord.

Business.

The second excuse was no better than the first, the oxen could have waited, he could have tested them another time, but he said "I cannot come." The din and traffic in the city streets often drown the chimes of the church bells. The love of money, the desire for advancement sometimes takes entire possession of men and they have no time to listen to the still small voice which would call them back to their God. They lose sight of God. There is a legend of a swan soaring to the skies and beholding its glories, its stars and fleecy clouds, and returning to earth and telling the heron what she had seen. The heron in reply asks "Are there any snails there?" "No." "Then I do not wish to go," was the reply. Men love the things of this world so, that they do not care about heavenly joys.

Home Duties.

A home where Jesus is the unseen guest, is always a happy home. The wife would have enjoyed going to the feast with her husband, but this was not the custom, she could not accompany him, a bride must remain at home, so he refused to come to the feast. A home without Christ is incomplete, he makes every joy brighter, he helps us to bear every sorrow, his love hallows our love for each other.

A Wrong Use of Right Things.

These three excuses were all similar; there was no harm in buying a farm and cultivating the ground as the first did, but why should this interfere with his going to the feast? And there was no objection to the second one testing his oxen, but should he miss the supper on that account? Probably there never was so busy an age as this, we hurry from morning till night,

the work that should be a pleasure, is almost a torture, for we work until body and mind are exhausted. How the heart is engrossed with pleasure, the thoughts with money-making, and the time employed in furthering our own selfish ends. And is it in these things that we find our highest good? Have we no interest beyond the present? Is it only to eat and drink and be pleased to-day and to die to-morrow?

No, this invitation of Jesus is the answer to all these questions, come to him now, for all things are convenient, you will never find a better time. Sometime it will be too late, then no hope of entering, is written over the door. Age comes on, and the heart is hard. Life is almost ended and the record is made for all time.

“When the sun grows cold, and the stars are old,
And the leaves of the Judgment book unfold.”

Part II.—Missions.

We will deviate from our usual program, so as to make this one part missionary. When these invited guests refused to come, then the servants went out into the streets and hedges and brought in the poor and the maimed, and the halt, and the blind, so that the house might be filled, and we will consider some of these in this part of our lesson.

India.

Let us think of the heathen there. You may say, “why go so far away, when the streets of our own towns and cities are crowded with the halt, the maimed and the blind? We do not want to forget the poor in our own land, God knows, their lot is hard enough, and there are few who go to them and tell them to come to Jesus. But the condition of the heathen is, if anything, more desperate and pitiful. They are so far away, and there are so few Christians to help them,—300,000,000 souls in that wonderful country. There you will find more young men to-day, than there are people all told in this country of ours.

Idolatry.

Idolatry is the darkest, deepest and blackest, the most tragic thing in this world to-day. The word God to us means good. India does not know that; their histories of gods are too filthy for us to read. Men there torture themselves horribly, to win the favor of their gods who are said to delight in this torture and pain and misery. How can we shut our eyes to all the misery that idolatry brings upon these poor people.

They Need the Light.

At the time of the full moon, thousands of Hindoos gather on the banks of the river Ganges, and make tiny reed boats, placing a little light on each and pushing them out into the stream. They think these will light the dark way of their friends, whom they have buried in the river. One poor heathen, watching the many

little lights on the river, stretched out his hands longingly, and then cried, “O! it is all so dark; we all want light. I hope when I am in darkness, I may get a little light on my way.”

The Country.

It strikes you as very, very old—burned out, sapless, tired. Its people for the most part are small, effeminate. Julian Hawthorne says, “When I returned home and made the statement that eight millions of people had already died of famine and disease directly caused by famine, I was met with blank incredulity. But I know, and the missionaries know that it is true. Eight millions, nearly twice the population of London.”

Caste.

The proud and lofty position of the Brahman, his priestly right, has its ground, not in moral or educational superiority, but only in his birth. . . . “A proper caste-man would be kinder to a vulture, a cow, or even a serpent, than to a Pariah who lies before him fainting with thirst, or bleeding to death. If a Pariah comes into his house he not only drives him forth as an unclean leper, but he washes the floor which his feet have made unclean.

Missionaries.

William Carey sailed for India, June 13, 1793. He was accompanied by John Thomas. When they arrived in Calcutta, they were obliged to register as indigo planters, and for six years they raised indigo; this was the beginning of English missions.

In 1799 Joshua Marshman and William Ward with others went to Serampore where they were joined by Carey. Here these three families lived at the same table at a cost of five hundred dollars a year.

Alexander Duff came in 1830 as the first missionary from the Established Church of Scotland. He was the most prominent missionary after Carey.

In 1856 William Butler was sent by the Methodists of America, he went to the upper Ganges. He was followed by the great names of Butler, Parker Taylor and many more.

In 1816, Adoniram Judson opens a school to teach the women and children of Burma. Read the life of Adoniram Judson.

WE find a great many men and women sidetracked all along the pathways of life because they were not taught the value of good manners and of a fine, gracious courtesy in their youth. The result is that they have grown up hard and coarse and repulsive in manner and have not been able to win favor or attract trade or business. In other words, their bad manners and repulsive ways have kept them back and handicapped their careers.

HOME is the grandest of all institutions.—*Spurgeon.*

OUR YOUNG PEOPLE

OUR GEOGRAPHY CLASS.—Chapter XII.

THE Mayville party had more than realized all their fond anticipation they had before leaving America. The weather was ideal; sickness, outside of a little homesickness, was practically unknown to the party. They were all very congenial traveling companions. They had long since learned to reverence and respect the wise counsel of Miss Gertrude. She left no stone unturned that she thought would be beneficial to the class, in the way of knowledge. The teacher prided herself on definitions; she used to tell the class in school that "A definition was such a description of an object as would include everything concerning it and exclude everything else." When these four pupils were in the Mayville geography class, they had committed to memory a definition of geography which any one of them was able to repeat, even unto this day, upon being asked to do so.

An incident happened which afforded Miss Gertrude no little pleasure while riding through the country on one of their trips: The johnny car was jogging along at its usual pace. The entire party was silent in meditation; their eager eyes were drinking in the beauties of nature and as they passed cottage, castle, barracks and lough, Roscoe slowly said, half to himself and half out loud: "Geography is a description of the earth as the home of man." He said nothing more. The girls looked at each other and then at the teacher. In one of the proudest moments of her life, the teacher said, "I am able, at least, to see some results of my teaching." Roscoe said that he remembered that from the days of the Mayville geography class, whereupon the teacher answered, "If we keep this definition constantly before us while making this tour, we will have gained an inestimable amount of good, because that is the only true way in which the peoples of the earth should be studied.

It was a good thing for the party that they happened to meet Mr. Cullen in Dublin. The course they had taken from Cork led them through Limerick, Tipperary, Queen's and Kildare counties. This is a scenic part of Ireland. When they met Mr. Cullen, he told them they could not afford to miss a little trip down the Eastern coast, so they decided to take a couple days' journey to Wexford and return, which you will notice Marie mentions in her next letter:

Dublin, Ireland.

Dear Mr. Maxwell:

I think I mentioned in my first letter of having met a merchant from Philadelphia; through his advice we were

constrained to recanvass a part of southwestern Ireland, and we will never regret the money nor time spent. We started south from Dublin and passed through the countries of Wicklow and Wexford, until we came to the city of Wexford. This is one of the largest seaports in eastern Ireland and is the capital of the county of Wexford, which has an area of about nine hundred square miles. This is the place where the English invaders landed in 1629. It was taken by the rebels in 1641. In 1649 this city was stormed by Oliver Cromwell and party, and over a century later it is still found to be the headquarters of the rebel party. So you see it has figured conspicuously in the history of the Island for centuries; it is a town of fifteen thousand inhabitants who are rather an industrious people.

In this county of Wexford there is a district known as "the Barony of Forth," which has a very peculiar people, and their quaint customs were simply a revelation to us. They are hard working, industrious peasants, living in thatched cottages, with scrupulously clean and white-washed walls, which, by their perfect whiteness, at once arrests the attention of the visitor. These people differ in many respects from the inhabitants of other parts of the same county and have habits and customs peculiar to themselves. They are firm believers in the efficacy of prayer for the dead. When a funeral takes place two wooden crosses are provided. On the way to the cemetery a halt is made at a certain spot by the side of the road; here prayers are said to the dead, after which one of the crosses is deposited under a thorn bush by the roadside. The procession then goes on its way, and after the interment the other cross is fixed at the head of the grave.

This strange custom dates from time immemorial as may be conjectured by the pile of crosses by the roadside, some of which are in a good state of preservation, others of which have rotted away years ago. It is certainly true of which Miss Gertrude often reminds us, "That one-half of the world knows not how the other half lives."

We returned through the counties of Kilkenny and Carlow, and, as I said before, it would take a great deal to buy our experience back, which we would have missed had we not taken the advice of Mr. Cullen. Through his acquaintance with the people of this city, we were allowed to get into many of their homes and thereby contrast the appearance of parlor, sitting room and kitchen of the Irish mothers and wives, with those of the American homes. Through him we were permitted to visit many important places of interest, such as churches, Trinity and Phoenix Park.

Christ's Church Cathedral is a massive stone structure, with an annex on the next block, connected by an archway. It was founded by an ancient king of Dublin in 1040, but owes its completion to a Strongbow et. al., at a later period. A few years ago a wealthy brewer of the city remodeled its ruins with his own money. It is

(Continued on Page 96.)

The Q. & A. Department.

Who was the founder and first President of Yale College?

The charter for Yale College was granted by General Court of Connecticut, October 9, 1701. It was to be located at New Haven, but was started by Saybrook in 1701 and removed to New Haven Oct. 30, 1717, despite opposition of a minority of trustees who wanted to locate it at Wethersfield. It was named after Elihu Yale, of London, England, Sept. 12, 1718. He was born at New Haven, Conn., April 5, 1648, was sent to England to complete his education when 10 years old. At thirty he removed to India, where he remained twenty years, married, acquired a fortune, and was made Governor of the East India Company, and a fellow of the Royal Society. His donations to Yale College aggregated about \$2,000. He intended to give \$2,500 more but died before doing so. His death occurred in England July 8, 1721. The first President of Yale was Rev. Abraham Pierson, 1701-1707.

❖

Is the picture of a woman's head on the U. S. silver dollar that of a real person, or is it only imaginary? How was it selected?

It is a picture of Miss Anna L. Williams, who was a Philadelphia school-teacher in the winter of 1877-8, when it was drawn. At that time G. T. Morgan, the designer, was working on the sketches for the imprint of the then new silver dollar. Prof. Thomas Eakins, then of the Academy of Fine Arts, advised him to use a life study, and introduced him to Miss Williams, then living at Thirteenth and Spring Garden streets, in Philadelphia. Miss Williams possessed strikingly classical features, and she consented to sit for the drawing and her profile was used to complete the design of Liberty on the dollar.

❖

Could a woman, if nominated and elected, serve as President of the United States?

The Constitution of the United States, in Article II., Section I., uses the pronoun "he" in referring to the President, but it is not likely that this would prevent a woman from serving if she were elected.

❖

Is alcohol a food?

About as much as sea water would be to the boiler of an engine.

❖

What is the distance from the city of Mexico to Panama?

From the city of Mexico to the city of Panama is 1,550 miles in a straight line.

Please tell something about Holland, its area, population, government, etc.

You can find a full account of Holland in the Statesman's Year Book for 1904 or any encyclopedia. It is a limited monarchy, and the ruler is Queen Wilhelmina Helena Pauline Maria. The area is 12,648 square miles, and the population is 5,347,182, there being about 50,000 more females than males. The royal family and a majority of the inhabitants belong to the Dutch Reform Church, which is Presbyterian. The constitution grants religious liberty and complete social equality to the members of all religions. There is compulsory public school education of children between six and thirteen years of age. Farming, mining, manufacturing, fisheries and commerce are carried on.

❖

What is meant by longitude and latitude, and how much space is represented by a degree?

Longitude is distance on the earth's surface, measured east or west from a certain meridian. A degree of longitude at the equator is 69 statute miles, and narrows at the poles to 0. Latitude is the distance from the equator, measured in degrees north or south on a meridian. A degree of latitude measures about 69.4 English miles at the poles, and 68.7 at the equator.

❖

When was Greater New York formed, and what territory did it include?

Greater New York was established January 1, 1898, and included all municipal corporations and parts of such corporations other than counties within the territory covered by the counties of Kings and Richmond, Long Island City, the towns of Newtown, Flushing and Jamaica and that part of Hempstead in Queens County west of a line drawn from Flushing, between Rockaway Beach and Shelter Island to the ocean.

❖

How is invisible ink made?

An ink which becomes visible by dipping the paper in water and invisible as soon as it dries, is made by mixing linseed oil, one part; water of ammonia, 20 parts; water, 100 parts; stir or shake well before using.

❖

Where and when was Jesse James, the outlaw, born, and where and when did he die?

He was born on a farm in Clay County, Missouri, in 1847, and was killed at St. Joseph, Mo., in 1882, by Robert and Charles Ford.

MISCELLANEOUS

THE GEOGRAPHY CLASS.

(Continued from Page 94.)

now in a fine state of repairs, with its pillars of granite and its floors of inlaid marble. A philanthropist, namely, Sir George Rowe, spent one hundred thousand dollars of his own fortune in finishing and furnishing it, and when last heard from he was attending a vineyard in Spain at a guinea a week. We attended services at that Cathedral last Sunday. At the side of the church recent excavations, amid the ruins of one wing of the building, have disclosed the fact that there is a subterranean passage leading from this church to St. Patrick's Cathedral about one-half mile distant; and a sort of catacomb is formed in this tunnel which contains the remains of nobles, lords, priests and prelates of long ago.

Many names may be read to-day upon the walls of these catacombs. Eternity alone will reveal the secrets of this dark, dismal place. This was built at an age when some church fathers thought that a great many things should be done in secret.

A few years ago, while a tourist party was visiting this place, for some reason one of their party was left behind and the door closed upon him. He was not missed by the party until an hour afterwards, when they returned to release him from his prison. Upon opening the door they found the skeleton of the poor man lying immediately at the entrance, his flesh having been eaten from his bones by the innumerable thousands of rats that inhabit the dismal place.

I hate to leave you in such a dark place among a lot of rats, but I must close this letter.

Respectfully,

Marie.

(To be continued.)

IF YOU WANT TO BE POPULAR.

DON'T contradict people, even if you're sure you are right.

Don't be inquisitive about the affairs of even your most intimate friend.

Don't underrate anything because you don't possess it.

Don't believe that everybody else in the world is happier than you.

Don't conclude that you have never had any opportunities in life.

Don't believe all the evil you hear.

Don't go untidy on the plea that everybody knows you.

Don't overdress or underdress.

Don't jeer at anybody's religious belief.

Learn to laugh. A good laugh is better than medicine.

Don't try to be anything else but a gentlewoman; and that means a woman who has consideration for the whole, and whose life is governed by the Golden Rule.—*Christian World*.

THE Oxford University Press of New York have a fine edition of "The Oxford Self-pronouncing Bible." There is a Sunday-school Teacher's edition with Cyclopedic Concordance, with many helps to the study of the Bible, all arranged in alphabetical order, so the information desired can be easily found. There are several excellent maps, too, and some illustrations so that one finds all that is needed to make a perfect Bible; and being printed on fine India paper it makes it a convenient size, and excellent print. It has flexible leather binding and silk marker and leaves nothing more to be desired. It is so arranged that one very conveniently finds all the names pronounced as we come to them. It is a favorite Bible and everyone should have a copy of it.—*Martha Shepard Lippincott, Moorestown, N. J.*

OLD SAWS REFILED.

A watched Pot never boils over.

A Word to the Wise is wasted.

A rolling Stone gathers much Experience.

A Party and his Money are soon fooled.

Modesty is the best Policy.

A Company is known by the Men it keeps.

Discretion is the unpopular Part of Valor.

Time and Tide could wait for no Woman.—*January Lippincott's*.

WAR is murder.—*Tolstoi*.

War is hell.—*Gen. Sherman*.

War is the concentration of all human crimes.—*William E. Channing*.

The Christian churches of all nations are guilty for the continuance of this great crime.

PRINCE FRIEDRICH LEOPOLD of Prussia, son of the late "Red Prince Karl," has issued stringent orders that none of his servants in any of his residences shall use tobacco in any form.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

Matthew Henry

Commentary on the Bible

PRICE GREATLY REDUCED

Catalogue
Price,
\$15.00

Our Special Price
f. o. b. Elgin,
Only \$7.95

It is surprising that, in this labor-saving and time-saving age, the ever popular Matthew Henry's Commentary has not before been issued in convenient volumes. Two features of this new edition call for special attention: First, the moderate size of the volumes; second, the large size of the type (larger than any previous edition). Other features are the excellent printing and substantial binding.

"Biblical students who are most familiar with the very best commentaries of this generation are most able to appreciate the unfading freshness, the clear analysis, the spiritual force, the quaint humor, and the evangelical richness of Matthew Henry's Exposition of the Old and New Testaments. Ever since we have been engaged in the ministry we have found our appreciation of this work increasing with our years."—The N. Y. Observer.

"There is nothing to be compared with old Matthew Henry's Commentary for pungent and practical applications of the teachings of the text."—The S. S. Times.

We have now reduced the price of this commentary until it is within reach of all. Every minister and Bible student who does not already have a set of these books ought to take advantage of this special offer. You cannot afford to let this offer pass without due consideration. Better send your order at once. Price, only \$7.95.

Brethren Publishing House, Elgin, Illinois.

\$7.95 for this large handsome steel range

without high closet or reservoir. With large, high, roomy, warming closet and reservoir, just as shown in cut, \$11.05. Reservoir is porcelain on inside, asbestos covered on outside. Heavy cast top with 6 full size cooking holes. Large roomy oven, regular 8-18 size. (We have 9 styles of steel and cast ranges with much larger and smaller ovens, sizes to suit all.) The body is made of cold rolled steel, top and all castings of best pig iron. Grates we use improved duplex grate, burns wood or coal. Nickel band on front of main top; brackets and tea shelves on closet; band and ornament on reservoir; oven door, etc. Are highly polished, making the range an ornament to any home.

\$2.95 for this Oak Heater

just as illustrated. Burns hard or soft coal or wood. Has drawn cooler grate, corrugated fire pot, cold rolled sheet steel body, heavy cast base, large cast feet door, ash pit door and ash pan, swing top, screw draft-regulator. Polished urn, nickel top ring, name plate, foot rails, etc.

We have heating stoves of every kind. Hot blast, air tight, the kind that retails for \$3.00, for \$0.00. Base burners at 1/2 the regular price.

Write for CATALOGUE

OUR TERMS

are the most liberal ever made. We will ship you any range or stove, guarantee it to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it into your own home and use it 30 full days. If you do not find it to be exactly as represented and perfectly satisfactory in every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for double our price, you can return it to us and we will pay freight both ways, so you won't be out one single cent. **CUT THIS "AD" OUT** and send it to us and we will mail you our free Stove Catalog. It explains our terms fully, tells you how to order. **Don't buy a stove of any kind until you get our new large Stove Catalog for 1904 and 1905 and see our liberal terms and the lowest prices ever made.**

WHY NOT COME TO THE
LAGUNA DE TACHE GRANT
 FRESNO COUNTY, CALIFORNIA,

Where Pumpkins, Corn and common crops grow, as well as every kind of California fruit?

Come and visit the Brethren who are living here and see what they have done in the past two years.

Nearly 600 sales made since we put this land on the market and over 2,000 people now living on the grant where there were but about sixty a little over five years ago.

This does not look like a temporary boom, does it? Must be something solid behind all this. If not, five years ought to show up the weakness, but instead of weakening the Laguna and its various interests are growing stronger all the time.

If you are thinking of coming to California to make a home you cannot afford to overlook this place.

We still have plenty of good land with abundant water for irrigation. The price is from \$30.00 to \$60.00 per acre, terms, one-fourth cash, balance in eight annual payments.

COLONISTS' RATES

will again be in force March 1 to 15, 1905.

From Chicago to Laton,	\$33.00
From Mississippi River to Laton,	\$30.00
From Missouri River to Laton,	\$25.00

Make your plans to start for California March 1st and you will be in time to buy land and put in a crop.

Brethren Publishing House, Elgin, Illinois.

THE GOSPEL MESSENGER FOR MISSIONARY PURPOSES.

The General Missionary and Tract Committee have a plan to use the GOSPEL MESSENGER as a missionary in a very effective way. They propose to help pay for **10,000 SUBSCRIPTIONS** outside the Brethren Church.

THE PLAN.

The plan for securing these 10,000 names is to allow any one not a member of the Brethren Church, and not living in a family where there are members, to have **the Gospel Messenger from now until Jan. 1, 1906, for only 50 cents.** Or anyone interested in this plan of doing mission work may donate the paper to those not members and not living in families where there are members for **only 50 cents for the year.**

This 50 cents does not by any means pay the first cost of the paper, but the General Missionary Committee have so great faith in the Messenger as a missionary factor that they are willing to expend considerable money on making up the deficiency in order to have the paper read by those not members of our fraternity.

Send your order at once and the names will go on our list without delay. Cash must accompany each order. Always mention the fact that your order complies with the rules governing such subscriptions. Remember it is only 50 cents.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River,..... 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

500 Bible Studies

Compiled by
HAROLD F. SAYLES

This new book contains 500 short, sharp, concise, Outline Bible Readings, contributed by prominent workers from all over the world. The selections cover a larger range of subjects, and will be very useful to one in private study, as well as helpful in preparing to conduct a meeting on short notice. The book will be invaluable to ministers. It will be found very helpful in preparing outlines for Bible study and for prayer meeting. It will prove a source of pleasure and profit for all Bible students.

The collection is being enthusiastically received, and is also sold at a price within reach of all. Books of this character, but containing far less material, often sell for \$1.00 or more.

The book includes a complete index of subjects arranged alphabetically. Note a few of the outlines:—

- JESUS IS ABLE.**
 Having been given "all power," Matt. 28: 18, and having destroyed the works of the devil, 1 John 3: 8. Jesus is able to,
 Save to the uttermost, Heb. 7: 25.
 Make all grace abound, 2 Cor. 9: 8.
 Succor the tempted, Heb. 2: 18.
 Make us stand, Rom. 14: 4.
 Keep us from falling, Jude 24.
 Subdue all things, Philpp. 3: 21.
 Keep that committed to him, 2 Tim. 1: 12.
 Perform what he has promised, Rom. 4: 21.
 Do above all we ask or think, Eph. 3: 20.
 Knowing his grace and power, shall we not come and say, "Yea, Lord"? Matt. 9: 28. F. S. Shepherd.

- THE BLOOD.—Heb. 9: 22.**
 1. Peace has been made through the blood. Col. 1: 20.
 2. Justified by the blood. Rom. 5: 9.
 3. Redemption by the blood. Eph. 1: 7; Col. 1: 14; 1 Pet. 1: 18.
 4. This redemption is eternal. Heb. 9: 11-14; Heb. 10: 10-15.
 5. Cleansed by the blood. 1 John 1: 7; Rev. 1: 5; Rev. 7: 14.
 6. We enter into the holiest by the blood. Heb. 10: 19.
 7. Overcome in heaven by the blood. Rev. 12: 11.
 8. Then sing the song forever to the blood of the Lamb. Rev. 5: 9.
 Rev. J. R. Dean.

Reedley, Fresno Co., California.

\$7.95 for this large handsome steel range

Without high closet or reservoir. With large, high, roomy, warming closet and reservoir, just as shown in cut, \$11.00. Reservoir is porcelain on inside, asbestos covered on outside. Heavy cast top with 6 full size cooking holes. Large roomy oven, regular 8-18 size. (We have 9 styles of steel and cast ranges with much larger and smaller ovens, sizes to suit all.) The body is made of cold rolled steel, top and all castings of best pig iron. Grates we use improved duplex grate, burns wood or coal. Nickel band on front of main top; brackets and tea shelves on closet band and ornament on reservoir; oven door, etc. Are highly polished, making the range an ornament to any home.

OUR TERMS

are the most liberal ever made. We will ship you any range or stove, guarantee it to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it into your own home and use it 30 full days. If you do not find it to be exactly as represented and perfectly satisfactory in every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for double our price, you can return it to us and we will pay freight both ways, so you won't be out one single cent. **CUT THIS "AD" OUT** and send it to us and we will mail you our free Stove Catalog. It explains our terms fully, tells you how to order. Don't buy a stove of any kind until you get our new large Stove Catalog for 1904 and 1905 and see our liberal terms and the lowest prices ever made.

EQUITY MFG. AND SUPPLY CO., Chicago, Ill.

\$2.95 for this Oak Heater

Just as illustrated. Burns hard or soft coal or wood. Has drawn center grate, corrugated fire pot, cold rolled sheet steel body, heavy cast base, large cast feed door, ash pit door and ash pan, swing top, screw draft-regulator. Polished urn, nickel top ring, name plate, foot rails, etc. We have heating stoves of every kind. Hot blast, air tight, the kind that retails for \$3.00, for \$0.00. Base burners at 1/2 the regular price.

IN ANSWERING ADVERTISEMENTS PLEASE MENTION THE INGLE NOOK

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime.

BEYOND THE DARK CLOUDS.

BY MARTHA SHEPARD LIPPINCOTT.

No matter though we cannot see
The dawn beyond the clouds,
And though at first we're followed not
By fond approving crowds,
Keep hope and let us travel on,
In paths we know are right,
If we the torch bearers shall be,
More will behold our light.

So let us ever work and pray—
And right will surely win,
Though ere we reach the heaven bright,
Come many days of sin:
But still a brighter day shall dawn,
When we the storms have passed,
For sunshine always is beyond—
And clouds can never last.

Moorestown, N. J.

AN HISTORIC SPOT.—No. 7.

BY H. W. STRICKLER.

The French and English Claims to the Trans-Alleghany Region. Washington's Visit to the French Forts in 1753.

THE written history of this section of the country embraced the valleys of the Monongahela and Youghiogheny rivers, commencing at about the beginning of the eighteenth century. At that time both France and England were asserting their respective claims to the dominion of the wilderness region west of the mountains, and it was in the conflict which resulted from the attempts of each of these rivals to expel the other and to enforce their own alleged rights by the facts of actual possessions, which mark the beginning of the history of the great conflict of American freedom.

The claim that France made to this territory was based on the facts that the adventurous explorer "La Salle" descended the Mississippi river in 1682 and reached its mouth on the 8th of April; in that year he took formal possession in the name of the French sovereign, of all the valley of the mighty stream, and all the regions discovered and to be discovered contiguous to the valley of the stream, or to any and all of its tributaries. About sixty-seven years later, 1749, Captain Celeron, an officer in the service of the King of France, having under his command a force of about three hundred men, penetrated southward to the confluence of the Allegheny and Monongahela rivers, where he took and confirmed the French possession of the valleys of these tributaries, burying metallic plates, duly inscribed with a record of the event of actual occupation.

England, on the other hand, claimed the country by virtue of a treaty made with the "Six Nations" at Lancaster, in June 1744, when the Indians ceded to the British king an immense scope of territory west of the Royal Grant to Pennsylvania (it was at that time thought that the Pennsylvania boundary would not fall west of the Laurel Hill), coextensively with the limits of Virginia, which was very indefinite. At a subsequent treaty in 1752, at Logstown, on the Ohio below Pittsburg, one of the Iroquois Chiefs, who had also taken part in the Lancaster treaty, declared that it had not been the intention of his people to convey to the English any lands west of the Alleghanies, but that they would not oppose the white man's definition of the boundaries.

The "Six Nations" in council had also decided that, notwithstanding their friendship for the English, they would remain neutral in the contest which they knew to be imminent between that nation and the French, both of which were now using every effort to strengthen themselves in the occupation of the territory bordering on the headwaters of the Ohio.

In the year 1750 the Ohio company, acting under an English charter and a Royal grant, sent Christopher Gist to the Ohio river to explore the country, having in view its occupation and settlement. In 1751 he explored the valley down to the mouth of the Great Kanawha. In 1752 he represented the Ohio company at Logstown in a Peace Commission, deliberating with Col. Joshua Fry, and two other commissioners representing Virginia, and with the chief of the Six Nations.

Early in 1753 they began to move southward, from Lake Ontario, through the wilderness toward the Allegheny River, and, on the 21st of May, intelligence was received that a party of French and Indians had arrived at the head of the Ohio river, or "O-hee-yo'," now the Allegheny. The intelligence of the aggressive movement of the French caused the English to meet and resist their advance. Among the official communications addressed by the Earl of Holderness, secretary of state, to the governors of the several American provinces, was one to Governor Dinwiddie, of Virginia, containing directions concerning the French encroachment. The letter was sent by a government ship and reached Dinwiddie in October, 1753.

In pursuance of instructions contained in this letter, the governor appointed and commissioned George Washington, then a youth of only twenty-one years. The following is a copy of the commission:

"To George Washington, Esq.,—one of the Adjutant-Generals of the troops and forces in the colony of Virginia:—

I, in imposing special trust and confidence in the ability, conduct and fidelity of you, the said George Washington, have appointed you my express messenger; and you are hereby authorized and empowered to proceed hence with all convenient and possible dispatch to the part or place along the river Ohio where the French have lately erected forts, or where the commandant of the French forces resides in order to deliver my letter and message to him; and after waiting about one week for an answer you are to take your leave and return immediately. To this commission I have set my hand and caused the great seal of this dominion to be affixed, at the city of Williamsburg, the seat of my government, this 30th day of October, in the 27th year of the reign of his majesty, George II, King of Great Britain, etc., etc., A. D. 1733.

Robert Dinwiddie."

And the following was the tenor of the Governor's passport.

"To all whom these presents may come or concern, greeting:

Whereas, I have appointed George Washington, Esq., by commission under the great seal, my express messenger to the commandant of the French forces on the river Ohio, and as he is charged with business of great importance to His Majesty and this dominion, I do hereby command all His Majesty's subjects, and particularly require all in alliance and amity with the crown of Great Britain, and all others to whom this passport may come agreeably to the law of nations to be aiding and assist-

ing as a safeguard to the said George Washington and his attendants in his present passage to and from the river Ohio as aforesaid.

Robert Dinwiddie."

In his letter of instructions, the following is a copy:

"Whereas I have received instructions from a body of French forces assembled on the river Ohio contrary to the dignity and peace of our sovereign, the King of Great Britain. These are, therefore, to require and direct you, the said George Washington, forthwith, to repair to Logstown on the said river Ohio, to proceed to such place, and after arriving to present your credentials, together with my letter to the chief commanding officer, and in the name of this Britannic Majesty, to demand an answer thereto.

On your arrival at Logstown, address yourself to the Half King, to Monacatoocha, and the other sachems of the Six Nations, informing them that you have orders to visit and deliver my letter to the French commanding officers. . . . Wishing you good success in your negotiation, and safe and speedy return, I am,

Robert Dinwiddie.

Williamsburg, Oct. 30, 1753."

THE RATIONAL WAY TO FIGHT TUBERCULOSIS.

THERE is probably no topic in which the community in general is more interested than in the prevention and cure of pulmonary consumption.

The general fatality of the disease is greater than any other, fully ten per cent of all deaths being attributable to it. Its prevalence is also in due proportion.

When viewed from a matter of fact standpoint this is bad enough, but still there is no reason why we should not look at the actual situation fairly and squarely in order to meet more intelligently the issues at stake. Very encouraging efforts are being made in such directions, and the common sense basis of them as given by experts deserves the widest possible discussion.

The grand principle aimed at is to place the possible cure within the reach of all. In keeping with such intention the public is being educated in the proper direction of purely hygienic treatment. Fresh air, sunlight and plain, nutritious food are easily obtainable even by the comparatively poor man.

It is high time that the individual as such should have a show and the overdreaded bacillus come in on a second class ticket. Since the useless scare concerning the universal danger of infection by this veritably omnipresent microbe too little attention has been paid to the more fundamental doctrines of prevention and cure.

The newly found bug is as much a part of creation as the human being, and has come to stay, in spite of the defiantly belligerent manifestoes of health boards. If it could speak in its own behalf it would say that, far from being an intruder in the animal economy,

it is a specially invited guest. The susceptible person is, after all, the only one that offers it a welcome.

The bacillus is the theory, but evidently the patient himself must be the fact. The higher purpose should be to make the man strong enough to throw off the disease, no matter what its source. The same rule should apply with equal force to the susceptible person, however exposed. In both instances the germ would be as seed on the rock.

Dr. L. Flick is one of the most recent exponents of these advanced views. He even goes farther than most advocates of the new treatment by advising that the patient must get fresh air, irrespective of weather, night and day, even at the expense of numerous draughts in the bed chamber. Mere climate, he avers, is not always a necessary factor, provided the victim is well fed, leads an outdoor life and keeps up his pluck.

The more such doctrines are preached the better for the army of sufferers who look for practical help. While the fear of catching consumption from the casual victim is greatly exaggerated by various overzealous health boards, it is equally true that the erroneous belief that the disease is incurable has also gained altogether too much currency. In fact, if such opinions were well founded not only would doctors, nurses and friendly attendants be stricken by the thousands, but the poor tuberculous patient would be branded as a common leper.

It is a good sign of the times that broad and rational methods of dealing with the "white plague" are so steadily gaining ground and mere bacteriological theories are wanting in their more direct application. Let us continue, then, to have less scare about the business and more rational and better directed aims. The main question is, which can hold the fort, the microbe or the patient? We confess that our sympathies are always with the latter. Fresh air, sunlight, good food and plenty of pluck may yet rob the bacillus of all its real terrors.—*The Herald*.

* * *

ARRANGEMENTS have been concluded for a trial of motors from Delhi to Bombay. The prizes which are the gifts of several Maharajas and others are for the "most reliable car;" "the car in best condition after the trial;" "the car best suited to district work in India;" "the car making the best performance as regards reliability, and costing not more than £500 landed in India" and a "consolation prize." The journey of 880 miles is to take eight days.

THE sad survivors all are gone.—*Scott*.

"THE JAPS" AS PIRATES OF LITERATURE.
 "The Venerable" Graham in Japan.

BY FRANK WALDO, PH. D., CAMBRIDGE, MASS.

PERHAPS not all of the readers of this article will at once recognize that this deferential sub-title refers to an eminent character in literature. In fact, "the Venerable" Graham is none other than "Old Gorgon" the name applied to Mr. Graham of "Letters from a Self-Made Merchant to his Son" fame, written by George Horace Lorimer. That the Japanese took these letters seriously and considered them to be written by a real Mr. Graham, and the "Japs" were by no means alone in this, will be made plainly evident in the course of this article.

The wholesome advice contained in these letters has been widely appreciated not only in this country, but in foreign parts as well. England, Canada, Germany, Denmark, France and Japan each had to have its editions, while the wit and wisdom of its business precepts have made it a desirable shorthand reading book and even the blind have been provided with an edition in raised letters for their edification. But the most interesting of all is the free translation of the book by the Japanese. It was not only freely adopted as a piece of literary piracy but the adaptation of the text to Japanese needs is one of the most clever literary feats of the day.

The Japanese edition of the book bears a most comprehensive advertising title-page, an explanatory Introduction and a wheedling Preface. These are so suggestive to even our own thoughtful advertising men that a translation into English by a young Japanese student in this country is given below without much comment, as the book has become so well known through its quarter of a million copies that have circulated through the various countries in which it has been brought out. Those who know the book will thoroughly appreciate the mistakes as well as the ingenuity of the "faked" matter intended to boom the book among Japanese readers. It is perhaps needless to remark that the American "original" contained neither Introduction nor Preface, so that both of these as well as the Dedication are entirely of Japanese manufacture.

Japanese Preface.

1. This book is a translation of the sixteen letters the translator thought most instructive to our general public, selected out of the twenty letters written by Mr. John Graham noted for his deep thinking and originality, to his son Pierrepont, and compiled by Mr. Lorimer, editor of the *Saturday Evening Post* of New York.

2. The original title of the book is: "Letters from a Self-Made Merchant to his Son." But its literal

translation seems rather awkward as the title of a book in our country so we give a free rendering of it and put it as: "Letters of a Successful Man: Manage-in-the World Teachings and Precepts." (Advice about how to get on in the World.)

3. Mr. Graham is a meat merchant. And the canned goods he makes have good reputation in the markets of the world and supply specially the need of armies in every nation. He raised himself in poverty, started on the race-course of life, empty-handed, and by dint of his ability and perseverance reached to the highest position of success. He massed great wealth but his object is not in mere money-making. He has always a high notion of life and thus commands more respect as a man of character than a man of wealth.

4. As our title shows, this is a book of advice for anyone starting in the world. In his desire to make his dear son Mr. Pierrepont as a man of success as he is, Mr. Graham wrote these letters out of his valuable experiences and observations of thirty years, with zeal and love of a parent, and so they are most fitted for our time. If a young man will read this he will find a way to succeed in life: if parents read this, they will know how to instruct their children: if our educators read this, they will be benefited to see how a man of character is made. And this is why we translate the book and offer it to our countrymen.

5. The letters in this book were not written with any idea of being made public. [*Oh, truthful Japanese editor!*] So we omit such parts only dealing with the writer's household affairs and having no instructive value to the general public. And then as the letters cover a long period from Pierrepont's still being in Harvard till long after his entering in business, if the reader does not know the real circumstances under which each letter was written, the advice contained in it cannot be brought home. So the translator managed to give a brief note of the circumstances at the beginning of each letter, for what he knows.

6. In America the original has already reached the 15th edition. And when reprinted in England 300,000 copies were sold at once.

7. Recently when a certain noted bookstore in New York took vote for the six most popular books in America at the present, this book stood at the head of the list.

8. Large stores in America and England adopted the book as reader for their young employees. And one large house in London bought 10,000 copies to make Christmas presents of them to its clerks.

9. At present it is a shame for a young man in America and England not to know about the book and a certain paper even went so far as to say that if one fails in business, its main cause must be sought in one's neglecting to read the book.

10. The original being in the style of pure letter-

writing, it is quite full of slangs in common use in America, which are hardly to be understood. The translator managed to get rid of this difficulty by Japanizing expressions and at the same time, tried to retain the happy flavor of the original. He, however, greatly regrets that in many cases his endeavor has fallen short of his desire. The Translator.

Japanese Introduction.

At the beginning of the Chinese trouble, when the news of the uprising of the Boxers reached Europe, Russia, seeing at once the seriousness of the situation telegraphed to Chicago in America and sent orders to a certain firm in that city to immediately ship canned meats for military use. There are no great nations in the world, I believe, which can mobilize a large army in a short time without a supply of military provision from Chicago. Chicago is now the largest and most flourishing manufacturing place for canned meat in the world. According to recent statistics, the number of cattle killed for that purpose in a year is 15,000,000 heads and the area of the warehouses for stowing meat covers over forty acres. And Mr. John Graham, the preceptor in this book, is indeed, one of the most influential manufacturers of canned meat in that city.

The canned goods made in his firm are sold extensively in both hemispheres and the name of Graham is much spoken of among the Western people especially since the publication of this book. But to most of our countrymen, it may sound rather new and so it will not be a vain task to give here a brief sketch of his life.

Mr. Graham raised himself in life from a boy in a dry goods store. As he first went into the world he had no friend, no acquaintance, no one to render him help. And on his part, he had no fund, no education, no training, in short, no weapon needed for earning livelihood. Indeed, he launched out barehanded. He could not rely on others: so he had to rely on his independent self. He could not rely on a weapon: so he had to rely on his desperate strength. Such was the circumstances under which he struggled to build his fortune.

But he had spirit of self-reliance, great ambition, unswerving perseverance, pure character and strong will. Especially he had determination not to shrink from any sort of trouble or labor. And at the start of his life he was miserable enough to receive a very low salary of only two dollars a week at a dry goods store, to work hard for eighteen hours a day, and by night to have a cold sleep in a corner of the office. Again he peddled far in Egypt [*The Japanese have evidently never heard of Cairo, Illinois.*] and wandering lonely in the hot country of pyramids, en-

dured extreme hardship. But all the while he was independent and self-helping, and mustering all his strength, he could raise himself to a high position he holds to-day. A man of such a life, whatever his rank or profession may be, is worthy of our utmost respect. The Americans honor him by calling him the "Venerable Graham."

He has a "gem in his palm" (a very dear child) by the name of Pierrepont. The father sent him to school and at last had him graduated from Harvard, the best university in America.

When Pierrepont came out of the university, Graham placed him at once at the lowest position in his office. . . . He spared no trouble to make his son a man. And drawing from the inexhaustible store of his experience and observation, gained from his hard struggle, sat down to write these letters of advice and precepts.

There are many books of advice to young men, and books recording experiences of men of success. But most of them are not well fitted for the practical purpose, some being out of date, some too abstract, and some too monotonous. No other, indeed, contains such fire of zeal and love as we meet in this book of Mr. Graham. The sixteen pieces in this collection are not more than occasional letters but it is remarkable to find such variety in style ranging from mildness of spring wind to severeness of autumn frost, from hurriedness of a cataract to the gentleness of a leisurely stream. Here we have words of reprimand, eulogy, satire and humor, and stories of the writer's youthful dreams or failures of his acquaintances. And the whole feeling being sincere and devoid of any frivolousness the pages are strong with words almost alive with fire.

Let the book itself tell its worth. I have only given some sketch of Mr. Graham's life and told how he came to write these letters to his son. There is, however, one thing of which I can not remain silent. It is that Mr. Pierrepont Graham who was instructed through the letters, is now grown to be a man of independence and self-help and is one of the foremost young business men in Chicago.

Isamu Ishii,
"The Industrial Japan."

Japanese Dedicatory Note.

To make the thought of Gyo (the Chinese sage) as our thought and to act the acts of Gyo is to become as Gyo. The man we need most pressingly in our country to-day is a gentlemen useful and worthy of respect as the Venerable Graham. If our countrymen make the thought of the old man as their thought and act the acts of the old man, they will be all Grahams. The wealth of America or the power of England, what do we care for? It is our great honor to translate such a

good and useful book. On publication we thank for the kindness of our esteemed friend Mr. Hantaro Minegishi who sent us the valuable original from far America: we thank for the trouble of Mr. Morimer, editor of the New York Post, who compiled these valuable letters: and especially we thank for the willing consent of the Venerable Graham to make public his valuable advice, and for the invaluable benefit he contributed to us by doing so. We respectfully present the book one copy each to the three gentlemen.

Giichi Masuda,
Proprietor, the "Industrial Japan."

There is space to call attention to only a few of the points dwelt upon by the Japanese editor in these introductory pages. We are so glad to learn, what Mr. Lorimer had withheld from us, that the youthful and inexperienced Pierrepont has profited by the advice of his father "and is (now) one of the foremost young business men in Chicago." Doubtless this last information coming even from a Japanese source, although their recent war telegrams show that this source is not always reliable, will cause the still youthful Pierrepont to be deluged with begging letters as was his respected father upon the first appearance of the "Letters" in this country.

It is as well perhaps that we should sufficiently recognize the abilities of the Japanese to enlarge statements. I have seen it authoritatively given that about fifty thousand copies of this book sold in England, which indicates the Japanese exaggeration of six-fold in this instance. And the department stores in Chicago and New York dwindle into insignificance when we learn from the Japanese that, a single house in London has ten thousand clerks on which to bestow copies of this book whose precepts they are all urged to adopt. It is true, however, that business men have bought the book to give to employees whom they thought could profit by the advice contained in the book.

One thing is certain, the presentation copy of the Japanese edition sent to the Venerable Graham must be lying around somewhere in the "dead letter" office.

So much for the skillful introduction of the book to its Japanese readers. But the ingenuity of the editing translator in adapting the text of an up-to-date, pungent, slangy, ultra American book to suit the reverential spirit of Japan is perhaps without a parallel in translation. The following examples of the original and the Japanese "Translation" are illuminating on this point and are placed side by side to avoid misidentification. Permission has been obtained from Small, Maynard, & Company, to reproduce these small sections of "Letters from a Self-Made Merchant to his Son," but as the publisher of the Japanese "version" has not withheld the right of translation a little of his matter is used without specific authorization.

Extracts From Original Text and Japanese Translation.

Original.

Your letter of the seventh twists around the point a good deal like a setter pup chasing his tail. But I gather from it that you want to spend a couple of months in Europe before coming on here and getting your nose into the bull-ring.

* * * * *

What every man does need once a year is a change of work—that is, if he has been curved up over a desk for fifty weeks and subsisting on birds and burgundy, he ought to take to fishing for a living and try bacon and eggs, with a little spring water, for dinner.

* * * * *

It is never easy to get a job except when you don't want it; but when you have to get work, and go after it with a gun, you'll find it as shy as an old crow that every farmer in the country has had a shot at.

* * * * *

There is no excuse for every mistake a man can make, but only one. When a fellow makes the same mistake twice he's got to throw up both hands and own up to carelessness or cussedness.

Japanese Translation.

On reading through your letter of the 7th's date, its minute-closeness made me almost agonize to get its main ideas. After reading carefully over and over I came to find slowly where the desire of your honorable self lay. In short, your honorable self wants to make a tour in Europe for two months before taking business up at my hand-place (-side,) I guess.

* * * * *

Any person must change his work once a year. If he is following (engaged in) the work of leaning over the desk for fifty weeks and is eating fowls' flesh and drinking wine, he needs to take up fishing next and make food of mutton, eggs and well-water.

* * * * *

Outside the time when your honorable self does not need it, it is not easy to get a job. On facing the time when your honorable self must find a job, if your honorable self tries to shoot and take it with a small gun in hand, the job, just like an old bird often escapes to be shot, cannot be approached easily.

* * * * *

Man is not a being who never falls into a mistake. Mistakes are not always to blame deeply; but when one does again the same mistake, one has no word to give reason for it. One has only to apologize for one's carelessness with one's body flat and head low.

* * *

THE RACE PROBLEM.

BY MILLARD R. MYERS.

WE had scarcely taken our seats in the coach, until a noticeable board attracted our attention which read: "This compartment for white passengers." We had never seen such a sign before. We were in Northern Illinois. White folks! Black folks! The race problem! Why should the signboard be there? The rea-

son for it was, this was a north and south road which extended across the line, south of which the races do not mix.

We were on the North and South division of the Illinois Central Railway, aiming to intercept their through passenger service from Chicago to Omaha, because of their superb service, rapid transit and good connections.

The Southern part of our great Commonwealth have a race struggle of increasing gravity. What must we do with the negro or what will he do with us must be asked constantly and answered properly and practically. The suggestions to "ship him to an island" is about as practical as the other suggestion to "eat-him-up." In reply to the latter suggestion I heard a prominent colored bishop say on the platform that if the person who made the suggestion would carry it out he would have more brains in his belly than he had in his head. This statement no doubt contains about as much truth as humor, for the Negro race of our day represents a reasonable amount of brains.

Considering that but two generations ago he was only a beast of burden his enlightenment and culture is to-day little less than marvelous. I do not overlook the fact that there is a multitude of ignorant, shiftless, black trash which generations of culture only can remove, and that these people must be kept socially in their places, yet I have no sympathy with any plan of extinction, persecution, or injustice.

Years hence the world will recognize the great work now being accomplished by the large-hearted, devoted educator, Booker T. Washington, on the old "Squeers" method of learning to do by doing. At the same time all men will honor the president of the United States for daring to eat a meal with a black man, thereby recognizing that color should be no bar to reward of merit, and that "A man's a man for a' that."

The lily-handed dude, the aristocratic boss, the worthless white trash or any other creature who seeks advancement on the strength of family history or wealth, or tries to live on charity without labor, should fill the mind of every patriot with genuine disgust. I believe in giving honor to whom honor is due, and tribute to whom tribute is due.

I am frank to confess that among my friends are several real southern born and bred ladies and gentlemen who love the negro servants more genuinely than I can ever hope to. They speak of the dear old negro mammys almost as tenderly as their own mothers, yet they would not ride in the same coach or eat at the same table with her or her son. They also tell me that we northerners know nothing about the negro problem. Well, may be we don't know as much as we should, but the principle of justice to all, under the constitution of free

America is a simple legal principle as well as a religious obligation.

TRAINED TO CROW.

GREAT preparations are being made in the northern districts of France for a cock-crowing competition, which is to take place in Paris next month.

The French Bantam Club has made the discovery that the best crowing cocks are those whose hens are the best layers, and for the time being cockcrowing seems likely to oust cockfighting as a popular pastime.

Owners take immense pains to make their cocks crow well. One gentleman, who is hoping to take a prize at the competition, has two very fine birds, which he keeps in cages in his stable. The cages are so covered over that, though there is plenty of air, no light can penetrate.

Every day the cages are taken out into the open air, and the covering suddenly removed, when the cocks immediately begin to crow loudly under the evident impression that they have overslept themselves and that the dawn is far advanced.

After a quarter of an hour of this exercise the birds, who must consider the days extremely short and the nights extremely long, are taken back to the stable and covered over again. This goes on for several weeks before the competition, and increases the bird's desire to crow long and loudly every time he sees the light.

The birds are fed in a special manner peculiar to each owner, the secret of which is jealously guarded. For three weeks prior to the competition the food is carefully dosed, and made as stimulating and exciting as possible. The bird is then sent to the show. During the crowing contest a timekeeper with a chronometer stands in front of each bird, and marks the number of crows and the variations of notes in a given time, generally 15 minutes.

TOBACCO AND HEARING.

A PAPER read at the recent Congress of Otagy, held at Bordeaux, France, by M. Delie, dealt with the effect of tobacco on the auditory sense, and in it was described the injurious effect on the patient's hearing. There is a direct action, due to tobacco, on the auditory nerve, and the stimulating effect of the nicotine on other nerves is likely to add further complications, so that tobacco should always be used in moderation and especially where trouble with hearing is being experienced, and patients should be warned at an early date. In fact, there are certain conditions of the tissue when all smoking should be forbidden, and especially where the patient is comparatively young.

THE RELATION OF PHRENOLOGY TO EDUCATION.—Part II.

BY H. B. MOHLER, F. A. P. I.

THE efficient teacher, whether in reform, missionary or educational work, should be acquainted with relative conditions of body and brain and many modifications of temperament and cerebral development, he then will know which faculties are too active and which are too weak, and where stimulus should be applied or withdrawn as is necessary, and thus bring the mind up to a higher standard and better balance of power.

Nowadays it becomes an absolute necessity for the teacher to know what course of study is adapted to the peculiar needs of the child—what subjects, topics or illustrations are *naturally* calculated to excite the various faculties to action. Herein, however, many teachers are not adapted, as their partial development can produce only partial skill. Our Creator has endowed us with faculties each for a special function and they all have a definite location, both relative and absolute, in the cerebral mass. Those however, who are ignorant of phrenological principles, deny the localization of brain organs which is as inconsistent as to deny the location of the stomach, heart or lungs as fixed centers.

We *must* admit that development does take some form, and it's a "*law of development*" that every animal (man admitted) showing peculiar "*traits of character*" has a corresponding peculiar contour of brain and cast of head. Admitting that the growth of brain organs evolve from a fixed center (the medulla oblongata), the skull necessarily must adjust its contour to the variations of development within. Sir Charles Bell in his anatomy truly says: "The bones of the head are moulded to the brain and their peculiar shapes are determined by the peculiarity in the shape of the brain." But from this my dear reader dare *not* concede the idea of "bumps." The "bump theory" has been exploded years ago and now the "*law of development*," the "*law of localized centers*" are immutably fixed so that the power of any given faculty is determined by its length to any given point from the "*auditory meatus*" ascertained by measurement.

The simple arrangement of the executive, social, intellectual and moral groups, and as independent faculties, make this science easy in application and surely shows the perfection of divine workmanship. The peculiar fitness and harmony of location and function is marked. In the animal economy of nature we see those faculties, intended to serve our physical wants, clustered within the base of the brain which correspondingly has the lowest function in the scale of mentality. In all carnivorous animals like the lion, tiger, wolf, dog, etc., there is a marked development giving width above and about the ears, this being a

striking proof of an established law that also holds good in the herbivorous and omnivorous kingdom.

A little higher up in the scale of mentality and function we find the social faculties clustered within the occipital brain. While some of the carnivorous animals can be tamed and subdued in a way, yet we concede that the social forces in their primary relations in man, have a distinct higher function which is designed to modify and subdue his lower physical faculties and imbue him with friendship, attachment, filial love, patriotism and all the ennobling elements of an exalted social nature. As we approach the intellect we reach still a higher domain of power. These faculties being located within the anterior brain lobe are functionally vested with activities that bring man in touch with the "higher laws" of his being relating to his natural and spiritual interests. In the realm of art, science, philosophy, invention, legislation, and civilization these forces give man pre-eminent power and with his *will* and spiritual forces give him his "*free moral agency*."

Not long since in a discussion (entertained before the Star Science Club,) with a doctor of our town, the principal of the high school took issue on the three "*grand divisions*" of faculties the doctor made but it proves to be strikingly correct.

Hell, earth and heaven were the terms applied to the *base, central and top-head*—and it must be admitted that man's spiritual nature emanates from his spiritual faculties located in the top-head—these indeed involve the highest function of his being because their activities are the embodiment of his "*divine nature*." These "spiritual faculties". God has ordained for his glory and honor which identify us as his children, when we live obediently to their dictates.

(To be continued.)

THE POOR OF BERLIN.

"WHAT," I exclaimed in Berlin, "are there no poor in this city? Are you altogether without rags and wretchedness?"

"My dear friend," said the German, winking a heavy eyelid, "we are very clever people. We do not show our dust bins."

Berlin is ruled by municipal experts. It has its wretchedness and its despair, but these things are not permitted to increase. To be out of work in Berlin is a crime, even as it is in London, but with the difference—in Berlin the municipality legislates for labor in a fashion which makes idleness all but indefensible.

The laws to this end may not commend themselves to English minds, for the Germans are not soft hearted in such matters, but they have this engaging recommendation, they succeed. Let a ragged man make his appearance in Friedrichstrasse or the Lindens or in

any of the numerous open spaces, and a policeman is at him in a minute. "Your papers!" demands the man of law. The beggar produces his documents. If it is proved that he has slept in the asylum for the homeless more than a certain number of nights he is forthwith conducted, willynilly, to the workhouse and made to labor for his board and lodging.

Now, the workhouse in Germany is not a prison, but the vagrant would as lief go to the one as the other. The administration of the workhouse is conducted with iron severity. Every ounce of bread and every drop of thin soup consumed by the workhouse man is paid for a thousandfold by the sweat of his brow. So it comes about that the man least disposed to work, the born vagabond, finds it more agreeable to toil for his bread in the market than to fall into the hands of a paternal government.

Berlin takes advantage of the system in Germany which numbers and tickets every child born in the fatherland. No man can roam from district to district, changing his name and his life's story with every flitting. He is known to the police from the hour of his birth to the hour of his death. For a few pfennigs I can read the history of every person in Berlin. Therefore the municipality has an easy task. Every citizen's life story is known to them, and every vagrant is punished for his crime against the community.

Moreover, every person of humble means is insured by the state. Even clerks, shop assistants and servants are compelled to insure against sickness and against old age. This insurance is effected by the pasting into a book of certain stamps every week, and it is the duty of each employer to see that this contract is faithfully obeyed. And the state has at Beelitz an enormous sanitarium costing 10,000,000 marks (£500,000), where the invalid citizen is sent with his pension in order to expedite his valuable return to the ranks of the wage earners. It pays the city of Berlin to nurse its sick and cherish its invalids. The whole object of the municipality is to secure the physical and intellectual well being of its citizens, and on this task it concentrates its labors with amazing energy.

Berlin has a huge building resembling a factory where the unemployed, whole families, are received and provided for, but no one must take advantage of this hospitality more than five times in three months. Consider this point of view. If you are homeless five times in three months you are dubbed a reckless creature and packed off to the workhouse. Private enterprise has provided another asylum where the homeless may come five times in one month and where the police are not allowed to enter at night. I have visited this place and seen the people who attend it, some decent enough, others criminal in every line of their faces. There are many of these desperate men in Berlin, many of these dirty, ragged and unhappy wretches, doomed

from the day of their birth, but they dare not show themselves in the decent world as they do in London. They slink into these asylums at 5 o'clock; they have their clothes disinfected; they cleanse themselves under shower baths; they eat bread and drink soup, and then they go to bed at 8 o'clock like prisoners to their cells.

Now, this system is a hard one, for when once a man gets down in Berlin it is almost impossible for him to rise. But it has this clear advantage—everybody feels that it is better to work than to fall into the hands of the law.

Rags and misery dare not lie about in the parks or scatter disease through the crowded streets. If there is any virtue in the unemployed the state will certainly develop it as well as it is possible to do so. There is a central bureau for providing men with work, and when a man knows that not to work means the workhouse he solicits employment here and elsewhere with such a will as almost compels wages. In one year the state has secured employment for 50,000 men.

The citizen is provided with sanitary dwellings, with unadulterated food, with schools and technical colleges and with insurance for sickness and old age. For a penny he can travel almost from one end of Berlin to the other by electric tramway or electric railway. His streets are clean, brilliantly lighted and noiseless; his cafes and music halls are innumerable. He lives in a palace. And all this is the result of municipal government by experts instead of by amateurs.—*London Mail*.

A BRITISH PHANTOM.

THE project of digging under the English Channel has raised a storm of objection in Great Britain. Every time the scheme crops up the same criticisms are leveled at it. Mathieu's proposal, made in 1802, which received Parliamentary sanction both in France and in England, came nearest to realization. The plan has again been proposed, and seems no nearer realization than before. M. Peltreau in an elaborate report shows how commercially advantageous it would be to England and France. Englishmen, however, have received the French advances with anything but cordiality. Admitting the economic advantages which would result, and the comparative ease with which modern engineers could build the tunnel, they deplore the moral effect on the British nation, whatever that moral effect may be. Fears are expressed that a powerful army would steal through the tunnel and invade England with the utmost ease. The absurdity of the objection hardly deserves comment.

SLOTH makes all things difficult, but industry all easy.—*Franklin*.

ROUNDUP OF CATTLE.

IN that part of Colfax county, New Mexico, where the foothills of the Raton mountains border along the rolling prairies is the ranching community of Chico Springs, which derives its name from the little springs that flow from these rocky foothills. *Chico* is the Indian word for little, says a correspondent of the *New Haven Register*. The general store and post office is a small log building connected with the house of Mountain Spring ranch. The next house is a mile away, and the rest follow in the order of two, four, eight and sixteen miles, and, therefore, it is easy to be seen that great events do not follow on each other's heels in very quick order, and the sight of a team going along the prairie road generally is enough to call forth the field glasses to find out who the travelers are. For weeks we had been looking forward to the big roundup. A great amount of the land in this country is government land, and is used only for cattle and sheep raising. Once a year the cattlemen round up their cattle, sort them, brand the calves and, after counting all their stock, turn them out again on the government land. Naturally the cattle get scattered over some extent of ground, and the ranchers and cowpunchers may be away five or six weeks. When they return each ranchman sorts his cattle from the rest and takes them home, but they all turn in and help each other brand, with no thought of pay.

How Branding is Done.

Most of the branding is done in corrals, but this year the largest herd was to be done out on the prairie in the old-fashioned way. Of cows and calves there were in all about 1,200. All night long the mounted cowpunchers had been taking turns of four hours' watch to keep the herd together.

A cowpuncher's day is from sunup to sunset, and after an early breakfast they began to get the fires and irons ready for the branding. We started for the scene about 8:30 in the morning. The branding was to be done at what was called the big lake. East it would have been called a pond, but you mustn't tell a westerner so. We had a fine ride of eight miles on the prairie following the base of the foothills. What the country lacks in inhabitants it makes up in scenery, and I don't suppose there is a finer climate in the world. No matter how hot the day there is always a breeze, and the atmosphere is entirely free from any depressing humidity. To our left were the foothills as high as any mountain in Connecticut, and among the hills is a crater with a big part of one side torn out, and all over the country are pieces of black lava. The hills are of sandstone and the rock crops up in curious peaks, ledges and regular palisades.

Like the Sphinx.

Standing like twin sentinels, their peaks, 3,000 feet

above the prairie and as near alike in appearance as ever bluffs can be, are the Temples peaks. From their peaks a third down they are of sandstone, all seamed and cricked in perpendicular crevices, the earth then slanting away to the prairie, and they made me think of the sphinx keeping watch, their faces turned to the east. A mile farther on was another bluff of exactly the same formation but facing the south. I looked at these grand formations and then at the little prairie flowers at the roadside and thought of the infinite detail of the creation.

A low hum like that of a trolley car in the distance told us that we were near the roundup. Then soon we came in sight of it. There were the cows and calves herded together in one big, round group, all moving round and round, looking for freedom that seemed so near, all lowing and bleating, that of the cows seeming more like moaning than lowing. Round and round they went, always moving, and around them keeping vigilant watch went the mounted cowpunchers keeping the herd together in a compact form. Once in a while a cow would make a desperate break for freedom, and then after her would go a cowpuncher to persuade her to return, and one was apt to see some fine riding. I never knew what horseback riding was until I came west. Ease, grace, strength and the horse and rider one in every motion.

Chase for Runaways.

Sometimes it would be a calf that broke for—he knew not where. With a bleat of derision and kinked tail he started, often giving the horse a hard chase, and it wasn't easy to persuade him to go back, for a calf is as perverse as a burro. He often proved to be an "artful dodger" and it was interesting to watch the cowmen turn and wheel their horses while going full speed in following him.

Into that herd of excited cattle went the mounted roper, swinging the noose end of the lariat round and round by his right hand holding the coil in his left. Then out the rope would go. He seldom missed and then out of the herd toward the fire he came dragging his victim. Pitiful as it was, it was laughable, for if the rope caught the calf around the neck as it should and generally did, he came hopping along, pulling back on the rope with all his strength, bleating, twisting and kicking, but making good time, for the horses came in on the run. Then two men seized him, lifted him up from the ground and, each throwing a knee under his side, his feet flew up in the air and down he came, thump! on the ground, with a man kneeling on his neck, holding his forelegs back, another pulling his hind legs back and then he was earmarked, for in this country cattlemen have to have a registered earmark as well as a brand. It generally consists of a piece cut out of the ear. Then came the branding. When the iron struck the calf it bleated pitifully.

Sometimes Break a Leg.

There is an art in branding. The burn must not be too light or too deep, and all I can say of it is, it is over in a minute, and then the calf jumps up and runs for the herd to find its mother and tell her all about it. As soon as they throw a calf they take the rope off its neck, and the roper goes back to the herd for another. He is not always successful in roping the animal around the neck. Sometimes the rope goes around the neck and one fore leg, and in he comes on three legs. Sometimes the rope would go around the body or the calf would trip and fall, and in either case the poor thing would be dragged in on his side from the herd to the fire, a distance of 150 yards, the horse going at a good speed, a sort of slow lope, for there is no time to lose. Once I saw a poor calf sliding in with his head under him. I surely thought his neck was broken, but the only accidents that day was two calves with broken legs, and as they branded nearly 600 it was a small number, considering how they were handled. The cattle were of the long-horned Texan variety, known as the Hereford breed and were beef cattle. Such roundups as that are becoming more and more scarce, and, like the cowboy, will soon disappear altogether, for as the ranchers come in and take up the land in claims, or buy and lease, they keep their cattle on their own ground and do their branding in corrals.

The old-time cowboy is fast becoming a character of history. There were only a few men there that day who could rope with accuracy. These were a few of the old-timers, not all of them old men, either.

A PLEA FOR THE SCHOOL BOARDS.

BY MAUD HAWKINS.

A GREAT cry is frequently heard from teachers, that they cannot do efficient work in the schoolroom because they have no apparatus; or the query is, How can we induce school boards to become sufficiently interested in the schools, that they may provide tools with which to do the work required.

My experience has been that they are always ready and willing to buy everything and anything, if they can be made to understand or believe that they will be a benefit to the school, or that they will be used and cared for when procured.

But their generosity has so many times been imposed upon, that they are often at a loss to know what really is a benefit.

A teacher recently entered a school for the first time. She had received numerous reports from former teachers, that the board in this town was very reluctant to furnish the necessary appliances for the school. At the first glance of the rooms, she received the impres-

sion that the school was very much neglected by those in charge of it, as it *appeared* to be very barren of appliances. There were two or three curtains hanging at the windows, partly torn from the rollers. To be sure there were good walls and ceiling and an ample supply of bookcases, which, on further investigation were found to be packed with text books, and the doors were bulging out on account of the promiscuous way in which the books had been stowed away.

On those shelves were found two large maps rolled up and stored away, somewhat torn from frequent shifting, not by use. A good globe was dug out of a collection of debris, among which were two lengths of stove-pipe, some broken stove grates, window glass, broken slates, and seven window shades in various degrees of preservation, many of them good except being torn from their rollers, which a few minutes' work made presentable enough to be hung at the windows.

When the globe was set upon the desk, more than one-half of the pupils inquired what it was. The others merely knew that it was a globe, further than that they had no idea of its usefulness. An excellent chart was rolled up and laid on the top shelf; although it had been there several years, none of the children had ever seen it before. It brought forth numerous questions by the pupils, as to what it was for, and the different pictures and exercises on it were the theme of conversation for many days. There was always a bevy of children around it during each rest period, for many weeks; this alone was the means of them gaining much information, without any effort on the part of the teacher whatever.

She also found many queer looking little blocks, triangles, squares and prisms of highly polished hard wood, lying around in different corners of book shelves, closets, desks, etc. Thinking that they might possibly be of some use to her in her class work, she collected them; and when all together, she found them to be an excellent set of blocks for illustrating the subjects of mensuration and geometry.

In another place was a neat little case which was designed as a receptacle for these blocks when not in use. And on the wall was a case containing all the maps of the world; but these were as fresh as when put there, showing plainly that they had never been used. There was what once had been an expensive dictionary, but the pupils had evidently used it for a drawing tablet, as it was covered with all kinds of hieroglyphics. There was a Bible with both covers torn off, which was repaired with very little trouble; a few books of reference to which the children never had access. Indeed they did not know they were there, having never had their attention called to this fact. There was also a large bell on the desk, wash-basin, towels, comb, soap, mirror, wastebasket, three

chairs, a good stove, a floor sprinkler and a large flag, somewhat in need of repair, a report book with the covers partly torn off.

And still these very teachers had been complaining of a lack of apparatus. If they could find no use for what they already had, would they have seen the use for more elaborate appliances, had they been furnished them?

Teachers, if you can do no more, leave those things out where the pupils may have the pleasure of knowing that they are there and the privilege of looking at them, if you do not give any instruction with them, and above all take good care of them!

Towanda, Pa.

TARDINESS IN SUNDAY SCHOOL.

BY WALTER TROUP.

If the superintendent is tardy does not that more or less detract from the interest and progress of the cause of Christ in this the nursery of the church of God? I say it does!

Tardiness causes much disturbance. In all vocations of life we find this true, but more especially do we emphasize it in the Sunday-school work because this is God's work. We all know what a confusion it causes in Sunday school when three or four are late and all come in at the same time. It is a bad habit for either the old or young to form, and no one receives credit for sowing such seed. For instance, some of our people, members, do not have so very much to do in the way of the cares of this life, and yet often they do not get around in time for Sunday school. It should be remembered that older people are looked upon as guides, examples, and that they are to some extent moulding the lives of the young. When they come late to Sunday school, it is natural for the young to become dilatory and unconcerned and oftentimes we hear them say, "Well, there is Brother A. and Sister B., they have nothing much to do, and yet they come late, I don't see why, with all my duties I should make such an effort to be on time; I guess I'll not try so hard every time, as it will not make much difference if I am not prompt."

What do such people miss by being tardy? First of all they miss the song service, then the devotional exercises, and in many cases the best part of the lesson. There is an old saying, "Better late than never," but the Christian should apply it "Better never late."

As a rule when a pupil is late, or tardy, at day school the same is recorded by a "black mark," and I am afraid if this same rule were applied in our Sunday-school work it would count up pretty fast.

I know of an instance, not more than ten miles from

home, where tardiness was the means of killing a Sunday school; no one was there on time to begin the work and of course the school died. Who was to blame? The members, of course, of that church were to blame. Did you ever ask anyone why they were not at Sunday school? and do you remember what kind of excuses were given? "I didn't get up in time, some one came and hindered me in my work, I was looking for company, it looked as though it would rain, or I went visiting, etc., etc.," none of which will bear out anyone in that great day of judgment, when in the presence of the Almighty God.

Tardiness causes a cold and indifferent feeling towards the work. If we yield to this habit once it is no difficult matter to do the same thing again, unconsciously hardening our conscience. Who is to blame? Only the person who has committed the crime. May God help us all to be more prompt to the work he has left us to do.

Marxwell, Iowa.

A BUTCHER BLOCK FACTORY.

BY D. Z. ANGLE.

ONE of these factories is situated in Wayne City, Illinois.

The building in which the work is done is about forty feet wide by sixty-five feet long, and made similar to a barn with a driveway running lengthwise twelve feet wide.

On each side of this driveway are elevated platforms of plank two feet from the ground.

There is also an office and tool room in the building.

The structure is not very high (about ten feet at eaves), as space is not needed above.

Three men do all the work of the establishment.

They buy logs (mostly sycamore), from two and one-half feet on up as thick as obtainable in that locality. We saw one log four feet eleven inches in diameter at the largest end.

From these logs the men cut blocks about eighteen inches thick with a common crosscut saw.

The block is then rolled through the building to the dressing machine, which is run by an upright engine of six or eight horse power.

Here a man plugs up with wedges all small holes or crevices in the block, finds its center and it is then placed on the machine where the engine turns it slowly around and another man carves it by holding against its surface several different tools, till the proper shape is obtained.

When that is done the block is rolled on to one of the platforms, is taken charge of by another workman who dresses it some, and bores three holes in it where the legs are intended to be.

The auger which does this boring is run by the engine, but is easily controlled by the operator.

The block is now painted red, three legs are cut the proper length and turned to the right size, and it is ready for sale.

These blocks are sold and shipped to butchers in many States, at good prices, some of them bringing as high as twenty dollars. For a butcher block is a necessary article in every good meat shop, and you know timber is not very plentiful in some states of our great Union.

Mt. Vernon, Pa.

* * *

THE HINDU HOLY LAND.

A SIGHT of this mighty engineering feat should be enough to stop the mouth of any of those cantankerous spirits who doubt the benefits conferred on India by British rule. A little above Rurki a massive aqueduct carries the whole volume of the canal high above a river flowing beneath, and yet higher up two river beds are conducted over the canal which passes beneath them. The uniqueness of this piece of engineering is dependent on two other factors, the crystalline limpidity of the blue water, and the glorious scenery which forms a setting to all. I no longer needed to enquire why the common consent of countless generations had made this neighborhood their Holy Land, the appropriateness of it all flashed on my mind the moment the glorious vista opened to me. There beyond me were the majestic Himalayas, the higher ranges clothed in the purest dazzling white, emblem of the Great Eternal Purity, looking down impassive on all the vicissitudes of puny man, enacting his drama of life with a selfish meanness so sordid in contrast to that spotless purity; and yet not unmoved, for is there not a stream of life-giving water ever issuing from those silent solitudes without which the very springs of man's existence would dry up and wither at their primordium just as the Eternal Spirit is the fountain light of all our day, the postulate of our very existence. And then in the nearer distance the lower ranges clothed in the richest verdure of the primeval forest, vast tracts not yet subdued by the plough of man where religious devotees can strive to rise from Nature to Nature's God amid those solitudes and recesses where no handiwork of man distracts the soul from the contemplation of the ilimitable and mysterious First Cause. While looking down from the elevation of the canal there spread out at our feet a bucolic scene of peace and plenty where villages and hamlets surrounded by green fields and cultivation lay scattered among sylvan glades, drinking in vivifying streams which had journeyed down by chasm and defile through valley and through meadow from those distant solitudes. How natural it seemed that in those early Vedic ages, when the reverence for

the forces of nature was still unsullied by the man worship engendered by the development of his inventive genius, this vast cathedral of God's own architecture should have been made the chosen place of worship of the race where the more devout spirits strove not only to worship and adore, but to shake off the trammels of a mere mundane corporeal existence till the spirit was as free as the birds in the air, as clean from earthly dross as the limpid waters below, and as integral a part of the great eternal whole as nature around, so diverse in its manifestations, yet knitted together in one congruous whole by a pervading and uniform natural law. But, *facile descensus Averni!* how often the most glorious inspirations are dragged down and down till they subserve the basest instincts of man. So here a little further on at Hardwar we were to have the spiritual elation engendered by the natural scene cruelly shattered by a sight of the vileness and sordidity of the most repulsive aspects of humanity, and by realizing how the most divine conceptions can be dragged and abased to pander to all that is brutal and evil in man.—*By T. L. Pennell, M. D.*

* * *

A BIRTHDAY GIFT FROM THE BIBLE SOCIETY TO THE EMPRESS OF CHINA.

As the greatest work of the American Bible Society has been done in China, it seems fitting that the most remarkable copy of the Bible the Society has yet produced should be in that tongue. I refer to the sumptuous *édition de luxe* presented to the Dowager Empress of China on her sixtieth birthday by the British and American Ministers, on behalf of the Christian women of that country.

The book was manufactured by the Presbyterian Press in conjunction with the silversmiths of Canton, and had silver covers embossed with bamboo and bird designs. It was printed on the very finest paper obtainable with the biggest type, and a border of gold encircled every page. It was incased in a casket of solid silver, the whole weighing ten and a half pounds, and there was a gold inscription-plate on the cover of the casket.

No sooner was this superb volume presented to the Dowager Empress than she sent her eunuchs from the palace to the book-store of the Bible Society to ask for a common copy, so that she and her ladies might compare the two texts. Her Majesty evidently thought the Christians had one version for the palace and another for the hovel!—"Sewing the Bible," *Everybody's Magazine for January*.

* * *

If you would lift me you must be on higher ground.—*Emerson*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

OUR YOUNG PEOPLE.

IN the accompanying photograph you have one of more than eight thousand who read the INGLENOOK. Some one kindly sent us this photograph, but did not tell us who this Nooker is. And while it would probably be a comfort to some of us to know, yet the more important thing is to know that he is doing the right thing. As we look at the photograph it makes the editor think that when he is talking to eight thousand of this sort, he must remember that they are weighing every word and every sentence very carefully. The statement has been emphasized that

A Dollar

is the most productive thing in the world. Now some people may believe that doctrine but we do not, because we can't think of the dollar being greater than all things visible or invisible, immeasurable in quantity of result, infinite in accomplishment.

In the omnipotence of a dollar there is a fatal defect. It is material, and, being so, is subject to the physical law of action and reaction. A dollar may make a fortune to-day and lose one to-morrow; it may make happiness for one man and misery for another. The most productive thing in the world is not a dollar, nor a hundred dollars, nor

A Million Dollars;

but it is necessarily something which is not material. It is that invisible essence, germ, or spirit, which moves vessels and trains of commerce, armies and navies of warfare, mows down the forests before the phalanx of civilization, makes prairies of the wilderness, and builds empires and populates continents; it is that secret power which moulds and fashions the clay of the earth into temples, palaces and edifices; that erects monstrous structures from the marble and granite taken from the rock-ribbed hills; that elevates our supply of fuel from the bowels of the earth; that snatches our illumination from the sky; that makes the earth

twinkle and sparkle with glorious enterprise, achievement and splendor.

This illimitable force, immeasurable energy and unfathomable prestige, God Almighty has seen proper to place in care of

Our Young People.

The vast agricultural, manufacturing and financial interests of the world to-day depend not upon the development of a dollar; it is what it is; but these interests depend upon the development of our young people. The undertakings and the development of every important question, whether it be civic, state or national, await the sentence of the rising generation.

It follows, then, that the greatest work of the nation, of the pulpit, of the lecture platform, of the school-room, of the home, is the proper care, instruction and training of the coming man and the coming woman. Perhaps the first step, or rather an outline for all the steps in the process of development, is to aim at a harmonious symmetry in the physical, intellectual and spiritual culture of the youth. We may well thank heaven for the free government, the English language, the cosmopolitan character of our nation, the natural resources of our country, the diversity of climate, and the manifold avocations, amid which, we have opportunity to rear our offsprings.

In the training of this

Image of God

we must use great care and be exceedingly watchful that we do not warp individual power and character. The child's physical development should be vigorous and strong in order that the intellectual and the spiritual may be well taken care of. The child should be taught in infancy to have an insatiable love for nature as a wholesome and refreshing tonic educator for future work. The country boy or girl has decidedly the advantage of those who live in the cities. In a peculiar degree these country children are taught, by necessity, to utilize the resources at their command. They are also in a great degree exempt from the noise, dust, glare, confusion, vice, and temptation of the crowded cities. On the other hand their companions, from birth are the unadulterated sunshine, which is never darkened with the black clouds of smoke; the blue canopy above, which is not hidden from view by the sky-scraper; the music of the songsters of the sky, which is never drowned by the rattle and din of thousands of vehicles going hither and thither; the rippling brooks that make the meadows green, whose sweet waters have never been polluted with sewerage and offal; the myriads of beautiful flowers, which have not been circumscribed by filthy alley or narrow sidewalk.

Since it is impossible for all of our children to live and be educated in the country, it is evident that some must be educated in our great centers of

Congested Population.

The American systems of public schools are making wonderful strides towards success. With our modern text-books, illustrating the fundamental principles of education, the youth is very well informed at an early age as to what he may expect in the literary and philosophical world. But it is evident that one of the greatest auxiliaries that could be added to the American schools for the young man is a department of manual training, and for the young woman, a department of domestic science, each of these to be well equipped with shops and laboratories. It is all right to beautify our lovely parks, pave our shady streets, decorate our well-kept lawns, or enrich the beauty of our homes; but certainly no grander monument, no greater blessing, no nobler accomplishment could be left to our posterity than the establishment, within the reach of our children, of a school where the opportunity, coupled with the necessity, is to be found where they may acquire a useful, working foundation and education. It is all right for a boy to know his

A B C's,

which are the fundamental principles underlying his future written language; it is also all right for him to be taught the fundamental principles of civic, state and national government, along with brick-making, stone-masonry, carpentry, blacksmithing, pharmacy, dentistry, and numerous other professions. A truly educated man is one that knows *something of everything, and everything of something*. That is, he should have a general education first in all lines of life, and then specialize in some profession or handicraft. The average boy finishes high school, from sixteen to nineteen years of age, and usually with a single equipment for bread-winning and his sister without any equipment for bread-making. Theory and practice should go hand in hand.

Many a case might be referred to where men of more than ordinary ability, so far as text-book knowledge goes, have fallen far below their brothers, who possessed a smaller degree of knowledge but a broader field of experience. The school would be vastly more popular with both parents and pupils, provided the education of brain and brawn could be equally divided. We have before us, as

The People of the Nation,

this great problem to solve, along with many others, but the INGLENOOK thinks this is one of the greatest importance. We are making history every day; and in so doing we must conclude that the solution of all great problems involves pain, change, peril, deprivations and hardships; and yet in the outcome, as always has been, the world is always better for the conflict. Don't be a coward. Don't back out. Don't change your plan. "Fight it out on this line if it takes all summer." Christians have sprung up where the ground was fertilized with the blood of martyrs. Bridges are built upon the stones which lie low beneath the mud. Reformers often seal their message with their lifeblood. How many of our INGLENOOK boys and girls

We Don't Know His Name, but He's Doing the Right Thing.

will say to themselves and to the world, "I will be one that stands for good literature, purity of thought, freedom of speech and press, manual training, domestic science, free American life, and the highest type and plane of Christianity"? This young Nooker is only one of the great family who will read this editorial. Shall we not have some good resolutions made? If such an army start out for success, what short of success can be the result? Let us educate.

"THOU preparest a table before me in the presence of mine enemies," means such a feast as no king ever sat down to, unless God led him to it.

Current Happenings

RUSSIAN REVOLUTION.

No crisis since the time of Peter the Great has confronted the Russian government like the present one. Nicholas and his loyal allies have tried to carry out the last will and testament of Peter the Great, but have most signally failed. The monarchial demands and injustices have been too severe. The populace is up in arms. The life of the nation is at stake. Civil war is on. "Liberty or death for the czar," is the battle cry. Half a million starving men and women are in the desperation of despair. Their demands are very reasonable and very conservative and their cries are something very pitiful, but the czar ignores it all with a shower of lead. Twenty-five thousand troops have orders to disperse all congregations of peasantry.

The common people were reluctant to be disloyal to the czar, but necessity has driven them to arms and a bloody revolution is in sight. Twenty-five hundred have been killed already and thirty-five hundred wounded, and hostilities have only begun. Fields of carnage await the oppressed who dare defy the hand of tyranny. The czar demonstrates his moral cowardice by fleeing to his summer resort, both for safety and to shun responsibility. All newspapers have been stopped and the foreign ministers are leaving Russia as fast as possible. Wealthy people are planning vacations in France. The weather is bitter cold and there is a heavy fall of snow.

THE city of Schenectady, N. Y., has been experiencing a revival of unusual fervor; it is a movement on the part of all the Protestant churches, the Y. M. C. A. and other semi-religious bodies. Meetings are held in all sorts of places, groups of converts march to saloons and other places of evil resort, and thousands of converts are reported. Might not religious bodies elsewhere be inspired with the fact that in "union there is strength," and with a purpose in view some good will be accomplished.

ONE of the largest buildings of the Farr and Hailey oilcloth company, of Camden, N. J., was destroyed by fire a few days ago. Loss, \$175,000.

AN attempt is being made to drive all United States currency out of Canada. Robert Bickerdike, member of parliament, of Montreal, who is a prominent representative of the business, proposes to make the circulation of American silver money, in Canada, a criminal offense. At the coming session of the dominion

parliament a bill is to be introduced to this effect, either as a government measure or a private bill. This movement also recommends an amendment to the Canadian criminal code providing that any one uttering or offering in payment any copper or silver coin, other than Canadian, shall become liable to the penalty of double the nominal value thereof.

AUTHORITIES have located more than \$50,000 worth of diamonds and jewels owned by Mrs. Chadwick, upon which no duty was paid when they were brought to this country from Europe. Most of the jewels are being held by residents of Cleveland, Ohio. These Mrs. Chadwick gave as security for loans which she received to aid her in her downfall.

WILLIAM B. WAIT, principal of the New York Institute, has perfected two new inventions for the blind. One is the stereograph, which produces plates for the printing of literature for the blind. It does the work of six hand compositors and obviates the use of new type. The other invention is that of the kleidograph, which is a typewriter using the Braille characters, or points.

THE crossing of an electric light and a telephone wire at St. Louis brought about serious results. George Betz was instantly killed and two other men burned and shocked seriously in using the phone while the wires were in this condition.

THE heart of the city of Chelsea, Mass., including the Academy of Music and the Hotel Savoy, was destroyed by fire Jan. 12. Loss, \$200,000.

IN a monthly meeting of the board of directors of the St. Louis Exposition, Jan. 10, a report was read showing that the company now has a surplus of \$998,000 and that \$350,000 is due from wrecking companies for fair buildings.

K. H. SARASOHN, the founder of the first Jewish newspaper in the United States, died at his home in New York, Jan. 12, aged 70 years.

FOUR persons were injured in a collision near Riverside Junction, N. Y. The passenger locomotive was derailed and overturned, diverting the course of the onrushing coaches and averted great loss of life. The trains were under full headway.

Two Chicago men, John Kenneth MacKenzie and Dr. Robert Coy, were murdered by Indians in northern Mexico recently. They were on their way to inspect a mine, and it is supposed they were ambushed. The Indians massacred them and, it is understood, their escort of five men.

❖ ❖ ❖

UNITED STATES may be compelled to use force against President Castro, of Venezuela, in order to hold the claims properly due her.

❖ ❖ ❖

THE St. Lawrence University, of Canton, N. Y., under the direction of the Universalists, has received a liberal gift of \$50,000 from Andrew Carnegie, in view of the fact that his wife was a member of the Universalist church and that they were married by a Universalist minister.

❖ ❖ ❖

BOOKER T. WASHINGTON gave an address before the Kansas legislative assembly Jan. 18. Governor Hoch entered the House with Washington arm in arm, and sat upon the platform during the address. Mr. Washington stated that the negro race always had been grateful to Kansas for its aid and sympathy. He recommended an educational qualification for all voters.

❖ ❖ ❖

COUNT TOLSTOI, who is supposed to be upon his dying bed, has written a letter to the czar, warning him that his tyranny is driving his subjects to dissipation and his nation to ruin.

❖ ❖ ❖

FIFTEEN children were drowned at Zlaffings, in northern Hungary, Jan. 21. They were standing in a group upon a large piece of ice which had been cut round by their fathers, who were carting it away; the piece gave way and they all disappeared. Desperate efforts were made to rescue the children, but without success.

❖ ❖ ❖

IN order to make times better, as they seem to think, people in some parts of Texas have entered into an agreement to burn their share of surplus cotton. In other parts of the South similar agreements have been formed. There is a shortage in the Egyptian cotton crop, and these people who have such an abundance should not be too hasty in the destruction of that which may make for them a fortune.

❖ ❖ ❖

DR. JAMES B. ANGELL recently tendered his resignation as president of the Ann Arbor University, Michigan, to take effect Oct. 1 next. He is seventy-six years old and has been the head of this institution since 1871. He was impressed with the belief that

it would be advantageous to the university if a younger man would be called to fill his place. The board of regents refused to accept the proposition, feeling that no other person, young or old, could take President Angell's place either in the value of his service to the university and to the State, or in the love of the people.

❖ ❖ ❖

IT will be of some information to the INGLENOOK family to learn that the oldest ship in the world is not running as a ferryboat on one of our New York ferries, but is the Italian ship "Anita," registered at the port of Genoa. It resembles Christopher Columbus' ship, the "Santa Maria," and was built in Genoa in 1548. She made her last voyage at the end of March, 1902, from Naples to Teneriffe, and there she rests, to be broken up. The "Anita" is of tremendously stout build, and has weathered countless storms and tornadoes in all parts of the world, but she is the slowest ship afloat.

❖ ❖ ❖

It is estimated that the area of the American coal fields at present opened to mining is more than five times as great as that of the coal fields of England, France, Germany or Belgium, the great coal producing countries of Europe.

❖ ❖ ❖

It was recently discovered that in one room of a Connecticut high school there were nineteen girls who smoked cigarettes. The people of Connecticut continue to regard Chicago as the center of earthly depravity.

❖ ❖ ❖

WU TING FANG, former Chinese minister to the United States, is reported to be hiding in England, he having incurred the displeasure of the highbinders. Perhaps he asked the highbinders some of the questions it was his habit to put to Americans who were introduced to him when he was in this country.

❖ ❖ ❖

AT Ashland, Wis., a barn was set on fire, and while trying to extinguish the flames, four firemen were badly injured. Some dynamite had been stored in the barn and this exploded, blowing the building to fragments. Nearly every window in the vicinity was broken.

❖ ❖ ❖

AN old chest containing more than \$150,000 in English, German and American gold, was found in a secret alcove on the last parcel of the old Theodore M. Macey estate to be sold in the Bronx. The land is owned by James F. Meehan and consequently he is the possessor of the gold. It is supposed by some that the former owner of the property hoarded this money.

HOME DEPARTMENT

BEST OF ALL.

In my youth, I longed to hear
Trumpet measures breathing clear
To the theme my heart should read;
In my youth, I longed to see
Shades Pierian ope for me—
Laurel boughs float down my meed!

In my mid-age, nought I care
For the trumpet's hollow blare—
Nesting wrens its throat may stop!
In my mid-age, I require
Peace and shelter, household fire,
Ere their leaves the forest drop!

In my winter, shall I still
Seek abroad with fretful will,
Wanting all that I have not?
Let me swift that chance forestall,
Say "What's mine is best of all,
Else it were not in my lot!"

—Edith M. Thomas, in Lippincott's.

POLITENESS.

BY MRS. M. M. BOLLINGER.

No one admires courtesy, good breeding, or politeness more than I and yet I often think too much stress is often laid upon the mere outward tokens of politeness and that it is not the education or promptings of the innate kindness of the heart as it should be; but is merely a worded repetition or a habit acquired through constant drilling and lacks the love, kindness, gratefulness and charity of which it should be the manifestation.

The reason for such a belief is, that there is a strange inconsistency or impoliteness noticeable in some very polite people, that if looked at in the true sense of politeness, would stamp them as either uneducated, ill-bred, or willfully blind and lacking good common sense of the fitness of things. This applies to even some church members or Christians; they are too forgetful of true politeness; for instance, people who are very particular about teaching their children to say "thank you," "excuse me," or "beg pardon," do not set them the proper example, that is, they insist upon their children being polite to them and to strangers, but forget to be just as polite themselves to their children; then again, when mealtime has arrived and the repast is ready oftentimes the whole family gathers, one at a time, and commences eating until finally all are at the table, which reminds one of a yard full of

hungry animals each trying to get there first so that one may not get more than his share. They do not tarry one for the other or thank their heavenly Father for the food, or the privilege of eating it, and yet during the course of the meal they are very particular to thank each other when a dish is passed.

I have known parents who did not return thanks to be so particular on this matter as to send their children away from the table for this failure of being polite. What if your heavenly Father would refuse to let you obtain food or having once obtained it, to let you eat it, what would you think? Would it be any more unjust to you than you were to your child? Parents, we should ponder these things well, for how can we expect our children to be truly polite or thankful unless we allow them the force of our example and be thankful to our Father in heaven?

Sometimes we mothers are slightly to blame for the failure in returning thanks by not having our meals punctual and every thing upon the table and insisting upon every child having clean hands and faces and being at the table when father is ready. If it is, let us endeavor to remedy the growing evil by being very punctual even if we have to let some other work go. If the father is to blame he cannot truly be the head of the family because there is no head in a Christian sense.

Then again the children are taught to bow to each other as a greeting, say "good morning," or good evening as the case may be *every time* they meet, but are they taught to be thus courteous to God? How often, parents, do you bow to God, say "good morning, or good evening," *once* a day, *once* a week, *once* a month, *once* a year, *seldom* or *never*?

If we commit some slight error of good breeding we say "excuse me" or "beg pardon" to our acquaintances. And as we are all weak human creatures subject to errors, I dare say the best of us commit many mistakes during a single hour or day and yet do we stop and say "beg pardon" to our Father in heaven? Some do, but others never.

Of course some say there is no God, but it is those that do not read their Bible or observe nature, or else have become blinded by their own willfulness, for how can they account for the indescribable changes occurring in nature, or the mysteries enveloping almost everything, if there is not some all-powerful Supreme Being at work.

So, parents, let us awaken to our duty, and not allow politeness to be a mere routine of cold, unfeeling meaningless words, but let it be an overflow of that

unboundless love, kindness, and good feeling direct from the heart.

I pray that all may awaken to a true understanding of true politeness and be polite to their Father in heaven and teach their children to be so, also.

Vestaburg, Mich.

❖ ❖ ❖

JOY IN LITTLE.

BY WEALTHY A. BURKHOLDER.

“The world is so full of blessings,
Life is so sweet:
And I bend my soul in rapture,
Low at his feet.”

We often deprive ourselves of happiness by overlooking little things. We want great blessings, and are not thankful for the commoner ones which are constantly ours to enjoy. Water is one of the common blessings of mankind, but since the great drouth is prevailing people only fully realize the blessing it was to them. There are joys in our everyday life, but we think they are too little, and grasp after wealth, fame, learning,—in our estimation of greater value. We forget that the very air we breathe, the warm sunshine and the gentle showers, are all rich blessings and should call forth thankfulness. We pass along the dusty highway and notice a tiny wild flower, but it is only *common* blossom, and we pass on without stopping to examine how beautifully it is formed. Thus we fail to enjoy the beauty there is in the world by looking for something greater and not appreciating what is strewn in our pathway.

We should learn to love and seek out these little joys and then we can more fully enjoy greater blessings. We have been endowed with minds that are capable of enjoying the handiwork of God that is always before us, and if we pass along heedlessly we become dwarfed and miss much that is calculated to awaken real joy in the heart.

No matter how lowly and obscure the situation in life, the common blessings of heaven are strewn in the pathway. Everything in nature is instructive to the reflective mind, and from even the gentler dew, which performs its mission so quietly and imperceptively, we can learn a grand lesson. The snowflakes fall noiselessly and are mingled with the dust of the earth, and yet who can fail to see beauty in them as they descend in their purity? After a drouth how refreshing is a gentle shower and yet we often fail to appreciate it, and so with all the blessings that are daily showered upon us.

Life is what we make it, and were we to pay more attention to the little duties and joys, and try in every way possible to extract the happiness from all that is pure and good there would be more “singing hearts,”—those who go through life scattering beams of sun-

shine are reflecting the genial rays of their own pure lives upon all around them. Then

“Let us gather up the sunbeams
That are lying round our path,
Let us keep the wheat and roses,
Casting out the thorns and chaff.
Let us find our sweetest comfort
In the blessings of to-day:
With a patient hand removing
All the briars from the way.”

Newburg, Pa.

NEGLECTED CHILDREN.

WHAT bothers me is the maternal carelessness or indifference that results in helpless children lying around loose every day of the year. Ask any policeman, any elevated guard, any park employee, and he will tell you that the number of children of tender years left around in this way is astonishing. To a considerable extent, not taken into account by the public, mothers are responsible for the extraordinary fatalities from street cars, trucks, etc. No motorman or driver is morally responsible for driving over accidentally and killing a child 2 to 5 years old. The mother of the child is responsible. Whenever I read in the daily prints of a toddling infant being crushed to death beneath the wheels of a street car, I do not think of the motorman or driver, but of the agony of remorse that must pursue the mother of the victim.

The maternal indifference which permits mere infants to play unprotected in the open streets is akin to infanticide. Yet we see this every day in the city. Almost every day children are forgotten in the cars and carried to the end of the route or put off at some station to be turned over to the police. The lost child is a common sight in the shopping districts. Small children unattended by elders get bewildered in the park and are found by the attendants of the city. Fortunately the city humanely takes the place of parents for the time being and usually manages to restore the frightened fledgelings to the home nest.—*Pittsburg Dispatch.*

Pharaoh—I Have Sinned, Ex. 9: 27
- II. **The Insincere Man.**
Saul—I Have Sinned, 1 Sam. 15: 24
- III. **The Doubtful Penitent.**
Achan—I Have Sinned, Josh. 7: 20, 25
- IV. **The Repentance of Despair.**
Judas—I Have Sinned, Matt. 27: 4
- V. **The Blessed Confession.**
The Prodigal, Luke 15: 18

Text.—For if thou shalt confess with thy mouth, the Lord Jesus, and shalt believe in thine heart that God hath raised him from the dead, thou shalt be saved. Romans 10: 9, 10.

References.—Mark 5: 20; Luke 12: 8, 9; 1 Cor. 1: 5, 6; Rev. 12: 11; Psa. 35: 28; Psa. 66: 16; John 12: 42, 43; 1 John 1: 6; 1 John 4: 15; Matt. 10: 32, 33; Acts 8: 35-37.

Confessing Christ.

WHY should we confess Christ? Is it not enough to believe on him, and reverence him? I am afraid that won't do; he says somewhere that if we do not confess him before men he will not own us to the Father, but if we confess him before men, he will gladly tell the Father that we are his children. Christ was one day going out of the city, when a young man came running to him with the question, "Good Master, what shall I do to inherit eternal life?" Then Jesus made him a great offer. What did he offer him? This first. A strange thing, too! He offered him a cross. I wonder why? Did you ever think of it, boys and girls, why it is that the cross comes first?

Once, when another young man came to him, earnest and zealous, and said, "Lord, I will follow thee whithersoever thou goest," Jesus said, I am a homeless man, I am sleeping on the mountain side, where the wild things find shelter. He told him at once of the poverty and discomfort which were his lot. Why does the cross come first? Tissot has made it all clear for me in one of his wonderful pictures, the one that shows the pilgrimage of Jesus through the land. On this side there come to meet him the poor blind people, the lame, the sick and deformed; but when they get past him they are all strong, straight-limbed and glad. There is your answer. The cross first; follow me. You cannot live for yourself in this world of sinful, sorrowing, broken-hearted people. Come confess me before men, I will bring you where there is work to do; follow me to where men are struggling up

under the burden of sin and temptation, help them. Lose sight of self, follow me.

An only child, about sixteen, was sent away to school. The first night at the tea table the Christian landlady requested him to ask a blessing. There were a number of older boys at the table but they were not Christians. He blushed, for he was a timid boy, but he bowed his head and reverently prayed though his voice trembled. That night he could not sleep for thinking of how all the term, he would have to ask the blessing, and how one young skeptic was likely to sneer at him. But he said to himself, "It wouldn't be manly to refuse. A Christian who won't stand by his colors isn't half a Christian." And so he did perform this service all through the year. About the middle of the term the sceptic was baptized. He said to this boy, "The first night you were here, you were called on to give thanks, I could see it was awfully hard for you and cost you a struggle. I said to myself a religion that would give a shy little fellow like you, pluck enough for a thing of that kind was worth having." Remember that Jesus wants men who will face the thing that is wrong and fight it until it is down. He wants men that will love the thing that is good and pure and follow it until it is won. What a grand career he gives you.

Living up to Our Best Intentions.

"We hope, we aspire, we resolve, we trust,
When the morning calls to life and light;
But our hearts grow weary and ere the night
Our lives are trailing in sordid dust."

We mean to live well, at least there are times when we make resolves to do better; every New Year's day we resolve to improve. Some weeks have past in this year of 1905, have we kept our resolutions? What are our faults? What old mistakes have we avoided? Just here is the time and place for some confession. You were unkind, but you did not ask your sister's forgiveness. You were unjust in talking of your neighbor's faults; indeed you were not quite truthful, you colored statements until that ugly word l-i-e would very near fit them. And you know you were wrong. But you did not confess to him. Be brave, take up your cross and say, "I am sorry."

David's Confessions of Sin.

They were many. When David sinned, he prayed, "Wash me and I shall be whiter than snow. I acknowledge my transgression and my sin is ever before thee. Against thee, thee only have I sinned and done this evil in thy sight." And when we pray to God to

forgive our sins, the answer comes back, " Though they be as scarlet they shall be as white as wool."

Confess Christ in these Meetings.

Some of you have been afraid to confess him in these meetings. You have said that you cannot express yourself as well as some others. And unless you can make a fervent appeal like Brother Smith or read as distinctly as Sister Jones, you prefer not to make the attempt. By some strange oversight, the Lord says nothing about our confessing him eloquently. The Pharisee who prayed in the temple had a beautiful flow of language, while the poor publican spoke only in halting, broken sentences, but Jesus listened to the poor publican, and he was justified. Your first attempt may not be what you want it to be, first efforts seldom are. Try again. Jesus will help you, and he will bless your message.

Topics for Discussion.

1. Not all who confess him shall see him. Matthew 7: 21-23.
2. Men do not confess him for fear they may lose some position. John 12: 42, 43.
3. The Holy Spirit will lead us to confess him. 1 Cor. 12: 3; 1 John 4: 2.
4. We are his witnesses. Luke 24: 48; John 15: 27; Isaiah 43: 10.

EMPLOYMENT BUREAU.

The Missionary Reading Circle at West Milton, Ohio, will give the following program on next Sunday:

Devotional Exercises,
Song.

The First Bible Missionaries as Examples, . . . G. W. Teeter
Growth of Christian Character, . . . Martha V. Brumbaugh
Reading, Hettie Pfeifer

Song.

Denying Ourselves, Charles Flory
Unseen Influences, Alva Nehr
Each speaker limited to eight minutes.

We have copied this programme entire, for the benefit of some who are inexperienced, and anxious to learn how to form programs. The meetings at West Milton are always interesting and we know that much good has been done there. When you form a program, try to put on a few speakers, who are willing and able to do their work well. Then put on the names of a few others who are unaccustomed to such work, and help them to do their part. If you have books on missions you can find subjects for them that will be easy to write on; at first you should help them in every way possible. After while, they can help themselves.

"We have in our community a large body of young people, but few of them have accepted Christ. There

does not seem to be very much done to interest them in the church. We have neither Christian Workers' meetings nor a Missionary Reading Circle. Last summer an attempt was made to organize a Christian Workers' meeting, but it was in vain. Some thought we could find nobody to take part, others said that it would not be a success, and so the plan was abandoned. Please tell us how we can make our church members see the necessity of looking after our young people; they are not interested in missions either. Pray for us."—*An Humble Worker.*

As we read the above letter we wondered whether the "Humble Worker" lives in the only church of that kind. We know of some others where the sheep are well fed, but the lambs go hungry. Why is it that we cannot understand, that the care of our children is all-important? If you want your church to be made up of active wide-awake members whose lives are telling for Christ, you must train young people to work for Jesus. In the above church, two or three members whose hearts are burning within them to do some service for Jesus, should go to the officials and to the Sunday-school teachers and talk this matter over. Get their consent to hold a meeting, then find some who are willing to take a part. Form the best program you possibly can, invite your church members personally to come to this meeting. Work early and late to have a good meeting, pray about it earnestly and rest assured it will be a success.

If you want to start a Missionary Reading Circle, write to us for circulars, and then distribute them. Tell your people that they will enjoy reading some books on missions. A missionary sermon should move some to see their duty. And by keeping at it, you will surely persuade some to join. From the many members who belong to our Missionary Circle, we have had many words of commendation and appreciation for the good done, and the blessings it brought to them. Young people who are not appreciated in our own church always find a hearty welcome in some other church. We cannot afford to disregard their welfare. The grass is growing in the little path leading up to more than one church because the children were neglected, and when the older members had passed away, there were no young people to take their places. The elder and the other ministers should do all in their power to help the young people, the future existence of the church depends on them.

—————

Sister Mary E. Shickel, of Broadway, Virginia, says, "I have secured eight new names for the Circle. I think the books in the course are well selected, and I hope to continue the reading, even if I do hold a certificate. God is with this movement to bless and keep our young people."

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XIII.

Dublin, Ireland.

Dear Mr. Maxwell:—

Near to the south end of the subterranean passage where I left you among the rats last week, is the remains of the well-known Dean Swift, who was the Dean of St. Patrick's Cathedral for years, and whose memory is still perpetuated by a tablet.

On the opposite square we visited the original palace of the Dean which is in a remarkably good state of preservation, with a modern annex in which lives the present Dean, whom we heard read to-day, from the book of 2 Kings, to a church full of people.

It was with more than ordinary interest that our party visited the capital building, or Castle yards, as they are called in Dublin. These buildings date from the thirteenth century, especially the residence of Lord Lieutenant. Here are also to be found St. Patrick's Hall, Presence Chamber, Council Chamber, Chapel Royal, and Birmingham tower. A large soldiers' barracks is here and mounted guards keep their beat continually. In the same manner the soldiers watch "The bank of Ireland." We were fairly delighted with the history of this building. It was formerly the Irish house of Parliament, and the old court rooms are still preserved by the strong arm of England. A portion of this building is now occupied by the bank of Ireland. When King Edward VII ascended the throne of his mother, it was here that he received the resignation of Lord Cordigon, who was the royal governor of Ireland, and his successor, Lord Dudley, took his oath of office. On such occasions about a thousand troops pass in state to remind the poor, helpless Irish peasant that his hopeless condition is still being perpetuated.

Miss Merritt insists that I do not forget to tell you about our visit to Old Dublin, which name is given to the filthy and poorer district of the city. Shortly after we left St. Patrick's Cathedral, in passing down a dismal, crooked street, we beheld a frightful-looking crowd of humanity, as distressed as filth, dirt and poverty can picture, assorting old shoes, hats, blankets, garments of every description, which they have gathered here and there in their canvass during the week, and have selected from them such things as their individual families were able to utilize, and the remainder of which they had brought here to this particular spot to hold what they call, "The Sunday morning auction of the poor." These auctions occur every Sunday morning; the poor women trade, barter and swap until they have accommodated each other as much as possible in mating shoes and other articles of necessity; and when they come to an end with their matching they endeavor to sell the remainder for a "tuppens-hapenny," "six pence," or, at most, a "shilling." With these pieces of coin they either buy from one of their mates a scanty piece of clothing, or buy a few loaves of bread to satisfy the hunger of their little ones at home.

By talking with them Roscoe found out that they were

greatly encouraged by the plans of one Otto Ginnis, upon whom the English laws have conferred the title of "Sir." Mr. Ginnis has one of the largest, if not the largest, breweries in the world. He has grown immensely wealthy. He has donated seventy-five or eighty thousand dollars which is to be used in the construction of a large building where these poor people may conduct their Sunday morning auctions. These poor Irish fairly worship his name, when, if they only knew it, if his old brewery was cast into the middle of the sea, they would have no use for his donation nor his almshouse. He takes all their earnings from them, along with their husbands and sons, whom he consigns to drunkards' graves, leaves them widows and orphans, and donates them a small pittance so they will revere his name and that he can hold their trade.

We pass from this dark picture of misery and woe to a beautiful artificial park, called "Stephens Green," which was bought and preserved by Lord Ardillann, in order that their poor children might have a fresh-air exercise at their convenience and will.

The boys at last persuaded us girls to visit the police headquarters. At first we thought we didn't want to go, but we are glad now that we did. Here we saw many young men training for police service; many fine horses used by the police department, and many vans and ambulances. One of these ambulances was the identical one upon which O'Connell, the liberator of Ireland, was taken to prison where he was afterwards beheaded, his head being preserved in glass and his body taken to Rome.

Dublin is full of statuary; some of the statues are of Irish noblemen, whom the people loved and almost worship, while many of them are statues of kings of England, which are thrust upon them and they submit to having them put in their streets, through compulsion.

A magnificent institution is Trinity College, founded by Queen Elizabeth in 1592. Its degrees and fellowships are open to every section of the community; its library contains a quarter of a million volumes.

Phoenix Park, which is adjacent, is a beautiful plot of ground of eighteen hundred acres in its natural state, excepting the beautiful drives and the zoölogical gardens, which are very like our zoölogical gardens in Cincinnati, Lincoln Park, Chicago, or Central Park, New York. It was at this place that Lord Cavendish and Mr. Burke were murdered on the 6th of May, 1890, and their six murderers were executed on the same spot. In the gardens here are about two hundred lions and several beautiful droves of deer. As we pass in and out of the park we can see the beautiful stock yards with their macadamized floors, iron fences and a stone wall, made of variegated stones, encircling the whole yards. They certainly put to shame the stock yards of Chicago and many other western cities. We had a regular downpour of rain this forenoon which, instead of making the yards a miserable slough of mud, only washed them nice and clean. We certainly have had a fine time in Dublin. Mr. Cullen has certainly been a great friend of ours, and we would

(Continued on Page 120.)

The Q. & A. Department.

How did the titles of D. D. and LL. D. originate?

They originated in the twelfth century at the first establishment of the universities. The title LL. D. was created by Emperor Lothario II at the request of his Chancellor, a learned professor of law at the University of Bologna, and who was the first recipient of it. Later the title was borrowed by the faculty of theology, and was first conferred by the University of Paris on Peter Lombard, the celebrated scholastic theologian. The first person to receive the degree "Doctor of Medicine" was Wm. Gordenio, upon whom it was bestowed by the College of Asti in 1320.

❖

Please give a short sketch of John Davis, who discovered the Davis Strait.

His name was John Davis or Davys. He was born at Sandridge, Devonshire, England, about 1530 and was killed by Japanese pirates in the Strait of Malacca, December 27, 1605. He was a navigator and commanded expeditions in search of the Northwestern passage, on the first of which, in 1585, he discovered Davis Strait. He also discovered the Falkland Islands in 1592.

❖

Can any person apply for a patent, or must he do so through a lawyer? What is the cost of a patent?

Any person can apply in writing to the Commissioner of Patents, Washington, D. C., but it might be best to consult a lawyer. You must send with the application a written description of the invention or discovery, with an explanation of how it operates, with drawings and a model if possible. The fees are \$15.00 on filing the application and \$29.00 on securing the patent.

❖

Who wrote *The Last Days of Pompeii*?

Edward Bulwer Lytton. It is a history of Roman manners, habits and times, concluded with the great catastrophe which destroyed the city in 79.

❖

In No. 47 of the *Inglenook* I noticed the "Celtic" carries both the English and American flag. Why is this?

Simply because she sails between English and American ports, and must of necessity sail under the flags of these two nations.

❖

Is it true that Andrew Carnegie gave \$600,000 to Booker T. Washington for the Tuskegee Institute in 1903?

Yes; he gave that amount in five per cent gold bonds of the United States Steel Company.

Is it true that the frog has two hearts?

Yes. There are three of them. One to force the blood to all parts and two small pumps to keep the lymph in motion.

❖

Who is the editor of the *Farmer's Voice*?

A gentleman from Chicago by the name of Burke. The Brethren Publishing House only print the paper for him and have nothing to do with the owning or editing.

❖

What is the "franking privilege"?

The franking privilege is granted to all congressmen and a few other government officials. It is the right to send letters and books through the mails without paying postage.

❖

Is there an old age limit to the Presidential office?

No, there is no old age limit, but no person is eligible to become President who is not at least thirty-five years and who has not been fourteen years a resident within the United States.

❖

Who fired the first gun of the rebellion, the Confederates or the Unionists?

The first gun of the Civil War was fired at 4:30 A. M., Friday, April 12, 1861 on James Island, upon Fort Sumpter, by a Confederate.

❖

When did Li Hung Chang die and how old was he? Could he speak English?

He died in Peking, November 7, 1901, at the age of seventy-eight years. The *Annual Encyclopedia* for 1901 says that he knew no European language.

❖

In what Judicial Circuit of the United States is West Virginia?

The Fourth Circuit, which includes Maryland, North Carolina, South Carolina, Virginia and West Virginia.

❖

How long is the Ohio river, and what is its total drainage area?

About 1,000 miles, and has two hundred and ten thousand square miles drainage area.

❖

What is John D. Rockefeller's address?

Residence, 4 West Fifty-fourth street, New York City. Office, 26 Broadway, New York City.

MISCELLANEOUS

THE GEOGRAPHY CLASS.—Chapter XIII.

(Continued from Page 118.)

not have seen half what we have had it not been for him.

We received our first mail from home yesterday. We were very much grieved at the news that Verne Williams had his arm broken. Poor Mrs. Williams! It seems like she has had so much trouble, anyway, and now to think that Verne must be laid up for awhile. It makes us all happy to know that the subscription list to the "Mayville Times" has increased so much since we are sending our letters home. We received a nice letter from the editor of the "Inglenook" saying that the "Inglenook" family is gradually increasing. Thanks to him for the bunch of special "Inglenooks" which he sent us. We think that it was a splendid issue. We are going to start for Belfast to-morrow.

Yours respectfully,

Marie.

(To be continued.)

* * *

How are state flowers chosen, and what are their names?

They are adopted by the public school children in most instances, although in some States the legislatures or women's clubs choose them. They are as follows:

Alabama—Sunflower.
 Arkansas—Apple Blossom.
 California—Golden poppy.
 Colorado—Colorado Columbine.
 Delaware—Peach blossom.
 Idaho—Syringa.
 Indiana—Corn.
 Iowa—Wild rose.
 Kansas—Sunflower.
 Louisiana—Magnolia.
 Maine—Pine cone and tassel.
 Michigan—Apple blossom.
 Minnesota—Moccasin.
 Mississippi—Magnolia.
 Missouri—Golden rod.
 Montana—Bitter root.
 Nebraska—Golden rod.
 New York—Rose.
 North Dakota—Golden rod.
 Oklahoma Territory—Mistletoe.
 Oregon—Oregon grape.
 Rhode Island—Violet.
 Texas—Blue bonnet.
 Utah—Sego lily.
 Vermont—Red clover.
 Washington—Rhododendron.
 West Virginia—Rhododendron maximum.
 Wyoming—Gentian.

A NEW fuel has been invented by Jacob Smith, a glass worker, and it has passed a satisfactory test. Speaking of this article, a writer in the *Philadelphia Record* says: "It is said to possess more heat units per pound than either coal or wood; it can be manufactured and sold at a profit for half the cost of coal and it does not smoke except when a strong draft is used. Its success as a fuel for domestic uses was determined several weeks ago, but not until this week, when it was used beneath an engine boiler, was its value for manufacturing demonstrated. The fuel is made largely from the refuse of the pulp mills, of which there are a number about Muncie. Each mill turns out thousands of tons of refuse annually. The refuse, a combination of soda and lime, is mixed with crude oil, and the finished product resembles putty. It may be cut with a spade and thrown into a furnace or beneath a boiler. No kindling is necessary, for a match touched to it will light readily, the material burning with an intense heat. There are no clinkers, and the ashes remaining after the fire has burned down may be made into a new compound, for which Mr. Smith has another use. A bushel basketful of the fuel beneath a 6-horse power engine, at a local factory, kept steam up for eight hours. It is manufactured as a plasterer makes his mortar. The government patent office has called it the 'Smith fuel.'"

WHATEVER doing what can we suffer more, what can we suffer worse?—*Milton.*

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

RESIDENT AGENT

Michigan Land Association.

THE ITALIAN GOVERNMENT

Seeks to Place an Embargo On

Dr. Peter's Blood Vitalizer

THE AMERICAN SECRETARY OF STATE

Secures its Removal. Rev. Martinetti's Shipment Goes Through Without Further Hindrance.

Owing to the natural prejudice of physicians and druggists in many foreign countries, very strict and arbitrary regulations have been enacted covering the importation of medicine. A short time ago the Italian government, through its officials, tried to place an embargo on DR. PETER'S BLOOD VITALIZER, the well-known and popular herb-remedy. A shipment of Vitalizer to Rev. S. Martinetti, of Rivarole, Italy, was detained and delivery refused by the Italian custom officers. A pathetic letter was received from Rev. Martinetti by Dr. Fahrney, the manufacturer, telling of his great need of the medicine and urging that something be done so he could get it.

An appeal was accordingly made to the American Secretary of State at Washington, with the desired result—the shipment was delivered.

DEPARTMENT OF STATE,
Washington, August 15.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—Referring to previous correspondence, I beg to inform you that I am notified by the Charge d'Affairs *ad interim* at Rome that the shipment of medicine sent by you to the Rev. S. Martinetti, of Rivarol, Italy, has been delivered. I am, sir,

Your obedient servant,

ALVEY A. ADEE,
Acting Secretary of State.

DR. PETER'S BLOOD VITALIZER can be obtained the world over. Knowledge of its health-giving powers has reached to all countries and all climes. Every one who has used it spreads the information of its curative powers. Unlike other medicines, you cannot get it in drug stores. It is supplied to the people direct or through local agents, appointed by the sole proprietor,

DR. PETER FAHRNEY,

112-114 S. Hoyne Ave.

CHICAGO, ILL.

THE GOSPEL MESSENGER FOR MISSIONARY PURPOSES.

The General Missionary and Tract Committee have a plan to use the GOSPEL MESSENGER as a missionary in a very effective way. They propose to help pay for **10,000 SUBSCRIPTIONS** outside the Brethren Church.

THE PLAN.

The plan for securing these 10,000 names is to allow any one not a member of the Brethren Church, and not living in a family where there are members, to have **the Gospel Messenger from now until Jan. 1, 1906, for only 50 cents.** Or anyone interested in this plan of doing mission work may donate the paper to those not members and not living in families where there are members for **only 50 cents for the year.**

This 50 cents does not by any means pay the first cost of the paper, but the General Missionary Committee have so great faith in the Messenger as a missionary factor that they are willing to expend considerable money on making up the deficiency in order to have the paper read by those not members of our fraternity.

Send your order at once and the names will go on our list without delay. Cash must accompany each order. Always mention the fact that your order complies with the rules governing such subscriptions. Remember it is only 50 cents.

Address BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

THE FINAL WIND-UP

of our year's business will be Jan. 31, 1905. We are exceedingly glad to announce that our business has much more than doubled this past year and prospects point to an equally large increase the coming year. This growth is due to the confidence placed in the Company by our customers and friends and we take this opportunity of extending to one and all our sincere thanks.

Our Working Plans

(1) We have been successfully refunding freight and express charges on goods shipped from our Company for one year. No other Mail Order House has ever done this. Full explanation given in new catalog.

(2) Coöperation has proven a powerful factor in the development of our business. Over 1,000 Christian people have already joined hands in this great enterprise and have contracted for nearly \$1,000,000.00 worth of stock. Our original plan of "Scientific Coöperation" is protected by the Registry laws of the States and cannot be used by others without license.

The Mail Order Business is something that interests every household and is destined to be the greatest business of the age. The influence and assistance of over 1,000 people cannot be easily overestimated. Are you interested in the plan? Write for particulars.

Our New Year Announcements

(1) The same guarantee goes with each sale in the future as in the past. We only solicit your orders on the basis of giving absolute satisfaction.

(2) Our yearly financial statement will be printed and ready for distribution by the latter part of February. Our business is a public corporation in which thousands are interested, therefore, a statement will be mailed to anyone on request.

(3) A dividend of 10 per cent will be declared out of last year's earnings.

(4) The policy for the future will be to continue on the same safe lines and use all legitimate means for the increase and success of the business. Experience teaches us "Be sure you are right, then go ahead."

(5) During the year we will be in need of a number of additional workers. Correspondence solicited from Christian men and women proficient in stenography, or willing to learn office work. No person of questionable habits need apply.

(6) Our permanent Business Home is now being planned and we expect to have our location selected in the near future. A new, modern and commodious building will be erected so as to meet the demands of the Business.

(7) The Annual Meeting of Stockholders will be held on the last Tuesday in April. A very enthusiastic and interesting meeting is assured.

(8) Any one wishing to know anything about the business and our plan of coöperation will be given full information on request. Correspondence of any nature will be held sacred. We publish no testimonials or names of any one without written permission to do so.

(9) Our No. 64 Catalog will be ready for distribution by the first of March and will contain 872 pages filled with attractive and competitive prices. Drop a card for a copy and see for yourself. It's free.

(10) Albaugh Bros. Dover & Co. is the name of our corporation and we have no connection with any other Mail Order House. Our name has never been changed since the Corporation was organized, and we call attention to this fact to avoid confusion. Personality in a name instills confidence. The Board of Directors is composed of the following persons: H. P. Albaugh, G. S. Albaugh, O. T. Dover, M. R. Myers and Charles E. Eckerle.

(11) We desire to be of service and earnestly solicit your patronage with the strict understanding that the Golden Rule principle shall apply at all times. Give us a trial.

30,000 ACRES

IRRIGATED

Government Land

In Nevada

NOW OPEN FOR

HOMESTEAD

UNDER THE NEW

IRRIGATION LAW

The United States Government Constructs the Canals, Reservoirs and Lateral Ditches to the Land, and Maintains them for 10 Years at a cost of

ONLY \$2.50 AN ACRE

PER YEAR.

This Includes Water. After 10 Years Water and Canals Belong to Homesteader.

ONE-WAY COLONIST'S RATES

To Pacific Coast Every Day, March 1 to May 15.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River, 25 00

Proportionate rates from all points East.

Stop Off at Reno, Nevada,

And investigate the irrigated Government land. Call on Mr. H. B. Maxson, U. S. Engineer, for information.

Printed Matter FREE. Write to

GEO. L. McDONAUGH,

COLONIZATION AGENT

Union Pacific Railroad

Omaha, Neb.

...THE...

Union Pacific Railroad

In Connection With

San Pedro, Los Angeles & Salt Lake Railroad

EXPECT TO BE RUNNING THROUGH TRAINS BETWEEN CHICAGO AND LOS ANGELES VIA SALT LAKE CITY EARLY NEXT SPRING.

ONE-WAY COLONIST'S RATES

To Pacific Coast Every Day, March 1 to May 15.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River, 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

E. L. LOMAX, G. P. & T. A.,
Omaha, Nebraska.

CHEAP RATES

(To Sterling, Colorado,)

South Platte Valley

AND RETURN

First and Third Tuesday February and March

From Chicago,\$20.00
From Peoria,\$18.00
From St. Louis,\$15.00
From Missouri River,\$15.00

Proportionate rates from all points East.

Where you will see thousands of stacks of hay, thousands of fat cattle, thousands of fat sheep, thousands of acres of irrigated land that can be bought at from \$25.00 to \$45.00 per acre.

Only 24 hours' run to Chicago; only 12 hours' run to the Missouri River; only 4 hours' run to Denver. The only country that can make a good showing to the homeseeker in mid-winter. Go and see for yourself—it need only take four or five days' time and you will be well repaid by what you see. Buy your ticket over

The Union Pacific Railroad

Which is known as "The Overland Route," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line. Call on or address a postal to your nearest ticket agent, or GEO. L. McDONAUGH, Colonization Agent, Omaha, Nebr.

P DOUBLE UMPKIN
DOUBLE I
DOUBLE UMPKIN
UMPKIN PIE

WHY NOT COME TO THE
LAGUNA DE TACHE GRANT
FRESNO COUNTY, CALIFORNIA,

Where Pumpkins, Corn and common crops grow, as well as every kind of California fruit?

Come and visit the Brethren who are living here and see what they have done in the past two years.

Nearly 600 sales made since we put this land on the market and over 2,000 people now living on the grant where there were but about sixty a little over five years ago.

This does not look like a temporary boom, does it? Must be something solid behind all this. If not, five years ought to show up the weakness, but instead of weakening the Laguna and its various interests are growing stronger all the time.

If you are thinking of coming to California to make a home you cannot afford to overlook this place.

We still have plenty of good land with abundant water for irrigation. The price is from \$30.00 to \$60.00 per acre, terms, one-fourth cash, balance in eight annual payments.

COLONISTS' RATES

will again be in force March 1 to 15, 1905.

From Chicago to Laton,	\$33.00
From Mississippi River to Laton,	\$30.00
From Missouri River to Laton,	\$25.00

Make your plans to start for California March 1st and you will be in time to buy land and put in a crop.

Write us for free printed matter and local newspaper. Address

NARES & SAUNDERS, = Laton, California.

CANCER

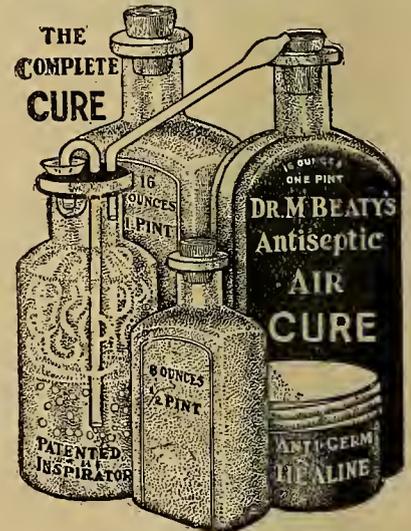

Cured without Surgery or Pain.

Our latest book which we will send free of charge tells all about Cancer and all chronic and malignant diseases, and how they can be cured at home quickly and at small expense, reference, patients cured in every State and Territory, ministers & bankers

Address, Drs. Rinehart & Co., Lock Box 20, Kokomo, Ind.

FREE

To introduce my great Antiseptic Aeriform Medication and to prove beyond doubt that it will cure consumption, bronchitis, asthma, catarrh and weak lungs, I will for a short time give *One Month's Treatment Free*, including Inspirator and all medicines complete, exactly as shown in illustration.

One Month's Treatment Free.

Do not delay, but write at once, and tell me the nature of your lung, throat or head trouble, and how long the disease has had a hold on you. The Month's Free Course is intended to prove the genuine merits of the cure, and costs nothing to afflicted ones, who enter upon a course of treatment.

I will keep in close touch with my patients during the progress of the treatment and will make no charge whatever for my professional services, consultation and all correspondence. Address Dr. Marshal Beaty, Specialist, 359 West Ninth Street, Cincinnati, Ohio.

IN ANSWERING ADVERTISEMENTS PLEASE MENTION THE INGLENOOK.

\$7.95 for this large handsome steel range

without high closet or reservoir. With large, high, roomy, warming closet and reservoir just as shown to cut, \$11.95. Reservoir is porcelain on inside, asbestos covered on outside. Heavy cast top with 6 full size cooking holes. Large roomy oven, regular 8-18 size. (We have 9 styles of steel and cast ranges with much larger and smaller ovens, sizes to suit all.) The body is made of cold rolled steel, top and all castings of best pig iron. Grate: we use improved duplex grate, burns wood or coal. Nickel band on front of main top; brackets and tea shelves on closet; band and ornament on reservoir; oven door, etc. Are highly polished, making the range an ornament to any home.

OUR TERMS

are the most liberal ever made. We will ship you any range or stove, guarantee it to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it into your own home and use it 30 full days. If you do not find it to be exactly as represented and perfectly satisfactory in every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for double our price, you can return it to us and we will pay freight both ways, so you won't be out one single cent. **CUT THIS "AD" OUT** and send it to us and we will mail you our free Stove Catalog. It explains our terms fully, tells you how to order. Don't buy a stove of any kind until you get our new large Stove Catalog for 1904 and 1905 and see our liberal terms and the lowest prices ever made.

\$2.95 for this Oak Heater

just as illustrated. Burns hard or soft coal or wood. Has drawn center grate, corrugated fire pot, cold rolled sheet steel body, heavy cast base, large cast feed door, ash pit door and ash pan, swing top, screw draft-regulator. Polished burn, nickel top ring, name plate, foot rails, etc.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Home-seeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

DON'T RUN IN DEBT.

SELECTED BY LOTTIE BOLLINGER

Don't run in debt; never mind, never mind,
If your clothes are all faded and torn;
Fix them up, make them do; 'tis better by far,
Than to have your heart weary and worn.
Who'll love you the more for the set of your hat,
The rouge, or the tie of your shoe,
The style of your vest, your boots, or cravat,
If they know you're in debt for the new?
There's no comfort, I tell you, in walking the streets
In fine clothes if you know you're in debt;
And fear that perchance you some tradesman will meet
Who'll sneer, "They're not paid for yet!"

Kind friends, let me beg of you, don't run in debt;
If the chairs and the sofa are old;
They'll fit your backs better than any new set,
Unless they are paid for, and with gold.
If the house be too small, draw the closer together,
Keep it warm with a hearty good will;
A big one, unpaid for, in all kinds of weather
Will send to your warm hearts a chill.
Kind husbands, don't run in debt any more
'Twill fill your wife's cup with sorrow,
To know that a neighbor may call at your door
With a bill you must settle to-morrow.

Oh, take my advice, it is good, it is true;
But lest some of you doubt it
I'll whisper a secret, now seeing 'tis you;
I've tried it and know all about it.
The chain of the debtor is heavy and cold,
Its links all corrosion with rust;
Gild it o'er as you will, 'tis never of gold
Then spurn it aside with disgust.

—Author Unknown.

SNAPSHOTS.

Invest money, don't merely spend it.

✦

In battles with the devil everything depends on who strikes the first lick.

✦

The sermon that most pleases you may not be the one that most helps you.

Sin is the most expensive thing on earth.

✦

It will pay better to go hungry than to feast by means of a dishonest dollar.

✦

The biggest coward you can find anywhere is the man who is afraid to do right.

✦

There seem to be more lies told for politeness' sake than truth for conscience' sake.

✦

Don't smoke a poor cigar, but remember that good ones have not yet been invented.

✦

The criminal can hide from the officer who is on his track, but no sinner can hide from God.

✦

If some people would read their Bibles more they wouldn't be so anxious to make money.

✦

Postpone your prayers for the poor until you have done something to relieve their necessities.

✦

When you begin to grow cold in religion, open your Bible and go to marking its precious promises.

✦

You can generally tell about how much religion a man has by the kind of company he keeps.

✦

Every sin has an avenger on the track of the man who commits it, and if not confessed or forsaken it will kill him.

✦

A man never needs the grace of God any more than he does when he begins to find a good deal of satisfaction in looking at himself.

✦

There is not a church on earth but that may have a revival as soon as it will comply with God's conditions—"Bring all the tithes into the storehouse."

LIFE AMONG OUR EARLY SETTLERS.

BY J. GRANT FIGLEY.

THE advance of this country was necessarily slow for the forests were gigantic. Almost the whole surface was covered with trees of the largest size. The labor and patience that have been expended in felling these trees and preparing the fields for the plow, the reaper and mower, will never be appreciated except by those who have performed the labor, or seen its slow progress. Years of this toil have been already expended, and the work is far from being completed.

The first habitations of the people were log cabins; not such a log cabin as has stood on the Centennial grounds where the roof was of pine shingles nailed on, the gutter of pine boards, the door neatly made, and the windows filled with sash full of glass. The cabins of our pioneers were made of round logs, cut only at the corners, their roofs of clapboards as they were split from the trees, held to their places by poles built into the end logs. The opening for doors and windows were not closed except at night, and then by a quilt or skin.

The Fireplace

was built of logs and the chimney of sticks, all lined with clay, the whole chinked, that is, the cracks were filled in with wood and daubed with clay. Such a house was built by the neighbors gathering together and was often finished in a day. The floors were of puncheons split from the trees. When all was done a puncheon scouring took place. The young people and old gathered at the house for a dance, if a fiddle could be procured, and if not, then the men took turns in whistling the music, and with more relish than a modern ball they danced all night in the new cabin.

A wedding engaged then the attention of the whole neighborhood, and the frolic was anticipated by old and young with eager anticipation. In the morning the groom and his attendants started from his father's house to reach the bride's before noon, for the wedding, by the inexorable law of fashion, must take place before dinner. There were not many tailors in those days.

The men dressed much in shoepacks, moccasins and

Leather Breeches,

leggings, linsey-woolsey or buckskin hunting shirts, all home-made. The women were dressed in linsey petticoats, and linsey or linen gowns, coarse shoes, stockings, handkerchiefs and buckskin gloves, if any. If there was jewelry it was the relic of the old times. The horses, for all came on horseback, were caparisoned with saddles, bridles or halters, pack saddles, with blankets thrown over them, and a rope or a string for a girth or reins as often as leather. They formed a procession as well as they could along the

narrow roads. Sometimes an ambuscade of mischievous young men was formed who fired off their guns and frightened the horses, causing the girls to emit loud shrieks. Sometimes "a race for the bottle" took place by two or more of the young men racing over the rough road to the bride's house, the victor to receive a bottle of whiskey, which he bore back in triumph and passed it along the procession for each one to take a drink in turn. Then came the arrival at the bride's house, the ceremony, the dinner and the dance, all conducted with the greatest fun and frolic till morning. Sometimes those who were not invited would revenge themselves by cutting off the mane, foretop and tails of the horses of the wedding party.

The Log-Rolling

harvesting and husking-bees for the men, and the quilting and apple-butter making, etc., for the women, furnished frequent occasions for social intercourse and gave ample opportunity for any neighborhood to know and appreciate the good and bad qualities of each other.

The rifle shooting was a pastime which men loved, as it gave an opportunity of testing their skill with the necessary weapons of defense, and means often of subsistence.

Wild game of all kinds was ever plenty. Pioneers out of meat could quite often stand on the doorstep and shoot enough squirrels, turkeys, etc., to last all day, and even sometimes shoot a deer or bear in that way. Some of the early settlers in warm weather had a blanket or quilt hung up for a door, and often prowling wolves would poke their heads past the hanging to see what was inside. If there was a light in the room or a fire in the fire place, the wolf would dodge out, otherwise he might come in and perhaps cause some trouble. Windows were scarce, in fact for a long time all the windows used were large sheets of greased paper fastened to the wall over an opening, to let in light. Some houses had no windows at all. A cow could have fallen through their large chimneys. Beds were often made with

Only One Leg.

Now don't laugh, I am giving nothing but the plain old-fashioned truth. A forked stick cut the proper height for a bed was inserted in a hole bored in a corner of the room probably six or seven feet from one side and three or four from the other. Then a stout pole was pushed into the crack between two logs and the other end across the fork on the stick. The same way another stick was placed for the foot of the bed. Then clapboards, hand split, were fitted into the crack along the side of the house and pinned to the pole with wooden pins driven into holes bored through the board into the pole. The poles were fastened to the forked stick with bark withes or leather strings. And

there was your bed. Tables were made by pinning slabs together with wooden pins, like the modern extension table tops join, or by pinning a cleat on the under side. The legs were made of poles driven in holes bored in the corners of the table top. Chairs were made of puncheon slabs cut in squares with legs put in the same as in the tables; some were three-legged.

Girls were taught how to spin and

Weave Flax and Wool,

to make clothing, and all about every branch of housework, and often girls took delight in seeing how expert they could be in turning pancakes baked on a fire place, not in iron skillets, but on griddles hung on a hook over the fire. A broadbladed knife would be slid under the cake; a dextrous twist of the wrist would turn the cake completely over with the raw side next the griddle; some even succeeding in making a double turn of the cake. These gifts were usually shown off the very best before company or chance lodgers passing through the country. But the girl who unluckily flipped her cake into the fire in turning it, or broke it, or scorched it, was unmercifully "guyed" by the others.

Included under this head will be considered other phases of matters connected with farm life. In the first place, there are probably many who do not know that in the "good old days" of wild-cat banks and

"Shin-Plaster" Currency,

there was no settled post-office system, and as there were no postage stamps used in the United States before 1847, postage was either paid by the sender or collected from the receiver. Envelopes came into use in 1830, but for a long time after that letters were forwarded without envelopes, being interlapped and fastened with red sealing wax.

Steel pens came into use in 1830 and for years before and after that people laboriously scrawled their letters and other documents with pens made from quills or large feathers, yanked from the bodies of geese. I have made quill pens that did fair work, but I do not fancy them. Ink was made of the boiled down juice of walnuts or oak bark set with a liberal supply of copperas. Paper was made of a very stout and durable make and one sheet fifty years ago was worth more than a whole handful of our modern paper.

Matches for striking fire came into use in 1829, and were a Godsend to the people, though they were a great deal more expensive than now. People were in the habit of making fire with flint and steel; many carried a little box enclosing a flint, a piece of steel, and

A Piece of Punk,

which is a fair quality of rotten wood, to light their fires. Some even rubbed two dry sticks together

and produced fire. When people were without these things they had to go to a neighbor after fire when their fire would go out.

Kerosene oil came into use for illuminating purposes in 1826 though for quite a while after that tallow candles as before were used for lighting the houses. The candles were made in moulds holding from six to a dozen candles. Cotton wicks were doubled and inserted through the mould and fastened at each end by small sticks or rods. The melted tallow was then poured in and left to cool. Some kinds of lights used were dishes or tin or pewter vessels holding a quantity of tallow or lard in which a piece of cloth was placed allowing one end to rest on the edge of the vessel, which was the end lit.

Farmers cut their grain with sickles for a long time, then scythes and grain cradles came into use, then the mower and reaper and now the grandfather can lean on the fence and watch his grandson with the latest improved binder which cuts and binds the grain and drops off a whole shock at a time for the help to shock up. In those good old days farmers threshed out their grain by trampling their yoked oxen over it until the grain was all tramped out. Then flails came into use and after seeing how many times they could bang their heads off with these flails, they became so expert that they could bring the business end of a flail within

One-Sixteenth of an Inch

of their respective noses nine times out of a possible ten, without any stars being projected into the firmament. After a while the first threshing machines called "crow picks" came into use. The grain, chaff and straw all come out together and had to be pitch-forked into the air and thus the grain was gradually cleaned. Now the self-feeding, self-stacking thresher does the work of from six to ten men. From loading and unloading hay by hand, some persons now have hayloader and hayrakes and mow the hay away with the old-fashioned swing and pulley hay fork or the more improved hay harpoons. When the farmer wants to communicate with some one in A or B or some other place, he telephones or runs over on a bicycle, whereas not so very many years ago he wrote a letter that reached its destination in a week or so, and had to pay a shilling postage, or drove his team of oxen over a muddy

Corduroy Road,

or went horseback and took a general farewell of his family and friends before starting out on his laborious trip. And though the railroads were only for the rich and fortunate, many probably never thinking that they would likely see a steam car in their neighborhood, much less have their threshing done by steam power, in the probably not far distant future the electric railroad may connect him more and more with the busy world about him.

Farmers plowed their land with wooden plows drawn by oxen, plodding methodically along, finally to give way to the self-adjusting riding plow drawn by a fine team of horses caparisoned in up-to-date harness. Heavy, lumbering wagons were used in transportation and riding often going many miles before reaching market. To-day the bicycle and the automobile, the pink-wheeled barouche, surrey and phaeton take the lead on getting there with neatness and dispatch.

When farmers were out of money, which was the rule and not the exception, they paid their debts with deer hides, coon skins, bear hides, etc., often paying for their farms and paying their taxes in that way.

Corn Bread and Pork

fattened on mast (fruit of forest trees, as acorns; etc.) was a very general diet. Farmers generally raised flax or sheep which gave them the material for their clothes, generally woven by the wives and daughters, and their shoes were made from skins tanned and prepared from the first to the last by the sturdy farmers and their sons. And who shall say that these old pioneers, makers of their own clothes and fortunes, were not as happy or perhaps happier than are their descendants? Who knows?

I am afraid that the common-schooling of our early settlers was rather meager, and was confined mostly to a thorough knowledge of the "three Rs,"—

Reading, 'Riting and 'Rithmetic.

The teachers of those days were sometimes kind and good men and women, but too often they were people who taught school because disease or physical disability of some kind prevented them from doing anything else. They were glad to get their board and clothes if nothing more, by making the rounds of the district with the patrons in turn, and like Ichabod Crane, were often quite welcome. Their book knowledge would often easily shame a ten-year-old boy of this progressive age, but the teacher generally made up his deficiency in education in his ability to thrash the pupils under his care, on the least provocation.

Some of those early teachers must have taken lessons of the Indians, for I have heard tell of the punishment inflicted by them that would have done credit to an Indian. Such teachers usually carried a stout cane or long whip called a "gad," which when vigorously used would cover a pupil with black and blue marks and leave them sore and lame for days; and indeed,

Cripples for Life

were sometimes caused by these educational Sullivans, and sometimes the punishment would be so cruel as to cause death, or what would be almost as bad, life-long debility from the shock received by the nervous system by prolonged punishment of an aggravating if not really severe corporal nature. One mode of punish-

ment was to gather the pupil's fingers on one hand closely together and slap and pound the ends with a heavy rule or ferule, which caused great pain as well as crushing the nails and often deforming the fingers. Another way was to violently slap the palm of the hand with a heavy ferule, while the fingers were tightly bent backward. The pain was intense, and the hand would be bruised and swollen for weeks, and sometimes the hand would be permanently lamed or crippled. And the worst of it was, that little children were as liable to severe punishment for trifles as older ones were for other offenses.

Teachers in those days were not required to pass an examination or have a certificate in order to teach, and did the best they could according to what they knew. In fact, in isolated instances, the teacher had to depend upon himself in the preparation of lessons for class use, if no books were at hand. Alphabets were printed and written with the proverbial quill pen made by the teacher, with ink made of the juices of roots and barks, on paper gotten no one knows where or how, and pasted on

Shingles and Slabs

made like unto paddles which could be studied from both sides at once, and in case of need, was used upon the person of the refractory pupil. For reading, the New Testament was much used, even after reading-books were brought into use.

I have in my library a United States history, by C. B. Taylor, bound in leather, and issued in 1830; also Daniel Adams' school arithmetic; also James H. Connolly's arithmetic, "the Ohio Accomptant," published at Pittsburg, Pa., in 1829. These are fine samples of the early school books. I also take pleasure occasionally, in examining the copy-and-sum book of my uncle, Jason Figley, made in the winter of 1835-36, when he was a lad of thirteen, in Columbiana county, Ohio; also the sum-book of my grandfather, Simon Figley, made in the winter of 1808-9, in Columbiana county, Ohio, when he was fourteen years old.

The school-houses our early settlers used were at first rooms in the private house of some patron. I know one school-teacher who was, when an infant, rocked in a

Sugar-Water Trough

used for a cradle, while his mother taught the neighborhood children. School-houses were built without nails, glass, or blackboards. Wooden pins fastened the benches and desks together, greased paper was used for windows, and enormous fire-places took the place of stoves. Of course the hinges were of wood, and the door was fastened by the good old latch-string. Backs to the seats were not always to be had, and the seats and other furniture were made of split slabs and puncheons, and naturally not free from splinters. In the spring of 1889 I chanced upon one of these school-

houses yet in use, in Michigan, but alas! there were glass windows, a blackboard, a stove and an organ added to the fixtures. The fireplace was boarded about on three sides and overhead, and held the organ, and the stove-pipe entered the chimney above and near the ceiling.

The reading matter of the old pioneer days was limited very naturally, yet, even if newspapers were scarce, those I have seen compare very favorably indeed with those of our own day. I have twenty-two copies of "The Historical Family Library," published by David Christy, at Cadiz, Ohio, from 1834 to 1836, a 16-page sheet, about the size of the *Gospel Messenger*, and which contained such solid reading matter as Hallam's "Europe in the Middle Ages," Chambers' "Rebellion in Scotland," etc. I presume the usual family book list was about the same as the set that was handed down to me; viz: The Bible (the small Bible I have was printed somewhere about 1652-82,) "The Life of God in the Soul of Man," (my copy was printed in 1813), Bunyan's works, Doddridge's "Rise and Progress of Religion in the Soul," Mason's "Self-Knowledge," and "A Pastor's Gift to the Awakened Sinner." Of one thing we may be assured, there was no

Blood-and-Thunder,

sensational, yellow-backed literature to poison the minds and morals of the rising generation, to say nothing of their elders.

Church-going people in the early days depended to a great extent upon the traveling or wandering preachers, quite often holding services in private houses, but more often schoolhouses, and often in the woods. It seems to me that Methodist and Brethren (they were Dunkards in those days) preachers predominated in some localities, though other denominations, more generally Baptists, came next. My mother says that when she was a child more than fifty years ago, the Brethren preachers were about the only kind she ever heard, and that love feasts were held in private houses by the faithful few.

Sunday schools were practically unknown and whenever held, were conducted much on the same plan as they now are, with the natural exceptions of stated lessons not being given, no papers or lesson-leaves were to be had, the Bible and hymn book (usually Watts') being the only books used. I am afraid that the religious services were not always interesting to the little children, who were obliged

To Sit for Hours,

sometimes, and listen to long sermons and exhortations too profound for their comprehension, sometimes in cold or badly ventilated rooms, and without the proper appreciation by their elders of their childish wants and requirements.

The children of to-day ought to be doubly grateful

that the public schools of our fair land are so carefully conducted, and every new method of instruction tested for their especial benefit. They ought also to be doubly grateful for the church and Sunday-school privileges they possess, so many hundred per cent better than their grandparents had. I am quite sure if they realized the pleasure their ancestors derived from church services, few and far between as they often were, and the inconveniences they often underwent in order to have them, even though the little children were not always properly looked after in that respect, they would gladly do all in their power to help along the good work, and not carelessly or thoughtlessly let precious moments pass wherein they might be sowing good seed IN HIS NAME.

Bryan, Ohio.

A WOMAN ENGINEER.

THE town of Scituate, Mass., has a full-fledged woman engineer. She is Mrs. J. W. Truworthy, daughter of John Smith, a retired sea Captain of Scituate. Her husband is a marine engineer employed by the Long Island Railroad Company.

"I never had a bit of trouble and they all used me first rate," said Mrs. Truworthy when asked how men regarded her invasion in that field of labor.

Mrs. Truworthy has an engineer's license and has traveled considerably with her husband. At times her knowledge of his work has made her very useful. She has had many adventures which would not have been relished by other women.

"I was always interested in machinery," said Mrs. Truworthy, "but should not have learned so much about it had it not been for my husband. We were living in Island Falls, Maine, and my husband was working on a little craft on Silver Lake. Only one other man was helping him and they found I could be of assistance to them occasionally. I learned all about the machinery very readily and soon could run the steamer.

"Eight years ago I applied for and received an engineer's license to run a boat on the fresh waters in the state of Maine. A short time afterward my husband secured a place as engineer of the steamer, Francis J. Murphy, and I was aboard that craft for nine months.

"The men treated me fairly. They did not swear very much and the Captain said that was a good thing for them. I used to do mending for the men and they appreciated that. If any treat was ever brought aboard the crew was sure to see to it that I had my share."

AN oat straw will suction up a sherry cobbler in four minutes and a half by the watch.—*Josh Billings.*

IMPORTANT ATTRIBUTES IN THE ACQUIREMENT OF DISTINCTION.

BY ETHA A. EVANS.

SOME may become great, in one sense of the word, appearing as brilliant meteors with the indications of being greatness personified but like all aerolites they suddenly lose their brilliancy and their true characters are disclosed. "All the clamor over the laurels the unworthy wear is needless."

Enduring greatness requires a backing of many things. I think that the cardinal requisites of greatness are a definite aim in life, a pure heart, honesty, sincerity, unselfishness, moral courage and self-control.

Without a definite aim one can accomplish naught. Once having aimed at a thing then the quality of stick-to-it-ive-ness should be cultivated and brought into play. One cannot hope to succeed if one's heart becomes faint at every obstacle that is encountered along the way. Only by bravely surmounting the petty trials and temptations can one become efficient to meet the greater difficulties that frequently arise.

Christ in his sermon on the Mount said: "Blessed are the pure in heart, for they shall see God." Matt. 5:8. A pure heart is a necessity and is the well-spring from which all noble aspirations arise. If the heart is impure the mind becomes contaminated and naturally inclined to wicked and abhorrent thoughts. In this passage from the Bible do we find proof of this. "Unto the pure are all things pure, but unto them that are defiled and unbelieving is nothing pure; but even their mind and conscience is defiled." Titus 1:15. "One's deeds portray their character in the strongest colors." If one's heart is filled with wicked impulses then one's deeds are and continue evil and one is a curse to mankind.

Then honesty is always the safest and best policy to pursue. It is best to be sincere also for people are not so blind as some think and insincerity deceives no one. It does not take long to tell the spurious from the genuine coin. Tenderness is a sign of a good heart and does not denote weakness as some would have it appear. How quickly any one wins one's confidence by their tender manner and unselfish deeds. Unselfishness is the noblest quality of the human mind and stands preëminent above all other virtues.

Then again one can not be great in the true sense of the word unless they depend on themselves and not lean on someone else for support. Self-reliance is the secret of all individual growth and vigor, the magic key which unlocks the door of every profession or calling in life. Only ceaseless activity can promote progress and maturity. Food easily acquired means food without that accompaniment of discipline which

is infinitely more valuable than the food itself. "An idle life" says Goethe "is death anticipated." "The world owes me a living" is the saying common to the shiftless and indolent. The loafer who never does a useful thing in his life belongs to this class. God never intended that strong independent beings should be reared by clinging to others like the ivy to the oak.

One of the best victories man can win is the victory he gains over himself. One must learn to control one's proneness to evil and those propensities which, if uncurbed, would eliminate all the noble traits with which one may be endowed. I do not believe there is a single soul, it matters not how degraded, how depraved their morals may be, but what has a spark of good in them. Perhaps their hearts may be like a garden overrun with weeds, but tucked away in some unexpected place is a flower born to blush unseen.

HOW ANIMALS MINISTER TO OUR COMFORT.

BY H. M. BARWICK.

A KANSAS blizzard brings our woolen clothes into use and a little meditation as we proceed brings this article into its present form. The wool industry is one of the first magnitude to-day. How we could get along without this comfortable commodity I do not know and yet it is very seldom that we refer these common everyday luxuries back to their origin. How the wild goat and sheep have been developed from the wild, short-furred animal of the mountains up to their present domestic state with such abundant fleeces of the finest wool annually is well known to him who chooses to know. Fortunes are made with these animals every year both from their wool and their flesh as food. After wool comes the fine silk of the silk worm. The home of this industry is in the Orient. Again, millions are invested in this little cocoon which yields much satisfaction to our bodily needs. In addition to the wool and silk I want to speak of the more important condition that exists in northern countries. In the temperate and tropical countries substitutes could be found for wool and silk but not so in the far north. Here the fur clothing which nature has given to the animals is absolutely necessary for man's life. Nothing else can take its place. No one but he, who has rolled up in a fur coat, knows of the extreme warming qualities which it possesses over any other texture. It is also in the north countries that nature has placed the fur bearing animals so that man's needs may be fully met. Southern people little think of the immensity of the fur trade in the world. Statistics are not available but just the seal trade off the coast of Alaska pays for that country several times over in each decade.

The skin of an extra good otter often sells for

\$1,000, while that of the silver fox of Canada sells for \$150. The broad prairies of Northwest Canada abound in fur bearing animals but these will soon become extinct. This does not mean that the fur trade will then fail for the many rivers and numerous inland lakes will still continue to be the home of millions of the smaller fur bearing animals that yield rich returns to the trapper. Besides these are the unexplored regions between Lake Superior and Hudson Bay where the native red man lives as he did before the white man knew of this country, and where wild game of many varieties propagate their species in great abundance.

All through this north country, the Hudson Bay Co., organized in 1670, still flourishes in its monopoly of the fur trade with the natives. It is said that the poor Indian gets but a meager sum for all his hazard and exposures to hunger and cold in trapping in these bleak regions. As a rule he exchanges his furs, whether few or many, for some trinket that strikes his fancy, and then before he gathers another winter crop he runs a bill at the station store of the Hudson Bay Co. who takes a claim on his next year's work so that his furs are bartered away before he has them and he is always bankrupt and at the mercy of his superiors in business.

Waterproof clothes are also made from the skins and intestines of some animals, so that with the warmth their furs afford us, the food their flesh gives us, the labor their stout bodies perform for us let us again think kindly of our animal friends for such they are.

We have said nothing of the influence that animals have upon our moral nature. Touching incidents prove the affection which some trained animals have for a kind master; then the beautiful birds and their sweet songs enrich our æsthetic nature every day. Some animals even teach men and women some good lessons on purity of life and parental deportment.

WILL THE GREAT SALT LAKE SOON DISAPPEAR?

THAT the Great Salt Lake is certain in the near future to disappear from the map has long been the belief of scientists. That its disappearance will come much sooner than has been expected, and possibly within a quarter of a century, is the conclusion that has been reached by certain investigators who have recently made careful studies of its fluctuations.

In an article in a recent number of the *Scientific American* an account is given of some of these investigations. One calculation is made from an examination of the surface level of the lake, which for thirty years has been steadily lowering, with only a

single period of rising tendency. In the last sixteen years the net fall has been eleven and a half feet, and in the last three years it has been three feet. Inasmuch as the rate of fall is increasing, and as the deepest part of the lake has only forty feet of water, this form of calculation indicates that the lake will be dry within forty years at the outside.

Another calculation is based on the cubic contents of the lake at the present time as compared with the contents in 1886, when adequate measurements on which to base an estimate were made. By this method the disappearance of the lake is scheduled to occur within twenty-five years.

Three theories have been suggested to account for this tendency. One is evaporation, another irrigation, and the third that there exists a subterranean outlet. The last mentioned theory is little better than a guess, but the first theory is unquestionably true to a certain extent, though whether it will account for the rapidity with which the level has been lowered in recent years is doubtful. As for irrigation more evidence can be produced to show its effects in decreasing the water supply of the lake. Irrigation was commenced by Brigham Young in the forties, but it was not till 1880 that it was adopted on a large scale, and it is within the period since then that the lowering of the level has been most swift.

There are indications on the mountain sides, and also on the nine mountainous islands in the lake, that the depth of the water was once 600 feet greater than at present. We are therefore witnessing now the speedy completion of a physical change that has been in progress for many centuries. Most great physical transformations of the surface of the globe move so slowly that they will give evidence of themselves on the map only after many generations. This one bids fair to make a material difference in the geographies which our children's children will study.

TRAINS WEIGHED IN MOTION.

RAILWAY men in Great Britain have a device for weighing a freight train in motion which will save much time in shunting. It is the invention of W. and T. Avery, of Birmingham. The train is drawn over the weighbridge at the rate of about three miles an hour, and as each car passes over the weight is instantly recorded on a dial or clock face with accuracy. This result is attained by cutting away a portion of the permanent way at each end of the weighing platform and substituting short lengths of rail, which rest at one end on pedestals upon the permanent way and at the other upon the girders of the weighbridge. This gradually transmits the load to the levers of the weighbridge. The device allows a great many more trains to be dealt with a day.

THE TEACHERS OUTSIDE OF THE SUNDAY SCHOOL CLASS.

BY LOTTIE M. BOLLINGER.

As the Sunday school is the only place where hundreds, yes, thousands of poor and ignorant children hear the Bible read, or are taught how to become joint-heirs with Christ, and inherit eternal life, it may properly be called the Bible school.

It is through this Bible school that we receive most of our members into the church; hence the church may be called the granary of the soul, and the Bible school the harvest field from which she gathers the grain.

Now, let us notice the size of this field; may we measure it in rods and acres; class or tribes? I hear all say, "No," and yet that is what too many of us are doing: but we should say that it includes the entire world, and every race, every tongue, kings on the throne, beggars on the highway, rich and poor, sick and afflicted, those near by and far off, constitute the

Grain to be Gathered;

and until we have drawn all or nearly all of these into our Bible schools for instruction, we have not fulfilled the Savior's wish or command as given to his disciples, "Go ye therefore, and teach all nations," etc., (Matt. 28: 19), and we have set at naught the ideas expressed in Rom. 14: 11, and Philpp. 2: 10, 11.

And when are we to gather this grain? Now is the time (2 Cor. 6: 2), and unless we avail ourselves of the opportunity given us, we will be forever too late for we know not what a day will bring forth, or how soon God will call us to come home; so let us all be up and doing, for we may all become reapers of this grain if we will and Christ would wish it to be so.

He evidently realized a

Scarcity of Laborers

in his Father's vineyard for in instructing the seventy chosen disciples which he sent out two by two, he says, "The harvest truly is great, but the labourers are few: pray ye therefore the Lord of the harvest, that he would send forth labourers unto his harvest" (Luke 10: 2). So if we are truly his disciples or reapers, if from any cause we cannot do more, we can at least do this much for the cause of Christ.

Perhaps the reason for this instruction in the time of Christ was the same as it is to-day; a lack of consistency on the part of many labourers; for while we cannot shift the responsibility of our life upon another's shoulders (Rom. 14: 12), we are responsible for the influence which our lives have over others; for we are admonished to put no

Stumbling-block

in another's way (Rom. 14: 13), but unless we are very careful as teachers that is what we will do.

It is not only the ones who are active workers in the Sunday schools who are teachers, but in a sense all are teachers, especially those who have the means for their own instruction at their command Gal. 6: 6), teachers, and reapers either in the vineyard of Christ, or the vineyard of the devil; because we cannot serve two masters. (Matt. 6: 24.) Which is it to be?

Are we going to waste the few years which God has given us, in selfish and indulgent living, living only for ourselves and our own selfish pleasures; pleasures designed and originated by the devil; or are we going to resolve to tread

The Rugged Path

which Christ trod before us in order to gain a crown of everlasting life, a life of joy, peace and happiness?

This question each one of us should consider carefully and prayerfully and answer for ourselves.

Of the teachers outside of the Sunday-school class there are two classes, viz: Christian professors and nonprofessors. The first class may be subdivided into

Four Classes.

First, ministers of the Gospel. To them we all more or less look for example, guidance and instruction, hence they should study to prepare themselves for such by constantly studying and searching the Scriptures; by praying for strength and power to do right, and only right in their everyday intercourse with their fellowmen; for no matter how eloquent or powerful their discourse is, if their life does not correspond to it, their work has been all for naught, for sooner or later they are caught in their hypocrisy and oftentimes have done more harm than good.

Here is a little incident which came under my own personal observation, which proves this to be so.

When about eighteen years of age, I went to teach in a district in which there were a good many young people who were constant attendants at the little country church at that place, where there was a young minister whom everybody liked and in fact

He Was Gentlemanly,

polished and educated and his discourses were always plain and in the right direction. Nearly all of the young people were on the point of joining the church, when one evening his sermon was on dancing, revelries, gambling, etc., and he dwelt very strongly upon the great sin it was to indulge in any of those things; and although at that place these things were carried on to quite an extent, most of the young people went home humbled and subdued, and feeling that he was right and they wrong. But during the following week, one evening several of the young men went to a small village about three miles away to attend a political speech and going into the saloon they

Found Their Minister

playing pool, and he had even gone so far as to stake money on the result of the game. Of course this soon spread among the church members and inhabitants of the district, but the members could do nothing for he was hired for a given length of time, and having no church government to deal with such cases, could not remove him, so he was allowed to stay, but what was the effect upon the young people? Some stopped attending church altogether, those who already belonged backslid, while those that did attend went to visit or to make disturbance, and to my knowledge, to-day only three or four out of fifteen or twenty belong to any church; so you see in this instance he did more harm than good, and that is nearly always the case.

The minister who can preach an eloquent sermon upon temperance, and yet dare not go to the polls and vote against the liquor traffic, or who is constantly seen in the saloon,

Wastes His Time

and talent. He must be honest, truthful and charitable in all his dealings; living as near as he can to what he preaches, or else he is the devil's reaper and not Christ's.

Second, officers of the church, such as bishops, deacons and elders. The life of these officers is plainly outlined in 1 Tim. 3:2-13; 1 Peter 5:2, 3 and Titus 1:5-12, and unless they follow this life humbly and prayerfully with meekness in the fear of the Lord in their own homes there will be dissensions there and this unquietness will be communicated to the outside world, (even if he walk a blameless life elsewhere), his work will have lost much of its good.

Third, The teachers of the Sunday-school class themselves: No matter how regular and punctual in attendance; how well they have studied their lesson; or how well they can teach it; if they are not punctual in keeping their business appointments or promises; honest in all their dealings; truthful, charitable and hospitable to all, and by constant prayer keeping themselves from vice and wrongdoing as free as they can, putting their

Heart and Soul

into their work, in fact, they should live up to what they want others to follow.

Fourth, The laymembers of the church: They are teachers also, for as they look to the ministers and officers of the church for instruction and guidance, so the outsiders or nonprofessors look to them for such or for criticism.

To them I would say, Let us be above criticism in our daily life, if possible, and live a life such as Paul admonished Timothy to lead when he said, "Study to shew thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word

of truth," (2 Tim. 2:15,) and also in Paul's epistle to the Thessalonians, he says, "And that ye study to be quiet, and to do your own business, and to work with your hands as we commanded you; that ye may walk honestly toward them that are without, and that ye may have lack of nothing. (1 Thess. 4:11, 12.)

Of the second class of teachers or nonprofessors I shall direct my remarks principally to the parents or guardians.

Parents, while the Christians and Sunday-school teachers may do much towards saving

Your Child's Soul,

that does not lessen your responsibility in the matter at all, for your child is the greatest blessing which God can bestow upon you, and upon you lies the duty to train it, or in other words you are its true teacher for Prov. 22:6 says, "Train up a child in the way he should go: and when he is old, he will not depart from it," and again Eph. 6:4 says, "And, ye fathers, provoke not your children to wrath, but bring them up in the nurture and admonition of the Lord," and how can you do this unless you set them the proper example?

Can you expect them to grow up into honest, upright, God-fearing men and women if they daily hear God's name taken in vain; see scenes of quarreling, cruelty, dishonesty, unkindness and disrespect to one another and to God in your own home; or if you allow yourselves to separate and figure in the divorce court, allowing the children to drift whither they will, among evil associates, among more evil influences, perhaps, than you gave them in your own unpeaceful home? Can you expect them to follow in other than your own footsteps which lead to degradation and crime, and unless you repent and

Retrace Your Steps,

to everlasting punishment?

Mothers, as upon you falls most of the care of your child during its infancy, so upon you falls the duty of forming its first impressions which are more easily made at this time, oftentimes so strongly that Time cannot efface them; you should therefore be very careful, and never allow your child to hear you use disrespectful, unclean or profane language; never promise anything that you cannot do; or tell anything that is not strictly true; never allow it to talk disrespectful to you, or about its father or anyone else before you; at all times enforce obedience and at as early an age as possible teach it to thank God for his mercy and goodness, and to tell him its troubles; also take them to church and Sunday school and not send them alone. This is done by many and they think they have fulfilled their duty and never think they, themselves, are to blame if the child goes wrong but

Say it is Luck

or fate, or else shift the blame upon the shoul-

ders of someone else, the poor Sunday-school teacher perhaps, who, if conscientious, knowing too well what rests with her, is overburdened with the responsibility, when she sees the little she can accomplish, because of the disadvantage at which she is compelled to work, when she has the child only one or two hours out of one hundred and sixty-eight, once or twice a month, and sometimes not even that much; and then she has to counteract your influence, if wrong, without casting reflections upon you to your child. Did you ever think of this and of what an injustice it really is?

Now, fathers, no matter how good a wife you may have, or how good a mother to your children she cannot train them alone; she must have your coöperation and help and in no way can you do this better than by being obedient to your Father in heaven; doing by the loved ones entrusted to your care as he would have you do; by being a fit example for them to copy; by taking them to divine worship as often as possible; by erecting a family altar, and living such lives as to be in accordance with the divine teaching. Then your children cannot go very far wrong, or if they do, they will generally return to their first-teaching, and you have the consciousness of knowing that you did your duty.

If you do not, remember that they will be punished accordingly, for the Father intended you for their instructor from the beginning; for he says that the iniquity of the fathers is visited upon the children even unto the third and fourth generation of them that hate him, and shewing mercy unto thousands that keep his commandments. (Deut. 5:9-10.)

Once more, I beseech you to realize your responsibility in this matter and so teach your child that when he is old enough to leave your care and guidance, and launch out into the journey of life, he will be fit to cope with its cares and responsibilities, trials and temptations, and not

Like a Ship

at sea, which has lost its rudder, drifting about without any aims or ideals except mere worldly pleasures; without any compass to guide his feet except his own will, and without any hope beyond this life.

Now, all are teachers as our lives may influence others, for the Bible says that our lives are like a vapor which appears for a time and then vanishes away, but vapor leaves something behind it. Let us see what!

Vapor as we all know is moisture, usually clouds in the higher region of the atmosphere, but as all of the air contains more or less moisture so we have vapor floating all around us. When this vapor cools slightly, it condenses and covers everything with dew, which is beneficial especially if we have no rain for sometime, but if this dew becomes frozen, it is then frost which often destroys vegetation to such

an extent as often to produce nearly a famine of some things, in some parts of the country.

If it is chilled below the dew point it forms fog which in some places is so dense as to cause

Great Loss of Life,

especially is this so along the northern shores of North America and the banks of Newfoundland where many ships are wrecked.

If it becomes cooled to any great extent it becomes too heavy to float, so forms into drops called rain, which is sometimes beneficial and sometimes so violent as to cause great destruction of life and property. The same with hail and snow, other forms of vapor, they are sometimes beneficial and sometimes destructive, but there is one fact which all of us may notice; as long as the vapor is at an even temperature, up high or not too cool it is beneficial, but just as soon as it becomes disturbed or cools too much it is destructive, so it is with our lives if we aim to lift ourselves to God, and do not allow ourselves to become cooled toward Christ by indulging in the sinful pleasures of this world, our lives will be beneficial to our fellowmen. We sometimes may not see the direct result of this influence and may not see it even during our lifetime, but if we live a life of purity and goodness, it will leave its footprints somewhere.

So fellow Christian workers, let us take the Bible for our leader, that is, Christ our great teacher, and not look to frail humanity for our guide, but let us endeavor to be sincere and consistent in the life we have chosen, and although the Sunday school is the harvest field for our work and we need more laborers, let us aim to lead such lives as will lead the parents and older ones into this field and then leave the result with God.

Vestaburg, Mich.

OLD BILL.

BY MAUD HAWKINS.

A FARMER was the owner of an old horse which was noted for his peaceful habits. He was always just where he was wanted, and never showed any signs of spitefulness or ill-temper. His master generally dealt kindly with him, and provided well for him, but on one occasion, during a busy season of farming, he neglected to provide him with a new set of shoes when it was necessary that he should do so. Consequently his feet became tender and somewhat grown out beyond the remnants of the old shoes. Old Bill did not like this neglect very well, and did not try to conceal his feelings, but showed the state of his mind as plainly as a horse could.

He evidently thought that the time had come when endurance had ceased to be a virtue. He was not the

same honest old plodder as heretofore. The final crisis came while working in the cornfield. He acted very contrary, as his master thought. He pranced, kicked, tried to turn and do everything contrary to horse etiquette. His owner prevailed on him but to no effect, and the old farmer could not imagine what had come over the old trusty horse. Finally when the noon hour came, he was unhitched from the plow and turned loose in the road to find his own way to the stables, as had been the custom for fifteen years, and the horse had never been known to misuse the trust.

But on this occasion he raised his ears and tail and with a determined look in his eyes, trotted down the road in the opposite direction, as fast as his crippled legs could carry him. Nor did he halt till he had reached the blacksmith shop, half a mile away, which he entered. And where his master, who had followed, found him standing quietly awaiting his turn.

He gave the blacksmith permission to shoe him, after which he returned home and was the same faithful old plodder ever after, as long as he was provided with suitable shoes. His master had learned better than to treat him with neglect again. Who will still argue that dumb animals do not think?

Towanda, Pa.

AFTER WHITE COAL.

EVERY day sees more and more of the wasted power of waterfalls, which lie at man's disposal in every hilly or mountainous country, turned to use in furnishing electric energy. The power of waterfalls is driving the greatest of all tunnels, the double Simplon bore, through the Alps; it is sending another tunnel, by devious ways, behind precipices and under glaciers to the summit of the snowy Jungfrau; and a plan is now being perfected for constructing, once more with the aid of waterfalls, and to be run by them, when finished, a rival to the Simplon road, which shall cross the Alps between Turin and Martigny.

Everybody knows what Niagara is doing, and how the waterfalls of California, and of other mountainous states, are being harnessed.

A. A. Campbell Swinton, at a recent meeting of the British Association for the Advancement of Science, presented accurate statistics, which he had personally collected, showing that no less than 1,500,000 horse power derived from waterfalls is now being utilized in various parts of the world for the development of electric energy. Of this great total, which he believed did not represent the full truth, for he thought it probable that the real aggregate is 2,000,000 horse power, nearly one-third must be credited to the United States.

There is one feature of this utilization of water power in place of steam power, which Mr. Swinton brought

out, and which is seldom thought of, and that is the saving of coal which it effects. On the basis of 2,000,000 horse power derived from waterfalls, this saving amounts to nearly 12,000,000 tons of coal per year.

But the maximum amount of water-power that is available has not yet begun to be approached in actual civilization, so that the annual saving of coal must become larger and larger every year. This, in view of the increasing difficulty of working many coal mines, owing to the great depths to which they have penetrated, and in view of the approaching exhaustion of some of the most famous fields, becomes a highly important consideration. Every little while the world is reminded, more or less sensationally, of a coming coal famine. The fact is that coal, of the better grades, possesses so many advantages and conveniences as a fuel that the earth's supplies of it should be conserved for human use as long as possible. Men of science have more than once sounded a warning against the waste of coal, for coal is a gift of a geological age which cannot be renewed. Thus waterfalls, by enabling us to spare coal, are performing an indirect service only less important than their direct service in supplying electric power. But for them the growing use of electricity would soon make a drain upon the coal mines of the most serious character.

The era of waterfalls seems certainly to have dawned. Every great cataract will become a focus of industry, just as every great river valley has always been a center of population, and Prof. Brigham's prediction that Niagara is to be the industrial center of America may be fulfilled within a generation.

CAVERN RAT FINDS ITS WAY.

THE cavern rat found in the Mammoth Cave of Kentucky, is of a soft bluish color, with white neck and feet. It has enormous eyes, black at night, but quite unprovided with irises.

These eyes are perfectly insensible to light, and when the experiment has been made of catching a cavern rat and turning it loose in the bright sunlight it blunders about, striking itself against everything, is unable to provide itself with food and finally falls down and dies.

In its native depths, however, it is able to lead a comfortable enough existence, as its enormously long whiskers are so extremely sensitive that they enable it to find its way rapidly through the darkness. The principal food of the cavern rat consists of a kind of large cricket, of a pale yellow color, and which, like most cave dwellers, is perfectly blind.

BETTER to be right than to be President.—*Henry Clay.*

THE STORY OF AN ARROWHEAD.

BY EMERSON COBB.

LONG, long ago, in the time of the French and Indian War, there was an old chief who ruled his tribe of braves in a quiet grove near a small stream. Here from day to day he would sit and smoke while his warriors were out in search of game or perhaps gone to a neighboring tribe to trade. He never took part in the war, but often one of the Indians of the engaged tribes would come to this chief, Catsha, the tiger, to buy arrows.

One day as Catsha was sitting alone, there was a tall strong youth came to get arrows for his people. He was a handsome Indian, not so dark and brown, but rather fair for one of his race. As he approached the old man he bowed his head and said, "O chief! I am sent by my master, Tallaloco, to buy arrows for the conflict with the "pale-faces," for they are seizing our fields of corn along the river."

"Yes," he said in reply, "I will send arrows to my friend, the Chief. How many does he want?"

"Ten quivers, if you have them."

"Ten quivers," and, "I have them, for my braves know where the stream yields up the flint, and they are handy in the making of arrows. Ten quivers! (This to himself.) Ten quivers! Why do all the tribes come to me for arrows? Have we not the secret of how to make the flint soft while we work it? Ah! much of my younger days were spent in watching my father make the arrow. He made the arrow for the archer. He made the awl for women, and the needle. He made the tomahawk, the hatchet. Swiftly flew his keen-edged arrows, always straight with whirling motion. Now the other generation, much younger braves have come to me. Come to me his son for counsel. (Aloud.) All right, lad, I have the arrows. Here take these. Now depart and speed toward him. T'ward the chief, Great Tallaloco."

With these words he resumed his smoking, thoughtfully, priding himself that other chiefs came to him to buy arrows and tomahawks. The youth soon disappeared among the foliage and departed to the home of his people and to the scene of conflict.

That night among the whooping of Indians and the firing of guns a "pale-faced chief" lay moaning in the grass with a piercing arrow sticking in his side. The surgeon removed it and hurled it into the brush with contempt. It was a small narrow shaft with a keen edge, and the shape plainly told that it was one made by the chief, Catsha, and that is one that the youth had taken from the quiver and hid in the folds of his deerskin jacket, as he sped toward home.

Many years after as I stopped to rest under the shading branches of a decaying oak, I noticed an

arrowhead sticking in its massive roots. A close examination told that it was one of the styles peculiar to the western tribes. As I sat and intently studied it, it seemed to reveal to me a world of its history.

"After lying in the grass for many years," it said, "some children found me and used me as an implement in their play. Their father told them many stories about the wars that used to drench the land in blood; of massacres, war-dances and of the horrible tomahawks and scalping knives. From that time the sight of their little flint plaything carried with it a dread and a shiver of terror. They ceased to play with me and I became lost again. Years passed and at last a gentleman discovered where I was hiding and carried me away to a museum where at last I enjoyed a reunion with some of my old comrades.

"How pleasant it was to lie in the warm case and to talk over past adventures and to have people coming in to look at us. There I recognized some of my brothers that were also made in the camp of Catsha and even some that were with me in the quiver. I also made acquaintance with the leaden ball that pierced the heart of the great Tallaloco and in that way made a decisive stroke in the downfall of the Indian Nation.

"All was peace now. The tomahawk lay point to point with the sword and the fearful scalping knife nestled up closely against the scarred butt of the old musket. Skulls of chieftains were just across the room and I could behold the only remains of men who had driven me, true to the mark, into the heart of some victim.

"But at last these joys of companionship came to an end; for one day an artist came and got me and took me out in the woods to make a sketch of me but he lost me and I again sought a rest among the leaves, at the roots of a strong oak. As the years passed the roots gradually grew around me until they had enclosed my point in them and there I now stick. Leave me I pray you, and let me remain here until I crumble into my original form. The fierce warrior has long since gone to his happy Hunting Grounds where he will never be molested by war and will have no more use for points of flint for he will now shoot shafts of golden sunbeams; paint his face with the light of joy and utter whoops in adoration of the name of the 'Great Spirit.'"

Elgin, Ill.

A BABY'S INFLUENCE.

WHO can resist a baby? Perhaps some old bachelor will reply that he cannot only resist one, but that he would likewise consider it a good plan to drown them all as soon as they are born, in kitten fashion. Well, the man of this type is left out of this category altogether, and in asking who can resist one of these dear little helpless bits of humanity we mean who with

a heart can turn away from the dimpled, clinging hands, or not be won over by the innocent baby smile. No matter where a baby appears its influence is felt.

Let a mother and baby enter a car, and five out of every six will do nothing for the rest of the way but watch the baby, and the old gentleman with glasses, who had been absorbed in the reports of the stock market, will look pleased and smile down on the little mite who has taken such a fancy to his gold-headed cane and will even unbend so far as to beam upon the mother and say in his deep bass voice, "Very fine child, madam;" and if by chance the little creature should smile up into his face or evince any desire to be more friendly, the austerity that frightens his clerks almost out of their wits and keeps them continually toeing the mark, will vanish entirely, and in its place will come an air of conscious superiority, as though the honor conferred upon him by the tiny morsel of humanity at his elbow has made him a trifle superior to those other of his fellow beings who had not received any such mark of distinguished consideration.

Women, old and young, unless they are dwarfed in their true nature, always love babies. The maternal instinct is the strongest and best point of the feminine character, and from the time of doll dressing up to the day when their lives are gladdened by the advent of a little stranger, they adore the winsome, helpless human beings that are dependent upon them for love and support.

The thought of a curly head, a rosy mouth or a little lisping voice joyously calling "Papa" or "Mamma," has kept many a man and woman from despair and the many dangers of life that are worse than death.

Men bow to the rule of the small sovereign! A woman with a baby receives all the attention where one without may perhaps, be treated with absolute rudeness by the same person. Windows are opened or shut, seats given up and hands ready to help in any way toward the comfort of the atom of humanity who would probably reward their efforts by a continuous whining and crying that keeps up from the beginning of the journey to the end.—*Harper's Magazine*.

* * *

HARNESS THE TIDES FOR WORK.

TIDE, with time, perhaps waits for no man. But it is now expected to work for at least one man—namely, James Howarth, of Manchester, England, who claims to have completely solved the time-honored problem of utilizing the rise and fall of tides for industrial ends. He proposes to use the risings of the tide in compressing air with a unique scheme. The essential feature is the construction of a number of chambers in suitable positions to which the tide has access, and, entering the bottom of these chambers,

the air is compressed as the water rises. He claims that a twenty-four-foot tidal rise would give over ten pounds per square inch pressure, and that one acre of beach surface of this rise would supply over one hundred horse power. The compressed air is to be transferred into receivers situated on shore through pipes. Pressure impressed water is to be used as an intensifying medium, the pressure being impressed by the tidal rise, and air and water are preserved impressed ultimately as the process proceeds. The inventor submits that enough tidal power might be drawn from the British tidal coast to equal all the steam engine power employed in Great Britain; also that the system could be applied to waterfalls and streams.

MUSICAL NOTES.

BY MARGUERITE BIXLER.

A NEW year. A new song. To thee, to me, what will it be?

It is much better to reach the human heart than high C.

About 1500 B. C. is the date given for the invention of the flute.

Church bells were first suggested by Paulinus, an Italian bishop.

The first writer to compose hymns in metrical form was Clement of Alexandria.

Handel's harpsichord dated 1651 is at present time in the South Kensington Museum.

If anybody's actions speak louder than words surely 'tis those of the bass-drummer.

The "Messiah" one of Handel's oratorios was written in seventeen days, in the year 1741.

The first recorded hymn of the New Testament is the "Magnificat" sung by the Virgin Mary in the home of her cousin Elizabeth; the second is the "Benedictus" sung by Zacharias at the circumcision of his son, John the Baptist; the third is the "Nunc Dimittus," sung by the aged Simeon in the courts of the Temple, when Jesus was brought there by Mary and Joseph.

* * *

TAME RAT BRINGS RECRUITS.

CAPTAIN SAMUEL HULL, who has a small cottage at Riverside, Conn., has tamed a large gray rat so that she is as docile as a kitten and comes at a call and eats out of a dish. Recently the rat appeared with three young ones, who are becoming as tame as their mother.

I TELL thee what, corporal, I could tear her.—*Fowler*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

A SECOND-CLASS MAN.

WHO wants to be a second-class man? Who ever heard of a boy that was willing to be second-class? Did you ever see a man hunting a second-class job? Some men take second-class jobs, in fact many men do. Many men have to do so. Have you ever seen any one whose ambitions only ask for a second-class place? Generally second-class things are only had when first-class things are not obtainable. We wear second-class clothes and eat second-class meals as a matter of necessity and not preference. The goods in second-hand stores are sold to people who feel their inability to buy first-class goods, or, perchance, do it as a matter of economy.

For work that really amounts to anything, first-class men are wanted. Not one time in a thousand do you see a first-class man qualified and equipped for a first-class job who is out of a position. It is the second-class man who is not in place. Then why are there so many second-class men? It evidently is not because men want to be second-class. One reason is, many men are not willing to pay the price to be first-class men. Another reason may be that they have indulged in dissipation until their understanding is dull and slow, or their growth has been stunted; and indeed such seldom stop at second-class, but are often found much lower than that.

A third reason why men are found in the second place is because their leisure hours and moments are spent in exhausting their strength and vitality, vitiating their blood, shocking their nerves by a thousand different ways of abuse until the limbs tremble like leaves in the wind, their whole physical man being a nervous wreck. Such a man is only a half a man, and could in no sense be called first-class. Such persons are to be pitied; they have lost their manhood, their character and their reputation. It is awfully hard, even if possible, for them ever to get above second-class. All the blame for this condition should

not rest upon them either. We have hundreds of men to-day in first-class positions who are really competent to hold them, who care very little, if at all, whether anybody else in the world has a place or not.

Aristocracy, arrogance, egotism, selfishness, vanity, all militate against real manhood in helping to support the downfallen, the overburdened and the unfortunate. Many a man has the proper mettle, but conditions are against him. Such men can be brought to the surface; other men have not the mettle, neither the conditions; this is generally a hopeless case. There is a sufficient quantity of this class of men to fill all the second-class places, and it is not necessary to create more second-class places to accommodate men of first-class mettle, who, by proper development, could fill first-class positions.

Labor is dignified. False impressions have gone out concerning labor, and labor has been classified many times upon a wrong basis. Labor may be classified as to kinds, but not importance. Mental labor and physical labor are equally important. The only labor that is not dignified is that which does not have for its purpose the elevation and uplifting of mankind. Labor that tends to degrade, stupefy sensibility, or dull conscience is not dignified labor and belongs to second-class or worse than that.

Who is willing to say, then, that he wants a place which will assist in the degradation of his people? Nobody's ambition is run that way. Such conditions exist because they are tolerated, not because they are sought for. Don't be satisfied to be a second-class man.

GREATNESS.

MANY erroneous ideas are afloat to-day as to what true greatness really is. It is to be believed that the majority of persons confound greatness with fame. It is possible for great men and women to become famous, but it does not follow that all famous persons are necessarily great. It is possible for one to become so famous that his name is a household word even on the opposite side of the globe from which he resides, and yet he may be the very opposite of the truly great man.

Evidently a majority of people imagine that wealth, vast estates, gigantic bank accounts, palaces and luxury make the possessors thereof great. This is a huge mistake. Does the world look upon Russel Sage as being a great man? Although Barney Barnato possessed so many millions that it was impossible for him to spend the interest with all his extravagance, and even committed suicide because of his inability to prevent the accumulation of fortune, yet who for a moment catalogues him with the world's great men?

Gold, bonds and mortgages, hired servants, palaces and broad acres, are possessions, not greatness. Great-

ness is an individual attribute. Is power greatness? Some think so. This is another error. Muscular power may bring a man to notoriety. John L. Sullivan, James Corbett, and Jim Jeffries are examples of physical power and endurance, but they are great in no sense except from the basis of avoirdupois and beef. In fact the very opposite of true greatness is found in them. Another kind of power is illustrated in the official capacity of the czar of Russia. His is the only Christian nation that boasts of an absolute monarchy; his word is law. Absolutely so. Technically so. It would require such attention of the mighty nation to see any greatness in his majesty that all the elasticity would be withdrawn. True greatness is foreign to absolute authority, where it culminates in ambiguity and egotism.

Physical power is a quality. Kingly power is a position. Financial power is an inheritance or an accident. True greatness is none of these. It is absolutely within the power of every man to become great. Man, true man, woman, genuine woman, are the greatest works of creation. To be natural, simple, true, honest, earnest, generous, loyal, industrious—in other words to be just what the Creator meant us to be—is to be great. Anybody may be that.

THE TALENT OF INDIVIDUALITY.

PEOPLE often give expression to the thought that in large audiences they are not able to find two faces alike. While it is common to note resemblances and, in some instances, find striking similarities, yet it is an utter impossibility to find two people who look exactly alike. People are inclined not only to wonder at this, but they often really feel grieved that people do not think and act just as they do, and seem to be reduced to heartlessness when people do not rally to the support of their opinion. Church members are often found complaining because one of their ministers is not like the other. Communities often growl because one schoolmaster differs from his predecessor. Politicians make campaign capital, with which to defraud the public, of the fact that one presidential candidate is not the exact image of some time-honored statesman of days gone by.

Why don't people stop to think that this principle belongs to God's economy, and there is absolutely no place in the world for the man that is exactly like the other one? Man is God's creature and God does his work sufficiently well that he has never yet been required to duplicate it in order to make one good one. If one teacher or preacher is as good as another, why make the change? One man may be just as good as another, so far as good qualities are concerned, and yet not specially adapted to the situation. A polar bear may be just as good as a hippopotamus in the eyes of God, but they do not serve the same purpose

nor live in the same place. Elijah was a good man, and so was Elisha, but he was in no way like Elijah, and that is the very reason why he was so well fitted to follow the great Carmelite. Had he been just like Elijah, the rig that came from heaven for Elijah would have been double seated, and Naaman would have died with the leprosy. Blades of grass look alike, but no two of them stand on the same spot. It is impossible to tell the egg of a terrapin from the egg of some fowls and only incubation is able to reveal the individuality which the Creator has placed inside.

Two seeds may be deposited in the earth that cannot be distinguished, and when nature has done her perfect work, one may develop into the poppy red and the other into yellow mustard.

So don't be discouraged or feel despondent if your photograph to-day doesn't look exactly as it did when you were three years old, neither should you attempt suicide or disinherit a child, because strangers cannot decide whether the child resembles his father or his mother. Remember that there is a God-given talent of individuality. Everything stands for something. Things do not happen nor come by chance. Individuality is a law unto itself.

MUNITIONS OF WAR.

ON every hand our government seems to be preparing for war. The legislators are asking for appropriations with which to increase our army and navy that they may meet whatsoever enemy may encroach upon our rights of territory. At the same time the powers of the earth are pretending to establish peace commissions, treaties of peace and even erect a temple of peace. It seems queer that a nation of free and independent people who have every advantage of civilization should want to be making war with one hand and trying to establish peace with the other. It is hard to explain why, when we are trying so hard to establish arbitration, as the means of settling difficulty, that we should appropriate ten times as much for the encouragement of war as for the development of agriculture, or for the promotion of education.

However, the hopeful side of the picture is that all over our wide land is being established academies and colleges, outside of our public school systems, which are the greatest munitions of war that this, or any other, country can afford. It is to be hoped in the near future that war, intemperance and crime of every kind, will fade away before the impregnable phalanx of educators, which our country is now sending out.

Were it not that the colored man of the South and the red man of the West and the youth of our own family, were being equipped to meet this struggle, the picture would be dark indeed.

Current Happenings

EPIPHANY.

ON the 6th day of January, each year, thousands of people make a pilgrimage to the Jordan river for the epiphany ceremony. The celebration is given in honor of the visit of the Wise Men from the East, who came to pay obeisance to our Lord. The pilgrims bathe themselves in the sacred waters of the Jordan, not as a baptismal rite for the remission of sins, but merely to celebrate the above-named occasion.

When circumstances or distance interfere with such a pilgrimage, arrangements are generally made by the devotés of the rite to have water brought from the Jordan to their place of worship.

This year it was impossible for the Czar of Russia and the royal family to go to Palestine, so they celebrated the feast of epiphany in their own Neva chapel. It has been their custom on such occasions to have a salute fired. This custom was observed at the Czar's recent feast, as usual, but to his surprise, simultaneously with the report of the guns, came a rain of grapeshot through the imperial chapel which resulted in a very narrow escape for the royal devotés. Neither the damage done to the house, nor the narrow escape, affords so much anxiety to his Majesty as does the quandary, whether the affair was intentional or accidental. An attempt has been made to explain that the day before was spent in target practice, and this gun was carelessly left loaded and with the other salute guns, was fired at the given signal. But it is hard to explain how it happened that this particular gun should be pointed in the immediate direction of the Czar's place of worship.

AT St. Petersburg about twelve thousand ship builders recently ordered a strike. It is rather a serious matter with Russia just at this time that her ship-building industry should be at a standstill.

FATHER GOPON, the leader of the rebellion in Russia, is said to be marching through the country, toward the imperial palace, with a hundred thousand strong. An attempt is being made to suppress the movement by the government troops, and at many points vast numbers of men, women and children are mercilessly slaughtered; sometimes as many as five hundred and once as high as five thousand. The internal conditions of Russia are something awful and it is hoped that the worst has been passed.

PITTSBURG, Pa., is to receive fifty million dollars with which to build an underground railroad system.

SINCE the Minnesota Educational Exhibit won the prize at the World's Fair, a proposition is now on foot to send it to the Lewis-Clarke Exposition at Portland, Oregon.

THE tangled finances of the Island of San Domingo have suddenly become a legislative and political issue in our country by the President causing a protocol to be signed, placing the revenues of the island under American control for a while. It seems that we have the time and the ability to attend to our own business, and at the same time be guardian for a lot of orphan children.

THE cotton growers, from thirteen states and territories, had an interesting session in New Orleans. By a unanimous vote they decided that wisdom dictates a reduction in acreage and the use of commercial fertilizer. Their president, Mr. Brittin, says that the depreciation in price in the present market is not due to speculation, but solely to over-production.

THE strikers in Russia demand the following: First, equal political rights for all classes; Second, freedom from search by the police; Third, freedom of religious faith; Fourth, freedom of speech and press.

FOR years it has been somewhat of a scientific guess as to Mt. Everest being the highest peak in the world, but recent investigations by the British-Tibet Survey Mission have determined it as an absolute scientific fact that Mt. Everest, in the Himalayas, is the highest peak in the world.

SINCE the beginning of the construction of the Panama canal, the canal commissioners have received applications from nearly five thousand persons asking for employment. The majority of them, however, has been clerks, civil engineers and time-keepers. A very small per cent of the applications has been accompanied with the pick or shovel.

THE Great Northern Power company, of Duluth, Minnesota, has closed a contract for a dam across the St. Louis river rapids, for a canal and a power house all of which are for the utilizing of the wonderful power nature has given to the place. They expect to generate a hundred thousand horse power by the use of this great force of nature, and that eventually the railroads leading to the iron mines, will be operated by this power.

THE Illinois Legislature may as well have been killed as scared to death. A sorry looking set was beheld when their criminal grafts were fearlessly exposed by one of their number. They were sorry it was discovered.

* * *

HENRY PHIPPS, a wealthy Pittsburg steel man, has set apart one million dollars for the erection of improved tenement houses in New York City. He wants the investment to clear four per cent after allowing the repairs, and this four per cent to be used in the construction of other tenement buildings. An organization will be formed to care for this work, and it will be done on a purely business basis so that the scheme will not be discouraging to those who want to try to build their own houses.

* * *

THE UNITED STATES COURT, of Iowa, affirmed the anti-cigarette law, but we are sorry to say that the law does not reach far enough yet.

* * *

THE Medical Commission of the Harvard University has at last reached a decision in the investigation of the cancer problem, which has been under consideration for the past two years. They have decided that cancer is not infectious but is hereditary, and that the only hope of cure is an early surgical treatment, or in some form of serum not yet discovered. Many deny this statement, however, and claim that epithelial cancers are readily removed without harm or danger.

* * *

SEVERAL people were killed and many more injured by the collision of three trains in the suburbs of London. The cause was due to a dense fog.

* * *

THE American Locomotive company, which embraces all the important locomotive plants in the country, except the Baldwin locomotive works at Philadelphia, has added one more to their list by incorporating the Rogers Locomotive works, Patterson, N. J.

* * *

THE University of Berlin recently issued a year book, showing that its students outnumber those of any other institution of learning in the world. Instruction is given to 7,774 matriculated and 1,330 non-matriculated students, 9,104 in all. One hundred twenty-three of this number are Americans.

* * *

IN the last ten years a decided increase in the attendance of colleges has been noticed, and it is claimed by college men that one hundred per cent has been made in the last decade for men and two hundred per cent for women.

FOR the first time in ten years the city of Rome, Italy, has been visited by a snow-storm.

* * *

THE quiet little lake of Loenvand, nestled among the fjords of Norway was suddenly awakened from its slumbers, last week, by the rush of an awful avalanche which plunged into her waters. The weight had become so immense as to cause the ice underneath to melt and the great mountain of ice slipped into the lake. An immense wave was caused to sweep over the neighboring shores, and so far fifty-nine persons are known to have lost their lives.

* * *

THE government of Italy has passed a law abolishing slavery throughout their dominion in the East African colonies. This is one step towards progress.

* * *

ANOTHER combination is attracting the eye of the public. The Wells-Fargo Company Bank and the Nevada National Bank of San Francisco have consolidated under the name of Wells-Fargo Nevada Bank, with an approximate asset of thirty millions.

* * *

IN a Santa Fe disaster, near Derby, Kans., one was killed and thirteen wounded.

* * *

DR. CHARLES HALL, president of the faculty of the Union Theological Seminary of Chicago, has announced the gift of \$1,100,000, but declines to reveal the name of the donor. A certain portion of the donation is represented by thirty-six lots off Riverside drive, near Twenty-second street. A new seminary is to be built on this ground in the next four years.

* * *

THE builders of the great subway in the city of Chicago are expecting a strike any moment among their laborers.

* * *

OUT of the seventy thousand school children, who have been previously reported to be suffering of hunger, in the city of Chicago, only two hundred accepted the invitation to the free breakfast given by the Salvation Army. The committees explain that their plans of feeding the hungry children have not as yet been properly brought before the public, but ere long they expect to make provisions so that it will not be necessary for even the outcast and poverty-stricken to go to school hungry.

* * *

THE total amount of exports from Great Britain for 1904 were \$1,444,000,000; the total amount of exports of the United States for 1904 were \$1,451,000,000.

HOME DEPARTMENT

When a woman has washed the dishes
 A thousand times and one,
 Sometimes that woman wishes
 Away from it all to run;
 She feels that she has been earning
 Cash for a little fun,
 And gaily she'll wash them on returning,
 A thousand times more, and one.

* * *

RELAXATION FOR WOMEN.

IN this busy world of ours—or rather in these busy cities—rest is absolutely necessary for the society woman, the housewife or the woman of business, for all women are high strung and need to put on the brake once in a while or trouble invariably results.

Any stranger visiting our shores is impressed with the extreme nervousness of our people, which is shown in the many attitudes which they assume within a short space of time and the difficulty with which they keep their hands still for more than a few minutes at a time.

Indeed, it is not uncommon to hear women complain of being so tired out and so nervous that they simply must find something to do, being unable to sit still for any length of time. Such a state of affairs is deplorable, and bodes ill, not alone for the women concerned, but for the future generations as well.

Rest is absolutely necessary to each human being; how else can we expect to be well-poised, clear headed and self-possessed? Extreme nervousness is akin to dementia, and the women of to-day must call a halt and put a stop to this pace that kills ere it is too late.

It is advisable that every woman should rest each day for a short period. It is not necessary to sleep, but it is well to retire to one's own room, remove all tight clothing, don a lounging robe and lie down. Relax all the muscles; let go, as it were, feel all the tension under which you have been holding yourself slacken little by little, and shut out all care from your mind.

There are those who claim this cannot be done, they have so much on their minds, their burdens are so heavy, and so on. Dear woman, your burden is not so great but someone else has borne as heavy a burden before; you are not alone in your trouble, and you can forget it if you will, for it is your duty to be superior to all outside influences.

Learn to take rest in inactivity, and you will learn a health-giving secret, and you must learn this if you wish to be well. By lying down for even fifteen min-

utes each day and relaxing (it is possible to lie down and fret and worry quite as much as if standing up) much benefit will result, for this gives the tired, nervous woman time to collect her wits, and appear fresh and in her right mind when evening comes and brothers, father or husband return from their daily labors.

There are many little ways in which a woman may rest at other times. When waiting for a car at a station, it is wise to sit down squarely on a seat and calmly wait; not on the edge of the seat, fidgeting until the car arrives.

That is the way, and the only way, to overcome this nervous, fidgeting affliction that has taken possession of our women of late.—*Health Culture.*

* * *

THE POWER OF FORGIVENESS.

THE power of forgiveness even for an offense against human law is well illustrated in the following: A soldier was about to be brought before his commanding officer for some offense. He was an old offender, and had often been punished. "Here he is again," said the officer, on his name being mentioned; "flogging, disgrace, solitary confinement, everything has been tried with him." Whereupon the sergeant stepped forward, and, apologizing for the liberty, said: "There is one thing which has never been done with him yet."

"What is that?" said the officer.

"Well, sir," said the sergeant, "he has never been forgiven."

"Forgiven!" exclaimed the colonel, surprised at the suggestion. He reflected a few minutes, ordered the culprit brought in, and asked him what he had to say to the charge.

"Nothing, sir," was the reply, "only that I am sorry for what I have done."

Turning a kind and pitying look on the man, who expected nothing less than that his punishment would be increased with the repetition of his offense, the colonel addressed him, saying: "Well, we forgive you!"

The soldier was struck dumb with amazement; tears started to his eyes, and he wept like a child. He was humbled to the dust, and, thanking his officer, he retired—to be the old refractory, incorrigible man? No! From that day forward he was a new man. He who told the story had him for years under his eye, and a better conducted man never wore a soldier's uniform.—*Selected.*

THE FROG'S APPETITE.

A FROG'S capacity for enveloping his comrades and assimilating them was once shown by an incident which occurred under the observation of one of my acquaintances. He had returned from the country with a lot of frogs, large and small, which he had obtained for one of the New York educational institutions. I have forgotten how many there were, but they numbered over twenty, I am quite certain. These he put into a large bird cage, the wires of which were close enough together to prevent even the smallest from escaping. On the third day he went to see how his captives were doing, and found, greatly to his surprise, that all had disappeared with the exception of two old "mossbacks," and they were eyeing each other askance, apparently in doubt as to which would be the "last survivor of the whole ship's company," as he expressed it.

As an insect catcher the frog is quite expert, even such quick moving species as the dragon fly often falling victim to its dexterity. Fishes also are often captured, and good-sized ones, too, a fingerling trout having been found in the stomach of a frog which was not more than six inches in length.

* * *

SMALL SAVINGS.

SAVE time by putting things in their proper places, planning your work systematically and performing it in the quickest manner.

Save strength by using modern conveniences, resting when possible and leaving undone the unnecessary putting.

Save money by buying only what is needed, and that of the best quality that can be afforded.

Save food by judiciously combining and using the left-over portions by care to avoid waste in cooking, and the thoughtful adaptation of various kinds to the needs of the consumers.

Save vegetables by sorting out the cut and bruised ones and storing in a cool cellar, free from frost.

Save apples by care in handling, watching to remove those that show decayed spots and canning them if necessary.

Save fuel by cooking several things at a time when a hot fire is kept for ironing or baking.—*R. E. Merryman.*

* * *

MOLASSES COOKIES.

ONE egg, one cup sugar, one cup molasses, one cup butter or lard, butter preferred, any seasoning which is liked, one heaping teaspoonful of soda dissolved in one-third cup of boiling water. Make a soft dough, roll, and bake in a quick oven.

MOCK LEMON PIE.

PERHAPS some of those people who do not like lemon pie would like this, try it, it is quickly and easily done, if in a hurry for a good dessert, but is best cold. Bake your crust the same as for lemon pie. Brown a piece of butter the size of a hickory nut in your skillet, and then pour into it one and one-half pints of milk, two eggs, reserving the white of one for the frosting, two heaping tablespoons of cornstarch or flour may be used, one third cup of sugar, two teaspoons lemon extract and a pinch of salt. Beat the eggs, sugar, salt, extract and cornstarch thoroughly, add enough cold milk to make thin enough to pour into the scalding milk and mix as for gravy. Cook five minutes, pour into the crusts and frost and place in the oven long enough to brown nicely. Frosting should be thin and seasoned with lemon. This will make two pies if not wished too deep.

* * *

DRESSING.

FOUR slices of stale bread soaked in three pints of milk until soft enough to mash, one egg, a piece of butter the size of an egg, pepper and salt to taste, three medium onions chopped fine, and seasoned with sage too if liked. This is good just baked alone if some ham gravy or bits of cold fried pork such as is left over are used. It may be fried in butter if in a hurry.

* * *

CREAM COOKIES.

ONE egg, one cup sugar, a pinch of salt, a piece of butter the size of an egg, nutmeg or any other seasoning which you like; beat to a cream, then add one cup thick sour cream and mix but do not beat long enough for the cream to separate, one teaspoon of soda mixed with the flour, of which you use just enough to have a soft dough that you can roll out. Bake in a quick oven.

* * *

JOHNNY CAKE.

ONE egg, two heaping tablespoons of sugar, a pinch of salt, one third cup of sour cream, two cups of buttermilk, one cup of white flour, two heaping cups of corn meal, mix thoroughly and bake in a quick oven. Excellent with honey or maple syrup.

* * *

MOUTH WASH.

ONE part of Chloride of Hydrogen.
Three parts Listerine.
Five per cent oil of Wintergreen.

This is an excellent mouth wash and is uninjurious to the teeth, leaving them bright and clean. It also sweetens the breath. Shake, and drop one or two drops upon your brush when you clean your teeth.

Reading Circle and Christian Workers' Topics

. By ELIZABETH D. ROSENBERGER.

FREE SALVATION.—Rom. 10:13.

For February 19, 1905.

I. The Blessing.

1. Salvation from the Guilt of Sin, Rom. 8:2
2. Salvation from its Power, Rom. 6:6
3. Salvation from its Results, Rom. 8:23

II. The Duty.

1. To Call Upon God, Zech. 13:9; Acts 2:21
2. To Call Through the Mediation of Christ,
 Heb. 9:24
3. To Call by the Aid of the Spirit, Rom. 8:26
4. To Call with a Disposition to be Saved,
 Matt. 14:30

III. The Promise.

1. To All Nations, Acts 2:39
2. To All Ranks, Acts 2:39
3. To All Conditions, Isa. 1:18
4. To All Characters, Acts 17:30, 31

Text.—For whosoever shall call upon the name of the Lord shall be saved. Romans 10:13.

References.—Jude 3; John 3:14-18; John 5:24; Matthew 18:3; Revelations 7:9, 10; 1 John 4:9; 2 Peter 3:9; 1 Peter 1:5; 1 Peter 1:9; Hebrews 7:25; Hebrews 2:3; Hebrews 1:14; Titus 2:11; 1 Thessalonians 5:9; Philip-
 pians 2:12; Jeremiah 3:23; Isaiah 46:12, 13; Psalm 91:16.

Whosoever.

A MAN who lived for this world alone, was taken sick. One day when he was sitting alone in the house, he thought of his condition, and he said to himself, "What a fool I have been. My life is nearly gone, and I have lived without God and without hope." When his little boy came in, the father sent him for the Bible. The boy brought it and read some for him; but when he came to the longer word "whosoever," he stumbled and said, "I can't read that. I don't know what it spells."

"Why boy," said the father, "you should know that word for all may turn upon its meaning."

So the child ran out and asked a man, who was passing, what it meant, while the father sat by the open window. "Why," said the man, "who-so-ever means *anybody* and everybody." The father said to himself, "Anybody and everybody; that includes *me*," and then and there he asked Jesus to save him.

But like the little boy, we do not know what it means. We say it over and over glibly enough, but to understand how Jesus saves us all, we will learn that only in heaven.

"Whosoever cometh, need not delay;
 Now the door is open, enter while you may;
 Jesus is the true, the only Living Way,
 Whosoever will, may come."

Our Need.

What weak men want is victories, what men who have failed want is success. What men who have succumbed to some besetment want, is more manhood. What peevish, fretful people want is more patience. What discouraged boys and girls want is a new heart and hope. Can Jesus come into your life with just this element that is lacking? Believe it, young people, he will come to whosoever needs him and asks him.

Without Salvation.

The world without Christ and without salvation is a cruel, grasping, selfish, wretched world, no matter what its intellectual attainments or its material possessions. When the Roman empire was at the height of its magnificence, it had at its disposal wealth, power, and intellect and from these it wrought senseless luxury and merciless despotism. Yet the world in the mass without Christ is not more wretched and lost than the heart that refuses to admit him. He offers us salvation, if we say "no" it is that we may choose something evil. If we bar the door of our heart against Jesus, it is that we may admit some other guest who will bring us not peace, but fear or perplexity; not joy, but trouble and it may be hatred. If the lost soul were a thousandth part as anxious to be saved as Jesus is to give salvation there would be no delay. How many more souls would be rejoicing in Christ Jesus to-day.

Saved from Sin.

That is the salvation we need. Moody describes it thus: "Down there in the dark alleys of one of our great cities is a poor drunkard. I think if you want to get near hell, you should go to a poor drunkard's home. Go to the house of that poor miserable drunkard. Is there anything more like hell on earth? See the want and distress that reigns there. But hark! A footstep is heard at the door and the children run and hide themselves. The patient wife waits to meet the man. He has been her torment. Many a time she has borne about the marks of his blows for weeks. Many a time that strong right hand has been brought down on her defenseless head. And now she waits expecting to hear his oath and suffer his brutal treatment. He comes in and says to her: 'I have been to the meeting; and I heard there that if I will, I can be

converted. I believe that God is able to save me.' Go down to that house again in a few weeks: and what a change! As you approach you hear some one singing the good old hymn, Rock of Ages. The children are no longer afraid of the man but cluster around his knee; his wife is near him. All are happy. Is not that a picture of salvation and regeneration? I can take you to many such homes, saved and made happy by the regenerating power of Jesus. He gives them strength to overcome temptation. He saves them from their sins.

Free to the Heathen.

This salvation is free to the heathen, and many of them are rejoicing to-day over sins forgiven. Oh, let us do all we can toward giving them the Gospel. When the first Moravian missionaries were leaving for Greenland, a minister said, "Give the natives sound divinity beginning with the being and attributes of God, following with the doctrine of sin, and thus lead on at last to Christ and the cross. This counsel was followed, and for years not a soul was saved. One day at a funeral a missionary out of the fulness of his sympathetic heart, told the story of Jesus' love and the cross. The natives listened eagerly, and welcomed this salvation. From that time on, many were saved.

Topics for Discussion.

1. Is Repentance necessary to salvation? Acts 3: 19; Romans 2: 4; 2 Cor. 7: 10.
2. In whose name are we saved? Acts 4: 12; Hebrews 5: 9.
3. The second birth. John 3: 3-12.
4. Baptism. Acts 2: 38.
5. By grace are ye saved. Romans 11: 6.

THE BUREAU OF EMPLOYMENT.

"We have Christian Workers' meetings, and use your programs. But we do not always know who is to lead, or what part we are to take in the work. Things go wrong sometimes. What should we do?"—A Sister.

"Things go wrong sometimes," in any organization, but they should not go wrong all the time. We believe that the trouble in this meeting lies in the lack of system. Every Circle or Christian Workers' society should have good leaders. There should be two or three who are capable and willing, to look after the interests of the young people. These two or three should be elected a committee to get out the programs and supervise the work in general. You need other committees to do other work, but you want one to exercise general supervision over everything. If your society has printed programs for the year, this committee should see to it that every member of the Society is given something to do. Those who can lead a meeting, should be appointed as leaders, others who are timid should only be asked to recite a verse of Scrip-

ture; let the singers, sing. If you have any members who are liked by everybody, who are interested in those about them, sociable, tactful, with a happy knack of addressing strangers, put two or three of these on a Lookout Committee. As members of this committee, it shall be their duty to ask people to join the Society, to see to it that all who come to the meetings are welcomed and made to feel at home.

Your ministers, and Sunday-school teachers can give a short talk, not five minutes in length, on some of these topics for discussion that are given with every program.

Do not forget to inform each one of their work on this program. There is much that we must learn, before our meetings will be successful. Help us to discuss ways and means each week. Give us some of your experiences.

We have never been so well pleased with the course laid down for Our Missionary Reading Circle, as we are with the one just outlined. And the thoughtful reader of our church papers can trace in a very distinct manner the influence of this reading upon our people, by personal testimony, larger collections and a greater zeal for missions. There was never a time when the quality of missionary literature was so high and the quantity so great as at present.

SISTER Mary E. Miller, of Tiffin, Ohio, says, "I hope to send more names soon. In the Circle here, the members exchange their books, and so help each other. Some of us have read all the books so far, and how much we enjoy them! They are so helpful. Long live the Circle, and may those who do not give to missions join it."

Brother George W. Fouch, of Weverton, Maryland, is interested and at work. He says, "I send you two names with the hope that I can send more soon. This work is important. God bless those who seek to serve him."

NEW NAMES.

- 2647. Catharine R. Kline, Broadway, Va.
- 2648. J. S. Myers, Broadway, Va.
- 2649. Josie Myers, Broadway, Va.
- 2650. Rilla S. Rimel, Broadway, Va.
- 2651. Ruby E. Rimel, Broadway, Va.
- 2652. Sadie E. Zigler, Broadway, Va.
- 2653. Lottie Spitzer, Broadway, Va.
- 2654. Sarah E. Zigler, Broadway, Va.
- 2655. Dr. E. M. Arnold, Cerrogorido, Ill.
- 2656. Mrs. Susie Arnold, Cerrogorido, Ill.
- 2657. Clark Heckman, Cerrogorido, Ill.
- 2658. C. T. Kaetzal, Weverton, Md.
- 2659. Morse A. Younkings, Weverton, Md.

Local Secretary.

Bettie Root, Fredonia, Kans., Box 375.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XIV.

Belfast, Ireland.

Dear Mr. Maxwell:—

Although I never promised to write any when we left home, yet I promised to assist the boys and girls in their undertaking, and especially Marie, and therefore I undertake to fulfill her obligations as this is letter day with her. No doubt you are well aware that traveling is very hard on clothing, and as we have lately arrived in Belfast and are comfortably located, the girls thought they would seize this opportunity to do a lot of mending for the party while the boys are out getting a superficial idea of the lay of the city. I thought it would be no more than courtesy, under the circumstances, to write this letter for Marie.

Instead of taking the most direct route from Dublin to Belfast as is generally taken by the globe trotter, we preferred to saunter across the Island in a zigzag fashion and that way be able to enter into the rural life of the people, which, after all, is the real way to study geography. I am trying to keep constantly before the minds of the class that we are studying geography. Roscoe and Oscar are doing some excellent work with their kodaks, and when we get home we expect to have a good time showing the pupils of the Mayville school some of their work. I think when we get the pictures finished and we get home I can talk better than I can write. But I want to send to you, in this letter, a description of St. Patrick's purgatory. Ireland is surely a land of pilgrimages; there is hardly a large territory any where in the country without its hallowed spot to which, from time immemorial, pilgrims have thronged in search of help—spiritual and physical.

The place of pilgrimage which, in the middle ages, was the most famous in all Europe is one of the most remarkable unto this day. In the northwest corner of Ireland, in the county of Donegal, there is little inland lough called, "Lough Dearg" in the center of which are several islands. This lake is about twelve miles from the town of Donegal which is on the west coast of Ireland, but strange to say the lake is on the east side of the height of land and its waters are drained by a small river and emptied into the sea near Londonderry near the northeast corner of Ireland. This little crystal lough is nestled among the wild uninhabited region in which are the bleak mountains and a large, dreary moor which entirely cuts it off from the civilized world. By the use of a vivid imagination you can easily see that the conditions would render this place the most ideal spot for seclusion, reflection, devotion and penitence.

As would naturally be supposed, there hangs about this place a peculiar air of loneliness, desolation and melancholy, which, of course, suits those who resort there for a brief sojourn to do penance. Comparatively speaking Lough Dearg is larger than the ordinary lough of Ireland. It measures three or four miles each way. It contains several small islands; some of these islands are strikingly barren, treeless and shrubless. The stretches

of moor and mountain that surround the lake are well covered with shrubs. One of these many islands differs from the rest in this, that it has many buildings upon it and seems covered quite to the water's edge; but upon landing one finds the interior to be particularly rough and stony. Strange to say, paths may be easily traced over these rough, stony ways that have been worn practically smooth by the tread of barefooted pilgrims, who, for more than a thousand years, have walked the trying penitential rounds.

Among the buildings on the island, two are chapels and several are hospices for the accommodation of pilgrims. This island is looked upon as being holy, and in fact is called Holy Island, but the common name for it is St. Patrick's purgatory. It derives its name and distinction from the tradition that St. Patrick, when he was alive, more than fourteen hundred years ago, occasionally retired to a cave on this Island for prayer and penance.

The successors of St. Patrick held his rendezvous in the most sacred reverence. In 1610 A. D. St. Dabheog built a monastery at this place. Of course, as we told you in a former letter, the Danes took the country at one time, and they destroyed the monastery. But it was rebuilt in the twelfth century by the Augustinians, and from that time till the seventeenth century, this famous place was under their charge. It was during their administration that the Island won extraordinary fame. It has been read about, written about, and lectured about until there is hardly a day in the season when pilgrims may not be found from Ireland, England, Scotland and even America and far-away Australia, and it has become the Mecca to the prince as well as the peasant.

The pilgrimage season opens usually about the first of June and closes with August. The latter part of the season is the busiest one; many little boats crowded with pilgrims are seen leaving the Island and the echoes of sweet music die away on the bosom of the waters as they sing "Farewell to Lough Dearg." The aged prior stands on the edge of the cliff, overhanging the lough, and waves his last prayer and farewell as they go to take their place in the world again, which, for a time, they have learned to forget.

It is the most democratic place imaginable. Rich and poor, high and low, educated and uneducated, miner and planter, tradesman or shepherd, may all be found resting upon some elevated knoll side by side. The rich lady and beggar shat familiarly together. Some prelate from America might share a cup of black tea and an unbuttered oatmeal cake with some country cobbler.

These statements seem as if they come from dream-land, and after all it does not lack much of that and yet these things have real existence. No formality, whatever, characterized the intercourse of the people upon this remarkable Island. Their principal duties of penance are to watch, pray and fast. They generally have one meal a day for each of the three days. The meal consists of un-buttered bread and tea without milk; this meal is in-

(Continued on Page 144.)

The Q. & A. Department.

What are the religions of Russia and Japan?

The established religion of Russia is the Greek Catholic, officially called the Orthodox Catholic Faith. The Holy Synod, the governing body of the church, was established with the concurrence of the Russian clergy and the Patriarchs of Constantinople, Jerusalem, Antioch, and Alexandria. The Emperor is the head of the church. It differs from the Roman Catholic Church in denying the spiritual supremacy of the Pope, in permitting the study of the Scriptures in the vernacular tongue and the marriage of the clergy. The chief forms of religion in Japan are Shintoism, with twelve sects, and Buddhism, with twelve sects and thirty-two creeds. There is no state religion, and no state support. Absolute religious freedom is allowed by the Japanese Constitution, and there are over 1,000 preachers, churches and preaching stations of the Roman Catholic, Greek and Protestant churches.

❖

What is the difference in meaning between majority and plurality vote in an election?

Plurality is the excess of the winner over the next highest candidate, and the majority is his excess over the total combined vote of his competitors.

❖

Please give a cure for frost bites.

Rub the affected parts with pure oil of peppermint. Care should be taken to use only the pure oil, as the essence of peppermint will not have the desired effect.

❖

Who was "The Pathfinder"?

This was a popular name given to John C. Fremont, in allusion to his success as an explorer.

❖

Who is the Chief Justice of the United States Supreme Court, and of what state is he a resident?

Melville W. Fuller, of Illinois.

❖

How high is Bartholdi's statue in New York Harbor?

151 feet in height and stands on a pedestal 155 feet high.

❖

What are the powers of Congress?

Declare war, coin money, establish post offices, rural routes, borrow money, and levy and collect taxes.

❖

To whom shall I apply for free government seeds and plants?

To your Congressman.

Will you please explain what linen is made of?

Linen is cloth woven out of flax threads. In old times thread was spun by women on spinning wheels turned by hand, but now it is mostly made by machines. For the finest kinds of cambrics and for laces, however, the threads are still made by hand. Linen cloths, too, were once made by hand, but they are now woven almost wholly by machinery. The chief kinds of cloth made are lawn, cambric, damask, diaper, sheeting and toweling. The best linens are made in France, Belgium, Holland and Great Britain. Most of the linen used in the United States is brought from Europe. The word linen is derived from the Latin—linium—flax.

❖

When did the ground that Washington stands on become the property of the United States, and how, and to whom did it belong before?

The District of Columbia was formerly a part of Maryland, and contained about 64 square miles. Maryland ceded this to the United States Dec. 23, 1788, as the seat of government. Virginia also ceded 36 square miles, but this was given back July 9, 1846. The land originally accepted by the Government belonged to nineteen individuals, who agreed upon terms of sale. The lots for public buildings were paid for at the rate of \$125 per acre. The streets were given free. The other lots were the joint property of the owners and the public trustees.

❖

Are "Uncle Tom's Cabin," "Black Beauty," etc., considered novels?

Yes. A novel is fiction founded upon facts. Probably Uncle Tom as a person never lived, but the characteristics that are portrayed by Mrs. Stowe actually existed over and over a thousand times, at the time when the novel was written. Black Beauty is the autobiography of a horse; not that the horse ever talked, but that the author of the book has succeeded in putting herself in the stead of the horse to the extent that their morals are almost personified. Don't be afraid to read either of these two books, or any other novels of this high class.

❖

In what year did John Brown hold the fort at Harper's Ferry, Virginia?

John Brown seized Harper's Ferry Oct. 16, 1859.

❖

In what year was Charley Ross kidnapped?

July 1, 1847, from his home in Philadelphia.

MISCELLANEOUS

THE GEOGRAPHY CLASS.—Chapter XIV.

WHY?

(Continued from Page 142.)

variably taken before noon. Smoking is allowed, and one may drink all the water he chooses. It is believed by the pilgrims that the waters of the lake have a peculiar nutritious effect; they boil it, sweeten it, and drink it in large quantities. From the time they enter the Island until they leave they are bareheaded and barefooted.

In going from one prayer station to another the pilgrims often stop and kneel on the stones and pray. Sometimes these prayers are informal and other times certain prayers have to be said while encircling certain chapels; sometimes they go to the edge of the water and pray, then retreat a few steps and kneel and pray. Some pilgrims are able to make this round of stations in an hour while it takes others two hours. But this must be performed once each day of the three days' sojourn. In the evening of the first day each pilgrim has to go to prison, which means that they are to watch all night in the chapel and pray till morning. Formerly, of course, they used St. Patrick's cave, but nowadays the chapel is substituted for that.

An old man by the name of Gallagher holds the office of prayer leader, whose duty it is to remain all night and lead them in prayer; they often have very fine singing during the night. There are only a few seats in this old church and the pilgrims are compelled to stand or kneel during the night. The three days' pilgrimage upon the Island tests the power of endurance of the devotés; however, they are seen rising at four o'clock in the morning and hopping over the rocks from their lodging places to the chapel to say mass. It is remarkably strange that, in spite of the severity of this pilgrimage, none are ever known to suffer evil effects from it. That climate affords downpours of rain occasionally and yet no bad colds or sickness is experienced from it. It is a remarkably healthful spot, and this, together with the wonderful faith of the pilgrims and the intensity of their devotion, leads to spiritual exaltation, which, no doubt, drives away all sense of physical discomfort. It is a delightful scene to see boatloads of pilgrims leaving the Island, waving handkerchiefs and hats as a last farewell to the sacred spot, and from the depths of their hearts they join in this simple song:

"Oh! fare ye well, Lough Dearg,
Shall I ever see you more?
My heart is filled with sorrow
To leave your sainted shore.
Until life's days is passed away
With pleasure shall I dwell
On the happy days I spent with you—
Lough Dearg, fare ye well."

Hope Marie may be able to write the next letter herself.

Yours truly,

Gertrude Merritt.

(To be continued.)

WHY do we always talk of putting on our coats and vests, when we always put on first our vest and then our coat?

Why do we refer to the coverings of our feet as shoes and stockings when the stocks are first put on?

Why do we invite people to wipe their feet, when we mean their shoes?

Why in the olden times did a father tell his son he would warm his jacket when everyone knew he meant his pantaloons?—*Globe-Democrat*.

* * *

AN OBJECT LESSON.

A FATHER told his son to set up some bricks on their ends in a line a short distance apart. "Now," said the father, "knock down the first brick." The boy obeyed. The fall of that brick made all the others fall too. The father then said, "Raise the last brick, and see if the others will rise with it." They would not. Once down, they must be raised singly. The father now said, "I have given you this object-lesson to teach you how easy it is for one to lead others astray, but how difficult for him to restore them."

* * *

MR. HENRY PHIPPS, the wealthy Pittsburg steel man, has announced that he intends using \$1,000,000 of his accumulation for the erection of improved tenements in New York City. It is his purpose to have each house surrounded by a vacant space or playground for the benefit of the children. The buildings must be fireproof and thoroughly sanitary, light and well ventilated. A regular corporation will be formed to carry out his ideas, and prominent city officials and reformers will be requested to take part in its organization.

* * *

It is reported that in New York plans for the expenditure of \$100,000,000 of the city's money are on foot to construct a tunnel to the Esopus river, capable of bringing 400,000,000 gallons of water to this city daily. The great tube, which is proposed to stretch to the Catskill watershed, will be capable of draining 1,100 square miles. Plans also propose the building of a large city filtration plant and the construction of two emergency reservoirs, the latter to cost \$4,000,000.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.
SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

Brethren, Mich.,
RESIDENT AGENT

Michigan Land Association.

How Troubles Multiply

From little stomach irregularities—constipation, etc., a host of ailments come. The system becomes clogged—impurities multiply. To expel these impurities is an easy matter by using

Dr. Peter's Blood Vitalizer

It is not a violent cathartic, but a gentle regulator of the bowels and strengthener of the digestive organs. At the same time it purifies the blood and gives tone and vigor to the entire system.

DR. PETER'S BLOOD VITALIZER is a 100-year-old Swiss-German remedy—the discovery of a wise German physician of the olden times. Pure roots and herbs, and nothing else.

A MOTHER'S REQUEST.

Mondovi, Wis., Aug. 5th.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—My mother requests me to write you a few lines and thank you for what the **Blood Vitalizer** has done for her. She says she cannot praise it enough. No medicine has ever had such an effect on her as your medicine. She was suffering with stomach trouble and could hardly eat anything. Now she is perfectly well and can eat and drink what she pleases. Her trouble has disappeared completely. She says she will recommend it to everybody as long as she lives. Yours very truly,

Johanna Anibas.

WAS SICK FOR 25 YEARS.

Blountsville, Ala., Sept. 15th.

Dr. P. Fahrney, Chicago, Ill.

Dear Sir:—Your medicine, the **Blood Vitalizer**, has done my wife more good than all the doctors and medicines we have had for 25 years. She says she is now entirely well through the use of your medicine. You have our sincere thanks for what it has done. I can cheerfully recommend it to suffering humanity. You may use this letter to point the way to health for other sufferers.

Yours truly,

G. W. McDade.

DR. PETER'S BLOOD VITALIZER is not a patent nor a drug store medicine. It is put up, not as an article of general traffic for the benefit of jobbers and dealers, but for sick people. It can be obtained of authorized agents or direct from the maker,

DR. PETER FAHRNEY,

112-114 South Hoyne Ave.

THE GOSPEL MESSENGER FOR MISSIONARY PURPOSES.

The General Missionary and Tract Committee have a plan to use the GOSPEL MESSENGER as a missionary in a very effective way. They propose to help pay for **10,000 SUBSCRIPTIONS** outside the Brethren Church.

THE PLAN.

The plan for securing these 10,000 names is to allow any one not a member of the Brethren Church, and not living in a family where there are members, to have **the Gospel Messenger from now until Jan. 1, 1906, for only 50 cents.** Or anyone interested in this plan of doing mission work may donate the paper to those not members and not living in families where there are members for **only 50 cents for the year.**

This 50 cents does not by any means pay the first cost of the paper, but the General Missionary Committee have so great faith in the Messenger as a missionary factor that they are willing to expend considerable money on making up the deficiency in order to have the paper read by those not members of our fraternity.

Send your order at once and the names will go on our list without delay. Cash must accompany each order. Always mention the fact that your order complies with the rules governing such subscriptions. Remember it is only 50 cents.

Address **BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

CHEAP GOODS

Many persons deceive themselves with the idea that they are practicing economy by purchasing cheap goods. Such a method of economy defeats the very purpose for which it is designed. Goods inferior in quality are never satisfactory. They are not durable, they disappoint the purchaser and reflect discredit upon the firm that puts them out.

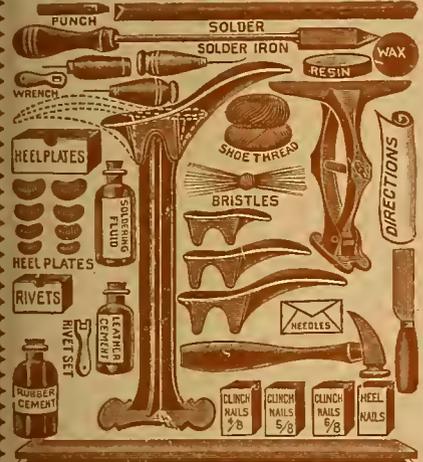

Don't be deceived by the "wonderful bargains" and "prices below cost" advertisements you frequently see. If you are a wise buyer you know you are being offered a shoddy grade of goods.

We do not handle an inferior quality of merchandise. Our goods are low in price, but not cheap in quality. We have established a reputation for doing business on the Golden Rule plan. We realize that every article we send out is an advertisement of our business and creates an influence either for or against us. Therefore we must handle the best quality of goods if we would maintain our present high standard and secure the confidence of the public.

Remember, our prices are the lowest that can be made on the quality of goods offered. We do not want your patronage unless we can give you honest returns for your money. "A square deal for everybody" is our first consideration. On that basis we solicit your trade.

This is a Bargain at \$1.25

If "A penny saved is a penny earned," then why do you pay out hard-earned dollars for repair work you could do yourself if you had the necessary tools? With our Home Repairing Outfit you can save many dollars every year by repairing your boots, shoes, harness, tinware, etc. The complete outfit is packed in a strong, neat box which contains 40 articles as follows:

HOME REPAIRING OUTFIT No 1
FOR
BOOT, SHOE, HARNESS AND TINWARE REPAIRING.

- 1 Iron Last for men's work.
- 1 Iron Last for boys' work.
- 1 Iron Last for women's work.

Price, complete, per set, ... **\$1.25**

Quilt Patches

We are sure we have a bargain that will delight all ladies who read our Inglenook advertisements. We have on hand large quantities of Bright, Handsome, All-Wool and Pretty Colored Patches, many cut from kersey cloth and nearly all good size. They are especially valuable for making up comforts and quilts and many other uses which will suggest themselves to any woman who likes needle work. Many Sisters' Aid Societies in country districts have had difficulty getting the right assortment to put into comforts, quilts, etc. We can help you out. The price is 20 cents per pound, and a large number of patches. We can make immediate shipments. Send a trial order at once.

Suit Case

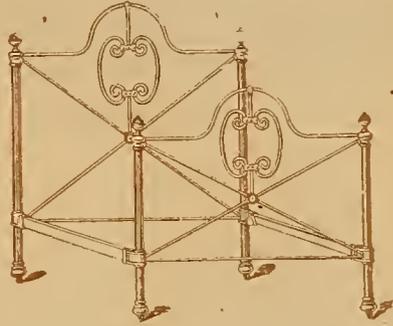

Here's a Dress-Suit Case that you'll be proud to carry—one that will wear well and look well when a cheap case will be shabby or wear out. There's not a cheap feature about this case, except the price. Covered with excellent mauve rubber cloth, solid steel frame, ends securely sewed and riveted, double leather, corners solid leather. Case is fitted with brass spring lock, brass catches, is lined with a good grade of cloth and has strap in body of case. Length, 20 inches.

Our price, only..... **\$1.50**

A High Grade Iron Bed for \$2.28

The Iron Bed has become popular and for real reasons. It is strong, graceful, more sanitary and cheaper than the wooden ones. Here is an Iron Bed that is generally sold at twice what we ask for it. By contracting for large quantities we have reduced the price to a minimum. The simplicity and elegance in bed-

room furniture which now is universally sought finds complete expression in this bed. The material used is of good quality. It is 48 inches high at the head and 41 inches at the foot. Sizes, 3 feet, 6 inches; 4 feet and 4 feet, 6 inches. Can be had in olive, white, Nile or pink. Always give color when ordering.

The Spirit of Simplicity

Finds expression in our offerings of bedroom furniture. The feature of hand-wrought construction, brought into harmony with simplicity of outline creates an influence for refinement and simple taste. The Bureaus of generous length, the Chiffonier of drawers for storage, and the low Twin Beds—are pieces that conform in perfect detail. Our prices are always the lowest consistent with values.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River,..... 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

P DOUBLE UMPKIN
 DOUBLE I
 DOUBLE UMPKIN
 UMPKIN PIE

WHY NOT COME TO THE LAGUNA DE TACHE GRANT FRESNO COUNTY, CALIFORNIA,

Where Pumpkins, Corn and common crops grow, as well as every kind of California fruit?

Come and visit the Brethren who are living here and see what they have done in the past two years.

Nearly 600 sales made since we put this land on the market and over 2,000 people now living on the grant where there were but about sixty a little over five years ago.

This does not look like a temporary boom, does it? Must be something solid behind all this. If not, five years ought to show up the weakness, but instead of weakening the Laguna and its various interests are growing stronger all the time.

If you are thinking of coming to California to make a home you cannot afford to overlook this place.

We still have plenty of good land with abundant water for irrigation. The price is from \$30.00 to \$60.00 per acre, terms, one-fourth cash, balance in eight annual payments.

COLONISTS' RATES

will again be in force March 1 to May 15, 1905.

From Chicago to Laton,	\$33.00
From Chicago to Lillis,	\$33.00
From Chicago to Kingsburg,	\$33.00
From Mississippi River to Laton,	\$30.00
From Missouri River to Laton,	\$25.00

Make your plans to start for California March 1st and you will be in time to buy land and put in a crop.

Write us for free printed matter and local newspaper. Address

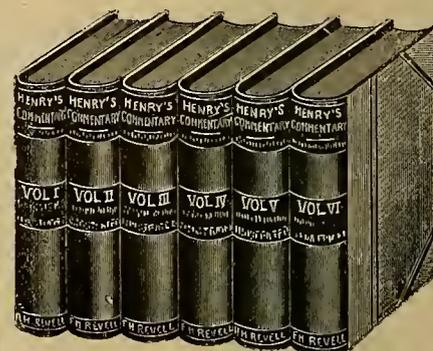

NARES & SAUNDERS, = Laton, California.

500 Bible Studies

Compiled by
HAROLD F. SAYLES

This new book contains 500 short, sharp, concise, Outline Bible Readings, contributed by prominent workers from all over the world. The selections cover a larger range of subjects, and will be very useful to one in private study, as well as helpful in preparing to conduct a meeting on short notice. The book will be invaluable to ministers. It will be found very helpful in preparing outlines for Bible study and for prayer meeting. It will prove a source of pleasure and profit for all Bible students.

The collection is being enthusiastically received, and is also sold at a price within reach of all. Books of this character, but containing far less material, often sell for \$1.00 or more.

The book includes a complete index of subjects arranged alphabetically. Note a few of the outlines:—

JESUS IS ABLE.

Having been given "all power," Matt. 28:18, and having destroyed the works of the devil, 1 John 3:8, Jesus is able to,

- Save to the uttermost, Heb. 7:25.
- Make all grace abound, 2 Cor. 9:8.
- Succor the tempted, Heb. 2:18.
- Make us stand, Rom. 14:4.
- Keep us from falling, Jude 24.
- Subdue all things, Philpp. 3:21.
- Keep that committed to him, 2 Tim. 1:12.

Perform what he has promised, Rom. 4:21.

Do above all we ask or think, Eph. 3:20.

Knowing his grace and power, shall we not come and say, "Yea, Lord"? Matt. 9:28. — F. S. Shepherd.

THE BLOOD.—Heb. 9:22.

- 1. Peace has been made through the blood. Col. 1:20.
 - 2. Justified by the blood. Rom. 5:9.
 - 3. Redemption by the blood. Eph. 1:7; Col. 1:14; 1 Pet. 1:18.
 - 4. This redemption is eternal. Heb. 9:11-14; Heb. 10:10-15.
 - 5. Cleansed by the blood. 1 John 1:7; Rev. 1:5; Rev. 7:14.
 - 6. We enter into the holiest by the blood. Heb. 10:19.
 - 7. Overcome in heaven by the blood. Rev. 12:11.
 - 8. Then sing the song forever to the blood of the Lamb. Rev. 5:9.
- Rev. J. R. Dean.

Price, limp cloth cover, 25 cents, prepaid.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime.

FACE PICTURES.

SELECTED BY LOTTIE M. BOLLINGER.

We write our lives upon our faces, deep,
An autograph which they will always keep.
Thoughts cannot come and leave behind no trace
Of good or ill; they quickly find a place
Where they who will may read as in a book,
The hidden meaning of our slightest look.

Reach for the things above—to those who climb,
Steps ne'er are wanting; ever the sublime
Allures us onward, and our lives will be
Just what we make them, to eternity.
What they now are, the face will surely show
Like the footprints on a field of untrod snow.

Time deepens all the lines or dark or fair—
Lines carved by grief or chiseled deep by care.
Thoughts into actions very quickly grow;
Actions are seeds which everyone must sow,
They reap the richest harvest of good deeds,
Who sow but loving words, most precious seeds.

—Presbyterian Banner.

Vestaburg, Mich.

A FEW WHYS.

BY ADAH BAKER.

Why do people sacrifice principle for policy?

*

Why do they go into raptures over any of Dame Fashion's decrees?

*

Why do people consider it their duty instead of privilege to go to church?

*

Why do people try to hammer the unfortunate one flatter yet than what he is?

*

Why do people set an alarm clock day after day and then continue to disobey its voice?

*

Why is more time spent on studying how to get out of a task than it takes time to do the task?

Why do people enjoy complaining about the weather?

*

Why do people satisfy themselves with the delusion that they are going to do better next time?

*

Why do children know so much more about Santa Claus than the true meaning of Christmas?

*

Why do people feel under obligation to do things solely because the other people are doing that way?

*

Why do men persist in loving their money when the Bible declares that the love of it is the root of all evil?

*

Why do women go into raptures over a style that will in a few years hence appear hideous to say the least?

*

Why is it that people who are all the time telling what great things they are going to do, get nothing done?

*

Why do people become so fettered to the world that they dare not consult their own ideas of right and wrong?

*

Why do people with a cold and deliberate act of the will cast aside those influences which are pointing to eternal life?

*

Why do so many boys and girls succeed in getting through high school without getting any of the high school through them?

*

After speaking reproachfully of our more favored brother, why do our views change so quickly should we chance to gain his position?

*

Why do men when in their better moments hear the Holy Spirit pleading with them to lead better lives and then deliberately turn it away?

Palastine, Ohio.

THE NOBLE PRIZES.

BY A. W. VANIMAN.

SWEDEN is a land that is far advanced in education, and in the establishment of institutions of a charitable character. Their schools are of a high grade and school attendance is compulsory. Many worthy institutions are in existence, whose purpose is to benefit the poor and unfortunate. It is a very common occurrence to read in the papers that some wealthy person, either living or by will, had donated a large sum of money for some charitable purpose or to advance education.

Some few years ago a man by the name of Noble, by will, donated something like 30,000,000 kroners (about 800,000 dollars) as a fund of which the interest was to be used as an encouragement in the different lines of educational research. The different subjects for which prizes are given are Literature, Medicine, Chemistry and Physics. There is a fifth one to be given in the interest of Peace. These prizes are not confined to residents of Sweden, but may be given to any one in other nations who is considered to be entitled to it.

A committee appointed for the purpose determines who is entitled to these prizes, and what is called Noble Day is an interesting event in Sweden. The king presents the prizes to those present or their representatives. The amount of the prizes this year is about 37,800 dollars each, a sum not to be lightly regarded, to say nothing of the honor that naturally attends the prize.

These prizes were given to the one who, during the year, brought forward some great discovery or made some great research in one of these subjects.

This is the fourth year that the prizes have been given.

Two of them went to Englishmen. Prof. J. W. Rayleigh, of London, in physics, and Sir W. Ramsay, of London, for chemistry. The prize for physiology and medicine was given to a physician in St. Petersburg, Russia, I. P. Pawlow. The prize in literature is divided this year between two Frenchmen and a Spaniard.

Among those who have received these prizes in the past may be mentioned Prof. Röntgen, of Germany, who discovered X rays; Prof. V. Bering, who discovered diphtheria serum, also a German; Mr. and Mrs. Curie and Prof. Becquerel, of France, who discovered radium.

It is said that Mr. Noble secured his fortune by discoveries in connection with dynamite. Although he made his money out of the material that is assisting in doing such deadly work in war, he has now willed that it shall be used to advance the cause of peace.

Malmö, Sweden.

SENDING TIME SIGNALS.

THE plan pursued in sending daily time signals from Washington is as follows: A few minutes before noon telegraph wires in one of the rooms of the Naval Observatory are connected with a cup containing mercury under the pendulum of the master clock. With every swing a point on the pendulum comes in contact with the fluid. An electric current is thus enabled to flow through the wires for an infinitesimal fraction of a second and then ceases. An ordinary telegraph sounder in the room gives a click with each contact. Any number of circuits, including distant cities, can be actuated by the same apparatus. Hundreds of sounders, in railway and telegraph offices, in Government bureaus and in astronomical observatories, all respond in unison to the tick of the master clock. Human agency is necessary in switching circuits on and off, before and after this service is rendered, but the signals themselves are sent automatically by a timepiece whose regulation by telescopic observations of the stars, is one of the finest pieces of scientific work done in Washington.

The clicking of the sounders may continue for about five minutes, beginning at 11:55 A. M. By means of a simple bit of clockwork an interruption is effected ten seconds before noon. Attention is arrested by this silence, and men who have taken out their watches when the preparatory signals began now stop talking and listen eagerly. Exactly at noon the clock again actuates on the sounders, the hour being indicated by the first click after the pause.

The same plan can be adapted to midnight service, and also for 1, 2 and 3 A. M., Eastern time, for the benefit of those parts of this country which use Central, Mountain and Pacific time, respectively. The rotation of the earth requires four minutes for each degree of longitude, so that where "Standard" time is used there is a difference of an hour for every fifteen degrees. New England and a part of the Middle Atlantic States region are governed by the seventy-fifth meridian, which is exactly five hours away from Greenwich, the world's starting point in reckoning time as well as longitude. Chicago and Minneapolis are near the ninetieth meridian, Denver almost exactly on the hundred and fifth and San Francisco near the one hundred and twentieth. In each successive belt, going westward to the middle of the Pacific Ocean, midnight comes an hour later than it does in the one next preceding. Going the other way, it comes an hour earlier for every fifteen degrees. Nearly all civilized countries have now adopted the system, but a few still stick to local or solar time. France still obstinately holds out, and Paris clocks differ from those in London about nine minutes. Madrid and Greenwich are fifteen minutes apart in fact,

but Spain has sensibly joined the procession. A traveler from England does not have to set his watch again while in Spain to insure keeping appointments and catching trains.

If a message which is more elaborate than a clock tick is sent, a few seconds would be required in the manipulation of a telegraph kept by an operator. Hence a little time would be consumed in transmission. Again, in communicating with countries on the other side of the globe, it is necessary to use land wires and ocean cables successively. A single current that embraces both cannot be operated. Hence at certain points the message must be taken off and repeated. The chief delay in reaching Australia and Japan would be due to the necessity for repetition, not the actual transmission. In ordinary commercial business the delay at junctions might amount to many minutes, or even two or three hours. But when special arrangements have been made in advance for co-operation the aggregate might be reduced to a minute or two.—*Cincinnati Enquirer*.

ARE YOUR LUNGS WHITE OR BLACK?

If you ever have a chance to go to the museum in connection with the Edinburgh University, at which Andrew Carnegie is Lord Rector, or Chief Ranger, or something of the sort, you will see some strange objects in a glass case that will do more to teach you the value of fresh air than all the books that were ever written.

Last year a professor secured the lungs of an Esquimau, a Londoner and a coal miner. He has had them preserved with some kind of a chemical process, and they are now side by side in a glass case. The Esquimau's lungs are pure white; the Londoner's lungs are a dirty brown; and the coal miner's lungs are jet black.

The Esquimau had kept his lungs clean, not because he knew more about breathing than the Londoner or the coal miner, but because he lived in a land of snow fields and spent his time in the open air. It is a curious fact that every Esquimau who is brought to our large cities dies of consumption in a few years.

All of us that run up and down in the skyscraper canyons of Chicago or New York or Boston have no chance to breathe the dustless, germless air of Greenland or Alaska. The whitest lungs in an American city will be a shade darker than the hue of a lily.

In a large city, our fresh air, like our fresh eggs, might be fresher. Therefore it is much more necessary to make the best use of what we have. When our fresh air is stale, what must our stale air be?

There is a young man in a clothing house who takes his watch regularly, once a year, to a jeweler's, so that it will always be in good condition. Yet this

young man is in the first stages of consumption, and he is not taking any steps to escape from the "white plague."

He could buy another watch with a week's salary, but in two years he will need a new pair of lungs, and all the money in the world will not buy them.

You need not think that this young man is an unusually stupid specimen. The fact is that he is like half of the men and women of our cities—he pays less attention to his lungs than to his watch or his piano or his bicycle.

To breathe stale air is just as bad for the wonderful machine which we call the lungs as it would be to drop a pinch of dust into your watch, or to empty the button bag into the piano, or throw a spadeful of ashes over a bicycle.

Some of the greatest men in the world have had consumption, but most of them have had the sense and the will power to cure themselves. Napoleon, Goethe, Von Moltke, Emerson and Cecil Rhodes are five cases of cure.

Now it is easy for a doctor or a writer to say, "If you have weak lungs go to the mountains or live outdoors all day long." But it is not so easy for others to take this advice. In thousands of cases it is impossible.

There might just as well be a fresh air trust so far as some wage earners are concerned. The only chance they get to walk in the open air is when they lose their jobs, and then they are not usually in the right frame of mind to enjoy the walk.

But there is one thing that every one can do—keep the windows open at night. For eight hours a day you sleep. If you keep your windows open and let a current of air blow through your bedroom you will be doing the right thing for one-third of the time.

In fact, Professor Biermer calls consumption a "bedroom disease." As long as people live and sleep in egg-box tenements, with all the windows shut tightly against the air that feeds them, there are no doctors and no writers and no medicines that can cure them.—*Herbert N. Casson, Health Culture*.

PROVERBIAL CONTRADICTION.

Some proverbs I've been reading, and I find
One says that "Out of sight is out of mind;"
But if that's so, how can it too be true
That "Distance lends enchantment to the view?"
And yet again, if it be true, I ponder
How is it "Absence makes the heart grow fonder?"

—Henry Waldorf Francis.

* * *

By this we know that we love the children of God, when we love God and keep his commandments.—I John 5:2.

THE MINISTER'S EWE-LAMB.

A Story of Service in Country and Town.

THE minister walked homeward in the gloaming through the sweet meadows. There was a beautiful new gold watch ticking away in his waistcoat pocket, and his mind was filled with the memory of the kind wishes and words that had just been uttered at his farewell meeting.

He sighed as he thought of the many kind friends he was leaving, and of the new untried path that lay before him. "God give me grace and wisdom," he murmured, "that I may see nothing but his glory."

Looking back upon the last three years, there seemed so much to blame himself for, so little room for praise, and all that the brethren had said of him to-night out of the depths of their kind hearts, he felt was so little deserved. They did not know of all the mistakes and failures—they were only known to his own heart and to God.

The minister unlatched the little garden gate, and let himself into his house with his latchkey. There was a light burning in his study. He pushed open the door and went in. Lying upon the couch, with her face hidden, was a young girl—the minister's daughter—his one treasure.

She lifted her face at the sound of his footsteps, and then he saw that she was crying.

He came quickly to her side, and put his hand upon her golden head.

"Is the pain bad again, Dolly?" he asked, anxiously.

She smiled up at him—a bright, reassuring little smile, though tears were still falling down her cheeks.

"Oh, no," she said; "I have only been thinking and worrying, father."

"What about, Dolly?"

"Oh," she said, "I am so useless to you dear, and I long so earnestly to be able to help you. Here in the country, where everyone is kind, there have been little things even a cripple girl could do—little visits I could manage to make, and tracts to leave, though not nearly all I want to do for you. But when we go to London, father, I can never hope to be the least bit of good there. Nothing but a drag and burden to you—an added care, instead of a blessing."

The minister's hand brushed back the curls from the white forehead lovingly, and there was silence in the little room for a moment, only broken by the sleepy twitter of a little bird outside. Then he said softly:

"It may be that God has some special bit of work in London that only my little cripple Dolly can do. Some poor heart that only Dolly can reach. He has

work for all in his great vineyard—even for you, little one."

And Dolly soon found work, for only a few Sundays had passed, and she had scarce grown accustomed to the crowds and noise of East London, when they pressed her into service, and, timid and frightened, she sat down in the Sunday school at the head of a class of big girls.

She had never seen girls like them before. They were nearly all older than Dolly in years, and in knowledge of the world and its wickedness they were fairly grandmothers beside this little teacher. Most of them earned their own living by working in factories, and they looked at Dolly curiously—half in contempt and half in pity.

But such a gentle little teacher she was; so ignorant of earthly things, yet so full of the knowledge of Jesus and his love that her heart fairly overflowed with its sweetness. She had suffered so much in her short life, and through her pain Jesus had been the one Comfort. So dear was his name to her, and so rich in blessed memories, that almost before she had timidly breathed it aloud all her shyness was forgotten, and her eager face flushed up in its earnestness as she spoke of him.

How the girls listened. They had never been taught like this before.

"Oh, Liza, ain't she an angel?" one girl whispered under her breath.

"Hush," said Liza, "and listen."

Dolly was happy. She had found something that even she could do, and her thoughts were always full of her class. It was wonderful the hold she gained upon the girls, and all the week long she was planning lessons and talks and schemes for them. If she chanced to meet one of the girls in the street there was always a sunny smile of greeting ready, and her little gloved hand would go out to shake the rough and often dirty one of her scholar, who would pass on feeling as though an angel had stopped to talk to her on the way.

It almost seemed like helping father, Dolly thought, to be caring for these girls; but there was something more she longed to do to help him, and yet she dared not attempt anything, even if she had known what to attempt. She could pray, and, never dreaming how the answer would come, Dolly prayed about this, and sometimes hushed her breath at the thought that God might use even her.

This matter that was so laid upon Dolly's heart was about an enemy of her father's. He had been an enemy to her father's predecessors in the circuit, and from the first day's ministry had been a trial to Dolly's father. He came to all the meetings with the prime object of upsetting them. His heart seemed like a

millstone; nothing touched it and nothing was sacred to him. He jeered at the minister, scoffed at the hymns, ridiculed the Bible, and turned everything that was holy and beautiful into sorry jesting. He was a dreadful trial at the open air meetings, for there he would gather a crowd of kindred spirits around him, and between them it was well nigh impossible to conduct any sort of services whatever. Every time the chapel opened he was there, seated just in front of the minister, with his daughter by his side, and the preacher needed all grace and resolution to enable him to forget that jeering face before him, and to preach his sermon undisturbed by the audible sneers that fell from old Abel's lips.

Dolly thought so much about this wicked old man, chiefly because he was such an ever present trial and hindrance to her father, and perhaps a little because his daughter was one of her girls, and her girls filled her thoughts from daybreak to sunset. Oh, if Liza could only be brought to know Jesus, for who, like Liza, could influence old Abel for good? How splendidly the meetings would go if Abel helped, instead of hindered, and how her dear father's work would be lightened, if only the thousand and one annoyances imposed upon him by his enemy were done away with. But Dolly did not know how to move in the matter, or what to plan; there was nothing at all save prayer.

* * * * *

In a small back room, up a great many flights of stairs, a girl was moving about dusting and arranging the scanty furniture. It was Liza, and old Abel sat by the window smoking a long "churchwarden," intently watching his daughter.

Presently, as she was passing him, he put out his hand, and drew her to his side.

"Where's your grit gone, Liza?" he questioned, "I can't make top nor tail of you lately, stopping in to tidy the place, as meek and mild as a lamb. You used to be off about the streets fast enough, and many's the bit of sauce you've given your dad if he ventured to speak a word about it. What's come over you, my gal?"

Liza lifted her face shyly to his, and her colour rose as she said:

"I've got converted, father."

The old man's only answer was a gruff grunt, but now that the ice was once broken, the girl went on eagerly:

"I wanted to tell you all about it, father, only I was afraid you would laugh at me. It was all through Miss Dolly. Oh, father, you don't know the ways she talks to us in class. It isn't like teaching a bit, it is just like listening to one of God's angels. We never had nobody like her before. I never used to even listen to the other teachers, but somehow I couldn't

help wanting to hear what she said; and then—somehow, I began to want to be good, too. And things I used to like—larking about the streets with the girls and chaps, and that—I didn't care a bit for any more. I felt so wretched and unhappy, I knew I wasn't fit to die, and I wanted God to make me better, but he seemed such a long way off, and I couldn't find my way to him alone.

"And then, you know, father, just when I was feeling bad like this, Miss Dolly was too poorly to come to class, and two or three Sundays I went hoping to find her there, and thinking she would, maybe, say something that would comfort me a bit, but there was always a fresh teacher, and though I tried to listen, they didn't seem like Miss Dolly."

She paused and glanced at her father, but he was busily engaged in re-filling his pipe, and apparently was taking but little notice of her words. Still Eliza went on softly:

"Then one night, I was very, very wretched, and I happened to go by the minister's house, and there was a light in Miss Dolly's room, and I thought I would make bold to go and knock, and ask if she was better.

"The servant asked me to come inside, and presently she came downstairs and said Miss Dolly would like to see me. So I went up into such a lovely room, father. It fairly dazzled my eyes, it was all so pretty, and there on the sofa was my dear Miss Dolly, looking so white and tired, but smiling like she always does when she saw me. And nothing would do but I must sit down beside her and talk—me in my old factory dress, and her so dainty and sweet—but she talked just as if she didn't feel the least difference between us, and she put her little white hands on my big ones, and asked me if I loved the Lord Jesus.

"And then, you know, all my wretchedness that I had half-forgotten for the moment, came back like a great flood, and I broke down and cried, and told her all about it, just the same as I am telling you, father.

"All the time she kept her pretty hands on mine, and when I could look up I saw the tears running down her cheeks, just as though she knew all about how miserable I had felt, and she said:

"'Oh, Liza, I can't tell you how happy you have made me; for I have been praying for you and your father ever since I knew you, and now I know God is going to answer my prayers. Let us tell him all about it.'

"Then she prayed so beautifully for you and for me, father, and somehow, while she was praying, all the misery went away, like a great burden rolling off, and I felt so happy.

"Won't you be converted too, father? We are both praying for you now."

But all the answer Liza got to her question was another, but deeper, grunt.

The weather grew intensely hot as the summer drew to a close, and Dolly's little stock of strength failed, so that every day had to be spent upon the sofa in her room, much to her regret, for there seemed such a lot of work to be done before the three years' sojourn ended, and it was hard to lie still and be patient. Still she managed it, and always had a smile ready to break forth for any chance visitor, or if she heard the quick step of the busy minister coming up the stairs to her room.

He came late one Saturday night after the usual prayer meeting, and Dolly knew at once, by his face, that he was bringing good news.

"You've got something to tell me," she said confidently.

But the minister didn't say anything for a full five minutes beyond:

"God bless you, little daughter, and make you more and more a blessing."

She smiled up at him in her old way, her eyes bright with expectation, and then he told her all about the prayer meeting, how the first person to come after he reached the vestry was old Abel, and how his—the minister's—heart had failed him at that, for he felt the service was as good as spoilt now.

How old Abel had sat wonderfully quiet and attentive until the meeting was well under way, and then he had suddenly stood up, and one of the stewards was taking his arm to try and get him to go out quietly, but he began to speak, telling them a wonderful story of how God had been working in his wicked old heart. All this time the steward kept a tight grip of Abel's sleeve.

"We were all surprised but never doubted that it was some new freak of Abel's, faithless workers that we are, mistrusting the Almighty Power that even the winds and waves obey.

"You could have heard a pin drop," said the minister, "as Abel went on to tell us of his daughter's conversion. He said he had never believed in conversions at all, thinking them merely a boast of superiority on the part of parsons, and such like people. He said he had always scoffed at the mention of it until he saw the wonderful change in Liza. He watched her day after day, expecting to see her fall back into the old ruts, but instead found her checking herself on the brink of a display of temper, or the utterance of a bad word. 'She used to say them pretty well as easy as I did,' said Abel, 'and think nothing of it, but now the girl, altered altogether. So gentle and thoughtful stopping at home to see to my food and clothes, and she said it was conversion changed her, and that she was praying for me, and that little Miss Dolly had been praying for me ever since she knew me.'

"Well, Dolly," said the minister; "that broke him up altogether. He couldn't get over the thought of

your praying for him every day for nearly three years. He said the thought of it tormented him night and morning, till he was forced to cry:

"'I yield, I yield! I can hold out no more.'

"Oh, little daughter, in the end our prayer meeting was turned into a praise meeting. I only wish you could have been there. It was like being at the very gate of heaven. After to-night we can indeed say: 'Is anything too hard to do for the Lord?' And you, Dolly, grieving over your lack of usefulness! You have done more than all my sermons."

And Dolly and the minister rejoiced together.—*Methodist Recorder.*

ABOUT MAHOGANY.

THE United States is not a mahogany growing country, unless Cuba may now be said to be a part of the United States. It is a tropical wood. Its home is in Central America and in Cuba, Jamaica and Santo Domingo. British Honduras, Guatemala and Nicaragua give the most and Mexico the largest timber. The richer, solid, heavy varieties come from the islands. These will not float. They are susceptible of a high polish, and the wood has a rich, wavy figure. The pretty figured pieces of wood are of great value. A six-foot piece (which included the crotch of the tree) in a certain shipment will bring about \$500 when cut into veneers.

No matter where a shipment of the wood comes from or what variety it is there are always more or less of the fine, flaky sticks that make veneer. Mahogany is a phenomenal wood, in that it does not warp under any conditions of weather, use or age; neither does it shrink. It is of great beauty, hardness and durability. In no other wood can these qualities be found combined with large size, uniformity of grain and richness of color and figure.

The island timbers are eight to ten feet in length by twelve inches in diameter, some from Cuba, however, reaching thirty-five feet in length by two feet in diameter. Honduras squared timbers are as long as forty feet by two feet in diameter, and the three-foot and four-foot timbers come from Mexico. The softer mahogany comes from the swampy lands. There are no mahogany forests; the trees are not grouped that way, the individual trees being more or less widely separated. Like other trees, the core is the poorest part, often being worthless.

A schooner load represents the expenditure of about \$13,000. That is not all for the timber, labor and freight, a considerable part of it representing "grease" to the Spanish custom officers, whose favor is not obtained by a smile. There are no sawmills in the mahogany growing countries. The trees when cut down are squared by hand. An Indianapolis company

is going to have them hewn into octagon shape hereafter instead of squares, believing it will get twenty-five per cent more timber out of them this way. Oxen are used for the haul to the water, and the timbers are rafted and floated to larger streams, where larger rafts are made and sent to a loading port. Having arrived there, the lumberman's trouble and expenses are not half over.

The coming and going of ships to these small ports are not regulated like the running of railroad trains. It may be announced that a ship will be there on the 4th and there is great scurrying to get the timber ready. When the ships do get there they will not wait for the arrival of their timber cargo, but will sail away without it if it is not ready. So the rafts are anchored. There is a worm, or marine borer that likes mahogany, and he goes promptly to work. If the ship does not arrive on time and is not sighted within a day or two the timber must all be hauled up on the beach or every timber turned over daily. The worm does not make fast time in boring, and if the side he is working on is turned to the hot sun before the borer gets more than an inch or so in it will scorch him to death.—*Cincinnati Enquirer*.

NEW HOMES UNDER IRRIGATION.

Effect of the Irrigation Movement on Eastern Land and Industrial Institutions.

SOME of the sociological factors in the national irrigation movement was the theme of an address last week before the Philadelphia Congress of the American Association for the Advancement of Science, by Guy E. Mitchell, an extensive writer on irrigation and public land subjects.

No question before the public to-day, Mr. Mitchell declared, presents more interesting sociological phases than does the national irrigation question in America, not only through the great number of homes to be created by artificially watering desert wastes but through the far-reaching effect of the working out of a great government irrigation policy and the general education of the American people on the advantages of this practice both east and west.

The social side of irrigation can be described in a single clause. Irrigation subdivides and resubdivides land into small home tracts.

Irrigated communities average the smallest farms in the world. The west contains thousands of five and ten acre farms from which men are making comfortable livings. The social conditions of some of the most intensely irrigated tracts are perhaps the most nearly perfect of those of any communities in the world.

Education to Eastern Farmers.

Now the effect of the great government irrigation works, which are being pushed rapidly forward, will be to create a western empire of new homes and at the same time to incidentally thoroughly educate the people of the entire country on the subject of irrigation. The consequence will be that irrigation practices will finally enthrall the eastern farmer. The facts as they exist in European countries show that irrigation can be practiced with great profit on land which has sufficient rainfall to grow paying crops. Irrigation is a crop insurer besides guaranteeing double yields and when it is applied to eastern farm lands the result will be to divide them into smaller and better tilled tracts.

A Nation of Rural Homes.

Along with the prosecution of the government irrigation policy and its great agricultural education will then come the establishment of rural colonies throughout the entire country and a vastly improved agricultural and social condition.

A BEAUTIFUL PRAYER.

THE fishermen of Brittany, so we are told, are wont to utter this simple prayer when they launch their boats upon the deep: "Keep me, my God; my boat is so small, and thy ocean is so wide." How touchingly beautiful the words and the thought! How wise and appropriate the prayer! Might not the same petition be uttered with the same directness by us every day of our lives? "Keep me, my God; my boat is so small,"—I am so weak, so helpless, so easily carried by the winds and tossed by the waves. "And thy ocean is so wide,"—the perils are so many, the rocks so frequent, the current of temptation so resistless, the tides of evil so treacherous, the icy mountains of disaster so threatening, that, except thou, the Lord, dost keep me, I must utterly perish. Keep me, my God, keep me; my boat is so small, and thy winds are so fierce, thy waves are so high, thy waters are so deep, thy ocean is so wide, I am so buffeted about by sharp adversity, so driven before the storms of grief, so swept by the resistless eurocydon of defeat—keep me, my God, keep me!—*Selected*.

"REFINEMENT is more a spirit than it is an accomplishment. All the books of etiquette that have been written can not make a person refined. True refinement springs from a gentle, unselfish heart. Without a refined spirit a refined life is impossible."

"THE infidel's child would not write: 'God is nowhere,' as he had tried to teach her; but 'God is now here' was the way in which she wrote it."

PLEASANT STORIES OF PLEASANT PEOPLE.

BY MARGUERITE BIXLER.

LISZT, the musician, had a wonderful personality. One writer has said: "If you only heard Liszt play, and didn't see him, you lost half the pleasure." An amusing incident is told of him, as a teacher. A young Magyar tried to play a sonata of Beethoven before him one day.

"Piano, piano," cried Liszt. "Piano, softly! Let it sing—let it sing! Can't you see piano written there?" cried he, still more sharply, but the young patriot only grew more nervous and played the heavier.

At last Liszt took his hands from the keys, saying, half-angrily, half-laughing:

"Do you know, my young friend, what the field sergeant does when the recruits can not tell the difference between right and left? He ties a bundle of straw on their right arms and a bundle of hay on their left, and gives the command: 'Hay, straw!' We shall have to try this plan with you for 'piano' and 'forte'! Now, then, give old Beethoven a chance. Hay! hay! hay! well! Now, straw, straw! plenty of straw—still more straw," and Liszt laughed till the tears came.

✦

In the *Youth's Companion* there is a pretty story of Queen Victoria and Jenny Lind. It belongs to the year 1848, and shows how the modesty of the two women—the queen of England and the queen of song—made a momentary awkwardness which the gentle tact of the singer overcame.

It was on a night when Jenny Lind was to sing at her majesty's theatre that the queen made her appearance after the memorable Chartist day. For the great artist, too, this was a first appearance, for it was the beginning of her season at a place where the year before she had won unparalleled fame. It happened that the queen entered the royal box at the same time that the prima donna stepped upon the stage. Instantly a tumult of acclamation burst from every corner of the theatre. Jenny Lind modestly retired to the back of the stage, waiting till the demonstration of loyalty to the sovereign should subside.

The queen, refusing to appropriate to herself that which she thought to be intended for the artist, made no acknowledgment. The cheering continued, increased, grew overwhelming, and still there was no acknowledgment, either from the stage or the royal box.

At length, when the situation became embarrassing, Jennie Lind, with ready tact, ran forward to the footlights and sung, "God Save the Queen," which was caught up at the end of the solo by the orchestra,

chorus and audience. The queen then came to the front of her box and bowed, and the opera was resumed.

✦

When Patti was a little girl she went to school in Mt. Vernon, N. Y. She was so fond of music even then that she used the school piano so much that complaints were made to the school trustees that "the little Italian girl" played the piano so much that no other children could get a chance. She had a sister, Carlotta, who was a beautiful singer too.

Patti was a very good-natured, big-hearted little girl, and full of sympathy for anybody who was in trouble. But she grew very angry once, when some of the bad boys annoyed her by calling out to her, "Patty-cake, patty-cake, baker's man," etc. She turned and faced them, pouring out her wrath in pure Italian. Nobody knew what she said; but the boys turned pale with surprise and fright to hear her, and never called her that again.

She was a brave little girl. Once when she was playing with the other children near a pool, one of the little girls slipped and fell into the water. Patti kept her presence of mind perfectly. She sprang into the water, caught the struggling girl, and swam to a log where they clung together until they were rescued.

One day one of my pupils, a young English lady, showed me a piece of money that she said was once in Patti's packet! When a little girl she heard Patti sing in England, and was so delighted with the music that she went up to Patti and said: "How *can* you sing so nice, lady?" Madam Patti put her arm around her, reached in her packet, and gave her the souvenir.

NEWS ON TRAINS.

THERE are some things so simple that when they are first put into effect people are quite apt to ask "Why did not some one think of this before?" Big money has more than once been made from inventions so "easy" that it would seem as if a hundred persons might have thought of them at the same time.

So we are tempted to ask, when advised that the Union Pacific railroad has introduced a new service on its overland trains, "Why haven't railroads done this before?" Probably because none of their bright men happened to think of the idea, we suppose. It remained for the advertising department of the Union Pacific to work this out, as they have worked out many others.

The scheme is practically this:

About noon and at half past four every afternoon, there is flashed over the wires of the Union Pacific system, a brief summary of the most important tele-

graphic news of the day, news from all parts of the world. This is handed over by operators at scheduled points, in typewriter form, to the conductors of the Overland, who post the sheets in the buffet, smoking and library cars.

Those who have taken the journey to the Pacific Coast know how hungry a man gets for news, and how hard it is to appease that appetite when passing through a country where large newspapers are not published such as can be procured at off intervals, giving only the most meager telegrams. One feels quite cut off from the world for the time being, and often arrives at his destination two or three days behind the times, as far as up-to-date information is concerned. The "news service bulletin" of this enterprising road will be a boon to those who wish to keep in touch with the swing of the world's pendulum, the tide of affairs that goes on while they travel, and we believe the traveling public will be quick to recognize the utility and value of this innovation, and show their appreciation by using the line that adopts it.

We have had for some years the dining car, the traveling barber shop, the stenographer who takes dictation while going at sixty miles an hour, and other facilities to the advantage of the modern traveler, all tending to his comfort, but this is the first attempt to supply him with news without charge. Who knows but that in the future every fast train will be equipped with a printing office and turn out a small daily paper? It may come along about the time that, as we fly we shall be able to communicate from our own section or drawing-room by telephone with our families at home.

The expense attaching to this new service is not great—the Union Pacific using its own wires and its own employés, but it is certainly a great convenience. The new scheme will be inaugurated at once.

It should not be forgotten that the Union Pacific was the first line to introduce dining cars, vestibuled cars, steam heat, Pintsch light, buffet smoking and library cars, tourist cars, on Trans-Continental trains west of the Missouri River, and still continues to lead.
—*The Omaha Excelsior*, Oct. 1, 1904.

ORIGIN OF STRAWBERRIES.

UNTIL recently nothing definite was known about the origin of the cultivated strawberry, but it has been ascertained that its progenitor was a plant found in Chile and fetched from that country to Europe. This plant was known as the "pine" strawberry, because of its agreeable pineapple-like smell. Up to that time the garden strawberries had been derived from the scarlet berry of Eastern North America, but the "pine" species was so superior as to supplant the other.

The Government Plant Bureau states that during early colonial days the wild strawberries of the field were abundant in this country, and furnished a much-prized article of diet. When transplanted to the garden they gave fruits of increased size, but only a few commercial varieties resulted. From Virginia they were taken to Europe, where they were cultivated to a considerable extent until the "pine" from Chile, made its appearance.

It is now known that the "pine" strawberry is native to the western mountain regions of both North and South America. It may correctly be called the parent of the modern strawberry, though some of the best of the garden varieties of to-day have been obtained by crossing the "pine" with the eastern scarlet berry. At all events, the modern strawberry is distinctively an American product—a gift of the New World to mankind, like Indian corn, the potato, the tobacco plant and the kidney bean.

Our Eastern strawberry reached Europe about 1712, and the "pine" from Chile became known there in 1760. There is a native European wild strawberry which has the advantage of bearing fruit all through the summer, but it is inferior. The garden strawberry, as we know it at the present time, adapts itself to a wider range of latitude and to greater extremes in environment than any other cultivated fruit. Within the last twenty-five years its size has been greatly increased so that nowadays occasional berries will afford two or three mouthfuls apiece. New varieties are continually being obtained from propagation from seed, while the desirable horticultural sorts thus secured are propagated from the runners, their qualities being in this way perpetuated with certainty.

THERE never was so great a thought laboring in the breasts of men as now. It almost seems as if what was aforesaid spoken fabulously and hieroglyphically, was now spoken plainly, the doctrine, namely of the indwelling of the Creator in man. What is the scholar, what is the man for, but for hospitality for every new thought of his time? Have you leisure, power, property, friends? You shall be the asylum and patron of every new thought, every unproven opinion, every untried project which proceeds out of good will and honest seeking. All the newspapers, all the tongues of to-day will of course defame what is noble, but you who hold not of to-day, not of the times, but of the Everlasting, are to stand for it; and the highest compliment ever received from Heaven is the sending to him its disguise and discredited angels."
—*Emerson*.

"IGNORANCE is a prolonged infancy, only deprived of its charm."

WHAT DO YOU READ ?

BY LOTTIE M. BOLLINGER.

FRIENDS, if I should ask you what you read, some might say the Bible, more would enumerate a list of books, magazines, newspapers, etc. Now, why is this so? Simply because too many of us read everything else to the exclusion of the Bible, while we should read the Bible to the exclusion of everything else, if necessary, for it is through it that we learn how to live.

But some say we go to church and hear it read. This may be so, but that is seldom more than a few verses or at most a chapter, once or twice a week, and although Bro. A or B may be thoroughly honest and conscientious in his endeavor to lead you aright, how do you know but that he may make a mistake?

How often we hear the remark: "I don't believe that way," after some sermon preached by Bro. A, or "Bro. B said it was this way," yet no endeavor is made to read the Bible and find out which one was right, if either.

If you ask those same people what they do believe, if they tell you and you ask the reason for such belief, quite often it is based upon another's remarks, or views, and seldom are you sent to the Bible for proof.

Are you willing to leave your soul's welfare to the guidance of one frail mortal without any endeavor on your part to distinguish right from wrong as given in the Holy Book

Many do this who are unwilling to leave the temporal things of this life in the care of others for fear of neglect or loss, and would be unwilling to intrust the entire care and training of their little children to Bro. A or B, yet they go on day after day neglecting to read or study the one and only book which gives them divine instruction, and shifts the responsibility upon the brother's shoulders.

Many make excuses, some say they haven't any Bible to read, but spend in a very short time in unnecessary articles, enough money to buy a Bible a dozen times.

Some say the print of their Bible is so fine that they can't see to read it, yet they will spend hours reading a dime novel or a magazine with much finer print.

Others say they haven't time, yet they can find time to go on the excursions, attend socials, parties, fairs, shows, picnics, go fishing or hunting, or any other temporal amusement they wish and then no time for the Master.

Now, did you ever think how frail and without truth or foundation these excuses are, and do you suppose at the final examination on the last day that God will take them and overlook the many errors com-

mitted through ignorance caused by willful blindness and neglect to study God's Word?

We are told to search the Scriptures for the purpose of preparing ourselves for eternal life in that better home beyond, and if we fail through lack of understanding when we did our best perhaps there may be some excuse for us, but we cannot shift our responsibility upon another's shoulders, for each of us will have to account for himself and himself alone, unless our influence has been such as would lead others astray. So let us all endeavor to lay away our petty excuses and spend some time each day with God and his Word, so that we may feed our soul with spiritual food, the same as our bodies with temporal food, so that we may lead such lives as to be an example and an uplifting influence to those round about us.

Vestaburg, Mich.

* * *

NATURE AND HER GOD.

BY MARY I. SENSEMAN.

GOD is a Spirit and he has given it to Nature to have dominion over the earth and sun and moon and stars, and over the living things of the water and of the air.

The laws of the universe are inexorable, immutable, unwritten,—the laws of Nature. They pertain to all things material, all things which man's mentality is able to perceive.

These laws are unwritten except as men and women have jotted down many of them in their works on science. They are immutable, as we see in the regular succession of night and day and of the seasons, in the germination and development of plant and animal life, and in the unvarying cellular arrangement of each kind of substance. They are inexorable, as, supposing that the sun, taking compassion on shivering mortals, were to throw out an extra amount of heat some winter's day, the *natural* result would be that the sun would get to shine a few years less than it will otherwise; a plant, if kept from the sunlight, will die; disobedience to the laws of health result in bodily or mental disease; or, to illustrate more positively, a child who eats strychnine tablets in mistake for candy will suffer as much from the poison as a man using the tablets purposely.

The law of God is inexorable, immutable, written,—the Bible. It pertains to all things spiritual. One way in which this differs from Nature's laws is that it judges. It distinguishes motive of act from the act. It distinguishes the conditions of body and mind which counteract spiritual strength. Thus, a person inculpably ignorant will not be punished for violation of the law of God. On the other hand, inevitable

punishment will follow the slightest violation of the laws of Nature. And this is why: Nature is to God as a perfect machine is to the mind of the man who made it.

The law of God, too, is immutable. If this old world were to go to sleep to-night and forget to turn us toward the sun to-morrow morning, vast surprise would thrill everybody. Can Christ's law, "Accept me, ye whom I have asked individually," be expected to be wavering?

Men's bodies and minds are governed by the natural laws; their spirits, by the divine. So if we are spending all our energy to obtain bodily and mental development we are worshipping Nature—a machine—a servant of him who created all matter. If we give our energy first to a life of love and the remainder to health and development of mind and body we are worshipping the Omnipotent.

We are always seeking God in Nature,—in knowledge and science of the height and depth of the universe. We forget that he is not in the wind, nor in the earthquake, nor in the fire, but in the still small voice. We forget that the nearest we can get to God is in faith and the nearest we can get like him is in works.

Covington, Ohio, Rural Route No. 3.

HOW MOLES WORK.

MOLES are usually actively at work in the early morning or late in the afternoon. It is not difficult to kill them with a pitchfork when they are working, the animals being located by observing the movement of the ground above them. If water is allowed to run into the burrow and fill it the animal when present can be forced to come to the surface to avoid drowning, and may be easily killed. The best remedy for the damage done to lawns and grass plots by moles is prompt rolling with a heavy roller. By continued repetition of this the moles will be driven away at least temporarily.

Moles have few natural enemies. Their food consists chiefly of earthworms and insects that live in the ground, and their presence in large numbers at any place is an evidence of the abundance of their food. There is no doubt that they do much good by destroying many noxious insects. If it were not for the injury done to lawns by their throwing up ridges of earth along which the grass dies, or to gardens by their loosening the roots of young plants, moles would be more beneficial than harmful.

"WHO of our youth will give themselves to God for the purpose of laboring for the salvation of their fellow youth?"

ST. VALENTINE'S DAY.

BY ADELAIDE MCKEE KOONS.

ST. VALENTINE'S DAY is one of those customs about which we are supposed to be so well informed, that dictionaries and other books of reference can afford to slight it, or pass it by with only the merest mention, but the fact is, nobody, not even the compilers of such books of reference, knows very much about it, beyond the old fancy that birds are supposed to mate on the 14th of February, and we all know that millions of love letters and valentines, both sentimental and "comic" are posted on that day.

Valentine's Day Luncheons and "Heart Parties," are also favorite ways of celebrating this degenerate festival of love, and certain widely read magazines teem during the month of February, with suggestions of how to celebrate the day fittingly, but the real meaning of St. Valentine's Day, somehow seems to escape us, busy with the affairs of an intensely practical age. Besides, we have neither time nor imagination to write verses to our mistress' eyebrow, and if we did, she would receive them with open amusement, and "die-a-laughing" as she read.

The origin of St. Valentine's Day is really obscure, like so many of the traditional observances that have come down to us. One theory is that it was originally the feast of Lupercalia, a Roman Festival in honor of Pan and Juno, which took place in February, at which time young men and maidens' names were put into vases and drawn by the opposite sex, for partners during the feast, which we are told sometimes ended in an orgy. The drawing of names in like manner, was a very distinctive feature of the English and Scotch celebration of St. Valentine's Day.

The early Christian Fathers, with unflagging zeal, tried to stamp out this pagan festival of Lupercalia, but found that they could not erase it from the tenacious minds of the common people, and they then did the best they could to transform it into a Christian festival. They gave it a new name and selected the good Bishop Valentine, who was martyred on the 14th of February, 270 A. D. during the Claudian persecutions, to stand godfather to the change.

In fact, there were really two St. Valentines, both martyrs, both having been done to death by persecution, on the 14th of February, but the good Fathers seem to have chosen the Bishop St. Valentine as their patron saint, and so will we.

St. Valentine's Day found its way into England and Scotland, and flourished there. Some one tells us that this custom of exchanging love messages, exists "solely among English-speaking people," but I think this is going a little outside of the facts, as tradition tells us how it was celebrated in Norwich, Eng., where baskets of flowers, cakes, and other substantial dainties

were mysteriously left on doorsteps, and in France, where for awhile the names of saints were substituted for the names of sweethearts, and the drawers were supposed to emulate in their conduct, the qualities and virtues of the saint which happened to be their valentine. No doubt there were as many different ways of celebrating it as there were countries and parishes.

The common practice was for the lads and lasses to meet on St. Valentine's Day, and each writing their name on a billet, place it in a receptacle, from which it was drawn by one of the opposite sex, who thus secured a valentine or partner. In some cases, there were two valentines for each one. There was an element of fun in it, as well as an element of chance, and we are told that "quite often, a real love affair" resulted. The valentines thus mated were supposed to devote themselves to one another for varying periods, in some cases for a whole year. There must have been an aching heart now and then, when some impetuous "young Lochinvar" was allotted to the wrong girl, and what was done under these circumstances, we are not told. Perhaps a certain amount of "switching" was permitted, or Cupid may have been wise enough to avoid such mistakes. Doubtless he gave many a sly hint to those who needed his services and knew enough to profit by them.

It was believed that the first unmarried person of the other sex, whom one met on the morning of St. Valentine's Day, would be one's true love, perhaps become a husband or wife. So one girl tells us: "Last Friday (1750) was St. Valentine's day, and the night before I got five bay-leaves, and pinned four of them to the four corners of my pillow, and the fifth to the middle, and then, if I dreamed of my sweetheart, Betty said we should be married before the year was out. But to make more sure, I boiled an egg hard, and took out the yolk and filled it with salt, and then I went to bed, ate it shell and all, without speaking or drinking after it. We also wrote our lovers' names upon bits of paper and rolled them up in clay and put them into water, and the first that rose up was to be our valentine. Would you think it?—Mr. Blossom was my man. I lay abed and shut my eyes all the morning till he came to our house, for I would not have seen another man before him, for all the world."

The poets of Shakespeare's time made many allusions to this festival, the most familiar to us being, perhaps, Ophelia's little song, in Hamlet, which begins,—

"To-morrow is St. Valentine,
All in the morning betime,
And I a maid at your window,
To be your valentine."

There are many allusions to the popular belief that the birds mated on that day, and the following is one of the quaintest:

"Hail, Bishop Valentine, whose day this:
All the air is thy diocese,
And all the chirping choristers
And other birds are thy parishioners.
Thou marryest every year,
The lyric lark, and the grave whispering dove,
The sparrow that neglects his life for love,
The household bird with the red stomacher;
Thou makest the blackbird speed as soon,
As doth the gold finch or the halcyon—
This day more cheerfully than ever shine,
This day, which might inflame thyself, old Valentine."
—Donne.

For common folk, less favored than poets in imaginative qualities, there were little chap-books or pamphlets, printed and sold by the booksellers, which were called "Valentine Writers," some sentimental, some of a witty trend, and which contained all sorts of jingles, relative to the subject. These, one could copy upon a sheet of fancy paper, with the aid of a goose-quill, and slip between the door and lintel of the beloved one on St. Valentine morning. On the back of one of these chap-books, called "The Quizzing Valentine Writer," (Published in 1805) is a portrait of a maiden in an enormous coal-scuttle bonnet, who is repulsing a dandy of the most exaggerated type, with the words:

"Oh go, you little harmless thing,
A dandy, all so fine,
The gods I hope a man will bring,
To be my Valentine."

By which we can conclude, that if our grandmothers "fed on sentiment," as they are accused of doing, they occasionally seasoned it with a little common sense.

We learn from Pepy's Dairy (1661) that the complement of being selected as a valentine (whether by lot, or open choice) called for a gift, more or less substantial, and he tells us how he gave his wife, upon different St. Valentine's Days, "a payre of embroidered and six payre of plain white gloves," and a "ring set with a Turkey stone surrounded with diamonds," which must have cost him "a pretty penny," as he should express it.

Charles, Duke of Orleans, who was taken prisoner at the Battle of Agincourt, in 1415, and detained in the Tower of London for twenty-five years, beguiled the time by writing many valentines, of which the following has real literary excellence:

"Wilt thou be mine? dear love, reply,—
Sweetly consent, or else deny;
Whisper softly, none shall know—
Wilt thou be mine, love? ay or no?"

"Spite of fortune, we may be
Happy by one word from thee;
Life flies swiftly—ere it go,
Wilt thou be mine, love, ay or no?"

It has been only since 1800 that manufactured valentines have been used. The first manufactured valentine in America was made by a woman, in the early part of the nineteenth century. Her father was a stationer and lived at Worcester, Mass. Miss Esther A. Howland, for that was her name, saw some printed valentines which her father had ordered from England, and thought she could make some that would be prettier than those. She made a few and gave them to her brother, to take with him on his next trip "on the road." He surprised her by bringing back overwhelming orders for \$5,000 worth of valentines. She filled the orders, somehow, making use of fancy paper, gilt paper, small pictures, paper flowers, etc., and eventually became rich out of this business.

One of the old manufacturers tells how he "bought a quantity of beautifully made, artificial cambric roses, each no larger than a pea, but so perfectly formed that each separate petal was true to nature." And who was it, think you, who made these beautiful trifles to adorn valentines which were to gladden the hearts of all true lovers? They were made in French convents, by nuns, women who had renounced forever all thought of earthly love—who made no marriage except when they became the brides of heaven.

Though our ancestors played at love, and with love, delighting in much extravagance of sentiment, and doubtless inscribing many witty and quizzical verses to their valentines, never, never, was the "comic" valentine known. It had no place in their imaginations, but remained for this age to call it forth from the realms of hob-goblins and shadows, where it has lurked, doubtless, evading the light, as all distorted growths do. For a "comic" valentine is a monstrosity, a paradox. Dr. Samuel Johnson defines a valentine as "a missive sent to a sweetheart by another sweetheart." Broadly defined, a valentine is a token, a message, of love, tenderness, affection, and good-will—but where is the love and where is the good-will in a "comic" valentine? That is why I say it is a paradox—love concealing an insult—respect shielding a blow.

The widespread custom of sending valentines is due to and dependent upon the highly developed mail service of the present day, with which a paternal government has provided us, and by the way, it is, it can be, for every one of us, St. Valentine's Day all the year round, not only on the 14th of February, but every day in the year.

We can send, if we wish, it, a message every day, to some absent friend, who is toiling along under a burden all the heavier, because it is borne in silence, without a word of encouragement. Suppose we say that word of encouragement, send them a valentine, a message of love and kindness, a whispered word of tenderness to uplift them when they falter—who has not known the real, physical power which sympathy

can exert upon our minds and bodies—then will that not be a valentine, the very best kind of a valentine in all the world?

Then indeed will the name and meaning of St. Valentine's Day be more a shadow of a by-gone day, then indeed will the good Bishop Valentine feel that he has not stood godfather to the festival, through all these centuries, in vain. "And so, good-morrow, Valentine."

Mt. Vernon, Ohio.

AGRICULTURE SLIGHTED.

THE national platforms of all the political parties may be read without finding any particular reference to agriculture. Are there no farmers in America? Who feed the world? Who constitute the bulk of the population? Who are therefore entitled to first consideration from all political parties? What people do more for the country, but what class, however small, receive less political consideration? But whose fault is it, but the farmers'? We farmers have the numbers, the votes, the property and the money to accomplish any reasonable purpose, but instead of that we too often allow ourselves to be led by the nose by pothouse politicians and political shysters. We as farmers ought to control all parties and thus secure our rights in representation and legislation, whichever side wins the election. That's the way to do it.

* * *

DOG CAPTURES A BURGLAR.

OBSERVING a light in an unoccupied house in Geneva one night recently a policeman entered by a window and left a trained police dog on guard outside.

Almost immediately a man pushed past him and dashed out of the house, but was promptly seized by the dog, which sprang at his throat.

A terrible struggle ensued, but the animal, although half stunned by blows from a "jimmy," succeeded in bringing the burglar, a notorious criminal, to the ground, where it held him till its master came and secured the captive.

* * *

IF I WERE YOU, MY BOY.

I WOULDN'T be ashamed to do right anywhere. I would not do anything that I would not be willing for everybody to know.

I wouldn't conclude that I knew more than my father before I had been fifty miles away from home.

I wouldn't go into the company of boys who use bad language.

I wouldn't get into the sulks and pout whenever I couldn't have my own way about everything.

I wouldn't abuse little boys who had no big brothers for me to be afraid of.—*Selected.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

HABIT.

IN the great universe there are laws and laws; natural laws, moral laws and spiritual laws. A law is a certain regulation governing the function of a body or principle which is supposed to eliminate its dangers and propagate its benefits. Any violation of laws is exceedingly detrimental to the law and very much more so to the violator.

In the great human family it is naturally to be supposed that there are some people who cling tenaciously to those different laws. Not all persons to all the laws, but, as a rule, each person selects his favorite law and follows it to the exclusion of all others. For illustration: Many a time a man pays all due regard, and even more than is necessary, to the laws of education or the perfection of physical law, to the sacrifice of the higher spiritual laws. Again, people in social circles become absorbed in the observance of the social law to the exclusion of the religious law and domestic law. A man may violate one to practice the other. Any fixed principle in the heart and mind of the observer is called habit. If a man follows any or all of these laws from voluntary action, until it becomes a second nature to him, or until he becomes so used to it that he can perform it involuntarily, it is then a habit. Or, a man, from the lack of character, from a distaste of law and order, from lack of the necessary will power to labor, from a spirit void of sacrifice, from selfishness, from dishonesty and many other propensities, may be led to violate one or more of these laws; and by continually violating them, until it becomes a second nature, until his conscience is not sensible any more to the prick it receives from the violation of the law, he forms a habit. Thus it is plain to be seen that a habit may be a good thing or it may be a bad thing.

A habit which has been formed, through obedience to good laws, is a profitable auxiliary to life; but

a habit that has been formed through the discontinuance of good laws, or through the violation of them, is destructive in its nature; it is destructive because it destroys conscience; it violates principle; its enticing power increases; it becomes defiant; it finally ignores law and becomes alienated and foreign.

Vinet says: "Habit is the subjection of our present to our past." Then it is true that habits are more easily formed while we are young, because the past at that time is very short. Aristotle says, "Habit is that to which obedience costs no effort." He means that it has become involuntary with us and is fixed in our nature. George Eliot would intensify the picture showing the power of habit by saying, "Habit is the purgatory in which we suffer for our past sins." Foster, who was a decided optimist, defined habit as being a religious character, a grand felicity.

One of the finest views we have of this force, called habit, is an extract from Plutarch: "Not in itself the full, nutritious ear of corn; it is merely the tie that binds the sheaf together, and prevents its scattering; it is only truly good as a complement; a worthless monarch, but a precious minister.

"The strength, firmness and establishment of the disposition or faculty in the irrational part of the soul, gotten by continual use and custom, and which, according as the passions are well or ill governed, or directed, becomes either virtue or vice."

LUCK AND PLUCK.

A GREAT many people in this world attribute their success or failure to luck. It is not an uncommon thing to hear people make this remark, upon taking up a new enterprise, "Well, I have always been pretty lucky, so I guess I'll undertake this." While it is true that this sort of feeling is much better than the feeling that "all fate is against us," yet it is not the highest aspiration one can have, and is not always to be depended upon.

Unfortunately some people believe that ill-fortune follows them continually, and in nine cases out of ten this leads the possessor astray. It is exceedingly seldom that one succeeds in any vocation who is continually led by the theory that he is lucky or unlucky, and especially the latter. It is detrimental in the extreme to be led about by the delusion that we are continually compelled to fight against fate. These things force one to fight imaginary battles in which one can shed real blood; to surmount obstacles that never existed, which requires real energy both nervous and muscular; to scale the fancied heights that require both time and talent of real intrinsic worth that one can ill afford to surrender.

Pluck does just the opposite. Pluck climbs no

mountains that cannot be seen, but spares no pains to climb all of those in sight. Pluck meets all the obstacles manfully, and if they cannot be surmounted, pluck crawls under. Thus luck and pluck are continually antagonists.

Pluck affirms that the Creator handicaps no one; luck claims that God is a respecter of persons and that some people are born with a silver spoon in their mouth. Pluck is an optimist, luck is a pessimist. Pluck believes in the final triumph of right over wrong; luck believes that might is right. Pluck believes that he was born in the nick of time and in the right place; luck thinks that he may come out all right, if he carries a rabbit's foot around his neck or does not look at the moon over his left shoulder. Pluck believes that there is a definite work for him to do, while luck thinks that the work is his to do, if he can get hold of it first. Pluck thinks that he should strive to develop all of his talents in order to win the victory over the world; luck consoles himself with the idea that the world owes him a living and that he will get it even if he has to steal it. Pluck strives to do his work while the sun is shining; luck growls because the sun doesn't shine when he wants to work. Pluck does what he can do, if he can't do what he wants to do; luck stands around with his hands in his pockets because pluck has hold of his shovel handle. Pluck sees a chance to win; luck admits that while there is a chance to win, there are nine chances to lose. Pluck starts out in the morning with a determined purpose to do something before night; luck says he will if he gets a chance. Pluck is the concentration of all forces of the individual; luck is the distrust of the power of any one of these forces.

Pluck leads to development, honor, fame, wealth, success; luck is the fingerboard that points you to chance, uncertainty, doubt, speculation and failure. Things do not happen; they do not come by chance; this is not a world of chance; an all-wise Father guides the universe. There are no ifs in the first three chapters of Genesis; there was no subjunctive mode before the devil entered the garden of Eden. Luck, if, the interrogation point, are all symptoms of doubt; doubt and disbelief are dangerous, don't follow them.

* * *

A MISTAKE.

ANOTHER mistake has gone on record on page 37 of No. 2 of the current volume of the INGLENOOK. The article entitled "Unanchored" is there credited to Hope Newcomer, which was written by Edna Newcomer, her sister. This was the fault of the editor. The article was sent in without any name affixed thereto, and knowing both parties personally, when the article was criticized for the press, the editor just mechanically put down the wrong name.

In this instance no great damage has been done; the sisters both live at home and love each other as sisters ought, but it makes us stop and think what the outcome might have been had the credit been given to some stranger and taken from someone who was striving for literary fame. It is one of those mistakes that belong to the irretrievable class; it is a mistake that cannot be corrected. Apologies may be made, the pardon may be freely given, but there is no power on earth that can lift the eight thousand impressions that have been indelibly stamped upon the paper. There is scarcely a State in the Union where it has not gone, and how utterly impossibly it would be to bring the papers back. It is like a bad word that has been hastily spoken; like a feather carried before a high wind; like the spray on the angry sea; like a word spoken into a phonograph which is recorded on the record of wax.

Let this little mistake, though very insignificant indeed, be a lesson not only to the editor, but to each member of the INGLENOOK family. Let us not only be careful what we write, but what we speak as well, and remember that words can never be recalled, and actions when performed can never be undone.

* * *

VALENTINES.

ARE you going to send any valentines this year? and if so what kind will they be? Will they be sentimental, comic, or will they be sent as a burlesque? Sending valentines is like anything else in this world; good or bad may come from it according to the motive for which they are sent, and the manner of sending them as well as the character of the valentine itself.

A nice valentine sent from the right motive, to a friend, is like taking a bouquet of flowers to the sick, but when a valentine is sent as a burlesque to some person with whom you have had difficulty or some one whom you feel has trespassed upon your rights, is the very meanest and cowardly way to seek revenge. The same kind of a spirit that sends a valentine as a burlesque, with a little development, would send a dagger in the back of an enemy.

There are two reasons why this class of valentines does harm. First, the one who receives the valentine always thinks he knows from whence it came. If he is correct in his conjecture you have lost a friend probably forever. Second, if he is mistaken in his suspicion you have created an enmity between him and some one else, which, in all probability, you will never have power to eliminate. It would be a good thing for our social circle if all the comic valentines were consigned to Mr. Groundhog, with which to bed his nest for the extra six weeks he has to stay indoors.

Current Happenings

THE seal worn by the pope, and used by him on official documents to which his signature is attached, has on it the engraving of a fish, with the cipher of the wearer. Since the thirteenth century every pope has worn a ring of this character, and it is shattered with a hammer when the wearer dies, to prevent its use on a forged document.

JOHN D. ROCKEFELLER has promised Vassar College a donation of \$200,000, provided the college raises an equal amount and the alumni have already raised \$175,000 and are in good hopes of soon securing the prize.

It has been officially announced that an agreement has been made with the Western Maryland railroad, which is the extension of the Wabash, with the Baltimore and Ohio, which now makes it possible for the Gould system to have a through line from the Mississippi to the Sea.

PRESIDENT CHARLES W. ELIOT, of Harvard, presents a sweeping indictment against the game of football as played in American colleges, charging that it injures rational academic life and lowers the moral tone of the entire student body.

THREE large barns belonging to the national horse and mule market were destroyed in East St. Louis and one hundred mules were burned to death. Loss, \$35,000.

THE melting of glaciers in the winter has called for explanation. Dr. R. von Lendenfeld, of Prague, believes that the earth's interior heat cannot account for more than three to six per cent of the effect, but that the principal cause of the melting is the heat from the work of the ice in descending. The pressure of winter snows would probably somewhat increase the internal melting.

AN expedition in charge of the astronomers of Indiana University will be sent to Spain to observe the total solar eclipse which occurs on the thirtieth of next August. It will be in charge of John A. Miller, professor of mechanics and astronomy of Indiana University, and W. A. Cogshall, assistant professor of astronomy, also of the State university.

A REVOLUTIONARY leader of London recently made a speech before the large assembly of people in the immense building known as "Wonderland," denounc-

ing Emperor Nicholas and the grand dukes. Following this another Londoner made a speech denouncing Emperor Nicholas, Emperor William and King Edward, suggesting that the people rid themselves of "all emperors, thieves, and other loafers." Despite the fact that a body of policemen were present, the proceedings were not interrupted.

THE Naval Observatory at Washington was notified, on Dec. 30, by cable from Kiel, Germany, of the discovery of a comet by Borrelly, of Marseilles, right ascension one hour, fourteen minutes, south declination ten hours, no minutes. This comet was immediately looked up and observed by Messrs. Hammond and Wright, of the Naval Observatory.

THOS. A. EDISON, the world-famous inventor, has recently undergone a critical surgical operation at his home in Orange, N. J. Mr. Edison has had considerable trouble with his hearing. The operation was for the removal of a mastoid abscess near the brain, and it is hoped that he may fully recover. Although he is 57 years of age, yet the doctors believe that the operation will prove successful.

M. D. HATCH, of Lincoln, Nebr., has invented a device for husking corn, taking two rows at a time and missing no ears, whether the stalks are standing erect or lying on the ground. In a thorough test of the device it was found that twenty acres a day can easily be husked.

THE Roger Williams University at Nashville, Tenn., the negro college, was nearly destroyed by fire Jan. 24. The loss is calculated at \$60,000.

THE plant of the Valley Oil Mills at Memphis, Tenn., was destroyed by fire, entailing a loss estimated at \$150,000. The insurance is \$110,000. One of the employes (colored) is missing. He was seen to enter the burning structure, and it is thought that he probably perished.

CALIFORNIA is finding a little corruption at the headquarters of the legislature as well as Illinois.

ONE of the worst blizzards ever known in the Klondike region raged last Thursday, Friday and Saturday. Snow drifted to the height of twenty feet in many places, and miners and prospectors are said to be suffering intensely.

IT is a curious but well-authenticated fact that the wild silkworm produces a silk which is declared to have a better luster and stronger fiber than that of the captive silkworms. It is assumed that the confinement of and solicitious care received by the cultivated variety had produced a race which had lost some of its original vigor. Recent experiments seem to indicate that the effect so apparent is due entirely to the different food of the wild and domesticated silkworm. The leaves of the wild mulberry result in larger growth at each stage of development and a larger, heavier mature worm, and one that produces a filament of superior quality.

THE Great Northern Steamship company's new oriental liner Minnesota, left Seattle port, Washington, about Jan. 24, on her initial trip to Manila and oriental points, with 26,000 tons of freight, the largest cargo ever carried by a ship, and 141 passengers. Cotton comprises the greatest part of the vessel's cargo, which is made up of general merchandise, structural iron and machinery, and seventy-five freight cars, for use on an oriental road.

THE pulse register of Dr. Gartner, of Vienna, has proven very successful in lessening the surgeon's work in watching the circulation of patients under anæsthetics. It consists of a watch-like box, which is attached to the patient's forearm, and with hands that are moved over the dial by a sensitive spring, very accurately showing the pulse and blood pressure vibrations. It even reveals pulse action so feeble that the finger cannot feel it.

THE czar of Russia, it is reported, is contemplating a flight to Copenhagen. However reliable the report may be it is declared that the czar will appoint a mixed commission of officials, employes and workingmen to consider the strikers' demands, particularly that of the eight-hour day.

THE newest, and, to a certain extent, a most welcome invention, has arrived in the form of an electric hot-water bottle, says the *Marconigram*. It might more exactly be described as an electric bottle. It resembles its predecessor in appearance, but contains no water, and is otherwise a vast improvement upon anything heretofore put out. In the place of the water there are fine coils of wire which attain a given heat and maintain the same temperature as long as they are kept in use. The bottle is simply connected with a plug in the electric lighting fixture, and the current, passing through the coils, heats them to the desired temperature and maintains it. It is obvious that there is no danger of being scalded, of the bottle

being too warm or getting cold, and, once applied, there is no need to give it further attention except to remove it; then, too, there is no delay or inconvenience as when it is necessary to heat water on a fire. This device performs its work so simply and perfectly that its practical value is beyond dispute wherever one has the requisite electrical connections.

CAPT. J. LARSEN, a sailor on the great lakes, has just received patents on a new form of a pleasure boat. The boat is supplied with a glass bottom, and under the bottom is an electric light, which will illuminate the water and the bed of the stream for some distance around. A hooded reflector makes it possible to sit comfortably in the boat and witness the curious things in the water below with great ease, and pictures may be taken all through the means of the mirror. The captain has in his possession a number of photographs, which were taken by this means, and these are said to be quite satisfactory, although they were made when the water was clouded with dirt washed down into it. It is said that photography of the bottom of the streams will be greatly facilitated by means of the new contrivance.

SYNDICATES are flocking around Sir William Ramsay, the famous chemist who has demonstrated by his new process that gold can be extracted from sea water at a commercial profit, and stock shares which formerly sold at \$5 are now eagerly sought at \$350.

HICKS, the famous weather forecaster and astronomer, predicted a siege of zero weather to visit the greater part of the United States, and it certainly has come true. The State of New York has been struggling with a storm whose violence has not been equalled for years. Great suffering exists among the poor. One man lost his life in St. Louis, and even Kentucky reports a temperature of six below zero.

THE legislature of Kansas is appropriating \$200,000 with which to build an oil refinery in opposition to the Standard Oil Company. They think that a thousand barrels a day can be produced at a profit to the State of \$800,000 a year at the present prices.

GOVERNOR TERRELL, of Georgia, has decided not to grant permission to the colored troops to leave the State for the purpose of attending the inauguration of President Roosevelt. The Lincoln guards of Macon threatened to go despite his refusal.

THE Halter block and the building occupied by the Lincoln, Nebr., Overall Company, at Lincoln, were destroyed by fire Jan. 25. Loss, \$150,000.

HOME DEPARTMENT

"THERE'S A DEAR LITTLE GIRL COMING HOME TO-NIGHT."

SELECTED BY GRACE LONGANECKER.

"Oh, what do you think the angels say?"
Said the children up in heaven.
"There's a dear little girl coming home to-day
She's almost ready to fly away
From the earth we used to live in;
Let's go and open the gates of pearl
Open them wide for the new little girl,"
Said the children up in heaven.

"God wanted her here, where his little ones meet,"
Said the children up in heaven.
"She shall play with us in the golden street,
She had grown too fair, she had grown too sweet,
For the earth we used to live in;
She needs the sunshine, this dear little girl
That gilds this side of the gates of pearl,"
Said the children up in heaven.

"So the king called down from the angel's dome,"
Said the children up in heaven.
"My little darling, arise and come
To the place prepared in the Father's home,
To the home that my children live in;
Let's go and watch at the gates of pearl
Ready to welcome the new little girl,"
Said the children up in heaven.

"Far down on the earth—do you hear them weep?"
Said the children up in heaven;
"For the dear little girl has gone to sleep;
The shadows fall and the night clouds sweep
O'er the earth we used to live in;
But we'll go and open the gates of pearl.
Oh, why do they weep for their dear little girl?"
Said the children up in heaven.

"Fly with her quick, oh, angels dear!"
Said the children up in heaven.
"See—she is com'g! Look there! Look there!
At the jasper light on her sunny hair,
Where the veiling clouds are riven.
Ah, hush—hush—hush—all the swift wings furl;
For the King himself at the gates of pearl
Is taking her hand,—dear, tired, little girl—
And leading her into heaven."

Hartville, Ohio.

ECONOMY.—A Dialogue.

BY NANCY D. UNDERHILL.

At the meat market. *Mary*.—"Please give me a five-cent soup-bone."

James.—"Why, sister! I thought you did not like bones."

Mary.—"I do not."

James.—"Then why do you buy that great ugly joint? I've often heard you tell Thomas that it does not pay to buy the bony parts of beef, such as ribs, for roast."

Mary.—"But I'm not going to roast this."

James.—"Are you going to swallow it whole?"

Mary.—"No, I shall boil it."

James.—"Oh! I know. You put on a kettle, and throw in a lot of carrots and onions and garlic, and such things along with the bone; then pour in some hot water, and let 'er boil."

Mary.—"Again you are mistaken, brother. We are in no haste to add those things, and we do not put the joint into a dry, hot kettle. If we should put all those things over the fire before adding water, there would be a very disagreeable smell, and the kettle, being hot, might burst when water was added. That would be a far greater loss than to have thrown the bone away."

James.—"It would be a pity to waste all this good, rich marrow, just for lack of knowing how to get it out of the bone."

Mary.—"True. It is the marrow within the bone, that makes the good, rich soup, which we find so nourishing: but we must begin to cook it by adding cold water first, into a cool vessel, if we desire the most satisfactory results. Then we place it over the fire, and keep pouring in a little water every little while, to keep it from boiling dry. If we were to neglect adding sufficient water, the whole would be spoiled; and the smell would drive us from the house. It is like an argument. When a person has an argument, he must be cool at the beginning, and his opponent must be cool, also. Then, as the heat increases, the water of kindness, which is love, must be poured in, frequently, at every little interval of courtesy, until the marrow of Truth finally melts from its hard case of bone (prejudice). A little salt (a few crisp points to sinch the argument)—not too much—must be added, a little sage (wisdom)—not enough to make it bitter—may be thrown in, and it is ready to be served with your good things, the bone being thrown away. It takes two things to extract the marrow from a bone: heat and water. And the former must not be used alone. So, it takes the courtesy of love, coupled with knowledge to win the good effects of the Truth in a discussion. And the vessels must be cool at the beginning, and let the Holy Spirit keep pouring in, to maintain the right temperature."

TED.

BY KATHREN RØYER.

YEARS ago, one evening as my parents were sitting on the veranda, a thin, bony skeleton of a kitten shyly came upon the porch and jumped in mamma's lap. Some bad boys had been stoning the kitten and some bad dogs had been chasing it. Evidently he was a tramp cat. His thin form, pitiful cries and haggard looks quickly solicited sympathies from those who were enjoying greater luxuries, and he was promised, right there and then, that he might make our house his home until he died.

Unlike a great many tramps, he not only appreciated the kindness shown him, but he was quite willing to work for his living. Some time during the early part of his life he was named Ted, which ever afterward clung to him. In less than six months' time he grew to be a large, sleek cat; he was particularly intelligent and quite a favorite of the family. He always made unquestionable demonstrations of kindnesses shown and as quickly resented all attempts of insult.

The tuition he paid for his education was somewhat expensive. In order that he might learn that the stove was hot he burned nearly all the hair off his back, which made his nice coat of fur look ragged and haggard, but he never forgot the lesson.

When Ted was about fourteen years old we moved to a city where there were street cars, a thing which Ted had never seen before, and even unto the day of his death, when the street car would pass the door he would run to the cellar.

When Ted was about seventeen years old another little tramp kitten came to our house and, in its playfulness, would do many things to the disapproval of Ted. He couldn't see so much fun in the pranks of a kitten as he could at one time, though he had a great deal of charity for his little friend, yet he remonstrated many times against the excessive use that Master kitten wanted to make of Ted's tail as a plaything.

Ted finally lost his teeth, after which kind hands always had to chop his meat and other victuals for him. When nearly eighteen years of age he one day suddenly disappeared, which is the last we have ever seen of him.

This simple little story not only proves the great age to which cats live, but it also proves what a long, useful life could be made by showing kindness to even a tramp cat. Ted aided very materially in the rearing of six children in our family, furnishing amusement for the childhood days of everyone of us. Kindness shown to even dumb animals is never forgotten.

Elgin, Ill.

No man can sleep his way to heaven.—*E. P. Brown.*

HOUSEHOLD HINTS.

BY O. A. M'GREW.

ADD a pinch of salt to coffee to give it tone.

✦

Sprinkle clothes with hot water and a whisk broom.

✦

Mix a little ammonia with stove polish to prevent burning off.

✦

Place an apple in the bread and cake boxes to produce moisture.

✦

Try rubbing tough meat with a cut of lemon to make it tender.

✦

Add one or two tablespoonfuls of sugar to strong turnips when cooking.

✦

Add a few drops of ammonia to the blueing water to whiten the clothes.

✦

For insomnia try silent prayer while your head is resting on your pillow.

✦

Add a little sugar to milk to prevent it sticking to the vessel while cooking.

✦

Add a tablespoonful of kerosene to a pail full of hot water to wash the windows.

✦

Mix a little cornstarch with salt before filling the salt shaker to prevent it clogging.

✦

Sprinkle grated cheese over oatmeal porridge instead of sugar and eat with cream.

✦

Dip a bit of parsley in vinegar and eat to sweeten the breath and remove the odor after eating onions.

✦

Dip stale doughnuts in cold water, place in a paper bag and heat thoroughly in an oven and serve hot.

✦

Add a tablespoonful each of vinegar and sugar to counteract anything that has accidentally been made too salty.

✦

A splendid furniture polish is made by taking a wine glass of olive oil, one of vinegar and two table-spoonfuls of alcohol; apply with a soft cloth and polish with a flannel.

Fallowmead, Assa., Canada.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

ACQUAINTANCE WITH GOD.—1 Chron. 28:9.

For February 26, 1905.

I. What is Implied in this Acquaintance?

1. Knowledge, Col. 1:10
2. Love, Rom. 8:39
3. Enjoyment, Psa. 1:2; 40:8
4. Intercourse, 1 Peter 3:12

II. The Means for Attaining It.

1. The Word, John 20:31
2. The Spirit's Influence, Rom. 8:16
3. Prayer, Eph. 6:18
4. Faith in Christ, Col. 2:5

III. The Time to Commence It—Now.

1. It is God's Time, Joel 2:12
2. It is the Only Certain Time, Heb. 3:7, 8

IV. The Blessed Results of It.

1. Peace, Philpp. 4:7
2. Good, Prov. 13:21
3. Finally—Heaven, Mark 10:30

Text.—And thou Solomon, my son, know thou the God of thy father, and serve him with a perfect heart and with a willing mind. 1 Chron. 28:9.

References.—Prov. 15:9; Psa. 146:8; John 17:10; Deut. 33:12; Eph. 2:6, 7; Isa. 25:4; Isa. 40:1; Psa. 146:8, 9; Psa. 91:15; Eccl. 2:3; 1 Cor. 13:12; John 4:10; John 4:42; John 7:28; John 21:15; 1 Cor. 2:2; Ex. 33:12; 1 Chron. 28:9; Psa. 37:18; Deut. 33:3; Job 7:17; John 17:3.

King David was growing old, he had many things to arrange, in view of the fact that Solomon would sit on his throne. So he assembled all the princes of Israel, the princes of the tribes, and the captains of the companies, and all the courtiers who served him. Then he opened his heart to them and told them of his desire to build a temple for the worship of Jehovah, and how God had denied him that privilege, and appointed his son Solomon to build the house. Then as we read on we find that David prayed God to accept all he had done for him towards the building of this house. He said: "I have willingly offered all these things and I have seen with joy the people which are present here offer willingly to thee." And then he prays for Solomon, that he might prove faithful to God. And he advises Solomon to know the Lord; this implies a great deal. Solomon would have to be familiar with God's dealing with Israel in the past; he would have to study the law and the testimony to know what God required of him. We believe that Solomon did serve the Lord for a time, he may have been interested in the study of the law, but when he grew older he wandered away from God, he forgot the earnest counsel of king David.

Sin Makes Us Strangers to God.

Sin is the one great wall that separates us from God, he never makes peace with sin. If you will read through Jeremiah and Ezekiel and notice what God says about sin, you will be startled. It leaves the impression that no language can convey his indignant loathing of "the thing which I hate." So we must be cleansed from our sins before we can learn much of God. Only when the blood of Jesus Christ has cleansed us can we walk in the light of the Lord, then he will be with us to bless. He has promised:

"I am with thee! With thee always
All the nights and all the days;
Never failing, never frowning,
With his loving-kindness crowning,
Turning all thy life to praise."

How Do We Become Acquainted with God?

How do you become acquainted with people? You meet them, and then you associate with them; you admire their good qualities, you appreciate their love and helpfulness, and in this way we learn to know our friends. In the New Testament the Christian's relation to Christ is represented as a personal acquaintance with him which ripens into a close and tender friendship. This was our Lord's own ideal of discipleship. He invited men to come to him, to break other ties, to leave all and go with him. He must be first in their affections, and first in their allegiance and service. It was not a tie of duty merely, or of doctrine, or of obligation by which he sought to bind his followers to him, but a tie of personal friendship. The Savior becomes our helper, our keeper, our caretaker, our all in all.

"O Master, let me walk with thee
In lowly paths of service free
Tell me thy secret, help me bear
The strain of toil, the fret of care.
Teach me thy patience still with thee
In closer, dearer company
In work that keeps faith sweet and strong
In trust that triumphs over wrong."

"Known and Read of All Men."

If we are well acquainted with God our friends will know it. In some heathen temple the priest puts a mark on the face of the worshipers who have made their offerings before the idols and all day they bear this mark wherever they go. All who see them know where they have been in the morning and what they have done. If you and I have been with Jesus in meditation, reading his Word, and praying for the help

we need, our friends will see that we are his. We will be patient, loving and gentle we will show forth the spirit of Christ.

Value of a Personal Acquaintance with Christ.

It is incalculable. A true and great friendship is one of earth's richest and best blessings. It was easy for John and Mary and the other disciples to be friendly with Jesus. His eyes looked into theirs, they heard his words, they sat at his feet. It made them brave enough to welcome a martyr's death, and we study their lives to-day for inspiration.

1. What does God say about people who have not known him? Jeremiah 4:22; Jeremiah 9:3.
2. What does God promise his friends? Joel 2:26; 2 Cor. 9:8; Philpp. 4:19.
3. Do we know God to-day better than we did last year? 2 Peter 1:8.
4. We shall understand things in eternity. 1 Cor. 13:9-12.

* * *

THE EMPLOYMENT BUREAU.

Do these meetings in which our young people are chiefly interested benefit the church? We will answer this question by asking another: Is it a benefit to the home to send the children to school to have them taught reading and writing and other branches; would it not be better to keep them at home? Most people even if their own education was neglected, are very anxious to educate their children, and esteem it a privilege to send them to school. Our Young People's Meetings bear the same relation to the church that the school does to the home. Our older members who never went to Sunday schools or young peoples meetings should praise the Lord that their children enjoy better opportunities than they did. These meetings have brought new life and vigor to many congregations. The spirit of service and self-sacrifice in the young people has wrought a change in some of the older ones who were becoming weary in well doing. We know churches where the older members failed to keep up a prayer meeting, and the younger members have a live, earnest meeting, that is kindling a flame of missionary devotion which will spread throughout the entire church. We pray for a pentecostal blessing and outpouring on these meetings.

* *

Do you know how to use this program that is given each week in the INGLENOOK? We are trying to adapt it to your needs, and a few words of explanation may be helpful to some of you who have never taken any part in this work before. The leader should look over the list of names of the members who will take part in the coming meeting. The children, who are too young, to speak on a topic, should

be given verses from the Bible, if possible they should commit them to memory, and then recite them at the meeting, these verses you can find among the "References." Then there may be busy mothers and young girls and boys who would like to read something, give them the different paragraphs which we have written, bearing upon the subject, the short poems may be committed by some members and also recited at the meeting. Then at intervals some of the older members can give a short talk, not exceeding five minutes on some of the "Topics for older members" that you always find in every program. Have some singing interspersed with the talks and recitations, a song now and then in which all can join adds to the interest of the meeting. Then pray, pray earnestly that the Holy Spirit may be with you. If there are any who wish to take part outside of these there should be a little time for them to do so. It may be your elder who feels stirred to say something, give them a chance. Yet there must be system, so that your meeting does not drag and grow tedious. Always begin on time, and if possible without giving offense to any of the speakers, close on time.

* *

How many books on missions will you read this year? We are anxious to have you read as many as possible. We know something about the good results brought about by this reading. This missionary reading Circle is no longer an experiment, it is an assured success. We praise the Lord for all the enthusiasm and zeal that have come as direct results from this mission study. And we pray that this year may be one of the best in its history. "Take care of the Circle" said one of our missionaries to the Standing Committee at the last Annual Meeting, "because it has influenced the most of us to offer ourselves as missionaries." It has made our members who stay at home, feel that they must give something to the Lord, that they must give more money than they have ever given before. We ask you to find time to read a number of these books. Finish the course if you can. Let us hear from you.

Let us all thank God for these lives that are ready to be spent in his service. The Circle stands for service; in many places, there were no such meetings held, surely such will rally round the standard, and do what they can. Give of your means so that these who need to study and prepare themselves for this work, may not be hindered. Give as the Lord has prospered you. If only we could induce each and every member to do something for Jesus, the angels would rejoice at the good wrought by united, continuous effort.

Good books are one of the best friends.—*Lucy Larcom.*

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XV.

Belfast, Ireland.

Dear Mr. Maxwell:—

We had a great time reading that bunch of letters: they all arrived safely and reached us at this place. We were glad to hear that the young people are all spending their vacation so nicely. We often wondered how Raymond Tracey liked it in the drygoods store, and we are all delighted to know that both he and his employer are well satisfied. Several of them wanted to know in their letters whether any of us ever got homesick. So long as we are traveling in the daytime and are kept busy, we don't have time to think about home. I guess you find that out since we write so seldom.

I hope you enjoyed the letter that Miss Gertrude wrote last week. She certainly had a beautiful subject about which to write, and if it was as interesting to you as it was to us, it was too short. This letter will be our last from Belfast. It is the metropolis and most enterprising city of Ireland. There is some American push and hustle here. There are three hundred and fifty thousand inhabitants, the people are better looking, have better business facilities, much better land, better crops, better clothes, take more interest in politics and religion. There is not half the superstition here that there is in the south of Ireland; the johnny car and the donkey cart are just as prevalent only they have much better donkeys and higher priced carts and johnny cars. It is one of the great ship building centers of the world; the White Star line finished the great steamship Cedric here in the fall of 1902. She is the largest ship on the waters now and is seven feet longer than the Celtic.

One of the most interesting places we have visited in Ireland is the Robinson & Cleaver Works; linens, woolens and laces are their staples. They work nine hundred girls and from two to three hundred men. We saw some of the finest woolen goods and some of the finest linen goods that we ever saw in our lives; and more than that the nicest ones in the world.

I must tell you a joke on Roscoe; when we were going round through the store, which is the department where a sample of all their goods is shown, we chanced to see some of the very finest of handkerchiefs and we decided that we would each buy one for one of our classmates at home. Roscoe kind o' whispered to Miss Gertrude that he was going to buy one for Elsie Mills, and he rather solicited her assistance in making a selection. Finally they hit upon one they thought Miss Elsie would take a fancy to, and Roscoe, rather mechanically, slipped his left hand into his pocket to get the money and at the same time beckoned a lady clerk near by and said to her: "Price this one, please," holding it up gingerly. "Eight pounds, eight please." (That would be forty-two dollars in our money). Roscoe gave the tiniest little "oh," just like a girl, while Miss Gertrude blushed, and they looked at each other and turned away from the counter and left the lady behind the counter to wonder whether they didn't know how much eight pounds was. The funniest part of it is, we would never have known anything of this

had it not been that the lady clerk was so afraid that she had said something wrong, that she quietly took Oscar into her confidence and told him the whole thing, and of course you know that was enough for him. He not only nearly exploded but was not satisfied until he had told the whole party. We girls tried to sympathize with Roscoe by saying it was too bad that it cost so much, but he let himself down easily by saying, "he didn't like the bloom-in' thing anyway." The party chipped in and bought the daintiest little lace collar and sent it to Mr. Maynor's little Gracie.

We took advantage of the opportunity we had here to buy us some steamer rugs. We bought the very finest of all wool steamer rugs for fifteen shillings, sixpence, which, in our money, would be about \$3.87; these could not be bought in New York for less than ten or twelve dollars each.

While I am writing this the boys are standing looking over my shoulder and they said for me not to forget to tell you that we were out to see the Harlan and Walf shipyards, where we saw nine large ocean steamers in process of construction. You know I mentioned the Cedric a little while ago, and then there was the Ionic and five other large vessels which are to become the leviathans of the sea. This is one of the largest shipyards in the world. In looking at these large vessels and noticing the thousands of tons of steel that are used in the construction of them, it seems as if they would sink to the bottom of the ocean, rather than to ride the waves so heroically. The entire skeleton of framework is made of steel, and of course it is the displacement of water that affords the buoyancy.

Yesterday we met a company of soldiers and conversed with them for a few minutes. We learned that some of these were prisoners and were in charge of their fellow soldiers and were being taken to Dublin on a sentence of twenty-eight days' imprisonment. The penalty was placed upon them because they had reported five minutes late in camp. Thus England keeps continually before her people the fact that she has a strong unrelenting arm. She is compelled to enforce the strictest of rules in order to maintain her dignity and power. The Red Coats are hated by the Irish as they are compelled to support fifty thousand annually, and have no use for them whatever. A large number of those that we saw yesterday were Scotch boys from the Highlands. Their jackets were made of the brightest red that you ever saw, and their caps were a perfect nuisance; just the tiniest little bit of a cap that afforded no shelter or shade, and the worst of the nuisance was that small band, reaching from one side of the hat to the other, passed right under the nose, over the mouth. It not only looked very odd, but must have been very disagreeable. Their trousers were made of the prettiest plaid goods of the real Scotch cheviot cloth; and indeed their costume was something to be admired.

It was so sad to think that nearly half of them were drunk and smoking cigarettes and using the worst profanity. What will become of the nation who is forcing the majority of her young men to spend three of their best

(Continued on page 168.)

The Q. & A. Department.

How many soldiers, including officers, are there in the United States army?

The army is composed of fifteen regiments of cavalry, comprising 750 officers and 12,620 enlisted men; an artillery corps of 30 batteries of field artillery and 126 companies of coast artillery, including 651 officers and 17,742 men; 30 regiments of infantry, 1,500 officers and 25,345 men; 3 battalions of engineers, 1,282 men, commanded by the United States engineers; Staff Corps, Military Academy, Indian scouts, recruits, etc., 2,877 enlisted men; also, a provisional force of one regiment in Porto Rico of 31 officers and 554 native enlisted men; and 50 companies of native scouts in the Philippines of 100 officers and about 5,000 men. The total number of officers is 3,831, and of enlisted men 59,866, not including the provisional forces. The new army act limits the strength to 100,000 men.

❖

Was the tub in which Diogenes is said to have lived just an ordinary wooden tub? When did he live?

According to the common story Diogenes the Cynic made his home in a huge earthen jar which had been discarded after having been used as a receptacle for wine or oil for the sacrifices in the Temple of Cybele. It was large enough to permit the philosopher to recline in it at full length. He lived 412-323 B. C. The truth of the tale has been doubted, although it is related that during the Peloponnesian War (431-404 B. C.) the Athenians lived in similar vessels.

❖

What is the origin of the expression, "A fool and his money are soon parted?"

It is uncertain, but we have the following as told of its origin: "George Buchanan, a historian, scholar, wit and tutor to James VI of Scotland, made a bet with a courtier that he could make a coarser verse than the courtier. Buchanan won, and picking up the courtier's money, walked off, remarking, "A fool and his money are soon parted."

❖

Does the Lewistown reservoir serve as a feeder for the Miami and Erie Canal?

Yes. Its area is 7,200 acres or twelve square miles. Extreme length five miles, extreme width four miles.

❖

About how much ocean cable is in operation to-day?

Statistics report 252,436 miles. Only 38,797 miles are owned by government. London is connected with the world by a total mileage of 154,099 miles.

What is meant by "oiled roads?"

These words literally express their own meaning. The road, after having been graded, is thoroughly saturated with crude oil, by use of a sprinkling wagon, which renders it impossible for dust or mud to be offensive thereafter. Southern California has long since proved this to be a great success and the process is fast being introduced into India.

❖

How is the railway service in Japan?

To date it has about 4,500 miles of railway. In spite of the present war they built 210 miles of railway in 1903, and carried 110,000,000 passengers during that year, which, together with the freight receipts, brought them cash receipts to the amount of \$23,800,000.

❖

Why is the Christian Workers' and Reading Circle work not in the Visitor?

By a decision of the General Missionary and Tract Committee they have been transferred to the INGLENOOK, so as to reach the hundreds of young people who want them.

❖

How was Port Arthur named?

After Lieutenant Commander Arthur of the British navy, who anchored his ship in the bay about fifty years ago. His was the first foreign ship to visit that bay.

❖

What is the best way to thin printers' ink?

Printers differ materially, but perhaps the best thing is inkoleum which is the modern invention, and endorsed by a majority of printers.

❖

How was the emancipation of slavery accomplished north of the Mason and Dixon line?

By individual votes of the States after admission to statehood.

❖

Are there any butter factories by the name of Elgin, in Elgin, Ill.?

There is one on the east side by the name of Elgin Butter Company.

❖

When was the motto, "In God we trust" first used on United States coin?

In 1866.

❖

Who is Postmaster-General of the United States?

R. J. Wynne, of Pennsylvania.

MISCELLANEOUS

THE GEOGRAPHY CLASS.—XV.

(Continued from Page 166.)

years in such environments as this? Nothing to do, but loiter. Nothing to spend but time and their wages. Nothing in prospect but dissipation. Nothing to think about except profanity and vulgarity which are thieves of idleness. England will awaken to the fact one of these days that these young men, well educated, would be a better defense for the nation than all the armies and navies that they could stack up from Queenstown to Gibraltar.

We are going to take a train this evening for Larne and about midnight we will take a vessel across the Irish sea for Stranraer; from thence we will proceed to Glasgow and then to Edinburgh. Address our next letters there. Have all the fun you can with Elsie about the handkerchief.

Yours truly,

Marie.

❖ ❖ ❖

BIG DEER OF VERMONT.

NATURALISTS cannot fail to be surprised at the weight of some of the deer caught in Vermont woods this season. These scientific gentlemen have been laboring under the impression that about 225 pounds was the maximum weight of any deer ever found in this section of the country.

As a matter of fact many deer have been shot in Vermont that weigh more than 225 pounds. Here in Windham County this season one specimen weighed over 300 pounds, two others at least close to that figure, and nearly all the bucks brought in were in the 200 class or over. The Vermont deer are in a class by themselves, and in size and proportions are far ahead of the deer found in Maine and the Adirondacks, and their meat is of a better quality. Old hunters account for the difference in the fact that the deer in Vermont have better feed than those in the more closely wooded sections. They are not limited to browse on hemlock twigs, but find an abundance of nutritious grasses, and if reports from Windsor are correct they occasionally top off with apples, turnips, corn and beans.

❖ ❖ ❖

HE is the richest who enriches mankind the most.

FOOTBALL DAYS.

The football days have come again, the gladdest of the year;

One side of Willie's nose is gone, and Tom has lost an ear;

Heaped on the field, the players jab and punch and claw and tear.

They knock the breath from those beneath and gouge without a care;

They break each other's arms and legs, and pull joints out of place,

And here and there is one who gets his teeth kicked from his face.

The freshman and the sophomore, besmeared with grime and mud,

Go gallantly to get the ball, and quit all bathed in blood;

The senior knocks the junior down and kicks him in the chest,

The high-school boy is carried home and gently laid to rest,

While here and there a crowded stand collapses 'neath its weight,

And forty people get more than they paid for at the gate.

—Chicago Record-Herald.

❖ ❖ ❖

WHAT SOME NAMES MEAN.

[The following table gives the meaning of the names of the principal Highland clans in Scotland:]

M'Intosh; the son of the first.

M'Donald; the son of Brown Eyes.

M'Dougall; the son of Black Eyes.

M'Onnechy or Duncan; the son of Brown Head.

M'Gregor; the son of a Greek man.

M'Cuithbert; the son of the Arch-Druid.

M'Kay; the son of the prophet.

M'Taggart; the son of the priest.

M'Cleod; the son of the wounder.

M'Lean; the son of the lion.

M'Kenzie; the son of the friendly one.

M'Intyre; the son of the carpenter.

Campbell; crooked mouth.

Cameron; crooked nose.

Stewart; his stay or support.—*Liverpool Post.*

"THINK right,

Speak right.

Act right, and

Wear a cheerful face!"

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,

A PECULIAR PRESENTIMENT AND ITS HAPPY RESULT

An Echo From Across the Sea.

That some people are, at times, possessed of a certain inner consciousness or presentiment of things which are going to happen is almost a recognized fact. It is one of nature's mysteries—something that cannot be very well explained.

The following case, related by Chas. Barkholz, of Pewaukee, Wis., is a striking illustration.

Pewaukee, Wis., December 1st.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—I know you will be pleased to get this letter. You will no doubt remember that you sent sometime ago, at my request, through your agent in Germany, six large bottles of your Blood Vitalizer to my sister, Mrs. Wm. Heinke, Wildkuhl, Mecklenburg, Schwerin.

I have just received a letter from her, in which she says that four bottles of the medicine brought about a complete cure in her case. She says she is lacking in words to express her joy at getting well. She had been suffering for almost fourteen years, and the last few years had been unable to leave her bed. All hopes of her recovery had been given up according to letters which I received from near relatives.

I think the circumstances of this case most singular. I received a copy of your paper, *THE SURPRISE*, purely by accident, and after reading same, I became possessed of a certain feeling or presentiment, if I so may term it, that your Blood Vitalizer was to be the remedy that was to cure my sister. It was this peculiar conviction which led me to write to you to ship her the medicine, and now, you see, it has all been fulfilled. I consider it my duty to write and tell you about it.

Yours very sincerely,

CHAS. BARKHOLZ.

Dulled indeed, would one's sensibilities have to be if one failed to appreciate such an expression of gratitude! And yet these same sentiments have been expressed thousands upon thousands of times by users of **DR. PETER'S BLOOD VITALIZER**. There is not a hamlet in the United States, where this remedy has been used, but what it is spoken of as a good and grand medicine.

Unlike other ready-prepared medicines it is not to be had in drug stores. It is supplied to sick people direct through special agents appointed everywhere. For further particulars address

DR. PETER FAHRNEY,

112-114 S. Hoyne Ave.

CHICAGO, ILL.

SAFE AND CONVENIENT

If you want a good safe, conservative investment, write the Peoples State Bank, McPherson, Kans., about their "First Mortgage Bonds."

Ten interest Coupons with each Bond. The interest is payable Semi-Annually. All you need do is to clip off the Coupon and send to them, and they will collect and remit to you "Free" of charge.

Have had eleven years experience in making First Mortgage Loans in McPherson County, Kans., and have never lost one dollar Interest or Principal on any of these loans.

Customers are well pleased.

CHEAP GOODS

Many persons deceive themselves with the idea that they are practicing economy by purchasing cheap goods. Such a method of economy defeats the very purpose for which

it is designed. Goods inferior in quality are never satisfactory. They are not durable, they disappoint the purchaser and reflect discredit upon the firm that puts them out.

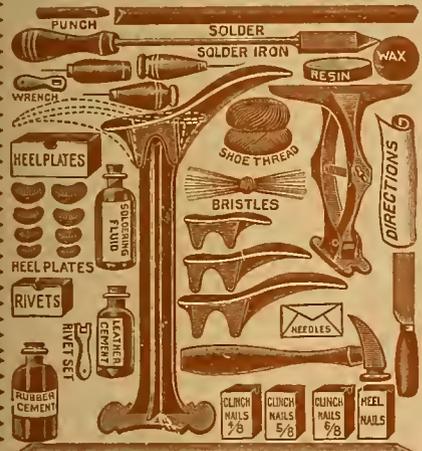

Don't be deceived by the "wonderful bargains" and "prices below cost" advertisements you frequently see. If you are a wise buyer you know you are being offered a shoddy grade of goods.

We do not handle an inferior quality of merchandise. Our goods are low in price, but not cheap in quality. We have established a reputation for doing business on the Golden Rule plan. We realize that every article we send out is an advertisement of our business and creates an influence either for or against us. Therefore we must handle the best quality of goods if we would maintain our present high standard and secure the confidence of the public.

Remember, our prices are the lowest that can be made on the quality of goods offered. We do not want your patronage unless we can give you honest returns for your money. "A square deal for everybody" is our first consideration. On that basis we solicit your trade.

This is a Bargain at \$1.25

If "A penny saved is a penny earned," then why do you pay out hard-earned dollars for repair work you could do yourself if you had the necessary tools? With our Home Repairing Outfit you can save many dollars every year by repairing your boots, shoes, harness, tinware, etc. The complete outfit is packed in a strong, neat box which contains 40 articles as follows:

HOME REPAIRING OUTFIT No. 1
FOR BOOT, SHOE, HARNESS AND TINWARE REPAIRING.

- 1 Iron Last for men's work.
- 1 Iron Last for boys' work.
- 1 Iron Last for women's work.
- 1 Iron Last for children's work.
- 1 Iron Stand for lasts.
- 1 Shoe Hammer.
- 1 Shoe Knife.
- 1 Peg Awl handle.
- 1 Peg Awl.
- 1 Wrench for peg awl handle.
- 1 Sewing Awl and Handle.
- 1 Stabbing Awl and Handle.
- 1 bottle Leather Cement.
- 1 bottle Rubber Cement.
- 1 bunch Bristles.
- 1 ball Shoe Thread.
- 1 ball Shoe Wax.
- 1 package Clinch Nails, 1/8 inch.
- 1 package Clinch Nails, 5/8 inch.
- 1 package Clinch Nails, 3/4 inch.
- 1 package Heel Nails.
- 4 pairs of Heel Plates, assorted sizes.
- 4 Harness Needles.
- 1 Harness and Saw Clamp.
- 1 box Slotted Rivets, assorted sizes.
- 1 Rivet Holder for same.
- 1 Harness and Belt Punch.
- 1 Soldering Iron ready for use.
- 1 Handle for same.
- 1 Bar Solder.
- 1 box Resin.
- 1 copy Directions for Half-Soling, etc.
- 1 copy Directions for Soldering.

Price, complete, per set, ... **\$1.25**

Quilt Patches

We are sure we have a bargain that will delight all ladies who read our Inglenook advertisements. We have on hand large quantities of Bright, Handsome, All-Wool and Pretty Colored Patches, many cut from kersey cloth and nearly all good size. They are especially valuable for making up comforts and quilts and many other uses which will suggest themselves to any woman who likes needle work. Many Sisters' Aid Societies in country districts have had difficulty getting the right assortment to put into comforts, quilts, etc. We can help you out. The price is 20 cents per pound, and a large number of patches. We can make immediate shipments. Send a trial order at once.

Suit Case

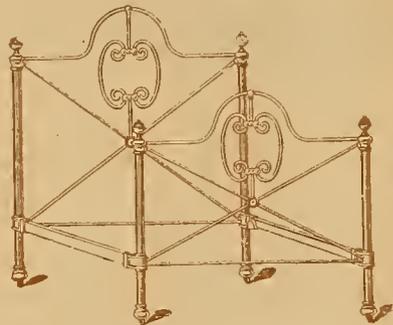

Here's a Dress-Suit Case that you'll be proud to carry—one that will wear well and look well when a cheap case will be shabby or wear out. There's not a cheap feature about this case, except the price. Covered with excellent mauve rubber cloth, solid steel frame, ends securely sewed and riveted, double leather, corners solid leather. Case is fitted with brass spring lock, brass catches, is lined with a good grade of cloth and has strap in body of case. Length, 20 inches.

Our price, only **\$1.50**

A High Grade Iron Bed for \$2.28

The Iron Bed has become popular and for real reasons. It is strong, graceful, more sanitary and cheaper than the wooden ones. Here is an Iron Bed that is generally sold at twice what we ask for it. By contracting for large quantities we have reduced the price to a minimum. The simplicity and elegance in bed-

room furniture which now is universally sought finds complete expression in this bed. The material used is of good quality. It is 48 inches high at the head and 41 inches at the foot. Sizes, 3 feet, 6 inches; 4 feet and 4 feet, 6 inches. Can be had in olive, white, Nile or pink. Always give color when ordering.

The Spirit of Simplicity

Finds expression in our offerings of bedroom furniture. The feature of hand-wrought construction, brought into harmony with simplicity of outline creates an influence for refinement and simple taste. The Bureau of generous length, the Chiffonier of drawers for storage, and the low Twin Beds—are pieces that conform in perfect detail. Our prices are always the lowest consistent with values.

EXPECT TO BE RUNNING THROUGH TRAINS BETWEEN CHICAGO AND LOS ANGELES VIA SALT LAKE CITY EARLY NEXT SPRING.

ONE-WAY COLONIST'S RATES

To Pacific Coast Every Day, March 1 to May 15.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River..... 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

WHY NOT COME TO THE
LAGUNA DE TACHE GRANT
 FRESNO COUNTY, CALIFORNIA,

Where Pumpkins, Corn and common crops grow, as well as every kind of California fruit?

Come and visit the Brethren who are living here and see what they have done in the past two years.

Nearly 600 sales made since we put this land on the market and over 2,000 people now living on the grant where there were but about sixty a little over five years ago.

This does not look like a temporary boom, does it? Must be something solid behind all this. If not, five years ought to show up the weakness, but instead of weakening the Laguna and its various interests are growing stronger all the time.

If you are thinking of coming to California to make a home you cannot afford to overlook this place.

We still have plenty of good land with abundant water for irrigation. The price is from \$30.00 to \$60.00 per acre, terms, one-fourth cash, balance in eight annual payments.

COLONISTS' RATES

will again be in force March 1 to May 15, 1905.

From Chicago to Laton,	\$33.00
From Chicago to Lillis,	\$33.00
From Chicago to Kingsburg,	\$33.00
From Mississippi River to Laton,	\$30.00
From Missouri River to Laton,	\$25.00

Make your plans to start for California March 1st and you will be in time to buy land and put in a crop.

Write us for free printed matter and local newspaper. Address

NARES & SAUNDERS, = Laton, California.

WATCH Yourself

Or you will "arrive" too late. Punctuality is a characteristic of all successful men. To grasp opportunities you must be on time. A reliable time piece is a necessity to every man who would be punctual.

For **\$11.08**

We can sell you a solid silver, open face, screw back and bezel case, fitted with a 15-jewel, genuine Elgin or Waltham movement, guaranteed to wear well and keep accurate time. If you prefer a hunting case it will cost you but 75 cents more.

We know all about the construction of these watches and can honestly recommend them. Our direct method enables our customers to save from one-third to one-half from prices offered by local jewelers.

Send for our complete watch catalog No. 7A501.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

When the world has sort o' grieved you
Till the tears are in your eyes,
An' the clouds are sort o' pulling
Like a shroud across th' skies,
Turn your eyes right up to heaven,
Where the sun breaks through and clears,
An' you'll find a-lookin' upwards
There's a rainbow in your tears.

Grieved you may be, broken-hearted;
But all clouds are silver lined,
And the darkest cloud of sorrow
Hides the glorious sun behind;
Just look upward through your weeping
At the light, and when it clears
You will see, 'twixt you and sunshine,
Rainbows dancing in your tears.

—J. M. Lewis, in Houston Post.

SEED-THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

Little inconsistencies form big drawbacks.

*

Snobbery may purchase jewels, but it cannot purchase crowns.

*

Economy is not stinginess; it is a saving on superfluity to supply necessity.

*

In calculating on trouble, do not make so large an allowance for contingencies.

*

Many great things have had small beginnings, but they have not had small prosecution.

*

The tone of voice is in tune with the heart, and if a change is needed, it is a change of heart.

*

"If the heart is right, all is right," is a true maxim, which license sometimes uses in self-defense, though upon license's very face it carries proof that all is not right.

Blue blood courses the veins, and nobility stamps the soul, of him who can, at once, live without sympathy, and without malice, while the faithful companion of innocence.

*

Let us not prove our delight in the faults of others, by pointing out every one we may chance to see; we but prove an old acquaintanceship with faults, it would seem, by recognizing them so readily in others.

*

It is a poor rule that will not prove its correctness on being worked backward: "If the heart is right, all is right"—if all is right, the heart is right. Demand of pride, as well as of other sins, this, the rule's only proof.

*

There is a price set upon that which Industry offers, and we cannot jew her down, or pay her in foreign currency. Money may, in part, occupy, but money cannot possess her rich estates; for she makes the man himself, upon whom she bestows the non-transferable title to her riches.

*

There are strange things under the sun, but the strangest of all is, why anyone will, for any consideration, allow a day—allow an hour—aye a moment,—to pass without turning to God, heaven, and happiness, from the eternal woe of those who know him not in the pardon of their sins.

*

In a daily newspaper, notice is given of the dismissal of a schoolteacher, for loudness and harshness of voice; a more important union for mutual benefit than the school is that of the home, but we find there also, a great discount is often placed on the benefits received, by this same grievous fault.

*

Earthly employers will pay us well for doing our best for them. God will pay us better for doing our best for ourselves,—for building the best character, for laying up the greatest treasures in the safest place; and all he requires, in return, is that we honor him for it.

THE WORLD'S WAY.

BY LULU C. MOHLER.

I SUPPOSE ever since the beginning old people have lamented the sad state of affairs and the world's wonderful wickedness; telling us many times that it wasn't that way when they were young. The younger generation are apt to be sniffy while these older ones make such speeches and think they see their youthful days through misty clouds of forgetfulness.

But ye, people of this now twentieth century, is not there some truth in some of their sayings? We read in history of the result of immorality in Rome and Greece and how it weakened those nations until they toppled and fell. If you want to spend some moments in some extremely unpleasant thinking, just think where we stand to-day in that particular. Study the morals everywhere if you think we stand on a high pedestal of pure, serene morality.

A wise man of our day said people cite us to the fact that mothers in the pagan days placed their helpless children in the arms of a white hot idol: and raise their hands in righteous horror at such heartlessness; proudly telling you of the great advance of civilization and the world's betterment.

But oh, merciful heaven, in pity deal with those exalted(?) ones who would not sacrifice their children but in cool indifference leave their children to be like Topsy who *just growed*, to get no wisdom from high-minded parents: becoming just a common person, learned in all the ways of shallow, frivolous society, used to society's subtle deceits and falsehoods. Some children not past ten years of age are as crafty as any veteran "carpet knight." A little child had rather suffer physical tortures for hours than grow to maturity and suffer soul agony of years and for eternity. No! Mothers would not to-day sacrifice to idols their children, but they sacrifice them for their indolent, cowardly natures rather than bravely taking the responsibility, care and even sorrow of training them to the love of noble, clean things and to be honest and square in all phases of human intercourse. For this reason too, we have what Edward Bok calls the American Skeleton, a spoiled, tyrannical child, the product of the modern American being a failure as parents.

Some men tell us in all positiveness that the world is getting better. For evidence, they say all slavery is abolished and the various empires are more and more settling disputes by arbitration. Well, as long as the world stands, we will have wars, for we were born fighters. If you don't believe that, just watch yourself when some one imposes on you. And then, it does not take a very smart man to tell you we have many slaves of many kinds, but they are not all black. Think for several moments and you can name a dozen kinds.

And religiously we are not getting more saintly, either, for look among the little jokes in the papers where some one tried to show to the world his remarkable sense of humor, by handling in the most reckless manner, subjects that a person who knows and reverences the things of God, shudders for him. For this alone many a soul will stand before his God with his robe of righteousness covered with many patches and rent in many places, besmirched with the dirt and mire of sin that no one would recognize its original snowy whiteness. There is a shocking disregard for holy things. Skepticism never was more prominent; but who can wonder when preachers bear so lightly their responsibilities. For instance, I heard on Thanksgiving Day a missionary and Bible teacher of Kansas City tell this story with a hearty laugh:

"When Daniel was taken a prisoner to Babylon, he was told he would be arrested and cast among lions that had not been fed for days if he did not stop praying at his east window, facing Jerusalem, to his God. Then Daniel reasoned this way, 'If I don't pray to my God I go to hell, and if I do, I'll be torn to pieces by lions. Well, I believe I'd rather go to the lions' den than go to hell.' So he prayed and was arrested and taken to the lions." Then we were told how nicely the lions received him and seemed to be so glad to have him among them, showing him every kindness. One large fellow lay down and invited Daniel to make a sofa of him, which Daniel did and sank down in luxurious ease and said, "Well, this beats hell."

Not much wonder, is there, that the masses are ungodly?

A young man who is studying law said the country needs more good lawyers than so many preachers. He was right, according to the kind of preachers of which we have a number. But then there are few ideal lawyers. Any man finds his hands tied who sets out to work a reform by law. If he wins he has strength few men possess, and if he had that strength of character he would rise above lawyers and governments to win people to right. The man who towers above the people is one who lives a holy, godly life.

Many tell us we are getting more cultured and learning how to live. Well, yes, our magazines are flooded with nice, polished articles pointing us to higher things. There are many good sentences and thoughts in it all, but it is all "scientific," senseless, idealistic, literary tomfoolery that nobody with brains lives up to, and the writers thereof don't themselves. We are just having a rush of "intellectual" thoughts. Few people are sane enough to write as the author of "The Simple Life," even if you have to wade through words to get the ideas in that; and just as few people fail to live a simple life. O, yes! the world is getting better.

Lecton, Mo.

UNCOVERING ADAB, THE OLDEST CITY IN THE WORLD.

DEEP down under the ruins of four other cities, in what is believed to have once been the Garden of Eden, but what now is only a sandy desert waste, the oldest city in the world, Adab, is being uncovered.

Centuries before, Nippur, which ruled the East thousands of years before Christ, was founded; before King Naram-Sin, from whose epoch, 2800 B. C., archæologists heretofore have dated the history of Babylonia, lived, this city, Adab, rich in palaces and temples, and honeycombed with sewers, just like the ones of to-day, lived and fought and flourished.

The fact surrounding the discovery of this wonderful old city and the rich relics of antiquity found in it have just been sent to America by Dr. Edgar J. Banks, of the University of Chicago, under whose directions the excavations are being made.

The expedition sent out by the University of Chicago is the third from America.

The first, the Catharine Wolfe expedition of 1884, confined its work principally to locating promising mounds. The second was the remarkably fruitful undertaking begun by the University of Pennsylvania at Nippur in 1888.

For many years Dr. Banks had been an enthusiast over the possibilities of explorations in the Valley of the Euphrates south of Nippur.

So great was the anxiety to begin this work that, in 1891, he secured the position of Consular Agent for the United States at Bagdad, in the hope that it would afford him the coveted opportunity. To his disgust he found, however, that members of the Consular Service are forbidden to excavate in the dominions of Turkey, so he returned to America.

Three years ago Dr. Banks set out again to dig in the plains of Turkey. On this occasion he journeyed to Constantinople to seek authority from the Turkish Government. Although he labored constantly to that end, so devious were the paths of diplomacy and red tape that it was only about a year ago that he was able to obtain the desired permission.

Success so far obtained, he lost no time in organizing an expedition and proceeding to the field. At first the Arabs gave him considerable trouble. A dispute over the ownership of the site of the city that has since proved to be Adab was settled only after considerable negotiation that appealed to the cupidity of the natives.

So hostile are the Bedouins who live in the neighborhood of the excavations that protection for the workmen was necessary. Considerable time was lost in obtaining such guides. Progress was delayed also by sand storms, religious feasts and hot weather. Once a pitched battle took place between the followers

of rival sheiks. In this fight a number of Arabs were killed.

The evidences of ancient human habitation that led Dr. Banks to work upon the site of Adab consisted of a series of mounds from 35 to 40 feet high and extending in a line along the valley plane for more than three quarters of a mile. The extent of the ruins, together with their proximity to excavations that have yielded rich treasures, excited the hope that within the mounds records of history that would antedate any then known in the world lay concealed.

At Nippur, twenty-two miles, excavations had yielded the most important results of modern research. Not far away, also, the ruins of Ur, of the Chaldeans, lie buried beneath the hillocks that rise on the banks of the Euphrates. Although excavations were begun at Ur some time ago little progress has been made.

It was the peculiar location of Adab also that aroused expectations of important discoveries. Cuneiform inscriptions unearthed at Nippur mentioned the City of Bel, the "lord of gods," the abode of kings living more than four thousand years before the birth of Christ. This seat of primitive human habitation scholars in archæology have come to believe lay to the south of Nippur.

All about Adab are the evidences of a very ancient civilization. To the east, on the remnants of the canal that 5000 years ago connected the Tigris and the Euphrates, is Shirpuria; to the southwest are Erich and Ellaser, of biblical fame, and not far away is famous Babylon.

Thirty miles to the south lies Ur, containing the site of the Temple of the Moon. It was from Ur that Abraham set forth in his journey into Canaan. Centuries before, when the city of Babylon was not yet known to fame, Ur was the capital city of Babylonia.

At Ur, in Abraham's time, reigned Khammurabi, King of Babylonia, whose code of laws was unearthed not long ago by M. Le Morgan, a French explorer, at ancient Susa, the capital of the kingdom of the Elamites.

With all these facts indicating a field of richest promise, Dr. Banks began his work. No one expected, however, that the oldest city in the world—certainly one of the group of oldest cities of which there is any knowledge or tradition—would be unearthed.

It was not until the explorers had penetrated various strata of archaic richness that the identity of the most ancient of the ruins was established.

In fact, workmen dug through the remains of five cities buried one on top of the other before the most important find of all was made.

When one city was uncovered the ruins of another and an older city were discovered to be immediately beneath. Below that was another, and underneath that

still another, until at the bottom of this wonderful pile of ruins, which lay like stepping stones of the centuries, the old, old city of Adab, the hoary ancestor of all other cities of the world, was laid bare in its tomb of sand.

The identity of this most ancient of all the congregated dwellings of men was established by many tablets bearing its name in the ancient inscription UD.NUN.KI, interpreted by Dr. Banks as meaning Adab.

The epoch of this city was fixed by tablets, statues, vases and similar objects of household and temple use and by the marks of builders on bricks used in erecting and repairing the great temple.

As unearthed the temple was found to consist of four structures, one superimposed upon the ruins of the other, indicating the immense antiquity of the city as well as the vicissitudes it underwent during the wars waged by the sovereigns who ruled in that ancient valley.

When the temple was demolished or damaged in those days it became the duty of the authorities to restore it upon the same site.

King Khammurabi (the King Amraphal mentioned in Genesis) among his other claims to fame declared that he was "the king who lent life to Adab." From this it is supposed that Adab was one of the cities looted and wrecked by the Elamites in their early raids and that Khammurabi restored it.

It probably underwent a series of such mishaps and restorations, as among the building bricks and tablets are found inscriptions of succeeding generations and centuries.

In this report Dr. Banks gives the following tentative dates to the various foundations of the Temple of Adab:

"The top (the latest construction) is of Dungi, 2750 B. C.

"The second (next lower down), possibly of Naram-Sin, 3800 B. C.

"The third, or plano-convex bricks, in the fourth millennium B. C.

"The lowest, of stone blocks, possibly from the fifth millennium B. C."

While building bricks with distinguishing marks establishing the various periods of work have been unearthed at Fara, Nippur and other ancient cities, it is only at Adab that a series has appeared sufficiently complete to enable the archæologist to trace their development and to determine their relative ages.

Already forty-three varieties of bricks have been discovered at Adab, and as the excavations progress the number will probably be largely increased. These bricks are divided into three general groups, representing successive periods or epochs.

The first group is composed of the so-called plano-

convex bricks, flat on one side and round on the other, and not unlike a small loaf of baker's bread. The upper side still bears the marks of the workman's fingers as he shaped the soft clay in the mold before it was baked many thousands of years ago. Less frequently the upper surface bears the impression of a thumb, to distinguish it from bricks of earlier builders.

In the second group, or period, the bricks are large, thin and flat, and bear on the upper side one or more deep grooves formed by drawing the finger across the soft clay.

Grooves may run lengthwise along the center of the brick, or diagonally from an upper corner to a lower corner, or a second groove may be added, forming a St. Andrew's cross. Sometimes three, four or five grooves run parallel to each other, indicating the marks of different builders or rulers.

During one reign, for instance, a single groove was used; during the next, two grooves, and so on. If the father marked bricks by a diagonal line the son added a line running the other way, and so produced a cross. In this way, inscriptions not yet being invented, added grooves and grooves in new directions indicated building operations under successive rulers.

In the third group, or period, the distinguishing mark was no longer the groove, but the inscription. Sometimes it was stamped and sometimes written. The latest inscribed brick yet found at Adab bears the name of Kurigalzu, who reigned about 1300 B. C.

It is proved by the series of bricks that at least fifteen rulers lived between the time of the last king who employed the plano-convex style, and of Sargon. As Sargon ruled 3800 years before Christ, the plano-convex period ended at least a number of centuries before his time.

Dr. Banks believes that, when deciphered, the inscriptions will reveal the names of a number of these rulers. Not only that, but the series will explain the relative age of every very ancient structure and ruin in Babylonia, and present proof by the side of which paleographic evidence, even when at hand, must be of secondary importance.

Considerable light upon very ancient history will, it is expected, be thrown by the inscribed tablets uncovered at Adab. Many such tablets bear the name of Naram-Sin and his father Sargon.

Now the period of Naram-Sin is practically the starting point of all Babylonian history, as calculated until the present time. Many of the earliest records begin: "In the year of Naram-Sin," or "From the year of Naram-Sin." It is generally agreed that he flourished about 3800 B. C.

Naram-Sin was a mighty warrior and conqueror. One tablet found at Adab describes him as "Naram-

Sin, the mighty god of Agade, king of the four corners of the world, the conqueror of Armenia," etc.

Ninety per cent of the objects found in Adab are classed as pre-Sargonic, or antedating the reign of Sargon, father of Naram-Sin, while the majority of those discovered at Nippur are post-Sargonic.

The Rev. Mr. Ussher, of Philadelphia, who visited Adab, says that the city "seems to have been a ruin before Nippur began to be great, such is its antiquity."

The work at Adab, however, is practically just begun. Most of the records and inscriptions found so far have been taken from the temple and the vicinity of it. When the earth is removed from some of the palaces, traces of which abound, the customs and history of the people who lived at the very dawn of civilized humanity, it is believed, will be disclosed.—*North American*.

* * *

THE FUR SUPPLY.

VERY few people except those connected with the fur trade, or who have had their attention directed to it, have any notion of the enormous destruction of animal life which takes place each year among fur bearing animals, or of the very extraordinary way in which the supply of these animals appears to keep up.

There are only a few species which seem to be verging toward extinction; such are the sea otter, the beaver over large tracts of country, certain sorts of fur seals and a West African monkey. Northern Asia and Northern North America still produce vast quantities of fur, and will long continue to do so.

Perhaps the most valuable fur in the world is that of the sea otter, formerly abundant on the shores of the Pacific Ocean in Northern Asia and North America, but now in great danger of extermination, unless it shall soon be efficiently protected. Between 1772 and 1774 about 10,000 skins of the sea otter were taken in the Aleutian Islands, and the fur was so eagerly sought after that at the end of the eighteenth century 120,000 skins were taken each year. The results of such destruction could not be doubtful. The number killed soon fell to 1500 each year, and in 1867, when Alaska was sold to the United States, it was 700. In 1901 was 406, while in 1903 Messrs. Lampson & Co., of London, sold 463 skins, but they had none in January, 1904, and none in October. It is not unusual for a sea otter skin to sell for \$500, while remarkably good skins may bring two, three or five times that price.

The only skin which approaches the sea otter in value is that of the black or silver fox. It is said that good skins of the black fox have been sold in St. Petersburg at from \$1,500 to \$4,000. A pair of silver skins in London sold for \$2,400, while a single skin is said to have brought \$1,000.

The Arctic foxes, known as white fox and blue fox, are in great demand. In 1903 Lampson & Co. sold more than 20,000 white skins and nearly 3,700 blue ones. Both these skins seem to be increasing in value. It is not long ago since the price of white fox skins ranged from \$1 to \$4. They are now said to be worth from \$16 to \$25, while the price of the blue fox skins runs from \$50 to \$75.

Almost 50,000 wolverine skins were sold in London last year, at prices ranging from \$4 to \$8 for good skins. Of Russian sable nearly 30,000 were sold, or three times as many as were sold in all London in 1891. These expensive furs run from \$2.50 to \$75 in price, but occasionally skins are found which bring from \$250 to \$350 each. The Siberian sable, which is more abundant, more than 470,000 skins having been sold last year, is an inexpensive fur, worth only about 50 cents apiece.

Mink and marten are cheap furs, and bring low prices, but the best pine marten bring from \$7.50 to \$12.50.

Otter skins again are costly, as are beaver, the supply of which, as has been said, seems to be falling.

Passing over a multitude of smaller and less well known skins, it is to be noted that in the March sale of 1903 no less than 403 musk ox skins were sold, as against practically none at previous sales. These are valuable for robes, but the surprising increase in the number leads one to imagine that there is great danger of the extermination of this ancient species.

The Alaska seal catch this year was small, only 13,000 skins, against 19,000 last year. The skins taken at the Commander Island appear to have been lost by the foundering of the ship that was bringing them. There are a multitude of other pelts used for different purposes, but hardly known to most readers, of which we need not speak further than to say that last year nearly 1,000,000 skunk skins were sold at prices ranging from 25 cents to \$1.75.—*Cincinnati Enquirer*.

* * *

LED TO JAIL BY HIS DOG.

OLD and blind, a man was sentenced to a week's imprisonment at Waterford, Ireland, for being drunk and disorderly, and his dog was allowed to spend the night in the lock-up with him.

Next morning the prisoner, led by his dog and escorted by the police, was taken to the jail, and at the gate the animal whined so piteously on being parted from its master that the man was ordered to go to the public ground with his canine companion.

Once more was a procession formed, the dog leading the way, and a motley crowd bringing up the rear. At the pound the companions were parted, the dog howling dismally.

WHAT A MUSICAL EDUCATION COSTS.

At my request, the following article was written for the Inglebrook readers, by William H. Dana, one of Ohio's best musicians, and President of Dana's musical Institute, at Warren, Ohio.—M. A. B.

IN regard to the expense of a musical education, especially in a conservatory, it is impossible from catalogues to know the cost, as the prices of tuition are so graded that one is unable to know his classification, and to be safe in making estimates fifty per cent should be added to the supposed cost and if study is to be pursued in Chicago, New York, or Boston, one can expect to spend anywhere from \$800 to \$1,200 for a school year of ten months. Board, street car fare, concerts, school certificates and other surprises are a constant drain on the pocketbook, saying nothing about tuition and music bills. My advice to any one going into a city for study is to take private lessons from a well known teacher, paying from \$1.50 to \$2.50 per lesson, and in the long run they will save money and get better results. There is little to be gained in the way of prestige from study in the American conservatory, as it is generally devoid of financial backing and must either be a financial success or die. Consequently such schools are not long lived, or stable. Music study abroad is cheaper than in this country. One can live well in any European city on \$600 per year and take lessons from reputable teachers. The tuition at the Hoch Schule in Berlin, or the Royal Academy of Music in London, is about half what is paid here for the same grade of instruction. A host of America's best organists studied with August Haupt of the Hoch Schule, paying \$1.65 per lesson, and at home these same pupils were getting \$5.00 a lesson before the odor of the sea was off their garments. I would not advise young people to go abroad for study until they have become "fixed" in habit and moral understanding. The majority of young men and women who go abroad are ruined in soul and body. Somehow they seem to think that the broad Atlantic has cut off both home and heaven, and responsibility for conduct rests not with them.

To one who has musical understanding, the environment abroad is beneficial, but to one who has not a well grounded musical and literary education much of the advantage in hearing is the "casting of pearls before swine."

From years of association and observation abroad I am led to say that American musicians like Wm. Mason, Sherwood, Eddy, Warren, Gilchrist, Paine and others have done more to make Europe popular than anything Europe ever did for the musicianship of this country. The fact is that they were all indomitable workers and would have been a success anywhere. Europe can not claim credit for their strength. The

seed was sown in America and limited was the guidance Europe gave them.

Sometimes I feel like saying that the better teachers are to be found in this country—method is better preserved here and instruction is more orderly: these things coming largely from early instruction in the public schools where order and method are emphasized. In our smaller cities are to be found excellent advantages, especially in music departments connected with colleges and independent schools of music. Instruction in these colleges averages about \$500 per year.

One cannot study, fare well, dress comfortably, study under experts anywhere for less than \$450 per year; and to spend less time than that with a teacher is to leave him or her without knowledge of method or the art in detail. Before taking up the study of music one should thoroughly understand that work is required, and continuity and consecration essentials to success.

INDUSTRIAL WORK FOR GIRLS.

A Chapel Talk Delivered Recently before the Students by Miss Roberts.

IN the earliest history of the race we find women doing all the industrial work. Man was the warrior and hunter. He protected the home and brought to it the game which he had procured which the women of the family dressed for food, and used its skin to make clothes, and the bones to make weapons for her lord to use in the chase and warfare.

During this period every home depended on itself. Life was very simple, all the necessities of the family being supplied at home without any dependence on others. As conditions changed, life became more complex, families depended on each other and combined for defense, every man protected himself by protecting his neighbor and thus the family became part of the community. The women cared for the family needs. They cooked the food, carded, spun and wove the wool into cloth, made the candles which furnished light, and made linen cloth of the flax. All the raw materials were furnished by labor of the men of the family. This was as a rule the condition of women in America seventy-five years ago. There was enough to keep them busy and furnish them a variety of employments.

Outside the home there was little for her to do. A few women who were dependent on their own resources kept small shops known as thread and needle shops; we get delightful pictures of the quaintness of these shops in Hawthorne's writings. Others kept Dame schools where the younger children were taught. These were about the only occupations open to women seventy-five years ago, outside the home work of cooking, sewing, etc.

About 1820 manufacturing began to be an important industry in the Northeastern States. Factories were opened and women and girls flocked to these in great numbers. This was the first great inroad made by the American women into the industrial world. Conditions in the factories at first were pleasant and the daughters of the middle class New Englanders were proud of their work in the factories. The workers were organized into clubs for mutual improvement and on the whole woman as a class was benefited by this movement.

In our factories and mills to-day women and girls are at work but owing to competition the wages paid are low ranging from \$1.00 to \$8.00 a week. During the last years a movement has been going on for the betterment of conditions. Some firms furnish rest rooms, lunch rooms and many comforts to their employees.

One of the occupations which has almost exclusively been women's work is that of nursing. The sick-room has always been women's province but the trained nurse as we know her to-day is the direct result of Florence Nightingale's work in the Crimean War in 1846, when she demonstrated to the world how much good could be accomplished by nurses specially trained and who depended not only on their desire to help but on knowledge. She opened, in London, schools for the training of nurses. New York City had such schools later and in 1872 the first class was graduated from Bellevue Hospital. At present there are upwards of 20,000 nurses practicing in the United States and every day nurses are making themselves more invaluable. To become a trained nurse girls take a three years' course of training which means hard work, and at the close of this term of training, they are reasonably sure of work, but their success depends on their interest in their work and to some extent on their physical strength.

In the business world women are found in all departments, as bookkeepers, buyers and sellers for wholesale firms and managers of departments. Usually the promotions to higher departments are made from the ranks of the army of saleswomen employed in our retail stores. Here as in other cases, the worker is obliged to depend on her merit for promotion.

One authority says that one-half of the telegraph operators, and three-fourths of the typewriters in the business world of the United States are women. In such positions the salaries vary, beginners receiving \$5.00 a week but experienced and trusty workers receive larger salaries. To make an efficient typewriter, a good general education is necessary as well as a knowledge of business methods.

I need say nothing about the teachers of our country, two-thirds of the entire number of teachers in the United States are women.

Teaching is a profession which is harder to enter than it was twenty or even ten years ago and it is becoming more so every year. Our schools employ only trained teachers whose scholarship must be of a higher standard than formerly, and statistics show that more people are choosing teaching as a profession than was the case when it was thought any one who had an ordinary education could teach.

There is one occupation always open to women which will never be overcrowded that of cooking. Cooks are always in demand and command good salaries. A great many girls can become good cooks by practice but the public is realizing that cooks require training and for this purpose, we find the schools of Domestic Science established in our large cities and in connection with a majority of girls' schools. A course in Domestic Science embraces cooking, household economics, marketing, home sanitation and nutritive values of foods. Statistics tell us that the graduates of these schools are always in demand. Women have taken an active part in the agricultural pursuits during the last years and we read of women who are successfully managing farms and attending to the details of the work. The raising of bees, vegetables, small fruits, flowers and poultry have all been successfully carried on by women.

One woman gave the following account of her work with bees: She says, "I always loved outdoor life and was specially interested in bees, and finally decided to try bee culture. I bought books about bees and studied them early and late and compared different authorities because they often disagreed. I talked with people who raised bees, and after filling my mind with bees, I began to work on a small scale and from my own experience I soon learned which of my books to pin my faith to. I did the hardest and most constant work of my life with my bees. My success the first year was not dazzling but I had learnt patience if I was not richer in money. Still I thought it worth while to increase my bee colonies and at the end of the first year I began to think I knew something about bees.

"After eight years of work I feel reasonably sure of success and every year each hive produces \$10 worth of marketable product in honey and wax."

A woman in Chicago owns and manages a stock farm. She left her home in the city and lived on the farm. She had always been fond of animals and after being on the farm for some time, she concluded to try managing it herself. She rides over every part of it each day and attends personally to the buying and selling of stock. I could scarcely believe the figures when I saw in the census of 1900 that there were 1749 women stock raisers in the United States.

One of the largest fruit growers of California is a woman. She owned a farm which was formerly mis-

sion property, and in many ways it was giving her a great deal of trouble. One of the most fruitful sources of her troubles was with the men who managed her farm. Finally she decided to leave her home in Oakland and go to the farm, giving it her personal supervision. In three years her farm was a paying venture besides affording her a great deal of satisfaction.

Another California woman took up grape culture on account of impaired health and from her efforts and experiments have grown the raisin industry of the state.

One young College bred girl took up an entirely new line of work. Shortly after her graduation her family met with reverses. She and her mother had their home but very little else. They lived three miles from a small city and she was unable to find any profitable work she could do and stay at home with her mother. At last she thought of raising pigs. Her friends said she ought to find something more suited to her station.

She said her friends did not seem to realize that a college education is not worth the snap of your fingers when you are in actual want and need assistance in a hurry. It was pigs or the poorhouse. She chose pigs. She began with ten pigs, cared for them as tenderly as if they had been priceless pieces of china, had them in clean pens and never allowed food to stand in their troughs, and fed them regularly. She never allowed any social duty to interfere with her work. Later she said to her friends. "I kept my pigs and now my pigs are keeping me."

Dressmakers and milliners are always in demand. In the Industrial School established for girls there are courses given in both these trades. Any careful girl after getting the instruction and experience the sewing-room here affords can be of help to a dressmaker so that she can readily get opportunities to learn dressmaking. In this respect our girls have an advantage over nine-tenths of the average white girls whose mothers do not have time to give them special training. Women have been successful as wall paper and carpet designers, and in silk culture. The women who have succeeded in these different lines of work tell invariably of the arduous efforts they have made, putting everything aside to attend to their chosen work and not depending for success on luck or capacity, but on training and hard work.

The figures below show the number of women engaged in different occupations in the United States. You will notice that working has become quite a fashion and that our girls should think earnestly of what they are going to do. Any girl of sixteen should be thinking about preparing herself to do some useful work in the world, even though her parents can take ample care of her. Boys are constructive from long training. A boy is sure he is going to do some work

in the world. Why should it not be true of his sister? A woman's true realm is the home but the fact remains that thousands of women must earn their daily bread for themselves and often for parents. Being able to earn their living does not unfit any girl from making a happy home, as the same qualities are needed for success in the home as in the industrial world.

Census of 1890.

	Men and Boys	Women and Girls
Agriculture,	8,320,000	680,000
Manufactures,	4,060,000	1,030,000
Commerce,	3,100,000	230,000
House-servants,	2,690,000	1,670,000

The census of 1890 shows that one-half of the population of the United States over ten years of age had some remunerative occupation.—*Youth's Instructor*.

PHYSIOLOGICAL SEA-WATER.

BY J. GRANT FIGLEY.

THE learned German chemist, Dr. Julius Hensel, has manufactured a *drink* in composition equal to the serum or water of blood, the principal ingredient of which is sea-water. Dr. Rene Quinton, of the College de France, has published a book entitled, "Sea-Water as an Organic Medium," seeking to prove as Dr. Hensel had, that water, sea-water at that, is the evolution-principle of life.

The claims of these two gentlemen seem to be that the organic mineral compounds of the human body, and of sea-water, are essentially the same: salt, lime, soda and potash, though the proportion in a given amount of sea-water is naturally abnormal to that found in the human organism.

It is a well-known principle now of medical science to prescribe various salt-solutions and combinations for certain diseases, the most exclusive being the injection of a warm salt-water solution into the veins of typhoid fever patients. In various forms of kidney and intestinal troubles, a salt-water solution is often prescribed.

Every household knows the efficiency of salt and water, either separate or combined, and the extensive medical use of them is not unnatural. But the effort to compare the products of the human body with that of sea-water is a trifle unique. However, embryotic life is more or less to be compared with that of amphibious creatures, and scientific research on a water basis is nothing so remarkable after all.

Even in a theological sense, water has something to do with the spiritual nature of man, as well as the physical, 1 John 5: 6, 8; etc. Let the good work go on among both scientists and theologians. In truth, they cannot get far enough apart to demoralize the universe.

Bryan, Ohio.

MIRRORS.

BY GRACE LONGANECKER.

I DOUBT if any one article of invention is more used than the mirror. It is in nearly every home, in school-houses, hotels, business offices and where is it not? It is even carried in the boys' pockets and sometimes the girls manage to carry it with them.

The precious article! How could we get along without it? I imagine we could not and doubt if mankind ever could. Even centuries back, to the time the Bible was written in Exodus the ladies used looking-glasses. (I suppose the gentlemen too.) I do not know if they were the identical mirrors we use or no, but they were looking-glasses. I suppose the belles needed them, then, to see if the powder was on thick enough and enough of the paint at the correct place. I suppose the boys needed them, then, to see if their mustaches curled just so, and many other people needed them for many other purposes. Do you use the mirror? For what?

Did you ever try to analyze the outline of your face in the mirror? Our faces sometimes bespeak our character. If you see a scowl on the face, too many vertical wrinkles, perhaps, it tells you to sweeten up your temper and change your appearance. If your mouth turns down at the corners, smile a little more and help it up.

The Bible teaches us to know ourselves and the mirror certainly helps us to do it. Mirrors are all right in their place, but we should not think of using them while at church. While there, we should study how to pose as a mirror, reflecting the image of Christ. So use a mirror and be one yourself.

Hartville, Ohio.

THE UNWIELDY HIPPOPOTAMUS.

"IN the channels which traverse the marshes of certain districts in Central Africa," writes a traveler, "hippopotami in incredible numbers are met with—sometimes in herds of 60 to 70. Wherever the channel widens out into a reedy lake rows of grotesque-looking heads, with ears erect, appear above the water surface, their owners studying the extraordinary apparition produced by the steamer. On approaching the spot these heads disappear one after the other under the water and a series of waves and large ripples indicate the passage of the monster forms below the surface. After a few minutes' time the same huge heads reappear, generally down stream of the boat. They have another stare and again disappear, with a snort and the expulsion of a small volume of water from the nostrils.

"If the water should happen to be shallow the at-

tempts of these animals to hide themselves are ludicrous, as their movements are clumsy and their anger and fear are evident. In such cases their heads and the fore parts of their bodies are under water, and nothing is seen but the huge pink hindquarters, struggling, kicking and stirring up the water in the effort to get out of sight. Although their uncouth antics may be safely watched from a steamer, it is a very different matter if the observer is in a canoe or small boat. Then his position is one of considerable danger, as he stands a very good chance of being upset.

"As the water of all these channels swarms with crocodiles such a contingency is not pleasant to contemplate. The natives are fully alive to this risk and never venture in their dugout canoes into the broad streams infested with hippopotami, but invariably keep to the shallow and narrow branches on either side of the main river."

* * *

WEALTH OF COUNTRIES.

It is interesting to know that while the United States is one of the richest countries in the world its stock of gold and silver money is not by any means so large as that of France, which has more metallic money than any other nation. The gold coins of the world are equal in value to \$3,582,605,000, and the silver coins to \$4,042,700,000, while the paper money has a face value of \$2,635,873,000. Of this vast amount France has \$800,000,000 worth of gold and \$700,000,000 worth of silver; the United States \$604,000,000 worth of gold and \$615,000,000 of silver. Great Britain \$550,000,000 of gold and \$100,000,000 of silver. Germany has \$600,000,000 worth of gold coin and \$211,000,000 worth of silver, while Russia, with a much larger population, has \$250,000,000 worth of gold and \$60,000,000 worth of silver coin. She has, however, \$500,000,000 worth of paper money, while South America keeps in circulation \$600,000,000 worth; the United States, \$412,000,000; Austria, \$260,000,000; Italy, \$163,000,000; Germany, \$107,000,000; France, \$81,000,000, and Great Britain, \$50,000,000. If the gold coins of the United States were divided into equal shares each person would have about \$9. Following the same plan every Englishman, woman and child would have about \$14.50, every German about \$12, every Russian about \$2.25, and every Frenchman about \$20. The ratio for all kinds of money would still leave the Frenchman the richest man in the world, for if all the gold, silver and paper money in France were shared equally he would have \$40.50, while the citizen of the United States would have \$24.50, and the residents of Austria, Belgium and Holland a little more, the Englishman \$13.50, and the Russian only \$7.16.—*Cincinnati Enquirer.*

IRRIGATION DEPENDENT UPON RATIONAL FORESTRY.

At the recent great American Forest Congress held at Washington, D. C., among a number of addresses was one by Guy Elliott Mitchell, Secretary, The National Irrigation Association, on

The Close Relation Between Forestry and Irrigation.

THE connection between a comprehensive system of forestry and irrigation is a local one, said the speaker, affecting but one-half of the territory of the United States, the arid region, whereas forestry itself, as affecting water supply is a purely national question, as well as a local one in each State and drainage basin. For this reason the new forestry movement has a country-wide interest and while California is alarmed over the destruction of her forests and the 'drying up of her streams, the lifeblood of her communities, Pennsylvania and New England are likewise exercised over the threatened danger to their water sources, necessary for city and town supplies and for power production. In the west the destruction of forests has an intimate bearing upon the capacity of the States to sustain population, for population results from irrigation, irrigation depends upon water supply and the water supply is furnished from the melting snows caught and held by the forests clothing the great mountain chains of the Sierras and the Rockies.

Three things are necessary to produce a maximum water supply for irrigation:

First, to prevent wholesale destruction of timbered watersheds.

Second, the substitute therefore a rational system of forest cutting, and,

Third, where possible to aforest and reforest lands where the value of the water supply warrants this most advanced and expensive feature of the American forestry plan.

Stop Waste First.

The first of these should receive the first consideration; the present waste should be checked and the second part of the plan adopted before it is too late and the third and most expensive part becomes the only remedy. For every thousand dollars now expended in carrying out the first two provisions of the plan, where all that is needed is to husband and direct the resources of nature, it is perhaps not an exaggeration to say that a million dollars and much time will be required to attain the same results through forest planting. The latter, while perhaps a subject for future rather than present application on a large scale, holds out wonderful eventual possibilities. The statement of the government Forester at the El Paso Irrigation Congress that liberal experiments have proven that enormous areas of the west can by systematic planting be made into forests with the effect of restoring streams which have disappeared and creating new

streams holds out new and unknown potentialities of entrancing interest to the forest and water student.

But what is needed to-day is more strength to the arm of American Forestry for the immediate prosecution of its carefully outlined plans to save what we have now set before us. The two greatest problems before this country to-day, problems well worthy the expenditure by the nation of millions and hundreds of millions of dollars instead of thousands and hundreds of thousands of dollars, are forestry and irrigation. They will return such expenditure, principle and interest, many times over, and the carrying out of the policy will demonstrate its wisdom easily within the present generation.

A Practical Business Plan.

The workings of the Forestry Bureau have come within the past two years to be recognized as a practical, hard-headed business proposition. The present Forester, Gifford Pinchot, when criticised for his enthusiasm in the setting apart of Forest Reserves and the substitution of æsthetic considerations for those of practical lumbering, made the notable response:

"I am not a preserver of trees, I am a cutter-down of trees. It is the essence of forestry to have trees harvested when they are ripe and followed by successive crops. The human race is not destroyed because the individual dies. Every tree must die but the forest can be extended and multiplied."

The country is fortunate in its possession of Gifford Pinchot as government Forester; the president is fortunate in having a man to carry out his advanced forestry policy, who is interested only in conserving one of the greatest of America's natural resources and in this erecting a monument to himself which will live for all ages.

In this connection the speaker urged the enactment of the pending bill, recommended by the president, providing for the consolidation of all the forestry bureaus and divisions into one organization under the Secretary of Agriculture. He also called attention to the necessity for the repeal of the timber and stone law and the substitution of the bill which has passed the senate and is now before the house, providing for the sale of stumpage, the title to public timber lands to remain in the government, thus insuring their natural reforestation.

Immediate Legislation Important.

Both of these bills have the unqualified endorsement of the Chief Forester and the various heads of bureaus and departments engaged in forest work, including the president himself, whose messages to congress deal specifically with this matter. Another law which the speaker condemned as inimical to the interests of the country is what is known as the Forest Reserve scrip law. Under this law, he stated, enormous areas in the Forest Reserves owned by individuals or corporations,

prior to their creation, have first been denuded of their timber by the owners and then turned back to the government and exchanged for the most valuable public timber land which could be found. The speaker quoted an utterance of President Roosevelt as a hopeful indication of better things to come in all matters of land legislation. The president said:

"Now keep in mind that the whole object of forest protection is, as I have said again and again, the making and maintaining of prosperous homes. Every phase of the land policy of the United States is as it by right ought to be, directed to the upbuilding of the homemaker. The one sure test of all public land legislation should be: Does it help to make and keep prosperous homes? If it does, the legislation is good. If it does not, the legislation is bad. Certain of our land laws have been twisted into an improper use, and it is necessary in my judgment that there should be a revision of the land laws and a cutting out of such provisions from them as in actual practice tend to make possible the acquisition of large tracts for speculative purposes or for the purpose of leasing to others."

LINCOLN AND THE LAKE CHAMPLAIN QUAKER.

THE people who love it will defy you to find a more beautiful lake anywhere; and, anyway, if the voyagers to the New World had discovered nothing else, it would have been worth all the trouble they took coming over. Big and gracious and commanding as some dear princess, it sweeps to the northern border, and the mountains range themselves on either side, watching and adoring.

The largest island in the lake is long and wide and has several townships of its own. Somewhere about 1785 a family of Quakers came from the south and found the place. "The Lord," they said, "has led us into ways of peace. Here we will live, and the blessing of heaven will be with us." They labored at their wholesome toil and their minds were filled with wholesome thoughts. Sun and storm succeeded sun and storm, and the years passed and they found rest unto the third generation.

In 1861, when the stricken country cried for men to save her, the note of war came to the island, and the great-grandson of the first Quaker was drafted.

"But it will be no use," he said. "I shall never fight. My mother taught me it is a sin. It is her religion and my father's and their fathers'. I shall never raise my hand to kill anyone."

The recruiting officer took little notice. "We'll see about that later," he commented carelessly.

The regiment went to Washington and the Quaker boy drilled placidly and shot straight. "But I shall never fight," he reiterated.

Word went out that there was a traitor in the ranks. The lieutenant conferred with the captain, and all the forms of punishment devised for refractory soldiers were visited on him. He went through them without flinching, and there was only one thing left. He was taken before the colonel.

"What does this mean?" demanded the officer. "Don't you know you will be shot?"

The Quaker was a nice boy with steady eyes and a square chin, and he smiled a little. "That is nothing," he said. "Thee didn't think I was afraid, did thee?"

The prisoner went back to the guardhouse and the colonel went to the president, to Lincoln, who was great because he knew the hearts of men. The case was put before him—of the mutinous Quaker who talked of his religion, the soldier who refused to fight, who defied pain and laughed at the fear of death.

Lincoln listened and looked relieved. "Why, that is plain enough," he answered. "There is only one thing to do. Trump up some excuse and send him home. You can't kill a boy like that, you know. The country needs all her brave men wherever they are. Send him home."

So the Quaker went back to the island, to life and duty as he saw them, and his children tell the story.—*February Lippincott's.*

KANGAROO VICTORIOUS.

A CURIOUS contest, between a kangaroo and a buffalo, took place in a large zoological park in the north of England. The two animals, after breaking loose from their inclosures, met face to face in an open space in the park. Without any preliminary quarrel the bull made a furious onslaught on the kangaroo, which at first contented itself with an endeavor to avoid the charge.

After a few moments, however, the bull's attention became altogether too personal to pass unrebuked, and, using its hoofs as battering rams, the kangaroo belabored the buffalo in the most effective manner. Roaring and bellowing, the irate buffalo made repeated attempts to gore its antagonist to death, but with scant success, the kangaroo proving a most slippery foe. The fray waxed furious for over an hour, at the end of which time the buffalo retired, showing, however, unmistakable signs of the kangaroo's attention.

"BETTER do nothing, than something that is worth nothing."

PIGEON SLAUGHTER.

BY HON. GEO. D. PERKINS.

LIVE bird shooting is the poorest apology for sport now masquerading under that name. There is no rational excuse for its tolerance by a humane people. It is essentially cruel. Trap shooting lacks all the excuses which may be cited, from a sportsman's viewpoint, in favor of the shooting of game birds. The game bird is provided by nature with an instinct which tends toward self-protection. The bagging of a duck is not a one-sided game, as any hunter will testify. When the contest of masculine wit against the game bird's instinct begins, the bird is free to conduct a campaign for self-defense. It knows instinctively that there is danger in the air, and it is provided with the means of escape. At the outset the odds are on the side of the feathered competitor. It is the overcoming of the odds which furnishes the elements of "sport." In trap shooting, on the other hand, the man behind the gun is careful to provide that the odds are all on his side. He selects as his target the pretty pigeon, a domesticated bird which looks upon man as a friend. The bird is cooped up for days before the sentence of death is to be executed. The trap is placed at a distance from the gun which gives the gun all the advantage. When the bewildered bird is liberated there is no suggestion of danger, and its flight may be toward the danger point instead of away from it. If the shooter, after firing both barrels point-blank at the feathered target, fails to hit it, the bird has gained a freedom which is likely to last only until the day of the next trap shoot. When the shooter only maims the bird it is generously provided that if the bird can flutter out of certain prescribed bounds a miss shall be charged up against the marksman. But this little piece of generosity doesn't heal the wounds of the bird.

If no other argument could be brought against the practice of live bird shooting from traps the very inutility of it might be urged. If it is merely a chance to test marksmanship that is desired, it can be had without the sacrifice of bird life. The "clay pigeon" projected from a trap in imitation of a pigeon's flight furnishes competing gunners with ample opportunity to show their prowess. These artificial birds can be made to fly swifter than the average live bird, and even among sportsmen there are many who argue that the breaking of these targets furnishes a better test of marksmanship than is afforded by shooting at real pigeons. Largely as a matter of economy the use of clay targets has been increasing. As a matter of humanity it should be extended until these targets alone shall be used in trap shooting.

The proposal to do away with the shooting of live birds from traps will be opposed by practically all

gun clubs. Ask the members why, and they will tell you that shooting pigeons is better sport than shooting at inanimate targets, and they will justify the practice by saying that the dead birds are usually used for food. The latter excuse is the only half way argument that can be made in defense of this sort of killing. But the so-called sportsmen are not killing the birds for food. In fact it is to be feared the man behind the gun is merely insisting upon his right to gratify the old barbarous instinct to see a life snuffed out as a result of his prowess. The better way to do away with this species of inhumanity would be to convince men of its demoralizing effect. But that would be a slow process. The swifter and surer one is for the humane sentiment of the community to insist that the cruel slaughter of live birds shall be prohibited by law.

Sportsmen who may be inclined to think their rights would be interfered with by the proposed law, may find some enlightenment in the utterances of President G. O. Shields, of the League of American Sportsmen, who, together with Ernest Thompson Seton, vice-president of the league, declare their sympathy and willingness to cooperate in the effort to suppress, by law, the shooting of live birds from traps.

President Shields does not share the fears of dealers in guns and ammunition that less shooting would be done if trap shooting were restricted to inanimate targets. He is inclined to think there would be more shooting in that case. For one thing, many genuine sportsmen who now refuse to attend the tournaments because of the bird slaughter would take a new interest in trap shooting. Also if target shooting were made the sole test of skill there would be more interest in achieving skill in that line, and consequently more shooting.

This presentation of the case from the sportsman's viewpoint should be of great assistance in securing the favorable attention of the legislature. With the true sportsmen working side by side with the Audubon societies there would be no question of the success of this movement for the protection of bird life.

* * *

IT TOUCHED THEIR HEARTS.

THOUGHTLESSNESS is at the root of much which seems deliberate unkindness. In a large city store recently a number of clerks, all of them young girls, catching sight of an old farmer coming down the aisle, began to amuse themselves by remarks which were intended to be humorous, but which seemed decidedly ill-natured.

Approaching the counter, the old man bought several small articles, the girl who waited on him exchanging sly glances with her companions as they still continued whispering and laughing together.

The old man carried in one hand a small, neatly-

made basket, the lid tied down with a bit of blue ribbon. While waiting for his change, he lifted the basket to the counter and said:

"S'cuse me, miss, but I've got something here I'd like to give you, if you'd take it and divide it 'round 'mong them other young ladies there. You see I've got a little gal to home 'bout your age, but she can't walk nor caper 'round like other gals. Had a fall when she was little, and the doctor says she'll never walk now, but she's just as cheerful and happy as them that can walk and be strong, never complainin' nor nothin'. She made this basket herself, makes lots of 'em, and every time I come to town she has me bring one of 'em full o' something to give to somebody that don't know what the country's like. Now this basket is full of the first that's ripened of our airly August red apples, and some little posey bouquets she fixed up herself. It jest came across me that mebbe you'd like 'em, and you're welcome to 'em. We live about forty miles out, half a mile from F——, an' I'd be glad to have you all come out and stay over Sunday any time. Here's the basket."

The girl accepted it with a very sober "Thank you" and walked toward her companions as the old man went on his way.

"Well, it was real kind of him, wasn't it?" she said.

"Yes, it was," replied one of the girls, heartily.

"He's a good old soul," said a third. "I feel guilty for laughing at him."

"So do I. What lovely apples! And here's six little bouquets of wild flowers his crippled girl fixed up. See how she's made the apples shine, too. I could cry for making fun of her old father."

The faces of the girls wore a soberer look, and there was a mist about their eyes as they separated, each of them wearing the little bouquets, the gift of which had touched their better nature.

* * *

RESTORED TREASURES.

ONE winter day a little boy whose uncle was very kind to him but who could not afford to buy him many playthings conceived a great desire to have a sled. His uncle did not promise to get him one, but that he was not indifferent to the boy's request was proved when on Christmas was drawn out of a barrel, to the little fellow's great delight, a gorgeously painted sled.

But it happened, alas! that after the boy had taken a few slides with his new possession down a neighboring hill, while he was coming up the slope the cord by which he was drawing the sled slipped from his hand, and down the pretty thing went straight under the hoofs of a team of mules which were coming that way.

The grief of the boy at the sudden smashing of his new sled was pitiful. His uncle knew he could not afford to buy him another; and, having waited so long for this one, the disappointment of his hopes for merry coasting was doubly keen.

But comfort came from an unexpected quarter. The considerate uncle succeeded in having the broken sled repaired at a machine shop and made twice as strong as before; and for a long time thereafter it continued to give its youthful owner great pleasure. And so, when sometimes in life something on which the affections have been fondly set is suddenly taken away, it may be because in place of it, in the kind providence of God, some better thing is to be substituted. The loss may not be final—for perhaps the treasure so prized will be returned before long rebuilt on stronger lines, and furnished forth with a fairer grace.—*C. A. S. Dwight.*

THE COLOR OF SNOW.

SCIENCE, while it gets at the marrow and essence of things, upsets many pretty delusions and fancies. We have been taught from childhood that snow is white, and the impression conveyed to our brains through the medium of sight appears to settle the question beyond the possibility of doubt, yet, though the judgment of our senses is to the contrary, it can be scientifically demonstrated that its true color is blue. It is faint and delicate cerulean tint, to be sure but decided enough to make the scientific declaration that snow is blue, one that is positive and irrefutable.

It is a well known fact that water in small quantities is perfectly transparent. In large masses it is distinctly blue. Snow is simply crystals of pure water. The reflection from these is that of all colors of the rainbow or prism, but by uniting before they reach the eye cause the snow to appear white. "But," you will say, "the single crystal also appears to be white." This is true beyond question, the reason being that which appears to be single crystal is in reality a multitude of microscopic threads, prisms, lines and dots.

In spite of their apparent diversity in form and shape, which may vary from hair-like crystals to perfect stars of beautiful, delicate and intricate designs, they may be said to be absolutely uniform in original delineation that of the hexagonal prism. The primitive form is that of a straight needle of ice, radiating from a central nucleus of either 60 or 120 degrees. What may on casual examination be taken for exceptions to this rule are the little disks which occasionally fall. These on close examination proved to be six-sided plains, the angle still being 120 degrees.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE VALUE OF ATTENTION.

It has been said that attention or concentration of thought is one means toward the end of obtaining an education. This at first thought seems logical, but upon deeper investigation it proves that education is rather a factor of attention. Attention is the stretching of the mind toward any particular subject. It is that peculiar quality which has the power to draw all the powers of the mind on the one thing before it, and makes that one thing the luminous, burning focus of thought. This kind of attention is not possessed without a considerable degree of education. The uncultured mind is not captured and held at will. It must be lassoed with a lariat of constant training, without which it becomes as wild and unmanageable as the wild horse on the open prairie.

Education, really, is the first power of attention. It is the will of controlling the mind and directing it to a given end. The failure to comprehend this is the real cause of more defeat in school life, and especially in the college courses, than perhaps any other one thing. In pursuing a course of study it is absolutely necessary that one be able to rivet his attention upon the subject in hand, in order that he may study it relatively and individually. You have noticed, in the reading of books, that one person will borrow a book from the library, focus every extremity of thought upon the contents of the book to the exclusion of everything else and become wholly lost to the world; and in a few hours will have all the author put in the book, if not more. While another person may borrow a book at the same time, of the same character, and from the same library, and allow himself to be so continually harassed with remembrance of office duties, domestic influences, and social interference that even after a day or two has been spent, worrying over the contents of the book, a very faint idea of the characters, the author, or even the purpose of the book is had for the great nerve force that has been expended.

James A. Garfield once attempted the reading of a book, while he was a member of congress, and he found his mind continually slipping away from the text and drifting into reverie of thought; after he had found himself in the wilderness of meditation several times, and brought himself back to the open field of study, he became alarmed at his inability to hold himself at the post of duty. Attention was stealthily slipping from his grasp; his nerve force was being badly spent; he was getting no returns for the loss of lifeblood. When the symptoms of this weakness showed themselves in such unmistakable terms he resolved at once to try one more book, and in case of failure he expected to resign his seat in congress and go, at once, to a German university where he could regain his power to concentrate the forces of his mind to the task in hand.

The great difference between the strong man and the weak man, the educated and the uneducated mind, lies at this point. Attention is a quality that can be trained and strengthened into self-control and mastery, or it can be let to run loose into distraction and weakness. This is not only true of persons who are acquiring fundamental knowledge by the use of textbooks, but it is equally true of tradesmen of all occupations, especially of a scientific nature, who possess such weak attention as to let the mind slip off their work and wander about, attracted by every passing sight or fancy. A strong attention veritably shuts the door of the mind to one thing and makes everything contribute to it.

It is said of Thomas Edison that his success, as an inventor, can be easily traced to his extraordinary power to exclude everything else except the one thing he had under consideration. A story is told of him that his bride and the invited guests awaited the wedding hour, far into the night, on account of his absence; becoming alarmed, a messenger was sent to his office, who found him wholly absorbed with the features of a new invention which had caused him to forget all about the engagement of the evening. The circumstance might have caused the bride to think this was the result of inattention, but evidently it was the outcome of undivided attention to the work of his office.

Young man, young woman, practice economy of thought, concentration of thought, attention. Hold it to its point and make it do the work.

THE PURSUIT OF BEAUTY.

THERE is a French saying, "You must suffer, to be beautiful." As the French pride themselves in matters of taste, particularly beauty, perhaps their adage becomes more or less truth.

The maid of a French lady has disclosed some of the secrets of her mistress' boudoir, or, rather her

torture chamber. The latter name evidently would be more applicable to the place referred to. The lady herself is now beautiful, but she wonders that she is now alive. Her maid says that for months and months the lady lay on her back on the floor, motionless, with her hands close to her side, during several hours each day. This exercise was for the purpose of improving her figure; for the same period of time each day, she sat upon a high stool, rocking her body backward and forward and from side to side, unceasingly. This was to give her that peculiar quality known as a statuesque throat and the waist of a sylph. In this particular case the lady's nose possessed a sort of soaring nature and had to be made Grecian by a constant application of a spring bandage. One nostril was originally larger than the other which occasioned the wearing of a small sponge in the smaller one in order to distend it, for the period of one year. Her cheeks have been filled out and rounded symmetrically by occasional injections of paraffin. Her ears were pressed against the side of her head for weeks and weeks, by the use of strong springs, while heavy weights were hung to the lobes of the ears to produce the required oblong shape which has been successfully accomplished.

She patiently suffered this complicated martyrdom, awaiting the results she now so much enjoys. She is now beautiful in her own estimation; she has done the work that nature failed to do; she has corrected a few mistakes of the Creator. Many of her sisters are doing the same thing. When nature neglects to put a hump on their backs, it is readily supplied; when nature supplies the hump, thousands of dollars are expended to remove it; when nature gives the Roman nose, the artist gets a job of paring it down; if it be too small, she willingly sacrifices some flesh from her arm to build it up; if born with the curvature of the spine, these sisters of ours willingly allow weights to be tied to them while suspended by the neck, in order to be straight; if straight in the beginning, it takes years of practice to walk crooked.

Evidently the French adage has some foundation; all this requires some suffering; it is all laid on the altar for the sake of beauty. If our sisters, and their brothers too, would spend half as much time, patience and money on removing mental, moral and spiritual infirmities, how much better it would be!

* * *

REVENGE.

AN oriental story tells of the haughty favorite of a monarch who, as he was passing, threw a stone at a poor dervish priest; the poor dervish, of course, because of his caste, did not dare to throw it back at the man who had assaulted him, for he knew that the favorite of the monarch was very powerful, and that at any insult from him he would probably manifest his power

to the disadvantage of the poor dervish. So he picked up the stone and put it carefully into his pocket, saying to himself: "The time for revenge will come by and by, and then I will repay him for it."

Not long after this the same dervish, in walking through the city, saw a great crowd coming toward him. He found to his astonishment that his enemy, the favorite of the monarch, had fallen into disgrace with the king, and was being paraded through the streets on a camel, exposed to the jests and insults of the populace.

The poor dervish thought, "Now is the time for revenge"; seeing all this he hastily grabbed the stone, which he carried in his pocket, saying to himself: "The time for my revenge has now come, and I will repay him for his insulting conduct." He grasped the stone firmly in his hand and raising his arm he meant to hurl it at his enemy, but he hesitated a moment; during this moment of meditation a decided change came over him; he threw the stone away saying to himself: "The time for revenge never comes, for if our enemy is powerful, revenge is dangerous as well as foolish; if he is weak and wretched, then revenge is worse than foolish; it is mean and cruel."

In all cases, and at all times, it is forbidden and wicked. When revenge is sought it shows, in the one who in seeking revenge, an unquestionable trait of character which is anything but Christian. Revenge is a relic of barbarism and belongs not to civilized communities. It cannot be attributed to the animal side of man's life, for animals of themselves do not seek revenge; it is only in the human family that revenge is found in a superfluous degree. It is evidently the work of the evil one and should not be tolerated in our disposition. It should not be tolerated, because it is evil in its design and its results; because it invariably digs a pitfall for another into which one's self falls; because it is a mark of degeneration; because it is an indication that one is influenced and led about by the enemy of our souls.

Revenge is mean, low, base, vile, despicable, unchristian, devilish. See that it enters not where the seat of your affections ought to be.

* * *

LOOK at the little yellow slip that is pasted on the outside of your INGLENOOK and see if the date says "Jan. 1906." If it does you have renewed your subscription and you are all right for another year; but if it should say 1905, you may rest assured that your renewal needs your attention right away. Please attend to this at once.

* * *

THE Hindoo says: "He who does reverence night and morning to the cow will be very prosperous." If we do true reverence in anything we will prosper in that thing.

Current Happenings

THERE are millions of dollars of public money wasted annually on official documents and papers. President Roosevelt has complained almost passionately of this wasteful and extravagant expenditure of public money, and he certainly makes no mistake. It is something gigantic. The Smithsonian Institution will probably serve as a fair specimen. The recent report of this institution, in the form of a quarto volume of more than nine hundred pages, contains a summary at the close of the report, showing the annual expenses to aggregate \$640,064, and considerably more than half of this seems to be for salaries and compensations, the former ranging from \$60 to \$400 per month. The documents are made up of selections, reprints and translations from well-known publications in Europe and elsewhere, and collated for the benefit of the favored few, at the expense of the public. Even as things are from the standpoint of this institution alone, the government could save at least a half million if matters were properly managed. It is without question, after all, the poor taxpayer who hands over the money to be so unfairly and unjustly circulated.

PRESIDENT HARPER of the University of Chicago, who was operated on last March for appendicitis, has consented to undergo another operation soon, which may perhaps prove more serious than the former. His son, Samuel, who has been living in Moscow during the winter, and his brother, Robert, who has been in Constantinople, are on their way home and expect to reach Chicago before the operation is performed.

BALDWIN COLLEGE, one of the Oberlin university buildings at Oberlin, Ohio, was destroyed by fire January 31.

AT a recent annual meeting of the Postal Progress league, Boston, Mass., the members generally favored the establishment of a parcels' post-office system in the United States.

PRINCESS VICTORIA, daughter of King Edward of England, underwent an operation a short time ago for appendicitis, at Buckingham Palace. The operation seems to be very successful, and it is thought that she will recover rapidly.

THE Kansas senate has adopted a resolution providing for an investigation of all the corporations doing business in Kansas. This includes the packers, Standard Oil company and others.

A VIOLENT eruption of the volcano Momotombo, on the shore of Lake Nicaragua, is reported. The mountain is like a blazing torch and the people are in great danger. This may be the cause of a great loss both of people and products, as many valuable coffee plantations lie at the base of the mountain. The volcano has been dormant for fifteen years.

FRANCE has 38,000,000 of population, 11,895 doctors, while it graduates 624 medical students in one year. Germany has 45,000,000 of population, about 30,000 doctors, and graduates 925 students in one year. The United States has about 80,000,000 of population, nearly 100,000 doctors, 13,091 medical students, and graduated 3,740 students in one year.

THE proportion of insane to sane persons in the United States is one in every 262; in Scotland it is one in every 574; in the agricultural districts of England it is one in 820; in London the proportion is one in 400.

ONE hundred fifty-two variable stars have recently been discovered by Miss Leavitt in what is known as the Large Magellanic Cloud.

THE mortality of the globe is said to be 67 every minute, 87,790 every day, or 35,630,835 every year. The births amount to 100,000 every day, 36,792,000 every year.

STOWED away in one of the rooms at the capitol in Montpelier, Vt., are the remains of the first printing press brought to this country. Upon it was printed the freeman's oath for Massachusetts, the first thing printed in British North America.

IN the electrical bleaching of flour by the lately patented process of J. N. Alsop, the apparatus consisted of two arc lamps in parallel, with a coil yielding an eighteen-inch arc. The arcs are enclosed by tubes, and the air in these is electrified, producing a gaseous mixture containing nitrogen peroxide and traces of ozone. The gas is drawn off into a revolving hexagonal drum, where it is thoroughly incorporated with the flour. The treatment not only bleaches and purifies, but it is claimed to add to the nutritive quality, analysis showing increased nitrogen.

MEXICO is the only American republic in which divorces are not granted.

EVEN the poor in the United States and England eat white bread. In most of the continental countries of Europe rye bread is the staple. The Russians use buckwheat. The Laplanders have a bread made of oaten meal mixed with pine bark, and the Icelanders make their flour from lichens. Banana flour is used in the South Sea islands.

* * *

THE *American Inventor* states that the Ingletton steel plow, which was on exhibition at the St. Louis Fair, is about to be placed on the market. It is said to have the capacity of plowing a furrow in one cut across a field fifty feet wide. The mechanism differs from previous steam plows in that the plowshares move at right angles to the course of the traction engine. They move around a steel frame drawn by cog chain geared to the engine.

THE latest vocation opened to women in Berlin is that of being a "Roentgen sister," or a nurse specially trained for treating patients with X-rays, a task which requires much skill and care.

HOME DEPARTMENT

IN WINTER.

BY MARY I. SENSEMAN.

There's a hill behind our barn;
And when enough snow has fell,
Joe an' me, we take our sled
An' go down there, just pell-mell.

Father, he can carpenter.
Why, he made our double sled
Out o' boards an' old tub hoops;
'Nen ma, she painted it red.

There's a pond in our meadow;
An' when the cold's just bitin',
Joe an' me, we take our skate
An' slide 'crost there a-kitin'.

Smith's hired man give us that skate
When he'd broke t'other'n o' his.
Joe an' me take turn about—
Too much might bring rheumatiz.

Tom Smith's got a boughten sled,
An' so've Grace an' Benny Dill;
But soon as snow's fell enough
They come to borry our hill.

In town I've seen boys and girls
Each with two skates, on the street.
The snow wuz crusted over,—
They wuz skatin' on the sleet!

We've only one skate 'tween us;
Our sled's heavy e'en for Joe;
But we've a pond when there's ice,
And we've a hill when there's snow.

Covington, Ohio.

BLAMABLE SICKNESS.

BY HATTIE PRESTON RIDER.

THERE was a great deal of senseless twaddle, in generations past, about the inscrutable will of the Almighty in sending sickness. It held not a word relative to taking reasonable care of that wonderful gift of his to his children, namely, the human body. Let us hope it was the disappearing remnant of the old, mistaken idea that to develop the soul, one must mortify the flesh, a monstrous subversion of the truth which reached its extreme in the practice of the Flagellants, or of those strange ascetics in the Orient, who bound their bodies in all sorts of unnatural positions, till the contracted muscles were useless.

Though we may not expect mankind to outgrow its errors by a mushroom process, yet we are learning to

care for the body as for a choice plant or a valuable machine,—there being still abundant room for progress, however, practical physiology and hygiene, taught in the public schools, are sure to bear good fruit. Physical culture and outdoor exercise are showing excellent results. What is needed most of all is rock-bottom common sense among middle-aged men and women. When a mother allows her child to go with wet feet, or overload his stomach with indigestible food, or doses him with drugs any physician should rightly be prosecuted for prescribing, she undoes all the good of his teaching. Here is one who lets a hard cold run into grip or pneumonia, and then calls a doctor, instead of administering at the start a hearty "sweat," and some simple remedy to assist nature in throwing off the poison.

Then there is a class who keep the family health in an excellent state of repair, but utterly neglect their own, going thinly clad, disregarding the functions of the body, as they would be ashamed to use their commonest household utensil. Many a woman dies, leaving husband and children to work out the domestic problem the best they may, just as truly a suicide, in the light of honest reason, as if from self-administered poison. Then we smother them with expensive flowers, and say:

"God's ways are inscrutable."

A lady once said to me: "It takes me a whole hour to iron my best tablecloth."

"My back ached fit to break, but I wanted to finish Maud's dress,"—It was a dispensation of Providence, likely, that as a result she lay in bed long enough to have made three dresses.

When, both for our own sakes, and that of those upon whom the burden of care and expense falls, we realize that it is a sin to suffer any avoidable illness, we shall have taken a long start into the beautiful way Christ had in mind when he prayed:

"Thy kingdom come,

Thy will be done, *on earth*, as it is in heaven."

418 Algona Ave., Elgin, Ill.

* * *

Somebody did a golden deed;
Somebody proved a friend in need;
Somebody sang a beautiful song;
Somebody smiled the whole day long.
Somebody thought "'Tis sweet to live";
Somebody said, "I'm glad to give";
Somebody fought a valiant fight;
Somebody lived to shield the right.

THE PANICKY MAN.

Whenever there's trouble in this thing or that,
 No matter how distant the place,
 When somebody says that finances are flat,
 Or that war signs are easy to trace,
 The average person would stick to his task,
 Still doing the best that he can
 To keep things as well as it's reason to ask—
 But along comes the panicky man.

With significant look and a voice that is low
 He hints at disheartening things;
 His "you mightn't have thought it, but now don't you
 know"—

In mournfulest minor he sings,
 Though full of good cheer and contentment at morn
 Your task for the day you began,
 You'll presently almost regret you were born—
 For along comes the panicky man.

Shall the people be led by the raven whose note
 Is the moaning of idle despair?
 Shall mere puny Terror take Thrift by the throat
 And Courage her mission forbear?
 Not so; for the public is wiser to-day;
 It has hit on a different plan;
 For 'tis well understood that the sensible way
 Is to sit on the panicky man.

—Washington Star.

THE IMPORTANT LITTLE THINGS.

How Unfairness in Small Matters May Mar Married
 Happiness.

WHEN my boy Frank had been married a few weeks
 I dropped into his apartment one evening as he and his
 wife were at dinner. I discovered him sitting opposite
 her with a newspaper held up before his face, absorbed
 in reading. If he had given me a blow between the
 eyes, he could not have hurt me more. I said nothing
 to him at the time, the next day I had a good talk with
 my boy. He seemed to think that I was making a
 good deal out of a small matter and he staggered me
 by saying that he often read the paper while he sat
 at the table with Jeanette. "Do you read aloud to
 her?" I asked, and he shook his head. "She doesn't
 care much about the news," he replied. It took me a
 long time to make him see that his reading the news-
 paper at the table was a purely selfish act, not serious
 in itself perhaps, but certainly unfair to his table com-
 panion. The word *unfair* opened his eyes, for I have
 rubbed it into him all his life that unfairness of any
 kind is not only one of the most contemptible of all
 qualities, but one of the greatest causes of unhappiness
 between people. Fairness—that is the quality that
 keeps married people in harmony, just as it harmo-
 nizes all people.—From "The Autobiography of a
 Married Man," in *Everybody's Magazine* for February.

"A GOOD job soon gets a divorce from a bad man."

WILL THE GLAD DAY EVER DAWN?

WHEN every home will be a type of heaven?
 When church proselyters will learn decency?
 When the gossip's tongue will cease to wag?
 When the "star" preacher will go to the rear?
 When the synagogue will fill up on Sunday nights?
 When business methods will prevail in the churches?
 When the steady-going folks will be appreciated?
 When the "I-told-you-so" people will have quit the
 country?

When the meal in the parsonage barrel will never get
 low?

When every Christian's life will be a sermon on
 the beauty of holiness?

When prayer meetings will reach their maximum at-
 tendance in August?

When society will spurn the male profligate as it
 does now the female one?

When the young man will treat his own sister as
 graciously as he now does some other fellow's sister?
 —*Epworth Herald*.

RULES BY WHICH TO RISE.

FIND your purpose and fling your life out to it.
 Try to be somebody with all your might.

What is put into the first of life is put into the
 whole of it. Start right.

The first thing you should do, if you have not done
 it, is to fall in love with your work.

Don't brood over the past nor dream of the future;
 but seize the instant and get your lesson from the hour.

Necessity is the priceless spur.

Give the youth resolution and the alphabet, and who
 shall place limits to his career?

Don't wait for an extraordinary opportunity; seize
 common occasions and make them great.

A great opportunity will only make you ridiculous
 unless you are prepared for it.

The "lucky" man is the man who sees and grasps
 his opportunity.—*Selected*.

A TALE OF A CAT.

My cat doth daily chase her tail,
 But ne'er that tail hath caught.
 What though her quest may seem to fail,
 Call not her zeal miswrought:
 She always has an end in view,
 And that's enough for humans too.

—Alwynn West.

FRIED BREAD.

Beat one egg, add two small cups sweet milk, pep-
 per and salt to taste. Dip your pieces of stale bread
 into this mixture and fry in butter the same as potatoes.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

ST. JOHN'S IFS.—1 John 1: 6-10.

For Sunday, March 5, 1905.

I. Concerning the False Pretentions of Men.

1. Pretended Fellowship,v. 6
2. Pretended Sinlessness,v. 8
3. Pretended Purity in Past Life,v. 10

II. Concerning True Teaching of God.

1. True Fellowship,v. 7
2. True Cleansing,v. 9
3. Jesus our Advocate,2 John 1: 1
4. Assurance by Obedience,2 John 1: 4

III. Results of Being Born Again.

1. A New Life,2 Cor. 5: 17
2. The True Life,1 John 2: 24
3. True Happiness,John 13: 17
4. Final Rest From Labor,Rev. 14: 13

IV. Our Ifs.

1. If we Would do Good,Rom. 7: 21
2. Like the Rich Young Ruler,Matt. 19: 21

Text.—If we say that we have fellowship with him, and walk in darkness, we lie and do not the truth.—1 John 1: 16.

References.—Romans 7: 11; 1 Corinthians 3: 18; James 1: 22; Matthew 24: 4; 1 Corinthians 15: 33; 2 Titus 3: 13; Revelation 12: 9; Revelation 13: 14; Galatians 6: 7; Isaiah 44: 20; Deuteronomy 11: 16; Titus 1: 10; Colossians 2: 8; Psalm 72: 14; Jeremiah 8: 25; Jeremiah 23: 26; Psalm 38: 12.

The Subjunctive Mood.

There are people who live in the subjunctive mood. You have heard them speak of some project, which might succeed if ———. They talk of some person who could do some good if ——— and so on until you feel that there is no one to be depended on, and no work that can be accomplished; you see things through a Scotch mist, an uncertain haze envelops everything. Our texts are a lesson in subjunctives; they deal with things that are doubtful, instead of positive truths. Suppose we should say that we have fellowship with Jesus Christ, and we give our testimony to that effect, if it is not true, our friends and those about us, will know that we are not telling the truth. We will not deceive the people by these false assertions, but it may be that we ourselves will be deceived. There should be no doubt about our profession; genuine, pure religion and undefiled has a true ring to it that convinces everybody. Christianity with an "if," or a "but" attached is a sorry kind of Christianity. It has as much chance of enduring unto the end as a dog in a pond with a stone attached to him. If we say we are

Christians, and we are not, then every word rings false, and we brand ourselves not Christians but hypocrites.

Something Wrong under Water.

A huge steamer was stranded in St. Mary's river, between Lake Huron and Lake Superior. Her steering gear suddenly gave way and her bow swung around and struck the shore, and to make the wreck more complete the vessel behind her rammed into her and punched a hole in her side. Yet a careless observer glancing at her from without might have seen nothing wrong, the damage done was all under water, and out of sight. She could not sink because the water was shallow but if you had lifted one of the hatches, you would have found the hold full of water. It took five days to get her free and over two hundred vessels were delayed because this one obstructed the narrow channel. "If we say that we have no sin we deceive ourselves and the truth is not in us." We are like this vessel, outwardly we present to the world a very good appearance, but how is it down below where no one sees but God and ourselves? Is everything shipshape or is there something wrong? That "if" holds us fast on rocks and shoals and will wreck us at last, unless we free ourselves by the blood of Jesus Christ which cleanseth from all sin.

"Nothing have we but our weakness
Naught but sorrow, sin and care
All within is loathsome vileness
All without is dark despair."

"Break the fetters that have bound us
Make us in thyself anew."

Testimony of a Chinese.

A Chinaman coming to this country soon after he was converted, was shocked to find that Christians here were not true and faithful to their God. Referring to the many things that Christians did which are surely wrong he said, "In my country when the disciples come out from the world, they come clear out." Shall heathen China set us an example and we refuse to follow it?

Satan Deceives.

Satan never keeps his word. The world never gives what it promises, and so we are tempted and we say we have fellowship when we really are walking in darkness. We are told that the palace of pleasure has a gorgeous entrance, adorned with statuary and brilliant lights and luring music. The exit is a dark, narrow, concealed rear-way which leads to destruction. It is degrading to fail to be what we might have

been. A soldier lay dying in a hospital. He said, "I have tried war, honor, the pursuit of money, of pleasure, and I have tried vice, but I have found satisfaction in nothing."

"But if We Walk in the Light."

Let us thank God that so many do walk in the light. The church to-day needs new workers to take it back to Pentecost. "They brought forth the sick into the streets and laid them on beds and couches that at least the shadow of Peter passing by might overshadow some of them." Everyone's influence is his moral shadow, think of this when doubt makes you say "if it could be done," "if we had more money or more workers." Emerson said "what you are speaks so loud that I cannot hear what you say." If you are a loving, humble, trusting servant of Jesus, you will be an active zealous worker in his church. Your light will shine into the dark corners, and men will know that you walk with God. We must be obedient to our heavenly visions or become blind to them. We pray for a spiritual uplift; let us not be found lacking in courage to follow the Holy Spirit's guidance.

Topics for Discussion.

1. David forgot his own sin. 2 Samuel 12: 5-7.
2. What is true fellowship? 1 John 1: 7.
3. The Pharisee lost sight of his sins. Luke 18: 10.
4. How can we get rid of doubts? John 1: 7; Mark 9: 23; Romans 9: 33.
5. How can we live a positive, active, Christian life? James 1: 22; Acts 10: 35.

* * *

EMPLOYMENT BUREAU.

ONCE in a great while we receive a letter from an earnest worker in which comes this explanation, "There are a few of us Circle members but the church does not seem to take hold of this work."

And then we pray, "Lord, help that church to see her duty clearly." And we ask ourselves, How can it be that the ministers do not see that to a very great degree they are responsible for these young people? Read how carefully the Israelites were commanded to train their children in their doctrine and history, the parents were commanded to tell these things to their children. Christ, by example and precept, taught us to shield and guide them, how can we be guiltless when we neglect them? Then, too, in our revival meetings in these past years; how many of the converts were children of our own church members and how many were brought up outside of our own church influences? We are sure that the number of converts from our Sunday schools and young people's meetings is larger and the number from outside our own people is correspondingly smaller. Our duty is plain; the indifference that refuses to

respond to this need, should be aroused by some means. We should look upon these children passing through our church doors as the most sacred charge we have. A missionary reading Circle and a Christian Workers' meeting will give them something to do in our church, where their interests are, there they will remain. We are glad that many elders are enthusiastic helpers, and we pray that all may realize their responsibility.

*

Special Work.

Our Circle stands for service, we have said this many times, but we wish to emphasize it. After you have persuaded as many members to join as possible, after you have read missions until you see how selfish you are, and how barren your life has been, after you have been holding some good stirring meetings, where everybody took part, and felt the presence of Jesus among you, after all this, what? — That depends. It depends on where you live and what there is to do. If you live in a wealthy farming community, where there are very few poor, and those are cared for, you can visit the sick, and make life pleasant for the old people, but your special work is likely to be a gathering of supplies and money for our missionaries in places less favored than yours. God expects you to give of your abundance to the poor of other places.

If you are located in a town, it is likely that there is far more work for Christian people to do, than you can ever accomplish. For this reason, lose no time; but have a visiting committee to see the poor in their homes, and do what we can to help them, teach them, comfort them and bring them to Christ.

Always there are our foreign missionaries to think about, to work for. Our Circle should be especially active in raising money for missions. We want to give, we want to give generously to the Lord.

Look for your special work, then be faithful, never leave it until whatever you could do has been done.

*

"She says that some one else could make that speech better than she could." But the probability is that if you agree with her and mention some one who could do it better, she would be offended. Our Circle wants to train up a mighty host of willing workers. Some people think they show their humility by refusing to do work, when if the real, inner truth were known, they are only indolent and do not want to go to the trouble to study and prepare themselves for service. We are afraid of napkin people! They do so much harm in a young people's society. You ask one of them to give a talk on the present condition of China, and give them our book "Rex Christus" in which to study this subject, he will likely say, that he hasn't time, and it is too much trouble to study the subject in that way; the napkin of too-much-trouble hides

(Continued on page 191.)

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chap. XVI.

Glasgow, Scotland.

Dear Mr. Maxwell:—

I had to stop writing the other time in order to take the train at Belfast for Larne, where we began our midnight ride across the Irish Sea. It was something, once seen, never to be forgotten; it is putting it very mildly to say that it was a delightful moonlight ride. Sometimes this little sheet of water becomes very rough and unpleasant, but the fury of the elements was pent up somewhere and our voyage was all that could be desired. The golden disc of the moon occasionally hid itself behind the fleecy clouds that would again break forth in all the glory of the orb, reflecting the pathway of glory, leading to the horizon beyond.

It was the choice of Miss Gertrude, Agnes and myself to take the train at once from Stranraer, where we disembarked, to Glasgow; but to this proposition the boys remonstrated vehemently. They said they could not leave Stranraer without seeing some of the best Clydesdale horses in the world. There is a Mr. Marshall, living near Stranraer, who has over four hundred of the very finest specimens of the Clydesdale family, and it was impossible to satisfy the boys short of accompanying them to the above-named farm. Of course we all enjoyed the extraordinary privilege of seeing so many nice horses at one place; we tried to realize that they were worth more, on the average, than a thousand dollars a piece; but I am sure that we girls did not enter into the degree of ecstasy that our brothers did; why Oscar could hardly leave the stable and was almost boyish enough to want to take some of them along.

After spending half a day at this interesting place, we took the train for Glasgow. The railroad is just far enough from the sea coast to give us a splendid view of the Irish Sea; and its altitude is great enough, being upon the range of hills, to allow us to enjoy the panorama of the interior. Beautiful fields of oats, little factory towns, thousands of Cheviot sheep, farm after farm of Belgian hares, herds of the finest dairy cattle in the world, all of these and more too, furnished employment for our eager eyes until we were finally lost in the great city of Glasgow,—a city of a million, busy, energetic, industrious Scotch people.

Speaking comparatively, Belfast has the horse car, Glasgow the electric car, and Edinburgh the cable car. Transit in Glasgow is chiefly carried on by the underground railroad system. The city supports stone paved streets, which are kept scrupulously clean and neat.

I just now heard the boys remark that they had not seen a single stalk of corn since they left New York; and while they were looking at thousands of acres of oats, Roscoe said he was reminded that Sam Johnson was right when he said that oats was calculated for mules and Scots. Of course being raised in America which is the greatest country in the world for Indian corn, it seems very strange to us when we get to a place where there is none.

The religion of Scotland is Presbyterian. In 1600, at the union of the crowns, there was an attempt made by them to enforce Catholicism upon the people of Scotland, but they did not submit as did the Irish. To-day Catholicism reigns supreme in Ireland. At the time the attempt was made to introduce it into Scotland, enthusiasm ran at high tide. At times it even assumed the proportions of personal conflict and combat. At one time one of the leaders of Protestantism a Mr. Andrew Melville, met the king of England in a controversy, in which the king thought to suppress public sentiment by a personal threat to Melville; shaking his finger under the nose of Andrew Melville, the king said: "I AM THE KING OF ENGLAND; YOU MUST." Andrew Melville replied: "WE ARE THE PEOPLE OF ENGLAND; WE NEVER WILL SUBMIT." And they never have; and to-day Protestantism flourishes in Scotland, and the Presbyterian schools at Edinburgh have sent out to the world many eminent theologians.

One of the queerest things that has attracted our attention, while in this city is, that all the draymen haul their merchandise in sacks instead of wagonboxes, as we do at home. It is a very common sight to see them haul loads and loads of coal in burlap sacks like father gets binder twine in at home. Not only coal is hauled in this manner, but corn and even hay, in fact everything that they haul, is handled in sacks. We see no particular objection to it, but the fact that it is so different from our usual way of doing things makes it quite noticeable.

The fancies and tastes of the public, too, are radically different from western ideas. It seems so odd to us to see the great broad plaids in goods without which the Scotch people would not think of making garments; they have the best of woolen goods in this country and the goods are comparatively cheap, since it is the home of the Cheviot, and cotton is unknown as a native.

We must say, however, in spite of the fact that these styles are not ours, that they are strikingly beautiful. The country people are a great study too; a great many of the Scotch peasants are fishermen, and among these rural people are to be found many of the old hand-looms of which we have heard our grandmothers speak.

This country, like all others, is given to localisms and peculiar customs. There is a strange custom prevalent among the old fishermen and hand-loom weavers of Girvan, Scotland. The industries of the town are fast decaying, only a few weavers being kept busy now, so the younger generation has to migrate in search of fresh fields. When the grownup sons and daughters have been successful in their new spheres, often at the other side of the world, their thoughts are busy with the "auld folks." A very common present to the latter is that of a "certificate" giving the right to be buried in the old churchyard. Thus their parents' last resting place is secured, and so common is the custom that only to a stranger does its grewsomeness appeal. The old people tell of the possession with pride and thankfulness.

Natives of the northeast coast of Scotland observe

The Q. & A. Department.

THE EMPLOYMENT BUREAU.

(Continued from Page 189.)

many a talent. "Well, I can't get interested some-way," another says. He is not interested because he thinks of other things and it may be that he thinks, he ought to be entertained in our meetings; when the truth of the matter is, that he should do the work, because it will further Christ's cause, no matter whether he is entertained while doing it or not. The napkin of indifference hides his talent. "It was too rainy to come to meeting, and when we held the other meeting I was away visiting," says one. You remind her that her little talk was left unsaid, and her seat was vacant, and she answers, "Why didn't one of the committee attend to it?" Keep close to such a one, watch over her, and win her if possible for she is getting ready to lay away her talent in a napkin of coldness-towards-the-church. Save her, and she may make one of your best workers.

*

Brother D. F. Landis of Williston, North Dakota, says: "The circulars for the Reading Circle were received in due time, we have been successful in organizing a Circle here. Brother Ora Kauffman is our secretary. We send you nine new names, there were three members here before, so we now have twelve. Pray for us."

*

Sister Nellie M. Shaffer of Hooversville, Pennsylvania, says, "I herewith send in two new names for the Circle. Four of our members here have completed the course. We pray that God may help and bless us all."

NEW NAMES.

2660 Sarah A. Clapper, Carrington, North Dakota.
 2661 Alice M. Clapper, Carrington, North Dakota.
 2662 George M. Clapper, Carrington, North Dakota.
 2663 John L. Clapper, Carrington, North Dakota.
 2664 A. B. Long, Bowdon, North Dakota.
 2665 Mrs. S. W. Lyberger, Hooversville, Pennsylvania.
 2666 Robert Mock, Hooversville, Pennsylvania.
 2667 Pearl Kauffman, Williston, North Dakota.
 2668 Daisy M. Johnson, Williston, North Dakota.
 2669 Ora C. Kauffman, Williston, North Dakota.
 2670 Mrs. Emily Keltner, Williston, North Dakota.
 2671 Irvin Kauffman, Williston, North Dakota.
 2672 Bertha Landes, Williston, North Dakota.
 2673 Stanley D. Keltner, Williston, North Dakota.
 2674 W. W. Keltner, Williston, North Dakota.
 2675 Ellen Kauffman, Trenton, North Dakota.

RECEIVED CERTIFICATES.

Josiah Berkey, Hooversville, Pennsylvania.
 O. W. Harner, Hooversville, Pennsylvania.
 Nellie M. Shaffer, Hooversville, Pennsylvania.
 Clara Shaffer, Hooversville, Pennsylvania.

LOCAL SECRETARY.

Ora Kauffman, Williston, North Dakota.

(On account of the interest in the Employment Bureau of the Christian Workers' Department, we are almost obliged to use some of the Q. & A. page this week to accommodate this work. We hope that the ardent admirers of the Q. & A. Department will not criticise us severely and will be willing to wait until next week for the answers to their questions.—Ed.)

I have seen it stated that there was a man that served as President of the United States for a few hours only, who was it?

David Rice Atchison, of Missouri, was President of the United States for one day on Sunday, March 4, 1849, by virtue of his office as President pro tempore of the Senate, as General Taylor was not inaugurated until the next day.

*

What is meant by the educational term "the three R's and two S's?"

It is an abbreviation of a slang phrase which incorporates the entire curriculum of our early school systems. Unabridged, the three R's mean, readin' 'ritin', 'rithmetic; the two S's are spellin' and spankin'.

*

Do irregular nouns ever take the regular plurals—such as geese to geoses?

Yes. For example, when you speak of one goose or a flock of geese; that is irregular. Again you speak of a tailor's goose and a half a dozen geoses; that is regular.

*

What was the date of the big flood in Kansas in 1903, also the loss of life and property?

May 31, 1903. Over 200 persons were drowned, 8,000 rendered homeless and about \$4,000,000 worth of property destroyed.

*

Is the Ingleook in circulation anywhere except the United States?

Yes, it circulates in India, Sweden, England, France and Canada, besides the Hawaiian Islands which belong to the United States.

MISCELLANEOUS

GEOGRAPHY CLASS.—Chapter XVI.

(Continued from page 190.)

a curious custom at funerals. After the burial service the coffin is carried outside the house and placed upon the two chairs on which it had rested within doors. As soon as the pallbearers lift up their burden and begin their journey to the graveyard these chairs are at once thrown sharply on their backs. In this position they are kept until the interment has taken place, when they are taken indoors again. Any attempt to place the chairs on their legs or take them in before the proper time is at once frustrated by the relatives of the dead.

The boys have been sending Raymond Tracy a flag from each country, through which we pass, so to-day they sent him the flag of Scotland; when we are through this will make a fine collection for our Fourth of July display, and we will decorate the old school building in the finest of style. We expect to write you the next letter from Edinburgh. I would not forget to tell you that we passed the home of Robert Burns, and as we were looking at the spot which has been made famous by the birth of this great man, Agnes involuntarily quoted,

"O wad some power the giftie gie us
To see oursel'es as ithers see us."

We expect to have a fine time at Edinburgh; we hope to have a lot of mail awaiting us when we arrive at London.

Respectfully,

Marie.

(To be continued).

* * *

A WILL AND A WAY.

It is always easy to find a way to do the right thing, if one only has the will. God helps. Decisions on which life and eternity turn have been made on the simplest form of speech. Dean Stanley tells the tale of a woman who found her way from the distant wilds of Asia to her husband's home in England by constantly repeating the only two words she knew in our language, "Gilbert" and "London." He used the pathetic incident to illustrate how much a seeker after God might do for himself if he would only put in practice again and again the very simplest and shortest notions he has of Christ and Christ's goodness. Let every one undecided, try to frame a prayer in which he can end his indecision with one word of irrevocable surrender.

* * *

MISS ELIZABETH JULIA EMERY, of Cincinnati, has presented a third dormitory to the Tuskegee institute, Alabama.

SIGNS OF RAIN.

'Twill surely rain
If the soot falls, the squirrels sleep,
The spiders from their cobwebs creep,
Loud quack the ducks, the peacocks cry,
The distant hills look clear and nigh,
And restless are the snorting swine,
While busy flies disturb the kine.
Puss on the hearth, with velvet paws,
Sits wiping off her whiskered jaws;
The dog, quite altered in his taste,
Quits mutton bones on grass to feast:
From all these signs I see with sorrow
Our work must be put off to-morrow.

* * *

WHEN IT RAINS.

The Pessimist.

The rain is coming down in sheets;
It makes me sad to think about
The mud that will be in the streets
And all the crops and things washed out.

The Optimist.

This rain will wash the dirt away,
And leave the pavements nice and clean;
I needn't use the hose to-day
To keep the front yard looking green.

—S. E. Kiser, in Chicago Record-Herald.

* * *

MAN WRESTLED WITH PANTHER.

MR. CHARLES BROWN, who has bagged a dozen tigers and elephants, had a remarkable escape from a panther near his estate at Bangalore, India. He was attacked by the animal, wrestled with it and threw it twice. Mr. Brown was badly mauled before the brute was killed.

* * *

CAUGHT WHITE HEDGEHOG.

THE white hedgehog captured by Henry Beal, of Parkman, Maine, a few weeks ago, has succeeded in making his escape, gnawing through his cage, which was composed of wood covered with fence wire. While in Mr. Beal's possession hundreds came to see him, several coming many miles. Mr. Beal refused several quite large offers for him.

"A MAN'S brain can do more work than both his hands."

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,
Cadillac, Mich.,
DISTRICT AGENT

or

BRO. JOHN A. MILLER,
Brethren, Mich.,
RESIDENT AGENT

Michigan Land Association.

\$7.95 for this large handsome steel range

without high closet or reservoir. With large, high, roomy, warming closet and reservoir just as shown in cut, \$11.95. Reservoir is porcelain on inside, asbestos covered on outside. Heavy cast top with 6 full size cooking holes. Large roomy oven, regular 8-18 size. (We have 9 styles of steel and cast ranges with much larger and smaller ovens, sizes to suit all.) The body is made of cold rolled steel, top and all castings of best pig iron. Grates we use improved duplex grate, burns wood or coal. Nickel band on front of main top, brackets and tea shelves on closet, band and ornament on reservoir; oven door, etc. Are highly polished, making the range an ornament to any home.

OUR TERMS

are the most liberal ever made. We will ship you any range or stove, guaranteed to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it into your own home and use it 30 full days. If you do not find it to be exactly as represented and perfectly satisfactory to every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for double our price, you can return it to us and we will pay freight both ways, so you won't be out one single cent. and send it to us and we will mail you our free Stove Catalog. It explains our terms fully, tells you how to order. Don't buy a stove of any kind until you get our new large Store Catalogue for 1904 and 1906 and see our liberal terms and the lowest prices ever made.

EQUITY MFG. AND SUPPLY CO., Chicago, Ill.

\$2.95 for this Oak Heater

just as illustrated. Burns hard or soft coal or wood. Has drawn center grate, corrugated fire pot, cold rolled sheet steel body, heavy cast base, large cast feed door, ash pit door and ash pan, swing top, screw draft-regulator. Polished urn, nickel top ring, name plate, foot rails, etc.

We have heating stoves of every kind. Hot blast, air tight, the kind that retail for \$3.00, for \$2.00. Base burners at 1/2 the regular price.

Our new spring Catalog of more than 300 pages sent free to those who take advantage of this offer.

Albaugh Bros., Dover & Co.,
The Mail Order House,
341-43 Franklin St., Chicago.

Brethren's Clothing

Our system of cutting and making Brethren's Clothing from measurements sent us by mail enables our customers to save from one-third to one-half from prices offered by local dealers or agents. While the prices of woolen or worsted goods have advanced from 20 to 25 cents per yard, we make no advance in the price of our suits.

OUR NO. 9778 SUIT, \$17.50.

A high grade, good weight, fine finished strictly all wool serge. Guaranteed fast black. Any merchant tailor would charge you \$30.00 for a suit of this material and our grade of workmanship.

OUR NO. 2163 SUIT, \$17.00.

As fine finished, all wool gray serge of medium weight as money can buy. The surface is rather smooth and the fabric soft and pliable. This makes a handsome suit and is well worth the price. Always looks well, wears clean and is excellent value.

OUR NO. 576 AND 177 SUITS, \$15.00.

Another excellent value. Two patterns of silk mixed cassimere, one ground color black, with gray mixture, the other with golden and blue mixture. Either of these numbers are very desirable patterns for old or young.

Send for our book of samples, giving prices and descriptions of these and many other excellent values in Brethren's Clothing, instructions for home measurements, tape line, etc.

Made Exactly as Represented in Cut.

"History of the Brethren"

By DR. M. G. BRUMBAUGH.

This book has been sold by the thousands, yet there is a demand for same because it gives the most authentic history of the Brethren of any yet published. It is profusely illustrated and is printed on good paper. Bound in cloth, \$2.00; half morocco, \$2.50; full morocco, \$3.00.

Address:

Brethren Publishing House, Elgin, Illinois.

**Weak Stomach
Indigestion
Dyspepsia**

To any sufferer of the above named diseases will be sent a 30 days Treatment of **BRAWNTAWNS** (50 cents) on the following conditions: Use according to directions, one tablet after each meal and one before retiring for 30 days, and if you can truthfully say you have not received any benefit and do not feel any better from the use of **BRAWNTAWNS**, your money will be cheerfully refunded.

Victor Remedies Company,
FREDERICK, MD.

A PECULIAR PRESENTIMENT AND ITS HAPPY RESULT

An Echo From Across the Sea.

That some people are, at times, possessed of a certain inner consciousness or presentiment of things which are going to happen is almost a recognized fact. It is one of nature's mysteries—something that cannot be very well explained.

The following case, related by Chas. Barkholz, of Pewaukee, Wis., is a striking illustration.

Pewaukee, Wis., December 1st.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—I know you will be pleased to get this letter. You will no doubt remember that you sent some time ago, at my request, through your agent in Germany, six large bottles of your Blood Vitalizer to my sister, Mrs. Wm. Heinke, Wildkuhl, Mecklenburg, Schwerin.

I have just received a letter from her, in which she says that four bottles of the medicine brought about a complete cure in her case. She says she is lacking in words to express her joy at getting well. She had been suffering for almost fourteen years, and the last few years had been unable to leave her bed. All hopes of her recovery had been given up according to letters which I received from near relatives.

I think the circumstances of this case most singular. I received a copy of your paper, *THE SURPRISE*, purely by accident, and after reading same, I became possessed of a certain feeling or presentiment, if I so may term it, that your Blood Vitalizer was to be the remedy that was to cure my sister. It was this peculiar conviction which led me to write to you to ship her the medicine, and now, you see, it has all been fulfilled. I consider it my duty to write and tell you about it.

Yours very sincerely,

CHAS. BARKHOLZ.

Dulled indeed, would one's sensibilities have to be if one failed to appreciate such an expression of gratitude! And yet these same sentiments have been expressed thousands upon thousands of times by users of **DR. PETER'S BLOOD VITALIZER**. There is not a hamlet in the United States, where this remedy has been used, but what is spoken of as a good and grand medicine.

Unlike other ready-prepared medicines it is not to be had in drug stores. It is applied to sick people direct through special agents appointed everywhere. For further particulars address

DR. PETER FAHRNEY,

2-114 S. Hoyne Ave.

CHICAGO, ILL.

**BRETHREN PUBLISHING HOUSE,
 ELGIN, ILLINOIS.**

To Our

Inglenookers

We thank the thousands of our old subscribers who have so promptly renewed their subscription for another year. We also greet with joy the many hundreds of new ones who have recently been placed on our list

Just a Few

Of our friends for some reason have not yet sent us their renewal. We presume it has simply been an oversight that you have not sent us your subscription. We are quite sure you do not want to miss a copy of the NOOK, and for this reason we have continued the paper to your address for several weeks, awaiting your renewal. Please send your renewal at once, so you will not miss a copy, as the delinquents will be removed from the list in the near future. If it is impossible for you to renew at this time, please inform us, giving full particulars.

We promise for you the coming year even better things than we have had in the past and you cannot afford to be without the influence of the NOOK in your home.

TESTIMONIALS

The INGLENOOK is well worth the price and an excellent paper for the American home. Every family in the Union should have it.—*D. W. Thomas, Homeworth, Ohio.*

THE INGLENOOK is newsy and well adapted to the class of readers for which it is published. Our young people especially should read it. The old can learn many good lessons from it.—*W. R. Deeter.*

To, Editor INGLENOOK:

Your valuable Magazine comes regularly to our table. And it is not only a cheap magazine, but it is

a valuable one for both old and young but especially for the young. I trust you will have a wide circulation for your paper.—*S. M. Goughnour, Ankeny, Iowa.*

Dear Editor of the INGLENOOK:—So far as I have seen the magazine is moving well along the line of its original design. A study of its contents adds ballast to steady the youth over the high tide of life. Parents make no mistake in subscribing for it for their children. It is more than a substitute for the trashy, immoral, slang journals of the day.—*L. W. Teeter, Hagerstown, Ind.*

From Chicago,\$33 00
 From St. Louis, 30 00
 From Missouri River, 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonaugh, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

Brethren's Clothing

Our system of cutting and making Brethren's Clothing from measurements sent us by mail enables our customers to save from one-third to one-half from prices offered by local dealers or agents. While the prices of woolen or worsted goods have advanced from 20 to 25 cents per yard, we make no advance in the price of our suits.

OUR NO. 9778 SUIT, \$17.50.

A high grade, good weight, fine finished strictly all wool serge. Guaranteed fast black. Any merchant tailor would charge you \$30.00 for a suit of this material and our grade of workmanship.

OUR NO. 2163 SUIT, \$17.00.

As fine finished, all wool gray serge of medium weight as money can buy. The surface is rather smooth and the fabric soft and pliable. This makes a handsome suit and is well worth the price. Always looks well, wears clean and is excellent value.

OUR NO. 576 AND 177 SUITS, \$15.00.

Another excellent value. Two patterns of silk mixed cassimere, one ground color black, with gray mixture, the other with golden and blue mixture. Either of these numbers are very desirable patterns for old or young.

Send for our book of samples, giving prices and descriptions of these and many other excellent values in Brethren's Clothing, instructions for home measurements, tape line, etc.

Made Exactly as Represented in Cut.

Brethren Publishing House, Elgin, Illinois.

CLEANLINESS IS NEXT TO GODLINESS

When we're clean, we're always happiest. After a bath life seems again worth living. Think of the pleasure and satisfaction of being clean through and through.

Dr. Peter's Blood Vitalizer

will remove every taint of impurity from the blood and at the same time restore the vital organs to natural activity. Nine out of ten of the common ailments of the day come from impure and impoverished blood. DR. PETER'S BLOOD VITALIZER cures them by cleansing, enriching and enlivening the vital fluid.

The proprietor does not desire to have the BLOOD VITALIZER sold side by side with drugstore nostrums and therefore refuses to supply druggists, except for their personal use. It can be secured of duly appointed agents, who handle it not so much as a business proposition, but as an accommodation to their friends and neighbors.

AN OCTOGENARIAN WRITES.

Swedonia, Ill., Aug. 25, 1904.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—I am happy to inform you that your **Blood Vitalizer** has cured me. I suffered from what the doctors called Bright's disease. I have not been well for fourteen months and during that time have gained fifteen pounds in weight. I think that is doing pretty well for a man who is past eighty years old. If I was younger I would take an agency for the **Blood Vitalizer** at once, as I know it is the best medicine in America. If everybody knew what the **Blood Vitalizer** can do you would certainly sell large quantities of it.

Yours respectfully,

John Metzler.

CANNOT DO WITHOUT IT.

Lawson, Mo., Jan. 21st, 1905.

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—I have been using your **Blood Vitalizer** in our family about three years. I do not believe I would have been alive to-day if I had not used your medicine. We just cannot do without it. I have disposed of a large number of bottles to friends and neighbors and it has given complete satisfaction to those who have used it.

There is going to be a big demand for it this Spring. I hope you will send the **Blood Vitalizer** ordered as soon as possible as we are almost out of it.

Yours very truly,

Sallie T. Osborn.

DR. PETER'S BLOOD VITALIZER is prepared by Dr. Peter Fahrney at Chicago, Ill., and nowhere else. It is not an article of commercial traffic, but is put up for sick people everywhere. For further particulars, terms to agents, etc., address

DR. PETER FAHRNEY,

112-114 S. Hoyne Ave.

CHICAGO, ILL.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

No. 9.

THE CHRISTIAN'S PATHWAY.

BY MARY C. STONER.

O, the way is so delightful
As we journey to our King!
For his guidance makes us joyful
And our hearts with rapture sing.

When the pathway leads thro' sorrow,
We're contented in his love
For we know that on the morrow
We shall reign with him above.

O, the shining angels beckon!
And we long to reach our home;
For we've all for him forsaken
And he smiles and bids us come.

Ladoga, Ind.

* * *

SEED-THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

*Would that good resolutions would ripen faster:
necessity waits long for them.*

*

*Do you give to all Christian endeavor the right of
way, and encouragement, through your territory?*

*

*It does not matter at what gap we let Satan in,
he can accomplish his purpose equally well: any be-
setting sin will suffice for a gateway.*

*

*Does the economy of some people begin with their
church expense and end with indifference, or begin
with indifference and end with their church expenses?*

*

*Earth would be nearer self-supporting, if the gold
in her veins and the boasted inherent gold of human-
ity, were coined and current in golden deeds of char-
ity.*

*

*Nimblest fingers may fail to at once find the keys
which produce harmony, while a very dull ear im-
mediately perceives the lack of it; hence, much fault-
finding.*

*True fame is but the world's recognition of merit:
like the snow upon the mountains, it falls but on
those who have reached its altitude and lies as lightly
upon them.*

*

*Hope oft alights on the promises
And bides through tribulation and distress,
Midst present pleasure, resting short of these,
Returns to bitterness.*

*

*If your nature is so ill that you must vent it, vent
it where hearts are not warm enough to bleed: do not
take the liberty to say unkind things to the dear ones
at home which you would not presume to say to others.
The tenser the heart's cords of love are drawn, the
more easily is the heart broken.*

Flora, Ind.

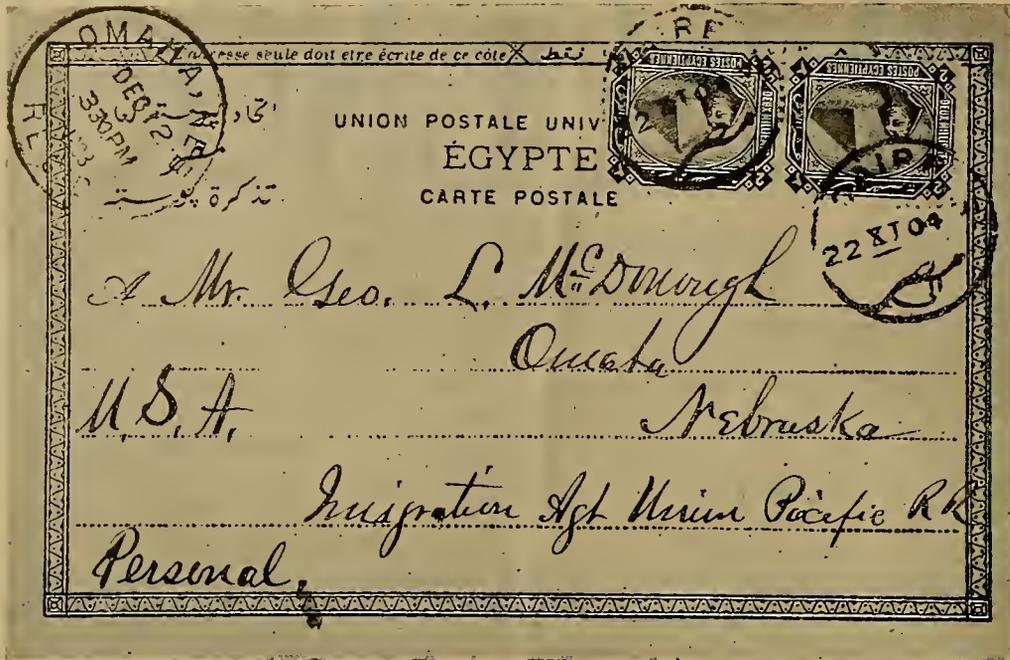

* * *

A CORNER STONE OF CIVILIZATION.

BY GUY E. MITCHELL.

EGYPT represents the two extremes in irrigation development. Civilization is said to have begun in the valley of the Nile and certainly the earliest attempts at agriculture through irrigation were very crude, and it seems strange that the most primitive irrigation appliances are still found in many oriental countries notwithstanding that, as in the valley of the Nile, some of the highest types of modern irrigation are to be found.

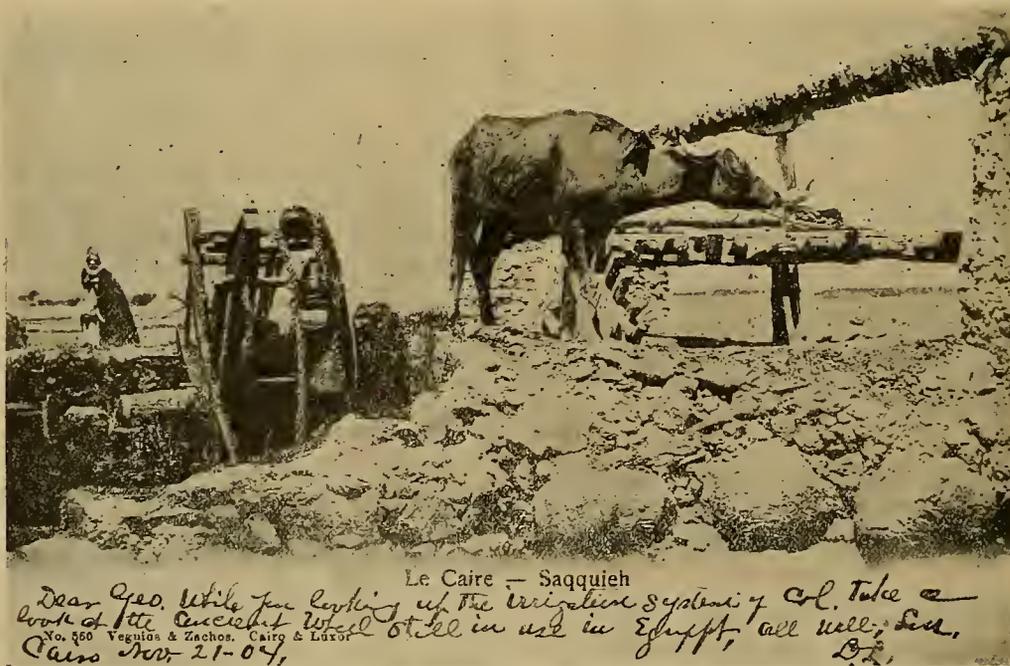

For ages and ages the most abundant crops and most prosperous and densely settled communities have resulted from the irrigation of desert lands. This artificial watering of parched and otherwise unproductive areas has been accomplished in various ways, ranging from the utilization of the waters of the spring or small well by the most crude and primitive hand methods of application, to the flooding of enormous areas such as the annual overflowing of the banks of the Nile and the Tigris. Only recently, however, and this especially in the United States, has artificial power been utilized to bring to the surface large quantities of underground water supply; but in some sections of the United States pumping water

FACSIMILE OF D. L. MILLER'S POSTAL CARD.

for irrigation has already proved an important supplement to the usual surface irrigation from flowing streams or storage reservoirs. Southern California is an instance of what energetic Americans can do when they have to. Necessity, which, as ever, is the mother

\$500 and even \$1,000 an acre. It is now seen also that even where surface water is plenty, pumping is a highly important auxiliary to the great irrigation development upon the threshold of which the United States lingers to-day.

REVERSE SIDE OF POSTAL CARD SHOWING WATER WHEEL.

of invention, seems, in the case of Southern California, to have perfected methods of electrical power transmission just in the nick of time to save from desiccation many hundreds if not thousands of acres of fine orange and other fruit orchards, worth in many cases

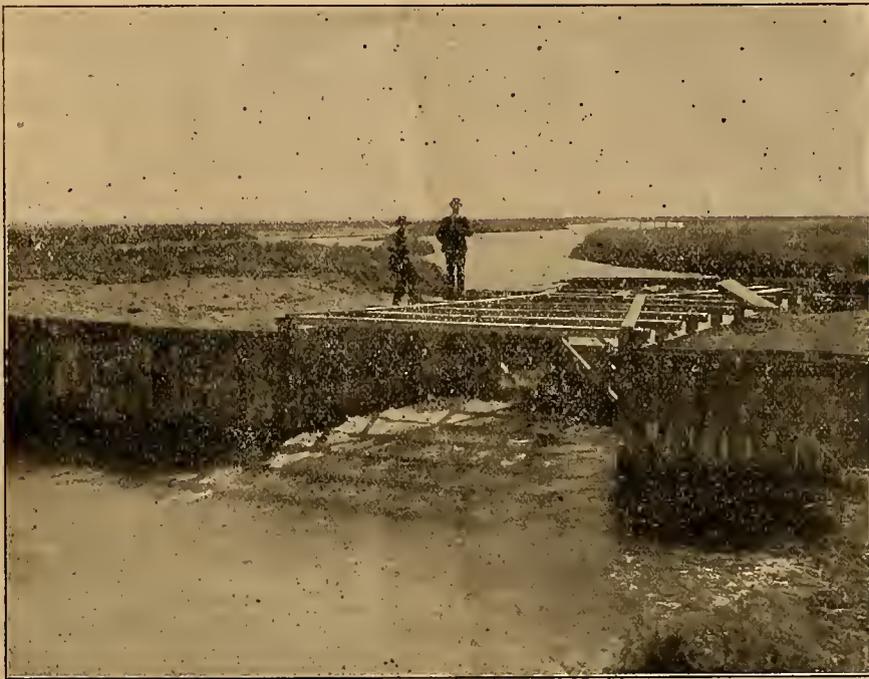

The Great Drouth.

The tremendous and far-extending drouth which visited not only Southern California but the entire Southwest five or six years ago, and has continued until this year, was apparently a fatal blow to the progress

of irrigation in that section. Rivers and ditches dried up or yielded such meager flows of water for irrigation that in many cases not one-half of the land formerly cultivated could be watered; indeed, in some instances orchards were left practically dry and desert-like, as the land stood before it was originally reclaimed. The farmers and fruit growers, strong in optimism, believed that the calamity was but of a year's duration, and that the succeeding season would see enough and to spare of water. A second year throughout the whole Southwest, as shown not only by the parched orchards but by the weather bureau records, proved a drouth such as is not dreamed of in the East. Things were in a critical condition.

Saved the Orchards.

Under these conditions it was not profitable, of course, to set out new orchards. But at this time fuel oil—petroleum—was discovered in great quantities in the Southwest, and oil and gasoline engines greatly reduced the cost of pumping. Yet this was somewhat expensive, and every pumping plant required the attention of an engineer. Then, however, came the great improvement in electrical transmission by which the subtle fluid could be economically carried fifty and even one hundred miles and then utilized to bring the inexhaustible water supply to the surface. This development is now working a revolution over great areas. The Sierra Nevadas lie close to the sea and

HEADGATE, POWELL AND BLAIR DITCH.—South Platte Valley on U. P. R. R., Colo.

Some of the more timid gave up and deserted new enterprises. A few of the more adventurous spirits sunk and drove wells through soil which had been as dry as the traditional bone and which it had been supposed was as far above water as some of the snow-crowned mountain-tops were from the sea. The wise-aces and pessimists laughed and shook their heads. The results, however, silenced their hollow levity. In hundreds of cases on the Southern California deserts water was found only a few fathoms below the surface, where the scoffers had predicted it would not be found if the drills went down a thousand feet. Steam pumping plants were expensive, for fuel on the Pacific coast was high, but where orange orchards, lemons, grape-fruit, plums, etc., were in full bearing and bringing in during good years six per cent on a thousand dollars an acre, Westphalia hams would have been utilized as fuel if nothing else had been available.

many mountain torrents find their way down precipitate slopes. Great electrical power is being extracted from these streams and rivers and transmitted to sections fifty or seventy-five miles away for use in automatic pumping.

Not only is electrical power adding large areas to irrigation by bringing up underground water, but it is also used for pumping water from rivers where, in many instances it is simpler and cheaper to employ this method than to build large diversion dams.

The great storage works which the government is constructing will many of them have auxiliary pumping plants operating by the electrical power which will be generated from the dams. Tremendous electrical energy will doubtless be developed by some of the stupendous works which the government has in prospect, and the national irrigation act has been con-

strued to mean that this asset should be used for reclaiming additional land—through pumping.

A Stupendous Work.

Unquestionably the national irrigation law carried to its full completion will produce results beyond the most sanguine conception of even its enthusiastic advocates. It is pregnant with constantly increasing possibilities for upbuilding and internal development. The present generation cannot expect to see the full and entire reclamation of arid America for no man knows when the limit of the resources of the West shall have been reached. To-day there are thousands of acres of rich land susceptible of irrigation which only five years ago it was not dreamed could be reclaimed. But the work should proceed rapidly; it should receive the support of the people to the end that new homes may be provided for those who want them, and a barren but resourceful section of country built up into a prosperous and productive part of the nation. No question was ever more national.

Unfortunate Land Laws.

Everyone is agreed that the broadest development of the West and the consequent reflex interest of the East requires that actual settlement and cultivation of the remaining public lands should be the watchword from this time forward. The national irrigation act carefully guards the interest of the home builder and the nation. This act has, however, largely increased the value of western lands, and speculators and stockmen have for some years foreseen that there is a limit to the public domain which has been heretofore so freely given away. Those who would see the highest development of the agricultural west claim that from this time forward no more government land should be passed into private ownership without stringent provisions regarding settlement and home-building. They claim that certain laws now on the statute books allow the absorption of large tracts of land into private ownership without such actual settlement, and to the end that this shall be stopped a vigorous movement is on foot to secure the repeal by Congress of the desert land act, the commutation clause of the homestead act and the timber and stone act and the lien land scrip act.

Congress should lose no time in acting upon this important national question, saving the lands for settlement, as urged by the President in every annual message, and repealing the above laws, leaving only the irrigation law and the original homestead law requiring genuine settlement and cultivation before the farmer can receive title from the government.

THE man who does not reverence God on the Sabbath is not likely to reverence him on any other day.—*O. L. Replogle.*

HONOR THY FATHER AND THY MOTHER.

THERE is a touching story told of the famous Dr. Samuel Johnson which has had influence on many a boy who has heard it. Samuel's father, Michael Johnson, was a poor bookseller in Litchfield, England. On market days he used to carry a package of books to the village of Ottoxeter, and sell them from a stall in the market-place. One day the bookseller was sick, and asked his son to go and sell the books in his place. Samuel, from a silly pride, refused to obey.

Fifty years afterward Johnson became the celebrated author, and compiler of the English Dictionary, and one of the most distinguished scholars in England; but he never forgot his act of unkindness to his poor hard-toiling father; so when he visited Ottoxeter he determined to show his sorrow and repentance.

He went into the market-place at the time of business, uncovered his head, and stood there for an hour in the pouring rain, on the very spot where the book-stall used to stand.

"This," he says, "was an act of contrition for my disobedience to my kind father."

The spectacle of the great Dr. Johnson standing bareheaded in the storm to atone for the wrong done by him fifty years before is a grand and touching one. There is a representation of it in marble on the Doctor's monument.

Many a man in after life has felt something harder and heavier than a storm of rain beating upon his heart when he remembered his acts of unkindness to a good father or mother now in their grave.

Dr. John Todd, of Pittsfield, the eminent writer, never forgot how, when his old father was very sick, and sent him away for medicine, he, a little lad, had been unwilling to go, and made up a lie, that "the druggist had no such medicine."

The old man was just dying when little Johnnie came in, and he said to him: "My boy, your father suffers great pain for want of that medicine."

Johnny started in great distress for the medicine, but it was too late. The father on his return was almost gone. He could only say to the weeping boy: "Love God, and always speak the truth, for the eye of God is always upon you. Now kiss me once more, and farewell."

Through all his after life, Dr. Todd often had a heartache over that act of falsehood and disobedience to his dying father. It takes more than a shower to wash away the memory of such sins. Dr. Todd repented of that sin a thousand times.

The words "honor thy father and thy mother," mean three things: always do what they bid you, always treat them lovingly, and take care of them when they are sick and grown old. I never yet knew a boy who trampled on the wishes of his parents that turned out well. God never blesses a wilful boy.

When Washington was sixteen years old, he determined to leave home and become a midshipman in the Colonial navy. After he had sent off his trunk, he went to bid his mother good-by. She wept so bitterly because he was going away that he said to his negro servant: "Bring back my trunk. I am not going to make my mother suffer so, by leaving her."

He remained at home to please his mother. This decision led to his becoming a surveyor, and afterward a soldier. His whole glorious career in life turned on that simple act of trying to make his mother happy. And happy, too, will be the child who never has occasion to shed bitter tears for any act of unkindness to his parents. Let us not forget that God has said: "Honor thy father and thy mother."—*Theodore L. Cuyler, in Pittsburg Christian Advocate.*

OTHERS MAY DO IT.

BY J. W. VETTER.

I REMEMBER, when but a boy, of hearing the story of a Rat, a Cat and a little Red Hen that were represented as living together, and one day they found a grain of wheat and the question arose, "Who will plant this wheat?" The Rat said, "I won't," the Cat said, "I won't," but the little Red Hen said, "I will," and she did. The wheat grew and at harvest time it was asked, "Who will cut this wheat?" The Rat said, "I won't," the Cat said, "I won't," but the little Red Hen said, "I will," and she did.

Now after the wheat was cut they asked, "Who will thresh this wheat?" The Rat said, "I won't," the Cat said, "I won't," but the little Red Hen said, "I will," and she did. "Now who will carry this wheat to the mill?" The Rat said, "I won't," the Cat said, "I won't," but the little Red Hen said, "I will," and she did.

The flour having been brought home they questioned, "Who will bake the bread?" The Rat said, "I won't," the Cat said, "I won't," but the little Red Hen said, "I will," and she did. Now when the bread was baked, it was asked, "Who will eat this bread?" The Rat said, "I will," the Cat said, "I will," but the little Red Hen said, "No, you won't," and picking up the loaf, she flew away with it. How often, my dear reader, when opportunities present themselves to do something for the church, when she needs money, when she calls for missionaries, for means to build churchhouses, we say, "I won't, others may," or, in a community, when wood is to be cut for some poor widow, or a neighbor is sick and needs assistance, we say to ourselves, "Others may do it." There are always a few willing workers and they, like the little Red Hen, will in time rise above us and carry away

the blessings and leave us hungry, dejected and miserable.

THE HAPPIEST TIME.

No amount of worldly success, of wealth, of power, of honor, of admiration, can bring happiness to the heart where the peace of God does not rule. And the greatest of those who have sought their own advancement rather than God's glory are foremost to bear witness to this truth.

When Napoleon was in the height of his prosperity, and surrounded by a brilliant company of the marshals and courtiers of the empire, he was asked what day he considered to have been the happiest of his life. When all expected that he would name the occasion of some glorious victory or some great political triumph, or some august celebration, or other signal recognition of his genius and power, he answered without a moment's hesitation: "The happiest day of my life was the day of my first communion." At a reply so unforeseen there was a general silence, when he added, as if to himself: "I was then an innocent child."

* * *

HOW FISHES BREATHE.

By means of their gills fishes breathe the air dissolved in water. The oxygen consumed by them is not that which forms the chemical constituent of the water, but that contained in the air which is dissolved in the water. Fishes transferred to water from which the air has been driven out by a high temperature, or in which the air absorbed by them is not replaced, are soon suffocated. They require aerated water to maintain life, and they take it in constantly through their mouths, and expel it through their gills, retaining the air. It follows that if the water in a lake should be completely cut off from contact with the air long enough to exhaust the supply of air, the fish in the lake would die. It would take a severe and pretty long continued freeze to accomplish this, but it might happen, and doubtless has frequently happened, with a small body of water.—*Nature and Science, in St. Nicholas.*

QUICKNESS is genius.—*Bartol.*

HOW I IMPROVED THE LOOKS OF MY SCHOOLROOM.

BY MAUD HAWKINS.

THE first day of September found me on my way to my new fields of labor for the coming nine months. My director met me at the station and conducted me to the schoolhouse. Indeed, the conglomeration of red dresses, pink aprons, blue jeans, and white sun-bonnets was visible for quite a distance. To an unaccustomed eye it would have appeared as an immense rainbow settled on the doorstep to reflect the rays of the sun forevermore; but I had seen too many scenes of that kind to be deceived.

When I alighted from the carriage I gave the assemblage what I thought to be a cheery "Good morning," but only two among them ventured to respond; and it was only a faint "good" from the one and "m-o-r-n" from the other. I found the schoolroom to be a dreary place indeed. The first object that caught my eye was a rude pretense for a desk, built sometime away back in the forties and by an amateur carpenter at that. (Now, I am very fond of antique

Articles of Furniture,

but that did not strike me as very artistic.)

There were six long, large windows, without the pretense of a shade or blind. The plaster was off the walls in many places, and some hanging ready to fall in others at the first sudden jar. What was left was a beautiful shade of dark gray, caused by the smoke from the rusty stove near the door. A few coarse advertisement pictures were dangling here and there by one corner on the walls, some of the former teacher's efforts to make the schoolroom attractive and to train the finer senses of the rising generation. But we will excuse him for a man is not expected to understand how to make a room look cheerful, and, besides, he was only teaching a few terms as a stepping-stone to something better and therefore did not try to build up a reputation as we stick-to-its do.

The wall under the building had been torn out in places, probably last year's efforts of Young America to locate a woodchuck or some other valuable animal. The doorsill had been worn so it had ceased to be. The desks were the old fashioned board ones built with the schoolhouse. Here, too, the pupils had taken their lessons in drawing, carving and pyrography for the last fifty years. The hieroglyphics were truly wonderful. There were

Three Good Blackboards,

two high bookcases against the wall to the right and left of the desk, and in the rear of the room were two rows of shelves for dinner buckets, and a number of hooks put up here and there, and everywhere a convenient place could be found, for coat, cloak, hat or bonnet.

I had been informed before I went there that the school had been greatly neglected and that the directors would spend very little in the betterment of the school, consequently I thought best not to ask for very much at first. Here was a good field for missionary work and I determined to try my best.

After the school was well organized and had been in good running order a few days, I mentioned to the pupils how much nicer it would look if we only had some shades to the windows, explaining to them the bad effect to the eyes of the strong light as well as the great improvement it would be to our schoolroom, which I hoped to be able to make much more pleasant. I finally suggested to them that each bring a dime to me, and the curtains would be forthcoming.

Much to my surprise, my efforts met with a hearty response; for I had expected to be compelled to furnish the greater part myself. But thanks to the generosity of the pupils, I had to throw in my mite of

Only Five Cents

to complete the required amount. I next endeavored to get into the good graces of the directors, and the result was that they agreed to treat the walls with a coat of whitewash.

I did not say anything to them about the falling plaster, just then, for fear of paralyzing their good intentions by asking too much at first, but bided my time. I knew that they would see the uselessness of trying to whiten the plaster that was not there.

And sure enough, they became of the opinion that "it needed a *leetle* patching before the whitewash was put on." And while the mason was there, it was but a little trouble to mend the wall under the building, and then the absent doorsill let in so much cold air that it would be a saving of fuel if a new one was put in, and, lo and behold! a grand success: and the directors did not even realize that they were doing so much. I thanked them kindly and proceeded to show them by deeds as well as words how much I appreciated their efforts.

Our new shades (which were a greenish yellow), whitewashed walls, new doorsill, and new foundation wall made quite a change. The children did a good deal of talking and carried occasional scraps of news as to what the teacher was doing; and I venture to say that the parents were interested and aroused from their lethargy.

Next I gave notice to the children that on the coming Saturday there would be an old-fashioned "bee" at the schoolhouse; and all were invited to come in the forenoon armed with pails, brooms, soap, brushes and kettles, for we were intending to make a raid on the old monster

Whose Initials were D. D.

(Of course I explained afterward to those who could

not guess, that D. D. meant Dust and Dirt.) But the mystery was something to excite their curiosity and to get them interested.

They came with a good will, bringing their older brothers and sisters and a few mammas to help the good work along. During the hubbub and splash, splash, I regretted now that our room was to be so nice, that our stove should be so rusty. If we only had a little blacking we would be happy. In a short time I missed one of our large girls from the ranks; but in the course of half an hour she returned, with rosy cheeks and the perspiration standing on her brow, but with a satisfied look in her bright, happy eyes. She put a small parcel into my hand, saying: "There, Miss —, ma said she was sorry, but that is all she had." I found myself in possession of half a cake of stove polish. Now who would polish the stove? A big, good-natured farmer boy volunteered. But really he did not get an opportunity to do much but direct the work, there were so many willing hands, rubbing here and there, pushing and crowding to get a place to give the dear old warmer a few gentle pats. And we declared when it was finished that we had no need of a mirror now, as we had a substitute in the stove.

Now for the old desk! What shall I do with

The Clumsy Old Affair,

covered with "jack-knife initials and raps official"? I was pondering on this one evening when I espied my lady of the house crumpling a large piece of pink paper preparatory to lighting the kitchen fire. I hastily rescued it from its pending doom, while her look plainly said, "You are welcome to it, but I don't see of what use it is to you." However, the first time she called at the school, she saw her once despised but now much admired pink paper in all its splendor, with edges slashed to form a fringe, covering up the deficiencies of the old desk. "Why, I never thought that old pink paper would look so pretty," was her exclamation. The desk looked quite artistic with a row of books, my bell, a few dainty pictures on improvised easels of cardboard, and a vase for flowers which was never empty. Now that the coarse, gaudy, advertising pictures were taken from the walls, they looked very bare. I began to search for others, picking up all the pictures that I thought appropriate. Some I procured from old magazines; some the children brought. I soon had a large collection from which to choose. Here, there, and everywhere are thrust on one pictures—pictures galore, if one will only use them. But the difficulty is to discriminate between good, fairly good, and bad, or coarse, glaring ones. Those that were large I merely fastened to the walls by means of

Brass Headed Tacks;

smaller ones I mounted by pasting them on larger

sheets of paper of harmonizing color; catalogue covers without print were used for the mounts of some. These were put on the wall in a manner pleasing to the eye. None were placed in a regular row, but some up, some down, some panel, some crosswise on the paper.

A great many of my pictures were instructive, representing scenes from which an interesting lesson or talk could be given, with occasionally a dash of color; and some which had no especial value except the skill exhibited in their execution. There were two shelves made of rough blocks of wood on each side of the room, large enough to hold a small lamp, for which they were originally made. These were fastened to the walls by large wire nails or spikes, and were rough and clumsy affairs. I had quite a tussle with them before they yielded to my prying, twisting and pulling, but at last they came down to be stowed away out of sight. There was a very good chart, which had been folded and laid carefully away. This was brought out, cleared of its cobwebs and dust, and placed where it could be seen if not used. The hooks at the rear of the room were removed and placed in a neat row on either side of the room within reach of every child.

I next invested forty-two cents in seven yards of

Turkey-red Calico,

with which I made a curtain before each of the lunch basket shelves, thereby covering up the rusty array of battered pails, baskets, and buckets of all sorts, shapes and sizes, each usually displaying over its top a soiled rag used to take the place of the more modern napkin. The shelves had the appearance of real book-cases, being set against the wall in the corners with the ends enclosed. I stood some of the new unused text-books on the top, a picture on an easel and the old school globe which I found in several places, it having been taken apart, evidently, by some boy who had a mechanical turn of mind, and wished to know how and for what purpose it was made; it was then tucked away by the teacher to put it out of sight, as being a thing of no value and a nuisance. This, after a good deal of bother, was finally planted firmly on its stand, brushed and washed so that the pupils could see that it really represented the earth, and placed on one of the make-believe bookcases.

I again opened my purse and this time it procured for us nine yards of cream-colored cheese cloth, and one afternoon I told the girls to bring their

Needles and Thimbles

and we would have another "bee." This time it would be all by ourselves, and during the following noon hour we made a draw curtain for each of the windows. This made the room look much better and, besides, it acted as a blind (but don't you tell the pupils) to prevent the children looking out the windows

whenever a conveyance passed. They never suspected that the curtains were for any other purpose than adornment.

I was in want of a wastebasket and it was some time before I found the necessary means to procure one, for I had no Aladdin's lamp to rub. But I did find in the coal bin an old peach basket which had served its day as a waste basket, and been pressed into the service as a coal pail when more than one was needed. It was quite badly shattered, but I straightened it up and with much cording and wiring, it soon resumed its former shape of a well-behaved peach basket. But it was not very pretty to look at surely; it must be covered. I knew that in one corner of the cupboard there was an old discarded, green window-shade, the ends and side of which were yet in a good state of preservation. These portions I tacked around the basket in pleats. I also lined it with the same. And behold! a thing of beauty. No one would guess anything about the wires and cordage. An old, leaky wooden water pail was treated in the same way. This was used for periodicals, papers, magazines, etc., of which we had gathered together quite a number. Two glass tumblers at two and one-half cents each were placed on each bookcase filled with pressed flowers, ferns, leaves and dried grasses. I bought some stencils, and on one blackboard was drawn

A Picture of Lincoln

under which were his memorable words, "With malice toward none and charity for all;" and one of McKinley, with his last words, "Good-bye, good-bye all." Between these there was a large scroll on which was the daily program neatly written. On the other board was Washington's picture, and underneath was written, "The Father of his Country." Washington and his hatchet, with the motto, "He could not tell a lie," and Washington as a soldier, with "First in peace, first in war, and first in the hearts of his countrymen," were added in February. There were some other chalk drawings in the line of flowers.

On my way to and from school I found many pretty leaves, for autumn was then in all its glory, with oaks, maple, poplar and ferns, these I gathered and pressed in large books and my camera printing frame was very useful for some of the smaller bunches. Some small branches, that were thickly set with scarlet or yellow leaves were pressed, and all laid carefully away for future use. After these were thoroughly dried, which took several weeks, they were taken from their seclusion. Those leaves which had kept their rich colors were mounted on sheets of white paper in different designs and fastened in a row at the top of the blackboard; those on large branches were tacked to the walls between the pictures. I was aided in all this by the pupils and it was enjoyed extremely by all.

I had a

Large Box Full of Leaves

left, which were used all winter by the primary grade to draw from, first by placing them on drawing paper and tracing round them, afterwards in coloring them. Soon they could venture to draw them freehand. Some of the very daintiest bunches of ferns were pinned on the draw curtains, and when the sun shone through them they looked very pretty.

But when the big boys brought in a mammoth hornet's nest, which they had discovered during their investigation of a deserted house near by, our happiness was complete: the nest was displayed in a conspicuous place on top of one of the bookcases.

The children had never had any practice in drawing, and when I suggested that they should take up the writing period on alternate days for drawing, they looked, if they did not say, "We can never draw." However, they were given something very simple at first, and something more difficult each time, always receiving some words of commendation for their efforts, criticism being given very sparingly for some time.

Soon colored crayons found their way into the room and later tiny boxes of water colors began to make their appearance, without even a request from the teacher. Parents are usually willing to purchase things for their children when they can be convinced that they are a benefit to them. We kept on day after day, little by little, until they could draw really good things. From the first, when the drawings were fairly good, I tacked them in a row at the top of one of the large blackboards as a reward, and that all might see how neatly they had been done; telling them that when they made a better one they could exchange the old for the new. There was a contest ever after as to who should have their drawings "put up" as they expressed it.

A Good Many Nice Drawings

were done at home of evenings. We soon had our row across the board complete: down each side they went and on the walls, wherever there was space, and finally some had to be bunched and laid away, to be exhibited on Parents' Day or some other grand occasion.

(Next time I will tell you how I obtained our school library.)

Towanda, Pa.

WILHELM TELL.

SCHILLER, the author of "William Tell," christened Johann Christoph Friedrich, was born Saturday, Nov. 10, 1759, ten years after Goethe, ten years before Napoleon, two hundred and seventy-six years to the day after Luther.

His father, Johann Kasper Schiller, was an officer in the Wurtemberg army until the close of the Austrian war of Succession in 1748, when the rugged soldier found a fitting helpmate in Elizabeth Dorothea Kodweiss, the slender, blond-haired daughter of the baker, Kodweiss, at Marbach, a glad-hearted girl of sixteen, whom time soon developed into a noble, womanly woman of excellent tact and judgment, of singularly gentle and happy disposition, of finest sense and feeling. He then moved to Marbach, and settled down to practice his crude art as a barber.

This however proved unsuccessful and when the seven years' war broke out in 1756, he again went into the army. After the war, Captain Schiller, as this title had now been conferred upon him, moved his family to Lorch, where he rendered free service to the Duke of Wurtemberg, in recruiting soldiers for mercenary service abroad. The trials at Lorch were great, as Captain Schiller received no pay, and the family felt the pinch of poverty.

Thus it will be seen that the early life of the poet Schiller was not the most inspiring. He was born in lowly circumstances and dragged on many years in poverty. Unlike the precocious wonder-child Goethe, Schiller was an average boy, like other boys. He combined the mental qualities of both parents, his father's restless energy and ambition, and his mother's gentle dignity, happy disposition, refined feeling and decided literary taste. The mother's influence, especially during his earlier years when the father was away with the army, cannot be overestimated in its wholesome effect upon the boy's character. It was to her, a woman worthy of honor for her qualities of heart rather than any intellectual pretensions, that is due the noble character of Schiller as portrayed in his writings.

His early education was limited. Proving his aptness as a pupil at the village school, his parents became ambitious for him and sent him to the village pastor, Moser, to be taught Latin. The boy Schiller early decided to become himself some day a preacher, which fact the pious parents eagerly embraced and made it a settled family aspiration. It is said that one of his greatest delights was to play church with his sister Christophine, two years older than himself, in which service he would act as a preacher.

The Duke, Karl Eugen, however, broke up these plans as he desired the already promising youth for his new military academy, Solitude, at Ludwigsburg. Accordingly in January, 1773, not yet fourteen, he entered school as a student of law, since theology was not taught there. He was very much dissatisfied here, for, besides being compelled to attend, he was forced to study law. When the school moved to Stuttgart, however, he began the study of medicine in preference to law, but this he disliked, his chief interest being

centered in literature, especially poetry, and in spite of the rules, many foreign and German classics were devoured like forbidden fruit in secret with a few chosen friends. This awakened his own genius and he began to write.

After writing many short poems and dramatic sketches, he abandoned them and settled on his first large work, a revolutionary drama.

Schiller received many discouragements in presenting his first work, but persevered nevertheless. After this one he wrote many others, the greatest of which is without a doubt the last one, "Wilhelm Tell." Begun in the spring of 1803, and completed Feb. 18, 1804, just a year before his death. The theme, the successful revolt of the Forest Cantons against their governors, is an inspiring one and surely the world to-day owes Schiller an immense debt for presenting it in such austere simplicity, unincumbered with any doubtful philosophy.

There seem to be three distinct threads running through the drama, with no necessary connection with one another, the conspiracy of the cantons, the private feud of Tell and Gessler, and the love affair of Rudenz and Bertha. Yet they are all carried along in such a way that all find their natural conclusion in the final celebration of victory.

The one thought especially which Schiller had in mind was to win sympathy for freedom and the rights of man. One cannot help but admire so good a lover of freedom.

The early life of the poet, his hardships, his trials, his contact with the imperial rulers, his relation and close touch to the tyrannical punishments measured out to the people of these Forest Cantons, no doubt created in him a burning desire to stir up the people and bring them to their senses. Even if, as has been suggested, he did first conceive the idea of "William Tell" as the subject of a drama from Goethe, the subject matter and the very thoughts and lessons which he wished to present to the people were already in his mind. Can you think of a man writing a whole drama, portraying as it were, the very condition and modes of life of a people, picturing the varied landscapes and knowing the peculiar characteristics of a country which he had never visited? His genius cannot be questioned. Ever since the first appearance of "William Tell" on the German stage in 1804, it has been a world favorite.

Tell, the main instrument on the side of freedom, was a man of impulses. He acted where others would only talk, deliberate or hesitate. He knew no fear and did not reflect long where it was a question of immediate action; at the same time he was humane and benevolent and trusted God's help in time of need. He was a man who thought much but said little, in fact he was often called a dreamer. He had

a noble character in vast contrast to Gessler, the man who was unscrupulous and knew no justice and who tried to subdue the Forest Cantons by force. Tell's motives were pure as was demonstrated when John Parricida dared to put himself on the level with him. His clear convictions remained unshaken and he exclaimed, "I lift my pure hands to heaven and curse thee and thy deed." His own attitude toward his own tyrannized country may be illustrated by the following words from another character in the drama:

"Rage on, ye winds! Flame down, ye lightning bolts!
Burst open, Clouds! Pour out, ye drenching streams
Of heaven, and drown the Land! Annihilate
I, the very germ the unborn brood of men!
Ye furious elements, assert your lordship!
Ye bears, ye ancient wolves o' the wilderness,
Come back again! The land belongs to you,
Who cares to live in it bereft of Freedom."

A BOY.

BY J. H. MORRIS.

WEBSTER says that the term "boy" is generally applied to male children, less than twelve years of age. Others have used it to denote an immature man. Sisters sometimes describe the brother by saying, "A boy is a nuisance." I have heard people say that men were only boys of larger growth. Would it not follow that boys are only men of less growth and development? I like to think of them as little men, because nothing but little men will grow to be big men. An apple seed will never grow to bring forth a peach tree, nor a plum seed a grapevine.

This subject may be looked at from many angles. We might consider the "Boys in Blue," "Boys in Grey," or "College Boys." It seems as though the people consider the whole male population as boys. The size and age seem to be left out of the question. If one takes such a wide view as that, he could write article after article upon the subject. It is not my purpose to discuss any particular class of boys but to try to set forth some characteristics that I have found in boys as a class.

Every boy has some energy about him. If he is one of those boys who can't sit still, who must always be doing something, who must always be shuffling his feet, throwing his arms or moving his chair, he is called the bad boy. He is no more bad than the engine that exhausts steam when there is a large fire in the fire-box and plenty of water in the boiler. The steam is being generated and if not used must find some means of escape. In this boy's nervous system energy is being generated and it must be used. When he is in school, Sunday school, church or wherever,

he must use this surplus energy. He doesn't mean to disturb anyone but he can not do otherwise. He cannot keep quiet any more than can a piece of lighted fuse.

When I see a boy of ten or twelve who can sit still for an hour or more at a time, I mark him down as a boy who lacks energy and will never move the world very far. It is the energetic, noisy boy who is making the world go.

The teacher's duty is not to suppress this energy but to direct it. Too many try to suppress it and hence make a failure, and even worse than a failure, because they get the ill will of the boy, drive him from school, Sunday school or wherever he happens to have charge of him. Many a boy is driven from home and consequently is ruined, because his parents did not understand boy development.

The cry throughout this land is: "What can I do for my boy to keep him in the home, Sunday school and church?"

It seems to me that the question is: "What can I do for myself that I may understand my boy better and get into his life and keep him in the home, Sunday school and church?"

I see men studying books on farming, gardening and stock-raising; women studying magazines, books on cooking or on entertaining; but where is the man or woman who is studying books on "How to help that boy"?

If some of our fathers and mothers would purchase a paper or a book (a good one, I mean) on how to help the boy and would study it as they do their magazines and farm papers, the streets would not be crowded with ten and twelve-year-old boys swearing, smoking and fighting.

How can any one direct this energy of the boy when he doesn't know how? It is your duty to direct it. Are you going to do your duty?

We would have more young men in church to-day if we had more "child-study" people at home. Are you going to help fill the churches with young men? You can if you will.

North Manchester, Ind.

WHOLE FOREST

To be Turned Into Shoe Pegs by Cleveland Firm.

A COSHOCTON, Ohio, forest is to be made into shoe pegs. Last week Porter Mitchell of Newcomerstown sold a large tract of timber on his farm, located five miles south of that city in Coshocton county, to a Cleveland house for a snug sum. The Cleveland lumbermen have a mammoth contract with a Massachusetts shoe factory to furnish it with shoe pegs and expect to convert the entire lot of timber into sole savers for the bootmakers.

THE LOST PARADISE.

ALMOST every spot on the globe has had the claim made on its behalf that it is the site of vanished Eden. Most persons seem agreed on the fact that paradise has disappeared from our midst. The question is, Where was it situated? To those who deny the Biblical story of man's genesis the question takes another form, and they perplex themselves as to the spot in which man first appeared on this earth. Some evade the difficulty by saying that man appeared in many different spots—that he did not spring from one original.

If we accept the doctrine of the Darwinians we are forced to confess that the place where man first evolved must have been anything but a garden of Eden. It must have been a haunt of mere animalism, and its food would certainly not have been fruit. Roughly speaking, therefore, there are two schools—those who believe that man came from a divine original, but fell away from his first estate, to which with infinite labor he may return, and those who believe that he evolved from the beast and is still evolving to the greatness that he may ultimately attain. Setting aside these somewhat discordant theories, we may well ask, Where was Eden?

The soundest scientists are agreed that mankind came from a single origin—whether a distinct creation or an evolution is beside the mark—and the original man must have had a local habitation. The geographical manuals and maps of the middle ages leave a good deal to be desired in the matter of accurate detail, but they have at least the merit of boldness, and if we go to them for an answer to our question we may get something like a definite reply. According to an old map of the thirteenth century, paradise is a circular island lying near India. It is surrounded by a wall in which is a gateway opening to the west. The gate is closed and the wall quite insurmountable. Our later atlases do not locate this happy island.

Other early maps would have us believe that Eden lay in central China. We can go with these ancient geographers so far as to place the probable sight of man's birthplace in Asia, but the consensus of learned opinion does not incline either to India or China. Eminent authority supports the idea that Eden lay somewhere on the great Babylonian plain, watered by the Tigris and the Euphrates—the Perath and Hiddekel of Genesis. Other authorities give their vote for Armenia, possibly influenced by the tradition which says that the Ark rested upon Mount Ararat, but this tradition would only point to Armenia as the probable first home of the postdeluvian man.

Professor Delitzsch and Professor Sayce favor Babylon; Heidegger favors Palestine; Media, Arabia and the upper Nile have all their supporters. Quatrefages,

treating the subject solely from a scientific standpoint, concludes that linguistic and other human types point to central Asia, but does not decide on any precise locality.

With the author of Genesis, as Dr. Kalisch has remarked, "Eden is geographically described in a manner which leaves no doubt that distinct locality was before the mind of the author." Even to those who think that this author was building on uncertain traditions it must yet be of interest to know what this locality was. Babylon was the most fertile land known to the ancient world; its poorest fields repaid cultivation fiftyfold, its better a hundredfold. Its luxuriance of fruit and grain was so great as to be actually embarrassing. There is no question at all that this district was the seat of Asia's earliest civilization and therefore why not say of the world's?

The idea of man created perfect and living in a garden of fruitful loveliness has always had a fascination for poor humanity, recognizing its present imperfections and the frequent distressing dismalness of its present surroundings. Even those who knew nothing of the Bible story pictured such a spot for themselves. Every early mythology has its fortunate isles, its Atlantis, its Hesperides, its Arcadia and its Golden Age.

Some persons even conjectured that paradise had not been on the earth at all, but was an island floating in the air, something like the island visited by Gulliver. They did not wish to think that the sacred spot could be submerged by the waters of the deluge, and by this device they raised it above any such calamity. On this island dwelt the sacred phenix; the well of life flowed there, the elixir of immortality; leaves never fell from the trees; the sun shone always on a perpetual summer. Men declined to believe that Eden had been destroyed forever. They preferred to imagine that its gates were closed to them for a season. To deem that such a spot could vanish seemed sacrilegious.

Many an earthly voyager and explorer had strange dreams of discovering some earthly paradise when he set out for unknown shores—dreams perhaps not spoken, but secretly nourished and strengthened by unconquerable force of romantic superstition that lived in the heart of ages other ways so dark. Even the Elizabethans dreamed always of some more wonderful country to be discovered. Their toils and perils and fightings had ever the redeeming glamour of romance. In those days was the true poetry of travel. There was always some El Dorado, some hidden Eden, to be reached.—*Kansas City Independent*.

ALWAYS taking out of the meal tub and never putting in, soon comes to the bottom.—*Benjamin Franklin*.

PEOPLE OF SOLOMON ISLANDS.

THE Solomon Islands lie east of New Guinea. The two northern islands belong to Germany and the others to Great Britain.

Neither country has done anything to develop them. The interior of the islands is almost unknown. The reason is that the natives are extremely hostile and exploring parties have never dared to venture far from the coasts.

Traders take their lives in their hands and live on the shores of a few islands, but rarely venture out of sight of the sea. As ships approach Bougainville, the largest island, they see many miles away the great Kronprinz Range, extending through the center and rising to 8,000 feet; but though mariners have seen these mountains for centuries no white man has ever visited the range, because the region between it and the sea is densely peopled by the most warlike of savages.

Carl Ribbe, a German naturalist, has had the courage to spend two years at trading stations along the coasts. He has just written a book that bristles with information about these islands and their inhabitants. He sketches the land, the people and the vegetable and animal life, and his book, "Zwei Jahre unter den Kanibalen der Salomon-Inseln," is especially timely because so little has been written about this archipelago.

Ribbe says that there is no more dangerous trade in the world than that with the Solomon Islanders. The traders are liable to be attacked at any time.

If the trade were not extremely profitable white men could not be induced to live there. The natives gather large quantities of coconuts and are anxious to sell them, though their commercial instinct does not keep them from killing the white trader if they catch him off his guard.

Sell Very Cheap.

They sell their commodities for a song in comparison with prices asked by other Pacific natives who know the whites better. The trader in the Solomons buys 100 coconuts for a piece of cloth worth about fifteen cents.

The natives are at the same ridiculous disadvantage in exchanging other commodities, and so the traders continue business relations that are so profitable to them. They dry the meat of the coconut under the tropical sun, turning it into copra, which vessels take away to Europe, where the oil is expressed for soap-making and other purposes.

It must be highly exciting to live in a land where day or night one may be the target of a spear or a bullet. The reckless traders, finding that the natives are almost crazy for firearms, sell them to every one who can produce the many thousands of coconuts demanded.

Now and then they are killed by the very guns that they have sold. The same blacks that traffic peaceably with the trader in business hours are likely to lurk around his house in the darkness in the hope of shooting him while asleep.

Now and then they are caught spying around the houses to find the exact position of the bed in which the white man sleeps. They are likely to mark the outside of the wall near which the bed stands for the purpose of killing the trader by shooting through it. At the especially dangerous stations traders move their beds every night or else pile around them a wall of boxes.

If a trader smells smoke during the night he is very careful about sticking his head out of the door or window, for he has learned that it is a favorite trick of the blacks to create a smudge so that the whites may be tempted out of doors to see what is burning. On such occasions they are like to be killed by their unseen enemies.

It is remarkable that the traders take their wives and children to these islands. Not a few white families are living along these coasts. The women and children lead no easy lives, for they are engaged most of the day in spreading coconut meat for drying or helping the men folk in many other ways. Ribbe says not a white woman there is surpassed by the men in pluck and courage.

Women Go Armed.

Every woman carries a revolver, for the women are in as much danger as the men. Now and then they are confronted with situations which require quick thought and action. The writer gives a number of instances of the courage with which the women and even little girls meet danger.

One day two traders named Macdonald, of Munia Island started on a business trip along the coasts of Bougainville, leaving their wives and daughters in the newly built cabins, which were not yet provided with doors or windows. A few nights later a twelve-year-old girl was awakened by smoke blowing through the house.

She thought the natives were up to mischief, and, picking up her revolver and awakening her ten-year-old sister, she stole softly to the doorway. Pushing aside the cloth that hung before it the two girls dimly saw several black figures crouched a few feet from the house waiting for some of the inmates to appear. The elder girl fired the revolver, wounding a black and frightening the others away.

The Solomon Islanders not only kill strangers, but also cheerfully eat them if the opportunity occurs. Most, but not all, of the natives are inveterate man-eaters.

They go on expeditions for no other purpose than to secure victims for the cooking pot; and as they

greatly prefer to celebrate their cannibal feasts at home they sometimes tie captives hand and foot to long poles which are borne on the shoulders of the victors many miles to their own settlements, so that their families and friends may share the feast.

Cannibals Got Him.

Mr. Ribbe tells of a white victim of cannibalism. He was one of those white wanderers among the islands who are a little peculiar and lead very strange lives.

This man, an Australian, was old and a little wrong in his head. One day he decided to go to Bagga, an uninhabited island in the Solomon group, to spend the remainder of his life in solitude. He said he was tired of civilization and wished to live and to die alone.

He bought materials for a little house and such implements and furnishings as he required and sailed on a trading schooner for lonely Bagga. He put his house together in 1886, and in the course of time he had a well tilled garden, many hens and a number of pigs, which he had raised from the few brought with him.

The old man was often warned that though his island was uninhabited it might be visited any day by cannibals, who would doubtless kill him. He said he believed the natives would respect his white hairs and, anyway, he was not afraid.

But his confidence was misplaced for he was killed and eaten. One day Captain E. Pratt, who had heard that natives had been seen paddling over to Bagga, went to the island and found that he had come forty-eight hours too late.

The house had been plundered and it was easy to identify the spot where the old man had been killed. In those days warships very seldom visited the islands, and the murderers never paid the penalty for their crime.—*Cincinnati Enquirer*.

WHEN LETTER POSTAGE WAS TWENTY-FIVE CENTS.

THOMAS SHERMAN says that in eighty years California went through the same progressive changes that England required a thousand years to accomplish. The history of the last half of these eventful years of the Pacific Coast would, in no small part, be the history of the great Wells-Fargo Express Company. After its establishment, in 1852, the company rapidly absorbed all other lines of the State, and was the banker, mail-carrier, and errand runner for every city, camp, or cabin in California.

Henry Wells and William G. Fargo were veterans of the express service before we find their names coupled in that union, as closely identified with the West as are the quartz and granite of her hills. Wells

was Harden's agent in Albany in the first branch establishment there, and, in 1834, he, with others, planted the first express office of the "West." This was at Buffalo, an outpost then four days and three nights from New York, almost as far as California is today! Fargo was express messenger for Wells on this Buffalo line. In 1845, Wells, ever lured toward the West, ever tracking the frontier, pushed out his express to St. Louis, Chicago and Cincinnati. On account of his fine tact and iron resolution, Fargo was chosen as manager of this unique and adventurous enterprise. Here in this unjostled space, with his convoy of boats and wagons, he won a large experience in his work.

Wells, ever fertile in ideas and quick to give them shape, now set on foot a letter express, at one-fourth the price charged by the government,—*six cents*, instead of *twenty-five*. Immediately the government was hot upon his track: He was haled into court again and again, but was always victorious. Then the audacious expressman proposed to the assistant postmaster to take charge of the entire mail service of the United States.

"Zound, sir!" cried the zealous postmaster, his ear to the ground, "such a proceeding would throw sixteen thousand postmasters out of office! It would never do."

Wells' request was declined by the wary officer, but his protest against high postage went on sounding through the nation; and the next Congress, by the leverage of public opinion, was forced to divide the government rate by four. So to Henry Wells, leading the host of reform, we owe one of the great forward steps in our civilization.—*Edwin Markham, in Instructor*.

OIL ON TROUBLED LAND.

OIL is not only poured on the troubled waters, but also on agitated terra firma. Some 3,000 miles of the roadways of California are now treated with oil for the purpose of laying dust. The results are said to be most promising, partly perhaps because of the peculiar climatic conditions in Southern California. The climate is dry, so that the difficulty has always been to prevent the road surface from loosening, since there is not sufficient moisture to bind the road materials. The oil used has an asphalt base and differs in this regard from the crude oil available elsewhere.

THERE is no "ideal" employer; there is no "ideal" employé. And the crying need is for an education that will teach men to realize that the way to get the golden eggs is not to kill or mistreat the goose that lays them.

REMEMBER Lot's wife.—*Luke 17: 32.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

OBLIGING PEOPLE.

It is as natural for some people to be accommodating and obliging in their habits as it is for others to be reserved, crabbed and selfish. It doesn't seem to make any difference into what rank or class we go, we still find the same marks of distinction and the same wide contrast in disposition.

Among the wealthier classes are to be found individuals who, when asked for a favor by one who is not so wealthy, will often grant the favor with a sneer, and pretend to be doing it as an act of charity, when it is anything else but that. Such gifts are only made because the donor is ashamed to be in possession of such wealth and not listen to the cries of the needy; not that his heart has been touched by their appeals, but because he knows public sentiment would manifest disfavor toward such a refusal.

Such a thing could hardly be called a gift, because it is really not given from any motive of charity, but rather as an advertisement of his position, reputation and wealth. You have often noticed this class of people, who are managers of stores, step from the front door and drop a penny in the box held by a poor beggar, not so much to stop the hand organ, but for two other reasons; one to let people see that he is classed among the liberal, and the other to drive the nuisance from his door.

There are many characters who are liberal with their wealth and will accommodate or oblige a neighbor or a friend, provided they can see far down at the other end of the line the returns slowly but surely coming back. The principle, in this case, becomes more a matter of investment, than the principle of "being a friend in need."

Again, the man who holds a good position in a business way, which renders it possible for him to offer positions to others, often does so wholly from a business standpoint, without the slightest regard for the accommodation of others, which ultimately is sure

to render the plan of the business so mechanical that it has lost all respect for returns upon the basis of honor. Even the most abstract business in the world, conducted upon the most mechanical business basis, should possess sufficient merit, intrinsic worth, and obligation to make the employer and employé fee that they are inextricably bound together, and that their interests are inseparably tied up. On the other extreme, some men are lavish with giving to others positions which cost them nothing, but must be backed up by a corporation. There is no obliging or accommodating sentiment expressed in this. It is purely a matter of wholesaling the interests entrusted to their care. Many a gubernatorial officer has granted a reprieve more to satisfy public opinion and heap garlands upon himself than for the compassion or justice he cared to show to the criminal. He didn't expect by the act to bring a freed man under any obligations, but rather to get rid of him entirely. Such an individual would perform some great act of this kind that would attract public attention much sooner than do some little act of kindness which common courtesy would demand.

It is so hard for some people to know that real obliging characteristics become most particularly demonstrative in the performing of the very smallest of kindnesses, and that many a time not even to the human family, but to dumb animals. That soul is most noble who can condescend to go out of his way or cheerfully put himself to trouble only to oblige a dog or a cat, without the slightest hope of ever being remunerated in any way for it, except the real genuine good that he gets out of the act itself.

Nobody enjoys taking a shopping list to town for a friend when he realizes at the time that he will be compelled to proceed from store to store and try to match ribbons, braids and laces, but the obliging woman does it nevertheless, and bears the fatigue without complaint. To oblige another when it costs nothing is merely amicable, but to oblige when the act involves a sacrifice is pure unselfishness. The obliging boy or girl cheerfully lays down the book or pencil to go on an errand; the obliging maid in the kitchen is not upset when the master of the house comes late for luncheon, requiring a meal in the middle of the afternoon. The busy man on the road to market cheerfully climbs down from his wagon and assists his neighbor who has unfortunately upset his load.

Really, unselfishness, pure, unadulterated unselfishness, is a conspicuous characteristic of obliging people.

THE RIGHT KIND.

CHARLES BLIGH, of Chicago, had an experience not long since that illustrates splendidly how great a fire can be kindled from a spark, however small, and in

spite of the fact that it is smothered with all manner of debris.

Mr. Bligh is constrained to think that the newspaper reports of murders, burglaries, holdups, gambling, counterfeiting, and every other crime on the calendar has been constantly held up before the public until the public has lost confidence in humanity, and it thinks that Chicago is as bad as Sodom of old. He tells this experience to show that there are some righteous even in that wicked city. He said: "The other night I was sitting on my back porch, about nine o'clock; it was almost time to retire. Without any warning a tall, strange man opened the gate and entered the yard. As he came toward me I saw that he was drawing something from his hip pocket, and the action sent the chills down my spine. 'You are Mr. Bligh,' said he. He gave me no time to answer, but continued rapidly, 'Three years ago I gave you a counterfeit dollar. I have become a Christian since. Please accept this dollar in its place.' He handed me a bill and disappeared in the darkness. I cannot remember having seen the man before. As I unfolded the bill a card dropped out, and on one side was printed 'What must I do to be saved? Believe on the Lord Jesus Christ.' On the other side 'What must I do to be lost? Nothing.'"

This experience of Mr Bligh does not prove that all of Chicago is wholly bad, nor is it an omen that the bad of Chicago are going to turn out suddenly good; but it does prove that the spark of good in mankind, if properly fanned, can be brought to a real flame that will diffuse light in the darkness around it. The experience also illustrates that nothing but sin is sufficiently bad that it should be cast away. It is all right to rid one's self of faults, habits and evil contingencies, but it is never right to throw one's self away or be in any way responsible directly or indirectly for throwing away some one else. It further shows that, however much Christianity is counterfeited, the right kind is still prevalent, and that this man had the debt-paying kind, and the kind that makes wrongs right and corrects mistakes that are not irretrievable.

VICTORY.

VICTORY, as the world looks at it, is something of which to be proud. Preachers, lecturers, orators and authors spend much time and talent in wreathing garlands for magnates, chiseling monuments for philanthropists and building reputations for remarkables.

The successful manager of an army, who has defeated an enemy in conflict, is almost always thought by the people to be a victor; and, when a few hundred or a thousand people tell him so, he is inclined to believe it himself; but just let them withdraw their sympathies and affections, remove the abundant sup-

port he gets from the publicity of speech and press, let him be neglected and forgotten, or purposely set at naught; if, under these circumstances your hero can smile inwardly, glorying in the insult or oversight, he is truly a victor. That is real victory.

Another individual who is generally conceded to be a victor is the genius. The man who has toiled long and hard to accomplish some scientific undertaking that he thinks will benefit the world, and by undaunted courage perseveres until he finally accomplishes it,—his name is heralded far and wide. The newspapers are glad to get even an old tintype of him when he was a boy. The latest cigars are named after him, and his name becomes a household word. There is supreme satisfaction for him as he beholds from the car window the flashing placards that bear his name. Another source of delight for him is to behold his full name in cold iron, molded on the machine which he invented, and to know that these machines are being put upon sale for the enhancement of commercial products and the general welfare of mankind.

Now let his competitor find fault with his machine; let his good be evil spoken of; let his wishes be crossed; let his advice be disregarded; let the public denounce his ideas and hold his opinions up to ridicule; if, under these circumstances, you find him to be patient, enduring it all in loving silence, he is a victor. It is not the man who has conquered the world who is a victor, but the man who has conquered self.

Duelists meet in the arena; antagonists defy each other upon the platform; combatants drive each other to the rope. "One must come off victorious," says the world. Over what have they gained the victory? Is it a victory because one man has more muscle than the other? Should he be counted victorious who has a mightier brain than his fellow-man? Should a crown of victory be placed upon the head of him upon whom fortune has smiled, or whom conditions made famous?

Alexander the Great conquered the world and sat down to cry because there were no other worlds to conquer, and yet he had neglected the opportunity of conquering his appetite, and filled a drunkard's grave at the age of thirty-three. General Grant conquered the South and is crowned the greater general of America, and yet committed suicide with a cigar.

Then self is the enemy which, when conquered, gives you the right to be called a real victor. When you can be content with any food, raiment, climate, society, solitude or interruption, that's victory. When you can lovingly and patiently deal with disorder, irregularity, partiality and unpunctuality, that's victory. When you don't care to refer to yourself in conversation or record your own good works, or even itch under praise, that's victory. When you truly love to be unknown, that's victory.

Current Happenings

THE worst fire that Indianapolis has known for years consumed almost one entire block, valued at \$1,500,000. No lives were lost, one fireman was seriously injured.

TEN thousand pounds of dynamite exploded in a mine near Calumet, Mich., killing three and injuring many.

THE sultan of Turkey has given permission to circulate the Christian Bible in his territory, in an expurgated version. The sultan thought that the Bible, as it reads, was unfit for Turkish women to read. One visiting the country would be impressed with the liability of lowering their morals with a piece of literature like the Bible.

THE Kansas Woman's Suffrage Bill died in the Senate.

THE Southwestern Cotton Oil Company's plant, at Oklahoma City, has been destroyed by fire. Estimated loss, \$60,000.

REV. CHAS. M. SHELDON, author of "In His Steps," believes that hundreds of churches are failures because the preachers neglect the young people.

MISS MARY HOLMES, of Boston, Mass., some ten years ago started a colored school at Monticello, Kans., and has made an endeavor to establish social equalities between the races. The antagonism of the white people of the community has discouraged her to the extent that she now has abandoned the project. These people would rather sustain their pride and risk their fortune in the hands of an ignorant enemy, than to lay down a little selfishness and egotism, and allow their weaker neighbors to be elevated to commendable citizenship.

It is estimated that in Mexico 3,450,000,000 cigarettes were smoked last year, which is about 100,000,000 more than were consumed in the United States. These factories have nearly tripled in the last ten years. Here is a little work for the Salvation Army, and Christian workers of all kinds.

POSTMASTER-GENERAL WYNNE has ordered the street cars of Des Moines to make a practical test of a letter catching device to be attached to the city street cars to enable mail to be deposited while the cars are in motion.

THE entire student body of Gettysburg college was placed under quarantine because of the discovery of smallpox in the institution.

FATHER GOPON, the leader of the revolutionists in Russia, is at present in Switzerland.

A SERIOUS famine is reported to have developed in the Diuki Islands, between Japan and Formosa. The famine is due to last year's drought. Fourteen thousand families are said to be starving to death.

ANDREW CARNEGIE has been subpoenaed to attend the trial of Mrs. Chadwick at Cleveland, Ohio, who is charged with securing money under false pretense.

MRS. KATE EDWARDS, of Pennsylvania, has received a thirty-day pardon from the death warrant issued after the trial. A great effort is being made by the citizens to secure her liberty.

A STREET car accident at Portland, Ore., resulted in one killed and ten injured. In order to extricate the injured the car had to be literally cut to pieces.

HELEN KELLER has met her rival in the person of Ella Hopkins, who is deaf, dumb and blind, and yet able to speak, hear and see through contact of her fingers. The girl's ordinary senses were lost through scarlet fever at the age of eight. She is thought by some to be able to read thought, and is quite able to know every part of the conversation by placing her fingers on the throat of the speaker. Miss Hopkins learns very rapidly, and the superintendent says that her most remarkable feats are withheld from the public for the simple reason that they would not be believed.

THIRTEEN life insurance companies in Great Britain refuse to accept risks on unvaccinated persons.

THE last rail has been laid on the road which now connects the river Senegal with the Niger in Africa.

FRANCE has a new process for reducing milk to a dry powder.

THE Leather Trust reorganization has gone into effect, backed by the Armour's.

PHILADELPHIA is getting tired of a rotten municipality. Combined forces of churches and reform organizations have created such a storm of public indignation that a renovation is about to take place. That's right, clean house.

* * *

THE Salvation Army, under Miss Evangeline Booth, has entered upon a new campaign against every form of sin. The announcement of Miss Booth assumes the form of declaration of war which has been issued to all posts of army for distribution.

* * *

THE zero weather is reported as having visited almost every State in the Union.

* * *

THE Ohio river takes on the resemblance of the Arctic Seas. Floes of ice are piled from shore to shore and for miles up and down the river. The thickness of these floes ranges from two to four feet. The people of the valley dread the results that must follow the release of the gorge.

* * *

It has been reported that Russia has made a loan of \$200,000,000 from the French government. The loan will bear interest at the rate of five per cent per annum.

* * *

AN earthquake shock was felt at Lockheart, Texas, recently. The disturbance is believed to be due to Pilot Knob, a high mountain near there, which stands on a vast prairie and which has shown volcanic characteristics during the past year.

* * *

EDWIN MARSHALL FOX, an American, has struck a valuable seam of coal under twenty-seven hundred acres of land recently purchased by him in Staffordshire, England. The vein is 725 feet below the surface of the earth, and proves to be fully five feet in thickness.

* * *

IRVIN W. S. BROOKS, pastor of the St. Stevens A. M. E. church, of Chicago, has made public announcement to the effect that he purposes adding to his church building some suitable rooms for training schools for young men and women. The young women will be taught the duties of a domestic, and the young men will be taught shoemaking, tailoring, baking, gardening, wagon-making, and brick masonry.

* * *

A LOOKING-GLASS trust has been organized in Belgium.

* * *

TWENTY-ONE and a half columns of the forthcoming Oxford English Dictionary are devoted to the specific applications of the adjective red.

ON American railroads annually 675,000,000 passengers are carried 21,500,000,000 miles.

* * *

THE tiger hunt in the central province of India during 1903 resulted in the killing of 199 tigers and 190 men.

* * *

THE Czar of Russia, with 90,000,000 acres, is the biggest landowner in the world.

* * *

A NOVEL social function signalized the completion of a great scientific work, when 500 guests of the American Museum of Natural History at New York were served with tea directly in the shadow of the sixty-seven-foot skeleton of an amphibian dinosaur, the first of its kind to be mounted complete, in what will be known as Dinosaur Hall. The wife of Mayor McClellan and several other prominent women were the hostesses, and the guests included many prominent men and women of several cities. The fossilized bones of this dinosaur were found in central Wyoming in September, 1897. It required two years to mine them, two-thirds of the skeleton being found. The other third was partly supplemented from the Como Bluff dinosaur, while the skull was modeled from a bloodless relation, the morosaurus. The restored skeleton stands sixteen feet high, and the bones are from 3,000,000 to 12,000,000 years old. Its tail is thirty-two feet long and its neck is sixteen feet.

* * *

MR. JOHN SPENCER, of Grand Junction, Colo., has achieved a wonderful success in obtaining a seedless, coreless and wormless apple. He has budded more than two thousand trees, and from this source must come the world's entire stock of this novel luxury.

* * *

THE czar of Russia has promised the people that he will create a parliament which shall be a representative body to frame the laws for the people. This means an end to the monarchical government.

* * *

SIX States have taken up the line of march designated by Kansas and are following the Standard Oil Company in hot pursuit. It is to be hoped that more conversions may be noted in the near future, and that the people may have a voice concerning the necessities of life.

* * *

KING EDWARD reconvened parliament and the Balfour government was sustained 311 to 248.

* * *

THE steamer Hudson was destroyed by fire while at the docks in New York harbor. Loss, \$30,000.

HOME DEPARTMENT

"PUSH—DON'T KNOCK."

Upon the door I saw a sign;
I cried, "A motto! And it's mine!
A wiser thing I never saw—
No Median or Persian law
Should be more rigidly enforced
Than this, from verbiage divorced—
"Push—don't knock."

'Twas simply meant to guide the hand
Of those who wished to sit or stand
Within the unassuming door
This weight of ceremony that bore.
'Twas never meant to teach or preach,
But just to place in easy reach
The ear of him who dwelt in stock—
"Push—don't knock."

But what a guide for life was that—
Strong, philosophical, and pat;
How safe a chart for you and me
While cruising o'er life's restless sea;
Push, always push, with good in view;
Don't knock—avoid the hammer crew.
This rule will save you many a shock;
"Push—don't knock."

When on that door I see that sign,
I say, "Great motto, you are mine!"
No stronger sermon ever fell
From human lips; no sage could tell
The hothead youth more nearly how
To point always his vessel's prow;
There are no wiser words in stock;
"Push—don't knock."

—Baltimore American.

A GOOD LETTER.

My dear niece:—

Well, well! Another canoe has started down the stream of life! But is it down the stream? I'd rather think it's across or up the stream, for it takes mighty pulling sometimes; but then there is the satisfaction of knowing that if it does seem up-stream we are getting nearer the Source, the Giver of Life.

You know, of course, that any old rotten boat, or log, or even a chip, will float *down* stream, but the canoe of life takes *pulling*.

Now I have referred to pulling, but that ought not to be so hard after all, for there are two of you to paddle the canoe. Your aunt Lizzie and I have an equal life partnership, and only one pocketbook. That doesn't mean though, that if I have money in my pocket she has none, but it does mean that what is earned belongs as much to one as to the other. I

make about all the income, to be sure, but she works just as hard, or even harder than I do, and does much more for the family in many ways than I can, and so I am an equal partner. We manage affairs together, and when there is a knotty question to be decided we sit down and talk it over, and so come to a plan that is satisfactory, or as near so as may be, to both of us. The way one does not blame the other for the way things go, and both know what each is to do.

But don't imagine that we never have any differences of opinion, for we do, and like most beings of the human race are perhaps too free in expressing them. But then we say them to one another and not to someone else, and so our differences do not amount to difficulties.

Love many, trust few,
And paddle together life's canoe;
In sunshine even you may get blue,
But pull together and you'll get through.

Having made for yourself the responsibilities of a house and home, do the best you can. Do each day just one day's work, according to your strength; set up a family altar; study the Word of God; and if you do your part the good Lord will do his.

Now, I have written a long letter; I quite often remark that advice is like medicine—it is not nearly so easy to *take* as it is to *give*, so I must close.

Wishing you and brother William a long, blessed, happy life, I am, as ever,

Your Uncle.

IN HIS SPARE MOMENTS.

"BEFORE I engage a young man to work for me," said a gentleman well known in the business circles of a great city, "I want to know what he does with his leisure moments." Those who study human nature know that the merchant's rule was a wise one for the men who win success are almost invariably those who make good use of their spare time. George Stephenson, the celebrated engineer, had this habit in a marked degree.

He was the son of a very poor man, who earned but twelve shillings a week, and had eight children. It may easily be thought that there was no money to spare for schooling, and at a very early age George was employed as a cowboy at sixpence a day. Later on we find him engaged with his father, his business being to fire an engine—his wages one shilling a day. But in all spare moments he might have been found

by the brook side, modeling engines out of clay. By the time he was eighteen years of age he had the care of an engine, and expressed his pleasure to his companions in the words, "I am now a made man for life."

Unfortunately, George could neither read nor write, so many avenues of knowledge were closed to him; but he determined to learn, and was not ashamed to gain the elements of knowledge in a village school. Afterward he paid fourpence per week to a Scotch schoolmaster to teach him arithmetic and other useful sciences. All this time he worked twelve hours a day, and it was only his spare moments that could be given to study.

A fellow-workman testifies that he took to figures wonderfully. He worked out his examples over night by his boiler fire, and in the morning sent his slate to the master by a boy to have the work examined and new problems set down.

He added to his income by making and mending shoes, repairing clocks, or cutting out miners' clothes. Nothing came amiss to him. At the same time he found leisure to study and model steam engines and locomotives. At length he reaped the reward of his labors, and became the famous inventor of the locomotive engine.

MASTER YOUR TRADE.

WE have heard many boys make the remark that they do not intend to follow the trade they are now working at, and then they go to work with an indifference with which they intend to emphasize their statement, says the *Lone Star*. When we hear a boy make such a statement our heart goes out in pity for him, because we realize that he is of the age in which he neither thinks nor cares seriously for what the future may bring forth. Boys, whether you will or not, you must work for a living, at some profession. Thus while learning a trade it is a duty you owe yourself to strive to learn all you can while you can. You may never in truth be called upon to follow the trade which you worked in youth, but you have a trade to fall back on should your future craft be dashed to pieces on the breakers of life's storm. Suppose you enter a profession when you reach the forks of the road where you choose; suppose in a course of time you are left with nothing but a profession, your patrimony gone, (for many such cases occur), what will you be if you have no trade to fall back on?

A common laborer will be your lot, or you must begin over again, accepting the wages of an apprentice. Unused to the former, how tired you will be at nightfall, how your bones will ache, and only for a pittance; as an apprentice your proud spirit will secretly rebel at the thought of being compelled to work for boy's wages. How different with a young man

who has learned a trade in youth! If his chosen business fails him he can still demand a decent salary as a master workman at the trade of his boyhood.

We should always urge our boys to set aim high and try to reach the highest pinnacle. At the same time we urge them to learn well the lesser duties that they may more fully understand how to do the greater.

Put forth your best efforts now, boys, to master the intricacies of the trade at which you are working.—*Immanuel Messenger*.

THE SECRET OF GETTING ON WITH CHILDREN.

BY HATTIE PRESTON RIDER.

"My *maden* sled," says little Dwight, "is better than a *boughten* one; it is stronger and goes farther."

That is the secret. Not all the purchased pleasures in the world count, after all, with real sympathetic interest in a child's pursuits. When one can get down to the plane of manufacturing a toy, or discussing a "play" elevated railroad or doll's toilet with the interest one gives to a grown-up's affairs, then the problem of keeping a child's confidence is solved. Never be too tired or too busy to listen and answer intelligently. A bother? Well, what of that, if you wish to be all God intended you should, to the little one he gave you? Neither costly gifts nor idolatrous love can take the place of that consciousness in a child's heart: "Father cares; mother will understand."

THE WAY TO LIVE.

BY J. G. FIGLEY.

IN traveling down the path of life we should do what good we can, and whate'er trials that assail us, try and bear them like a man. If gossipers should attack us and try hard to blacken our name, let them go, for their deeds will show that they are lost to shame. If our friends prove false and leave us, let us not sit down and cry; steadfast friends will still be near us—they'll be rewarded by-and-by. If the way seems dark and dreary, and we know not what to do, look to heaven and aid will come, aid to brighten the path all through. Let us live in peace with all men—if it really can be done—and not quarrel with our neighbors, with our friends, with any one. So let our lives be cheerful, useful, ever helping some struggling brother, and when Death calls us from *this* world, we'll be happy in *another*.

Bryan, Ohio.

THOSE who school others oft should school themselves.—*Shakespeare*.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

HONOR THY FATHER AND THY MOTHER.

Eph. 6:1-3.

For Sunday, March 12, 1905.

I. Obey Your Parents.

1. Fifth Commandment, Ex. 20:12
2. First Commandment with Promise, Eph. 6:2
3. Right, Eph. 6:1

II. Promises.

1. Well with Thee, Eph. 6:3
2. Long Life, Eph. 6:3

III. Parents' Duty to Children.

1. Provoke not to Wrath, Eph. 6:4
2. Bring Them Up, Eph. 6:4
3. Treat Them Right and
4. Expect Obedience of Them.

IV. No Prosperity to Disobedient.

1. Perilous Times, 2 Tim. 3:2
2. Hophni and Phinehas, 1 Sam. 2:24; 4:11
3. Absalom, 2 Sam. 18:10, 14

V. The Richest Lesson of Life—Obedience.

1 Sam. 15:22.

Text.—Children obey your parents in the Lord for this is right. Ephesians 6:1.

References.—Leviticus 19:3; Psalm 119:9; Proverbs 1:8, 9; Proverbs 3:1-3; Proverbs 4:1-4; Proverbs 6:20-23; Proverbs 23:22; Ecclesiastes 12:1; Colossians 8:20; Titus 2:6; Deuteronomy 31:12, 13; Psalm 34:11; Joel 1:3; Proverbs 8:17; Isaiah 54:13; Matthew 18:4, 5; Mark 10:16; Psalm 102:23; Acts 2:39; Proverbs 13:22; Proverbs 10:1; Proverbs 13:1; Proverbs 15:20.

“And was Subject unto Them.”

This was said of Jesus when he was a boy, he was subject unto his parents. There is no manliness in disobedience, or in trying to break away from the control of parents or teachers, though boys sometimes think that it shows their bravery and independence, but they never travel very far along that road until they find out that the way of the transgressor is hard. Jesus spent his boyhood in a deeply religious home, they taught him the commandments, what was right and what was wrong. The blessing was asked at meals. The psalms were recited together. Then the journeys of Jesus to Jerusalem year by year were a training, an education that should in some form or other come into the life of every boy. Very early our children should be taught to go to church, taught to love the services of God's house. Parents and their children should be there in their place, regularly, until the children learn that going to church is the first thing for Sunday morning, other pleasures are secondary.

The Boy You Chum With.

You have heard your grandmother say that birds of a feather will flock together, but I doubt whether any of us realize the tremendous importance of looking after the chums of our boys and girls. So many fathers here. We are busy and we give but little thought to the associations of our children until it may be the rudeness, their unkindness, or their disobedience startles us and we learn too late that they have been in bad company. Dr. Arnold, of Rugby, said, “That boy has gone a good way in the devil's service who will dare to influence another against his father and mother.” If the boy you chum with persuades you to do the things that your father and mother told you not to do or if he takes you to places they have forbidden you to enter, then it is time for you to drop him, and look for another friend, one who will be particular about obeying his parents.

Honor Your Parents.

Just a few weeks ago all the newspapers had the picture of a little old woman in a peasant's cap and dress; poor and obscure though she was, yet the world honored her because she was the mother of the President of France. Though she could never be persuaded to go to the palace to see her son, the President found time and opportunity to go to see his mother. When you listen to the counsel of your parents you are honoring them; when you succeed in life, do not forget the narrow path which leads up to the poor old home that sheltered you. Make your parents happy; lavish love and care upon them. Make them feel that they can depend upon you to the very end. They may be plain, old people, who can neither read nor write, whose hands are browned and seamed with hard work. Honor them.

Young People who Work.

I like to think of the little lad who was on hand just at the right time with the barley loaves and fishes to give them to Jesus. Children should be ready to obey, ready to work, ready to help father in a time of need. Of seventy-five leading men in a certain city, sixty-nine had come from honest, hard-working families. Poverty and difficulty had schooled them into competency. Our boys and girls will gain in moral fibre, in manliness and womanliness, if they must walk through some of the hard places of life if they have the courage and perseverance to go on no matter what discouragements must be met.

Obedience Made Easy.

How can we get the boys to like to go to church? Parents are asking this question, church-going parents. The house of God wasn't a dull place for Samuel. I do not believe that Hannah bribed him to stay here, or threatened him with punishment, if he did not remain. Samuel had something to do there. Let the boys do something, if it is only opening the church doors; make them the ushers. Have you never noticed that when we have a children's meeting, not only do the children come to church gladly, but more faults than usual come. These Christian Workers' meetings are to help you boys and girls to such an enthusiastic interest in church work that you will be the leaders and workers of our future church.

The Curse.

Upon the children who disobey Christian parents, and bring shame and disgrace into loving homes, a light, a disappointment, a curse will rest. Thousands of books might be filled with stories of the wasted lives of such boys and girls,—sad stories, we will read at none of them here.

Topics for Discussion.

1. What does Solomon say on this subject? Prov. 20; 8: 32, 33; 23: 22.
2. Is poverty a hindrance in the development of a child? Lam. 3: 27; 2 Tim. 2: 22; Prov. 22: 6.
3. What does God promise to obedient children? Prov. 8: 32; 13: 22; Psalm 103: 17, 18.
4. What has been said of children who are a cause of sorrow? Deut. 27: 16; Prov. 20: 20.
5. Young people should be happy. Eccl. 11: 9, 10; Isaiah 65: 23.

**EMPLOYMENT BUREAU.**

Brother Norman Flora, of Overbrook, Kansas, talks of reorganizing a Circle in the Appanoose congregation. Sister Martha Leckrone, of North Manchester, Indiana, wants circulars in order to distribute them in the Eel River church; we do hope that both of these will succeed in their endeavor.

Sister Nellie Shaffer, our secretary at Hooversville, Pennsylvania, sends us two new names, and informs that four of their number are ready for certificates.

The largest number of names sent in at one time was received from Brother Boyd Zuck, of Lanark, Illinois. He says, "We have organized a Circle here and are having very interesting meetings. We meet every two weeks at the different homes. The book we are studying at present is 'Effective Workers in Needy

Fields,' we like it very much. The number who formerly belonged to the Circle, with the twenty-four I send you, and the promise of some others, brings our number up to nearly forty. Maude Newcomer is our president."

Sister Euphemia S. Grafton, of Winamac, Indiana, says, "I keep thinking about the Circle, although I am not now very close to one of our churches. I cannot attend any of our meetings here. But I have always read our programs in the Visitor. I have read six books and I want to send for another one soon, my heart and soul is with you in your task, may the Circle do a great work and grow in members."

Sister Martha E. Lear, of Cerrogordo, Illinois, says, "Our Circle had a very interesting program on New Year's day. At the close we had resolutions. Upon being asked how many would like to consecrate themselves to mission work, five young people got up. This is very encouraging to us, it shows the influence these books are having. I send you three more new names."

We would like to send out more new circulars. And we would like to receive more new names for the Circle. How long is it since you asked any one to join the Circle? Look around you, and you will find some who are anxious to join. Remember this means a larger number who are willing to do what they can to send the Gospel to the uttermost parts of the earth.

**NEW NAMES.**

- 2676. Boyd Zuck, Lanark, Illinois.
- 2677. B. K. Mathias, Lanark, Illinois.
- 2678. Ethel Zuck, Lanark, Illinois.
- 2679. Hope Newcomer, Lanark, Illinois.
- 2680. S. I. Newcomer, Lanark, Illinois.
- 2681. Eva Force, Lanark, Illinois.
- 2682. Ada Wilson, Lanark, Illinois.
- 2683. Daisy Filer, Lanark, Illinois.
- 2684. Bessie V. Stitzel, Lanark, Illinois.
- 2685. H. W. Mathias, Lanark, Illinois.
- 2686. Virgie I. Royer, Lanark, Illinois.
- 2687. Lottie Boyle, Lanark, Illinois.
- 2688. Etta A. Eckerle, Lanark, Illinois.
- 2689. Amy Trout, Lanark, Illinois.
- 2690. Bessie Eckman, Lanark, Illinois.
- 2691. Edna Newcomer, Lanark, Illinois.
- 2692. Lulu Eckman, Lanark, Illinois.
- 2693. W. W. Zuck, Lanark, Illinois.
- 2694. Neva Coffman, Lanark, Illinois.
- 2695. Elder I. B. Trout, Lanark, Illinois.
- 2696. Sadie Miller, Lanark, Illinois.
- 2697. Ella B. Price, Lanark, Illinois.
- 2698. Vinna Dierdorff, Lanark, Illinois.
- 2699. D. D. Stitzel, Lanark, Illinois.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XVIII.

Edinburgh, Scotland.

Dear Mr. Maxwell:—Our expectations were fully met. We had heard Miss Merritt talk so much about Edinburgh in school, and you remember she had Elsie to write an essay on it once and we thought we would nearly know Edinburgh when we came to it. And sure enough our previous study of the place aided very materially when it came to really being in the city. After a hasty arrangement of a campaign of the city, it was unanimously decided by a vote of the party that out of loyalty to Sir Walter Scott, we should visit his monument first.

We found the Scott monument to be a beautiful structure about two hundred feet high, situated near the center of the beautiful Princess street gardens. The garden is more than ordinary so far as beauty is concerned. The floral artists have done their best on the place. The boulevards are wide and the plots of green grass are long and narrow, bordered with flowers set in rows instead of beds. A heavy border is often furnished by the use of small evergreens. We climbed to the top of the monument by winding stairs to find that we had not climbed half far enough to overlook the soldiers' barracks which are located upon a mountain of solid rock opposite Princess street gardens. In the top of the monument and all the way down the sides, on the interior, we could see quotations from Walter Scott which had been carved or written by the hand of some ardent admirer.

While viewing the city from the top of the monument we got a splendid snapshot of the magnificent passenger depot. Roscoe and Oscar could not get done talking about the depot. They think that the United States has the best railroad systems in the world, but when it comes to the depot question we lack a great deal of being up to the mark. The capacity and comfortable quarters of the oriental depot put ours to shame. In fact, the real nice, convenient depots in the United States can be counted without using many fingers. The depot at Edinburgh is a monster. There is an individual train shed for each train that arrives and departs from the station. The numbers on the end of the train shed correspond with the numbers on the train. People who know who they are, and where they want to go, can make no mistake and get the wrong train. The accommodations for the convenience and the comfort of the passengers are almost unsurpassed. The trains carry first, second and third-class passengers, according to the price the passenger is willing to pay and the accommodations with which he will be satisfied.

At this distance above the city we also were able to see the beautiful terraces and floral decorations over the entire garden. One is almost carried away into dreamland, and methinks one could not live here long without imbibing with more or less of poetic sentiment, because of the inspiration of the place. Before we leave the monument we copy the epitaph:

"Hope still cheers us while we mourn;
Fame strews laurels o'er his urn;
See yon structure cleave the sky;
Dream not genius e'er can die."

The National Art Museum at Edinburgh is full of Scotch art. The national aquarium gallery is a piece of Grecian architecture more than one hundred years old and is in a state of good repair. It is something more than wonderful to note the state of preservation of the ancient oriental buildings. They are monuments of the fact that labor unions with their high prices and scab work were unknown when these buildings were erected. Near the center of the city is what is called Parliament Square. This square is surrounded by a fine lot of parliament buildings. Near the center of this open square is a simple flat stone, surrounded by nothing and protected by nothing, bearing the two words,

JOHN KNOX.

This simple reminder carried our minds back over the pages of history into the ages that were darker than ours. We thought of John Knox at the university of Glasgow. We saw him as the student of law at Haddington. We remembered him as a private tutor to the Douglases. We talked of him as the humble, unassuming disciple of the venerable Lutheran minister, George Wisehart. We think of him as he follows his master, Mr. Wisehart, to the stake where he was burnt for heresy in 1546.

John Knox and a number of his pupils took refuge from the oppression in the castle of St. Andrews; it was while he was here that he was elected to the ministry. The French took the city and Knox imprisoned; in 1561 he was released and went to England. He preached at Berwick and then at New Castle. He became one of six royal chaplains at New Castle and afterwards assisted in the revision of a prayerbook of Edward VI. When Queen Mary ascended the throne, Knox fled to France and afterward visited Calvin at Geneva, Switzerland. For awhile he was pastor of an English congregation at Frankfurt-on-the-Main, but was soon forced to return to Geneva. Some years later he returned to Scotland, spending his time in preaching and writing. He wrote several books, the most important of which was the History of Reformation of religion in Scotland. We have often been thankful that Miss Merritt took so much care while teaching us biography, geography and history for it now comes very convenient to us.

None of us were satisfied until we had climbed the solid rock upon which stands the grand Castle of Edinburgh, which dates from 1300 A. D., and was held and used as a fort long before the conquest by the Romans. As far back as 854 Simon Durham speaks of Edinburgh being of some importance. Surely the rugged scenery in and around the city of Edinburgh is the result of a mighty volcanic upheaval somewhere along the mountains of the past. The castle is about four hundred feet above the level of the street, and is inaccessible except by winding stairs on one side. St. Margaret's chapel and Queen Mary's room, as they are known to-day, are probably all that existed before 1573. Above the portcullis

(Continued on page 216.)

The Q. & A. Department.

Please tell how to tan hides and how to soften them to sew.

First cut off the useless parts and soften the skin by soaking in warm water. Then take away the fatty part from the inside, and soak the skin in tepid water for two hours. Mix equal parts of borax, saltpeter and Glauber's salts (sulphate of soda), about one-ounce of each for a skin, with water to make a paste. Spread over the inside of the skin with a brush; double the skin together with the skin side inward, and let it stand in a cool place for twenty-four hours. Wash the skin clean and apply the following mixture in the same manner as before: One ounce of sal soda, one-third of an ounce of borax, two ounces hard white soap, melted slowly together without being allowed to boil. Fold again and put in a warm place for twenty-four hours. Next dissolve three ounces alum, seven ounces salt, one and half ounces saleratus in sufficient hot rain water to saturate the skin. Soak the skin in this for twelve hours. The water must be cool enough not to scald the hands; wring out the skin and hang up to dry, repeat this soaking and drying several times to make the skin soft. Smooth the inside with sandpaper and pumice stone.

What is the name of each officer of the President's cabinet, and what office does each fill?

Secretary of State, John Hay, of Ohio; Secretary of Treasury, Leslie M. Shaw, of Iowa; Secretary of War, William H. Taft, of Ohio; Attorney-General, William H. Moody, of Massachusetts; Postmaster-General, Robert J. Wynne, of Pennsylvania; Secretary of Navy, Paul Morton, of Illinois; Secretary of Interior, Ethan N. Hitchcock, of Missouri; Secretary of Agriculture, James Wilson, of Iowa; Secretary of Commerce and Labor, Victor B. Metcalf, of California.

Who is the author of the poem in which occurs the sentence, "Though lost to sight to memory dear"?

Ruthven Jenkens is said to be the author. The poem was first published in the "Greenwich Magazine for Marines" about 1702. It contains two stanzas and the poem is given in Reddall's "Fact, Fancy and Fable."

In case a gentleman writes a lady, asking privilege to correspond, or make a call, is she justified in refusing to acknowledge the receipt of the letter?

No; if it is a decent letter, common courtesy would demand an answer, either favorable or unfavorable.

How did the "monkey wrench" obtain that name?

This question had been answered in the INGLENOOK some time ago, but for the benefit of some of the present Nookers we publish it again. The very useful tool called the "monkey wrench" was first invented by Charles Monchy. The name "monkey" is a corruption of the name Monchy, which is the proper name. Mr. Monchy sold his patent for \$2,000 and built a two-story brick house in Williamsburgh, N. Y. in Brooklyn, where he now lives at an advanced age.

When the return address is placed on an envelope should "Mr." be used, for example—should it read "John Brown" or "Mr." John Brown?

It is not at all necessary; omit it to avoid ambiguity.

Of what is chamois skin made, or is there an animal by that name?

There is a species of antelope in the Pyrenees Mountains called the Chamois.

Are there butter factories in Elgin, Ill., or is it just a business name, "Elgin Butter"?

Yes, there is a butter factory in Elgin; it is also a business name.

What is good to prevent dandruff and falling hair?

Some use listerine, some Danderine, and a great many use just salt water.

How best dry inside of damp boots?

Fill them with hot oats. The heat creates steam and the oats absorb the steam.

How does Dr. Fowler's "Human Science" compare with similar works?

Very favorably.

What is the name of the Duke of Marlborough?

Charles Richard John Spencer Churchill.

Who was the most instrumental in driving the canteen out of the army?

The Women's Christian Temperance Union.

What is the origin of the expression, "Tit for tat"?

It is said to be from the Dutch "Dit vor dat" (This for that).

MISCELLANEOUS

THE GEOGRAPHY CLASS.—Chapter XVIII.

(Continued from page 214.)

the old prison where Marquis Argyle was imprisoned in a dungeon and executed.

We visited Queen Mary's room, where James VI. was born and where the Queen, by her conduct, caused the world to frown upon her. Above is the throne room where the old Scottish crowns and sabers are still intact, and may be seen encased in glass.

On old chapel remains about twenty by twenty, which is called St. Margaret's chapel, and dates 1070, which still contains a bowl for the holy water. The soldiers' barracks at this place is a scene of life and activity. A regiment of young Scottish highlanders are stationed here, and are a picture of beauty when on dress parade in their uniforms of white coats, short skirts, bare legs, red socks, and white shoes. The boys said that, while these were awfully nice to look upon in dress parade, they would make easy targets on the battlefield. In one room of the barracks we were shown a carload of ancient armors, sabres, guns and cannons, among which was a gun-carriage which carried the remains of H. M. Queen Victoria from Osborne to the Isle of Wight, Feb. 1, 1901.

One of the queerest things we saw while in Edinburgh was a dog cemetery. Among the many names inscribed on the tombstones were such familiar ones as Flora, Pat, Jess, Chips, Topsy, Manuf, Pet, etc. We also saw a very old "Slogan o' the Highlanders," made in 1486; it was taken in the siege of Monroe castle in 1497. It was large enough that a person could crawl through the muzzle.

Reluctantly we left scenic Edinburgh for Liverpool. To the left we have the Cheviot Mountains, where the Duke of Beachleigh has forty miles of land literally covered with the Cheviot sheep, which are the very picture of beauty with their smooth faces and fleecy coats in their own—their native land. To the right we saw evidences of many coal mines and limekilns. The boys were told that some of these coal mines were nine hundred feet deep. Gertrude almost went into ecstasy as we saw farm after farm literally covered with Belgian hares. There must have been millions of them. Indeed there are so many things to write about I hardly know where to stop. We expect to write to you from England next week.

Respectfully,

Marie.

(To be continued.)

ANDREW CARNEGIE has been asked to assist in the building of a new hotel in Pittsburg, but the iron king draws the liquor line so tightly that he absolutely refuses to have anything to do with any enterprise which would bring him in the remotest connection with the liquor traffic.

* * *

O SOLITUDE! where are thy charms?—*Cowper.*

EPITAPHS IN THE CEMETERY OF FAILURE.

He had no reserve.

He lacked stamina.

He couldn't decide.

He was *almost* a success.

He clung to his prejudices.

He was strangled by selfishness.

He failed to digest his education.

He did everything "just for now."

He lacked the fire that kindles power.

He was a clerk who hated the yardstick.

He never learned to let go of the rubbish.

He was crushed by an avalanche of details.

He became side-tracked by salary and comfort.

He was not a man before he became a lawyer.

He ruined his own judgment by not trusting it.

He could not put grit in the place of education.

He couldn't see the man at the other end of a bargain.

He was too much wrapped up in himself to appreciate others.—*Selected.*

THE TWELVE MISTAKES OF LIFE.

AN English paper gives a list of what it terms "the twelve mistakes of life."

While there are undoubtedly other mistakes than those mentioned the list is a fairly comprehensive one. It is a great mistake to set up our own standard of right and wrong and judge people accordingly; to expect uniformity of opinion in this world; to look for experience and judgment in youth; to look for perfection in our own actions; to worry ourselves with what cannot be remedied; not to yield in immaterial matters; not to alleviate all that needs alleviation so far as lies in our power; not to consider everything impossible that we cannot perform; to believe only what our infinite minds can grasp; to expect to be able to understand everything. And the last and the greatest mistake of all is to live for time alone, with no thought for the future, when any moment may launch us into eternity.

* * *

Lives of great men all inform us
That, when we are safely dead,
Liars large, immense, enormous,
Will write things we never said.

—Stoddard

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are old to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

How it has Grown In One Year!

All records for quick and substantial growth have been broken by **The Southwest Limited**, the electric-lighted train between Chicago and Kansas City via the

Chicago, Milwaukee & St. Paul Railway.

A year ago it made its initial run between Chicago and Kansas City. To-day The Southwest Limited is no baby. It ranks *first* among the trains between these two great cities of the west. It is the preferred train of discriminating travelers.

Inspection of The Southwest Limited will show the reasons for this marvelous growth. Electric lighted throughout, equipped with compartment-observation sleepers, standard sleepers, dining cars, chair cars and coaches, it is without an equal in excellence of equipment and service. The Chicago, Milwaukee & St. Paul Railway *owns and operates all the cars* on The Southwest Limited.

Leaves Union Passenger Station, Chicago, 6 p. m. Arrives Kansas City—Grand Avenue, 8.41 a. m.; and Union Station, 9 a. m.

To Our

Inglenookers

We thank the thousands of our old subscribers who have so promptly renewed their subscription for another year. We also greet with joy the many hundreds of new ones who have recently been placed on our list

Just a Few

Of our friends for some reason have not yet sent us their renewal. We presume it has simply been an oversight that you have not sent us your subscription. We are quite sure you do not want to miss a copy of the NOOK, and for this reason we have continued the paper to your address for several weeks, awaiting your renewal. Please send your renewal at once, so you will not miss a copy, as the delinquents will be removed from the list in the near future. If it is impossible for you to renew at this time, please inform us, giving full particulars.

We promise for you the coming year even better things than we have had in the past and you cannot afford to be without the influence of the NOOK in your home.

TESTIMONIALS

The INGLENOOK is well worth the price and an excellent paper for the American home. Every family in the Union should have it.—*D. W. Thomas, Homeworth, Ohio.*

THE INGLENOOK is newsy and well adapted to the class of readers for which it is published. Our young people especially should read it. The old can learn many good lesson from it.—*W. R. Deeter.*

To Editor INGLENOOK:

Your valuable Magazine comes regularly to our table. And it is not only a cheap magazine, but it is

a valuable one for both old and young but especially for the young. I trust you will have a wide circulation for your paper.—*S. M. Goughnour, Ankeny, Iowa.*

Dear Editor of the INGLENOOK:—So far as I have seen the magazine is moving well along the line of its original design. A study of its contents adds ballast to steady the youth over the high tide of life. Parents make no mistake in subscribing for it for their children. It is more than a substitute for the trashy, immoral, slang journals of the day.—*L. W. Teeter, Hagerstown, Ind.*

EXPECT TO BE RUNNING THROUGH TRAINS BETWEEN CHICAGO AND LOS ANGELES VIA SALT LAKE CITY EARLY NEXT SPRING.

ONE-WAY COLONIST'S RATES

To Pacific Coast Every Day, March 1 to May 15.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River, 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

LOST

When a man is out in the wilderness and finds himself embarrassed and "lost," he should not get excited and commence to run in every direction, but calmly sit down and try to regain his bearings.

So with the one who, for the first time in his life, gets sick; let him use a little common sense, and not take everybody's advice and swallow every vendor's medicines. He should bear in mind that in all diseases, nature herself endeavors to bring about a cure and all that medicine can do is to assist nature.

Then let him ask himself which medicine is the most trustworthy. It is right here where the average person finds himself "lost," and it is not to be wondered at when one considers the number of so-called "medicines" that are to be had—at all manner of price and on almost any terms.

There is the "medicine" that is offered free (?) to any one who will swallow it. A proper question to consider here would be—"Is the manufacturer of these 'free medicines' really and truly a philanthropist as the advertisement would indicate?"

If you were contemplating buying a barrel of flour and you were confronted with several brands, would you expect to be given a bag of the flour *free* in order to test it? Of course you wouldn't. Why not? Because flour that is worth anything is a staple article and is not given away.

The first thing to do in taking up a bottle or package of medicine is to look for the name of the maker, rather than the name of the article. Then ask yourself if you have enough confidence in that maker to loan him one hundred dollars without other security than his word—if not, why should you trust him with your health or life, even if the article is believed to be harmless?

Why should you fritter away valuable moments testing something to you unknown and which possibly is still an experiment, when you can get DR. PETER'S BLOOD VITALIZER, a remedy which has been in constant use for over one hundred years and which holds an unbroken record of success in the treatment of the sick,—a remedy which never fails to do good? It is prepared by one who is conscientiously engaged in his work, one who is professionally and financially responsible and who, at his time of life, cannot afford to follow questionable business methods.

Dr. Peter's Blood Vitalizer

is standard and graded A1. It is not given away because it is composed of valuable ingredients, but is supplied to sick people at a moderate price. An ounce of gold costs more than an ounce of silver. As gold is to silver, so is this old time-tried remedy as compared with the cheaper(?) medicines on the market. The best is always the cheapest.

Are You a

Milton and Umatilla
County, Oregon

A Thriving Land of Health
and Plenty.

Finest Grain Growing and Fruit Producing Section of the Pacific Northwest!

No Blizzards, Cyclones, Hailstorms, or Droughts.—Ample Opportunities for Homeseekers and Investors.

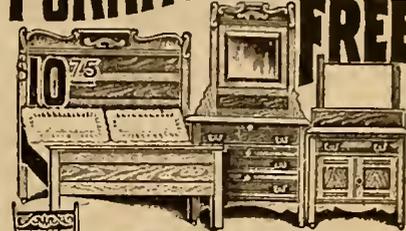

The Milton Land Co., of Milton, Oregon, have issued a pamphlet, for the benefit of the tide of homeseekers, from the Eastern and Middle States who contemplate settling on the Pacific Coast. In it is contained such information as is usually desired by those searching for investments or for new homes. Nothing but facts is presented, and these in the simplest manner possible, and as briefly as compatible with making the writer's meaning clear to his readers. This new pamphlet will be sent to anyone who wishes information in regard to this country, by addressing a letter with a two-cent postage stamp to the Milton Land Co., Milton, Oregon.

The proprietors of the Milton Land Co. have traveled over a good portion of Oregon and Washington, and have not found anything as yet to compare with Umatilla county, Oregon, in production and climate, the North Yakima country not excepted. Address:

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime.

ACHING HEARTS.

BY MARTHA SHEPARD LIPPINCOTT.

Oh! when will man e'er understand,
And feel another's woes,
And learn to give sweet sympathy,
Where bitter anguish flows:
And not unjustly to condemn
And fill the heart with care,
Until the soul misunderstood,
Deems life is so unfair.

How many hearts will ache each day,
For lack of sympathy,
Until the overburdened soul,
From life, longs to be free.
Would we more kindly words e'er speak
And criticise much less,
How many souls we would uplift,
And others' lives oft bless.

Moorestown, N. J., Box 3.

SEED-THOUGHTS FOR THE HEART'S GARDEN.

BY JOSEPHINE HANNA.

War is a game of men which rulers play.

Do not sow bitterweed and expect to reap love.

"Many men of many minds" affect not facts and figures.

*In vain does religion put its best foot foremost,—
it is judged by the other one.*

*Earth's cup is not deep enough to hold satisfaction,
yet some will drink from no other.*

*If a sectarian preference were taken from our religion,
how much Christian love would be left?*

*The genuine coin gives the true ring, no matter
which side it comes down upon: an applicable truth!*

*He who would build high, should lay a broad
foundation.*

*The man who is satisfied with himself is terribly
disappointed in other people.*

*"I am lowly," said Humility, "and I often stoop;
but I never stoop to that which is low."*

*Some people build homes on love, and at the first
test of their strength proceed to tear out the founda-
tion.*

*Thoughts are tendrils which fasten themselves to
that upon which the mind rests, and hold character
to its level.*

*Do not say offensive things in the name of candor
and frankness, unless you wish good qualities to re-
veal you in a bad light.*

*We may hide our character from others behind
artful actions and smooth words, but, before God, we
must recognize ourselves in our cherished thoughts.*

*Satan is a tailor, and can so well fit men with ex-
cuses that they are likely to forget they are Satan's
excuses and that they "who hold the truth in unright-
eousness," "are without excuse."*

*Don't keep pulling the other way. Get in harmony
with the spirit of the concern you are with and carry
out its plans according to established methods. When
you can improve on these methods, suggest a means to
do so, but if your suggestions are not appreciated,
fall in line and help materialize the plans of others.*

*Some people excuse themselves for not doing one
good thing because of the importance or necessity
of another good thing: e. g., foreign and home mis-
sions; others excuse themselves for wrong-doing be-
cause of the sins of those behind whom they wish to
hide: e. g., the non-Christian and hypocrite. Twin
spirits, these, at work in different fields!*

THE GREATEST CANAL IN THE WORLD.—Part 1.

BY D. L. MILLER.

THE other day at a Cairo hotel I picked up a copy of the *Egyptian Gazette*, an English newspaper published at Alexandria, and read with interest the fol-

ty-seven in number. Before passing through the great waterway Russia was seventy-five thousand dollars the poorer and the stockholder that much the richer. The fleet lay at anchor all the night and in the early morning silently steamed southward through the canal on their way to meet the Little Brown men of the Pacific in deadly conflict, and without doubt some of these

GENERAL VIEW OF PORT SAID.

lowing item of news: "On the 12th and 13th inst." November, 1904, "twenty-eight vessels passed through the Suez Canal. Of these seventeen were British, two German, one Austrian, two French, four Dutch, one Spanish and one Egyptian. The transit and passenger dues for the two days amounted to one hundred and fifty thousand, three hundred and seventeen dol-

lars and ninety-two cents. The total amount of tolls collected for tonnage and passengers from the first to the thirteenth of the month is eight hundred and twenty-five thousand, one hundred and seventy-three dollars and ninety cents."

lars and ninety-two cents. The total amount of tolls collected for tonnage and passengers from the first to the thirteenth of the month is eight hundred and twenty-five thousand, one hundred and seventy-three dollars and ninety cents." engines of war will find anchorage at the bottom of the Eastern sea when they meet and try conclusions with the Japanese fleet awaiting their coming. The interesting item in the Egyptian newspaper and the passing of the Russian fleet were of absorbing interest to me, and I concluded that an illustrated sketch of the Suez Canal would not be without interest to

ENTRANCE TO SUEZ CANAL AT PORT SAID, DE LESSEPS MONUMENT.

our readers, especially since we are to have a canal all our own uniting the waters of the Atlantic and the Pacific Oceans. It is believed by many of the friends and promoters that the Panama Canal when it is completed will be fully as profitable an investment as the Egyptian waterway has become.

That the ancients united the waters of the Mediterranean and Red Seas with a canal is a question settled beyond all doubt. It was of sufficient magnitude to

our readers, especially since we are to have a canal all our own uniting the waters of the Atlantic and the Pacific Oceans. It is believed by many of the friends and promoters that the Panama Canal when it is completed will be fully as profitable an investment as the Egyptian waterway has become.

That the ancients united the waters of the Mediterranean and Red Seas with a canal is a question settled beyond all doubt. It was of sufficient magnitude to

accommodate the largest vessels afloat at that time. To whom the honor for its construction is to be given, is a matter of some doubt. Herodotus assigns it to Pharaoh Necho, who reigned B. C. 600. Aristotle and Pliny ascribe the honor to Sesostris, while others would credit its completion to Alexander the Great and his immediate successors. It is more than likely that a number of these rulers had something to do in digging the canal that indirectly connected the waters of the two seas. In that age of the world the modern steam dredging machine was unknown, and the sand was no doubt carried out on the heads of slaves taken in war. The old canal was ninety-two miles in length, sixty miles of which were cut by human labor. The rest was formed by the eastern branch of the Nile and by a remarkable series of depressions in the land into which the water flowed when the necessary cuttings were made. It was about one hundred and fifty feet wide, and had a depth of from fifteen to twenty feet. Pliny says that it was thirty feet deep, referring no doubt to some of the natural depressions. At that time no vessel was built drawing so many feet of water, and it is unlikely that a depth of over fifteen feet was maintained in the cuttings.

How long or to what extent the canal was used in ancient times is unknown. The fact that it was choked up with sand and thus rendered impassable shows that it was not regarded as of great value commercially at that time. Early in the second century it was restored by Trajan the Roman Emperor. Evidently its importance did not appeal to ship-masters in those days, for again the drifting sands of the desert choked up the waterway, and so it remained until after the conquest of Egypt by the Moslems, when it was reopened and restored by the Arabian general Amrou under the reign of Caliph Omar. The conqueror named it "The Canal of the Prince of the Faithful." It was used for a century or more, when the unconquerable sand of the desert asserted its sway over the work of man and the canal of the ancients was blocked up, and so it remains unto this day.

When Bonaparte invaded Egypt at the beginning of the last century he had in mind the great benefit the world might receive from a ship canal across the isthmus of Suez, and ordered his engineers to make a careful survey with a view of determining the most feasible route for the canal and also to ascertain the difference in the sea levels, if such difference existed. In the report made of the survey the Frenchmen said that the level of the Mediterranean is thirty feet below that of the Red Sea and that because of this the cutting of a waterway in a direct line across the isthmus was entirely impracticable, an opinion which subsequent developments proved to be entirely erroneous.

From the beginning of the nineteenth century until 1847 various plans were drawn and many suggestions

made looking towards the digging of the canal. The French were especially active in this line of work, but nothing definite was reached until England, France and Austria sent out, in 1847, a joint commission for the purpose of making an exhaustive survey and measuring accurately the levels of the two seas. Robert Stephenson, the great English engineer, was a member of the commission, and it was ascertained that the two seas have exactly the same level; the only noticeable difference being that the tide rises about five feet higher at one end than at the other. In 1853 another survey verified that of the commission.

But Mr. Stephenson reported against the proposed canal and expressed himself very strongly, to the Eng-

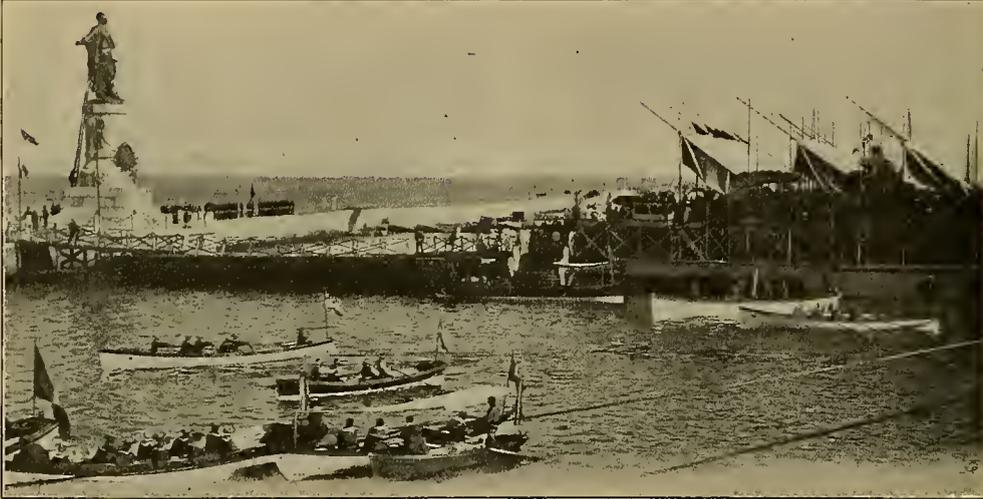

DE LESSEPS MONUMENT.

lish government, against the feasibility of cutting a waterway of such dimensions as to meet the requirements of modern commerce. He suggested instead that a railway be constructed, from Cairo to Suez. The suggestion was accepted by his home government, and the railway was opened for traffic in 1858. Thus one of the great engineers of his time missed the opportunity of having his name indissolubly connected with the work, and left it to a Frenchman to receive the honor of engineering and cutting the great canal across the desert waste of the Isthmus of Suez. Today the statue of M. De Lesseps stands at the entrance of the canal where that of Stephenson might have stood if he but possessed the foresight of the great Frenchman.

While these surveys were being made there was a young man connected with the French diplomatic service in Egypt who had made a careful investigation of the proposed canal. He was a man of marked ability and of untiring energy. He had faith in the canal and believed it to be entirely feasible. Instead of

mated that the Nile empties into the sea each year thirty million cubic yards of silt and sand. A channel five miles in length was carried out into the Mediterranean to make a safe approach for shipping. These harbors were the colossal features of the Frenchman's plan. In addition to the channel a harbor

UNVEILING THE STATUE OF DE LESSEPS.

following an oblique course, and uniting his canal with the Nile, as the ancients had done, and as all modern engineers had thought of doing, he proposed to cut a canal on a nearly straight line across the isthmus, one hundred miles in length, three hundred and

was an absolute necessity, and this involved the expenditure of an immense sum of money. In the execution of the plan it was necessary to build out into the sea a mile and a quarter two immense walls, strong enough to resist the action of the great waves

THE QUAY ON THE CANAL, PORT SAID.

twenty-eight feet wide and twenty-six and a half feet deep at low water mark.

The plan proposed by M. De Lesseps involved the making of two artificial harbors, one at Port Said on the Mediterranean and the other at Suez on the Red Sea. At Port Said the Mediterranean is shallow and the place is without a natural harbor. It is esti-

of the sea in time of storm. These immense structures of masonry are nearly three-quarters of a mile apart at the shore, but gradually approach each other until they are but twenty-four hundred feet apart. It would require ten million cubic yards of stone for the walls, and as these had to be brought a great distance the difficulty was all the greater. This was in part

overcome by using artificial stone manufactured on the spot. These were made by using two parts of sand to one of Portland cement. These were thoroughly mixed into a mortar and then thrown into moulds made of boards. When dried the moulds were removed and the stones were ready to place in the wall. Each block contains ten cubic meters and weighs twenty tons. They were made at the contract price of forty-two francs per cubic meter. Within the outer harbor is an inner port eight hundred and seventy by five hundred feet which is kept at a uniform depth of thirty feet by steam dredging.

(TO BE CONTINUED.)

A FORGOTTEN NATION.

THE long-forgotten nation of the Queen of Sheba is in arms again after a sleep of more than a thousand years. Saba, the capital of Yemen, in Southwest Arabia, where a Turkish garrison is now besieged, is said by the best authorities to be the Sheba from which the beautiful Queen came to view the wisdom and the riches of Solomon. For many centuries the Turks have wielded the power in Sheba or Yemen, but they have been unable to stamp out the national life, and now the whole country is in arms, attempting to drive out its oppressors.

Yemen was a great nation in its day and had a great commerce. Its colonies were founded in Africa, and the present Empire of Abyssinia is said to be a remnant of one of them. Even as late as the days of the Roman Empire, Yemen was powerful enough to drive back the legions of the Roman General Gallus, who attempted its conquest.

The present province of Yemen occupies the southwestern corner of Arabia, but if the Yemenites are successful in driving the Turks out of the capital of Sheba, or Saba, they intend to continue the war until they have carried their conquest to the confines of the old kingdom. It is even said that the Yemenites are commanded by a descendant of the old Kings who reigned in Sheba after the death of Solomon's admirer. The country is a hard one to fight over, being interspersed with mountains and deserts, and all the uneasy tribes of Arabia are watching the conquest, ready to throw in their lot with the winning side.

What these tribes amount to in numbers is not definitely known, for no census taker makes his rounds in the Arabian deserts. The force already engaged in active operations against the Turks must be considerable, as they appear to have control of all the province with the exception of the capital, which they hope to take before the arrival of the army which Turkey has dispatched for the rescue of the garrison.

The old kingdom of Yemen comprised the lower or southern half of the Arabian peninsula. There were

raised the finest horses in the world, and there in the dim light of the dawn of history was the home of literature, science and the mechanical arts—in fact, Yemen was the birthplace and home of that Arabian culture and scientific attainment of which so much has been written and the effects of which are still traceable in modern civilization. The country under various names is several times mentioned in the Old Testament, and Sargon, writing 715 B. C., tells of the tribute "of Shamsi, Queen of Sheba, gold and fragrant spices, horses and camels." But Sheba's most enduring fame comes from its beautiful Queen, who paid the celebrated visit to King Solomon, and from whom the Emperor of Abyssinia as well as the pretender of the desert claims descent.

It would be one of the romances of modern history if the twentieth century should see another Queen of Sheba on the lookout for a modern Solomon.

TATTOOING AMONG CHRISTIANS.

IN the "vanity" section of a museum at Florence there is an interesting collection of blocks used for what is called "religious tattooing" among Italian peasants of the district inclosed between the Abruzzi, Umbria and the Adriatic.

Peasants in these parts, at work with sleeves rolled up, display a Christian symbol of some sort, or a text, tattooed in blue ink on their brown skins. This has been imprinted on the occasion of some special festival.

A wooden block is pressed upon the tightly drawn skin to mark the outlines of the design. This is then punctured, and a blue ink is rubbed into the wounds, which usually heal in about twenty-four hours. The custom, which is essentially Christian, is in commemoration of the branding of St. Francis, who founded a monastery close to Loretto.

THE PERFECT FIGURE.

THE height of a person with a perfect figure should be exactly equal to the distance between the tips of the middle fingers on either hand when the arms are fully extended. Ten times the length of the hand or seven and a half times the length of the foot, or five times the diameter of the chest from one arm pit to the other should give the height of the whole body. The distance from the junction of the thighs to the ground should be exactly the same as from that point to the crown of the head. The knee should be exactly midway between the first-named point and the ground at the heel. The distance from the elbow to the tip of the middle finger should be the same as from the elbow to the middle line of the breast. From the top of the head to the level of the chin should be the same as from the level of the chin to that of the armpits from the heel to toe.

HOW I OBTAINED OUR SCHOOL LIBRARY.

BY MAUD HAWKINS.

WE now decided that, as everything was done to perfection and we could not be idle, having acquired the habit of thrift in our previous exertions, we ought to have a library for our school. But that would take money, and as that was a very scarce article with us, it sounded like a great undertaking for us, but where there's a will there's a way, and we made a beginning by appropriating one of our two spacious bookcases for our library. One of the boys, who had learned to draw the alphabet fairly well,

Printed in Bold Letters

across the door "School Library." But this was a deception at that time, for when we opened the door we were like Mother Hubbard in the nursery rhyme, for alas, the cupboard was bare. However, we were determined to have something in there, so we went to our County Superintendent and procured all the books which he had for distribution, such as Smull's Hand Book, school reports and sample copies of text-books. In fact, anything to be *given* away was gladly received by us. Then we asked each family to contribute any book they could or would spare from their home library. This was responded to quite liberally, several families sending in books. Some of them were not very appropriate or useful in a school library, but all were cheerfully accepted in the spirit in which they were given.

The children were also requested to bring any newspaper clippings on

Science, Art, Literature

or philosophy that would be educational. The result was, that we were flooded with valuable information on a great many subjects, with which the papers and magazines of to-day abound. We had some very interesting stories and anecdotes of many of the great men, which were classified and put into scrap books. For these we used the well-bound agricultural reports which can be had for the asking. We received several of these by writing to the Secretary of Agriculture, Washington, D. C.

One was kept for reference and the others were used for scraps. This was a twofold benefit (for besides the aim of filling the scrapbook it incited an interest, not only in reading the papers in general, but in selecting the best there is in them. We also made a book of poems and selections appropriate for speaking which was very useful. We then wrote to our *state* Agricultural Department and received their report and also a large number of bulletins on all subjects pertaining to

Agriculture and Nature Study.

We also asked for their monthly Division of Zo-

ölogy which was received each month also the Quarterly of Zoölogy. You ask why we sent for these. First, because they cost us nothing; but mainly because they contain a vast amount of valuable information which cannot readily be obtained in any other way. This is especially true of nature study work.

These bulletins were eagerly read by quite a number of the pupils. We next sent to our State College for their leaflets on Nature Study, which are also free. And several of the larger boys and girls were induced to take a correspondence course from that school, which is good and is at the same time free.

We also wrote to Washington for the farmers' bulletins of which upwards of two hundred are sent out. These are very valuable, as they give correct ideas and views in the raising of plants, and of the

Life and Habits of Many Insects.

For example, the silk worm is described in all its stages of life; the growth of the cotton boll is fully explained in another. Hence their value in school work, now that nature and agriculture are coming to the front and pushing their way into the public schools.

It happened that year that the school board were putting a new series of books into the school. We selected the best preserved one of each kind of the discarded books for our library. They were very convenient occasionally for reference.

And when the new books came we dedicated one of each kind to the use of the library. We then sent a postal to the Smithsonian Institution at Washington and received their large book on insects, profusely illustrated, with full directions for collecting and preserving insects.

We next formed a Band of Mercy, and wrote to George T. Angell, 119 Milk Street, Boston, stating the fact and received some free literature from him, which was neatly put together and bound by us in one large book, the girls drawing a suitable design on the covers. We also received the "Dumb Animals," the society's publication for one year free of charge.

We then wrote to the Unitarian Temperance Society, 25 Bacon Street, Boston, Mass., and received a bunch of free literature which is very good.

We formed a

Nature Study Club,

and received the Cornell University lessons, by subscribing for "Pets and Animals," which cost us twenty-five cents per year. This we procured through each of the pupils contributing one cent. We also had a literary branch to our band and club, but did not do much with that for some time, except practice; for none of the pupils were very capable of coming before an audience, for they, as yet, have never had any experience in speaking in public.

When we organized the Band of Mercy we request-

ed that each pupil should bring a penny as initiation fee. We elected the regular officers, the teacher declining any office except that of counsellor and supervisor over all. The fees amounted to thirty cents, with which we *bought* our first book, a copy of *Black Beauty*. We now began to write essays, and they were crude affairs, indeed. I had the members make little booklets of their own for each essay, and now as they could draw, the covers were embellished with many curious, and *some* quite artistic designs. Finally they were persuaded to write a letter for "Pets and Animals." Several tried and their efforts were rejected. But what rejoicing when one letter was published with the name of the author underneath. After that, I was fairly stormed with productions from large and small, for I was their mediator and advisor. I must confess that some never went any farther than the wastebasket. But a good many were sent and occasionally one was printed. Some ventured to write for "Dumb Animals," our band paper and other papers were written for by the older pupils. If they were or were not printed, the writing of them was a good discipline, and was the foundation for

Something Better in the Future.

We could now write quite intelligently, and a few of the older pupils wrote to the county papers, of which there were four, offering to write up the news of the community each week, if the paper could be sent to the school. This three of the papers gladly agreed to do, and sent stamps and supplies.

Nothing was ever allowed to be written which partook of slang. No slurs were tolerated. Occasionally some one received a good word of praise for any extra effort or deed of bravery. Everyone was free to write on any topic. It was all put into a small crayon box prepared for a mail box. The writer could sign his name or not, for it was all carefully inspected by the teacher and mistakes corrected, contributions that were not suitable were consigned to the wastebasket or returned to the writer.

Now that we had so many papers, we needed a reading table. A carpenter consented to make us one for fifty cents, this being unpainted and unvarnished, we covered it with oil cloth of a marble design costing eighteen cents, which was raised by a penny collection.

As we were situated near the place where the county fair was held, we made extra efforts to prepare an exhibit. Special care was taken with the copy-books, essays, drawings, maps, specimens of writing and examination papers, to have them gotten up neatly and well executed.

We Received \$2.50

in premiums, which made a happy day for us. With the money we bought "Beautiful Joe," at thirty cents; "Strike at Shane's," for thirty cents; and a book of

selections published by Geo. T. Angell of Boston at six cents to Bands of Mercy. We subscribed for "Youth's Companion" which was one dollar and seventy-five cents, and the remaining nine cents paid the postage account in our large correspondence.

The children frequently brought papers and magazines from their homes after they had been read. We were now receiving regularly, three county papers, "Dumb Animals," "Pets and Animals," "Division of Zoölogy," "Zoölogy Quarterly," "Youth's Companion," eight periodicals in all, besides a great many extra copies of different papers. Each was carefully read by all, and then neatly bound (by ourselves) and a suitable design drawn on each cover, and the book filed away for future reference. The reading table was always surrounded during noon hour and rest periods.

During study hours some would hasten with their lessons in order to have the privilege of sitting at the table and reading the books and papers, which were never allowed to be taken from the table. When the directors began to see that we appreciated all they would do for us, and took good care of the school property, they were not so reluctant to furnish what was needed.

"Well, What about your Library?"

you will say. "I don't think you have many books yet." No, but we have,—let us count them: Ten contributed by parents; eight by County Superintendent; five from Washington; four from our State capitol; three scrapbooks; four purchased by the school; costing a total of ninety-six cents (the only amount paid for books as yet together with twenty-one out-of-date text-books, and twenty-three new ones; making a total of seventy-eight books. You know Rome was not built in a day, and we are just laying a foundation.

The pupils were not accustomed to sing either in their homes or at school, and when I proposed it there was an unusual smile on the faces of all, (unnoticed by the teacher of course). The next morning we had an easy, pleasant, short song written on the board, that all might see the words plainly. We commenced, at least *I* did, for at first I could not get any to respond to my entreaties to sing. Finally some ventured to hum, and before long I could hardly restrain their desire to shout. Each one was eager to reach the end of the stanza first. No idea of harmony or tune whatever. I was fearful lest a man should chance to pass with a saw, and should stop, thinking it the place to have it filed. But after much patience we soon could sing fairly well, I began then to give a few minutes drill in the rudiments of reading music. This is a foundation for another Rome.

Christmas Drawing Near,

we proposed that the Band of Mercy, Nature Study

Club, and Literary Society, should join and have a Christmas tree and exercises. Our scrapbooks were very convenient now, for many a good selection was learned from them. Others were taken from the magazines; some from the "Normal Instructor" and "Teachers' Gazette," which I was taking at that time. The pupils could draw so nicely now that they thought they could venture to make programs for the entertainment and decorate them. We took sheets of drawing paper and cut to uniform size, taking three sheets or leaves for each program. On the first page or outside was written the word "Program" with green ink or colored pencil (we used both). An appropriate design was then drawn underneath, such as a branch of holly, with a suitable motto pertaining to the festive season on each. A little snow scene was put on some by our experts. Each one tried to have his program excel all others. This program was written on the remaining pages with green ink. On the last outside page was the word Christmas and the year. The leaves were then tied together with green or pink baby ribbon, a small bow being tied in the upper left hand corner. We procured some plain white cards on which was written an invitation to each patron of the school. They read: "The teacher and pupils of

Green Valley School

request the pleasure of your attendance at Christmas-tree exercises at the school building, Thursday evening, December 24, 1904."

The exercises consisted of songs, recitations, dialogues and select readings, and were pronounced very good. The next day when the pupils assembled to put the schoolroom in order, the boys fastened the tree up in the school-yard for a Christmas tree for the birds. Ever after when there was a surplus of lunch in the rusty pails, or any crust or scrap left, they were tied to the tree for our feathered friends, and long before spring the tree looked like a veritable beggar with the many strings of all kinds hanging from its branches. But when the robin and his friends came back the strings were very useful to help build their little homes.

After the excitement of the tree had subsided we began to plan again. What should it be? A social to procure books. This we arranged and raised \$4.56 with which to procure nine new books. We now had what books and papers we could read during the remainder of the year, therefore we turned our attention to something else. A new *organ* soon stood not far from the desk. We had one more social and found ourselves in possession of five dollars which was given in part payment for our twenty-five dollar organ, with privilege of a year to pay the balance. Next we planned an entertainment by home talent, a play or drama. We charged ten cents admission. There were seventy-five present, that meant seven dollars

and fifty cents for us. Twelve dollars and seventy-five cents were now paid. The school closed about this time and the teacher went away on her vacation, with many a promise that there would be ice-cream, peach, strawberry and numerous other kinds of socials during her absence.

When she returned she was handed ten dollars and seventy-five cents as the result of their efforts. There now lacked one dollar and seventy-five cents, which was easily raised by a Hallowe'en party, with a surplus of three dollars which was spent for more books. We were now

Out of Debt and Happy

and we hope never to be in debt again.

An organ, schoolroom repaired and neatly decorated, and a good supply of books, which were added to each year. Whenever the young people became restless, and expressed a desire for some amusement, we would get up a play or social gathering of some kind for the benefit of the library.

We continued to take the periodicals named, and from time to time more were added, each copy being always preserved. The rural free delivery now passed the school and the boys were eager to place a box for our mail. They were allowed to do so, and every mail brought us a good sized bundle of letters, papers, etc. Some of the patrons living on cross roads were also benefited as their mail was placed in our box.

Towanda, Pa.

TELEGRAPHING THE TIME.

It is three minutes to nine o'clock at night. The official in charge of a great observatory, the Goodsell Observatory, Northfield, Minn., is preparing to send out the time to the people living in his section of America. For sixty seconds he rattles away on a telegraph instrument at his desk, spelling out the word "time, time, time;" then he waits an instant. Then he turns to his telegraph key again. Eleven thousand miles of wire are open to him; he is ruler of them all. Every telegraph instrument in all that vast territory of which the Goodsell Observatory is the center is silent; every operator has taken his hand from his key; throughout the whole length of these thousands of miles there is a strange silence.

The seconds are slowly ticking away. Above the head of the observer there is a great observatory clock. At precisely two minutes to nine, after the telegraphers all along the miles of wire have been notified and have withdrawn their hands from the keys, the wires are switched into a connection with the very clock itself, and all along the eleven thousand miles there is no sound but the tick, tick, tick of the observatory clock. Every beat of the great arteries of commerce is stopped; every throb of the news of all lands going

out night by night over these wires from the great heart of the world ceases; even the sad messages of death and suffering, as well as the gay ones that tell of little babies born and young folks married and reunions of friends promised—all these must wait while the great clock on the wall makes itself understood in the language of time and eternity over these many thousands of miles.

Something strangely solemn is in one's thoughts as he stands beside the observer amid the silent seconds while the clock ticks on. Whoever is listening at the wire along its course, waiting to set his watch, whether he be a railroad employee or some man in a large jeweler's establishment where the people go to get their timepieces regulated, knows the system, and knows that there is a sudden pause just before the exact stroke of nine o'clock—a broken beat in the ticking. Then all carefully note their timepieces as the clock in the observatory ticks the nine o'clock second. Thus they can tell to the second whether their watches are fast slow or precisely right.

Attached to the clock is a simple device—a wheel with teeth in it—located behind the second hand, which breaks the current at each even second. Thus the clock is ticking the time over the whole stretch of wire covering the thousands of miles of territory in the field of this particular observatory.—*St. Nicholas*.

VENEZUELA'S RESOURCES.

VENEZUELA is the fourth largest republic in South America, and ought easily to rank next to Brazil and Argentina, both in population and importance. Yet we find that Peru, Colombia, and Chile exceed her in population, and Chile and Uruguay in trade. Venezuela stands sixth in population and fifth in trade, with Peru a close rival, and this notwithstanding her favorable position at the north of the continent, the accessibility of the interior through the lake of Maracaibo, and the magnificent river system of the Orinoco.

Comparing Venezuela with our own country, we find that it is equal to all our Atlantic and Gulf States combined, without Texas, for which we may substitute Wisconsin. And, while only a third of the vast territory is supposed to be capable of cultivation, this would make a farm nearly five times the size of Ohio. Yet the population, including nearly a hundred thousand savages, is considerably less than that of Massachusetts.

In climate and resources, Venezuela is peculiarly favored. Owing to the altitude of her mountain valleys, there is a large temperate area, principally given up to coffee and sugar cultivation, but producing as well a great variety of fruits and vegetables, maize, yams, beans, and peas, mostly for local consumption. On the lowland slopes and along the coasts and rivers are

found the famous cacao estates. Tobacco also is grown in this region, and every kind of tropical fruit. Here, too, are to be found such natural forest products as caouba, caoutchouc, the tonca bean, and vanilla.

Of the wealth and extent of the forest no estimate can be made. At the World's Columbian Exposition (I have not been able to get the particulars of her exhibit at St. Louis), Venezuela displayed no less than one hundred and sixty-five kinds of wood, most of which are, as yet, unknown to commerce. Twenty of these were dye and tanning woods, and more than half were reported to be "serviceable for construction, as they are hard, close-grained, and almost imperishable." Yet the annual export of timber from all Venezuelan ports would hardly make one respectable cargo, and is no more than a few days' output from the average Michigan sawmill.—*From "The Industrial and Commercial outlook in Venezuela," by G. M. L. Brown, in the American Monthly Review of Reviews.*

GEORGE WASHINGTON'S CRADLE.

FOR a number of years Joseph I. Keefer, a member of the Oldest Inhabitant association of this city, says he has been trying to locate the old-fashioned cradle in which Gen. Washington was rocked to sleep by his venerable black "aunty" nurse in the good old days of long ago, before he was old enough to hack away at the famous cherry tree with his little hatchet. After his long search Mr. Keefer, according to the *Washington Star*, says he at last had the pleasure of locating the revered relic and he has issued a little pamphlet, in which he tells of his find.

"The cradle is made of mahogany," he says, "and stands upon long spindle legs about the height of an ordinary bedstead. It is a very antique affair and must have been an expensive cradle, for in those days the family was rich and prosperous and the young heir of Augustine Washington, and Mary Ball was well provided for in his babyhood approach. Gen. Washington was very much attached to this one piece of furniture and had it carefully saved at Mt. Vernon. Park Custis, his adopted son, tells us the general often showed it to his friends and relatives and they usually enjoyed a hearty laugh at the amusing picture which he gave them as he described its use and history. After Gen. Washington died the cradle was handed down in the family and it is now in the old Lyles house near Georgetown, Maryland.

"THE world pays a salary for what you know, wages for what you do."

"NOTHING is so strong as gentleness; nothing so gentle as real strength."

A DAY ON THE DESERT OF ARIZONA.

BY WALTER SWIHART.

WE reached the well at dusk. A couple of our men found the keeper and procured enough water for the night. Our camp was soon arranged and supper hastily eaten. We spread our blankets upon the ground and were soon in the embrace of sleep.

At the earliest peep of twilight we began to stir, for we had more than thirty miles to make across the desert. While breakfast was preparing and other things arranged, two of the men went to the well to draw a supply of water for the day. The wagon, as all wagons in that country, had two barrels attached, one on either side of the bed, besides we had a half-dozen canteens; all must be filled. The well was about a hundred and fifty feet deep. The water was raised by a rope with a half-barrel bucket. The rope passed over a pulley and then around a drum which was turned by a long sweep. The sweep had a sort of yoke which was slipped over a horse's head, when water was to be drawn. The horse was then driven around to the right or left adversely as the bucket ascended or descended. The benevolent-hearted man who had, at great expense, blasted his way down through the hard rock, charged twenty-five cents for a barrel full and five cents for a canteen full of water. One of our company (we will call him guide), had crossed the desert at that place several times, and from his best judgment we expected to find no water until we reached a well approaching the river at the other extremity of our trip, so we filled every available vessel.

By sunrise we were ready to start. It was the middle of August. At that season the thermometer ranges from 100 to 120 degrees in the shade. So, following a short pleasant morning, with characteristic desert objects, such as cactus, thorns, greasewood and sage brush we passed into the hot, monotonous waste. The dismal trail wound about slowly but had a general trend toward a gap in the blue chain we could see quite distinctly in the west. To the south were the Great White Tanks; to the north much more pretentious ranges gave food for sight and thought. Our journey at times lay across level wastes, then undulating swells, then low ridges of polished flints.

After a time the sun began to pour his merciless rays upon our heads. The dry air made the need of drink very pressing, so much so that the supply was being consumed much too rapidly.

Our guide had in mind a place to reach by noon. The place, he said, sometimes afforded water. It proved to be a tortuous piece of erosion which, skirted by a few mesquite trees, was here and there scooped out into basins by the very infrequent mountain fresh-

ets. After spying along its course awhile the party decided there was no water to be found. A few of us, however, pushed on down the arroya a short distance farther and under a projecting rock we spied a small basin containing water. We shouted to the party. When they came we made a test of it. There proved to be only a few gallons and that was both foul and full of wigglers. We considered the matter awhile, concluding that as the water supply had gone down so alarmingly quick it would be policy to fill all the empty vessels with the wiggling conglomeration.

In the afternoon we passed through a small flat where the prickly pear was very plentiful. The fruit was a beautiful crimson with ripeness. By means of small sticks the fruit was easily plucked off the stalks, and we were able to gather a few quarts.

By the middle of the afternoon the good water was exhausted and we found it necessary to use sparingly of the desert water. Our guide now told us of a tank where we might find more, but it lay a mile or two out of our course. A tank in that country means simply a natural basin of such shape and size that a dam can be thrown across its outlet so as not to be washed out by the freshets; thus they make a reservoir called a tank. The tank had been built by a man at which to water his cattle when he was moving them from the one valley across to the other. We found it, but O, such a sight! It had a mantle of beautiful green. We dipped up some to examine it. It was an emerald translucent mass. After a trial by one or two it was pronounced undrinkable. This put another matter in mind, we must at all hazards reach the well. The heat was excessive, the horses already tired and by best calculations ten or twelve miles to go, over rough and often untenable roads.

The miles were growing more wearisome, and long before the half of this last part of the journey was performed there began to show among the mountain peaks a few miles to the north a thick black cloud. Muffled thunders began also to sound and out and around the pinnacles of rocks the great red tongue of flame began at times to dart fiercely. The clouds soon hid all the peaks and seemed tumbling into the valley. It was not long before we realized that we were to be overtaken possibly by a desert cloudburst. However, we hastened. Soon the clouds hid the sun and almost without warning the rain began to fall.

"The tent! The tent!" The wagon and carriage were hastily drawn together; the tent-pole hoisted; the ropes anchored to the vehicles. Into this we huddled while the rain beat heavily about. It lasted a couple hours. Before it ceased night settled down with such a heavy blackness that to move forward was an impossibility. Some one suggested that we might find water on the desert, but the thirsty sands had

taken up every drop. The guide said he could see the light at the tank station on the railroad. He knew he could get water there but that was perhaps three miles away. He offered to go across but the darkness was so impenetrable that the others thought the danger of such an undertaking too great and it was given up. Then without drink and without supper we were compelled to pass the night. We could not sleep outside, so we crowded ourselves together any way and in any posture the available space would permit.

As soon as we could discern objects the horses were made ready; camp broke, and we set out hungry and thirsty for the well. The air was pleasant and all the speed possible was made for the place. The morning was gone, and gone an hour before we with our minds riveted upon the cooling draught, came to the well. Alack! It had caved in.

We hastened on to the river. The way led among cliffs and bluffs of the broken hills. At last we emerged in full view of the river. And it—it already felt the influence of the mountain freshet and was a rolling mud of thin consistency. An eastern hog-wallow would look just as inviting. We dug holes in the sand near the water-edge and allowed it to filter in. That gave us a supply, though warm and muddy.

When the horses were watered and fed the others of the men went back a short distance where wild bees were seen working in the cleft of a rock, while I collected sticks for the cooking. By the time breakfast was ready the men returned, but reported the bees too deep in the rocks. So without supper, without breakfast and without honey we ate our ten-o'clock meal with a relish little realized by persons unaccustomed to a western appetite made doubly keen.

Churubusco, Ind.

ODDITIES IN LAKES.

ONE of the most singular lakes in the world is the celebrated pitch lake of the Island of Trinidad. This lake spreads over an area of ninety-three acres and its surface is composed of one great mass of floating asphaltum, seamed with veins of clear water. From it and a similar lake in Venezuela the world's supply of asphalt is drawn.

The pitch lake is a vile place, as far as smells are concerned, for the air all about it is heavy with noxious vapors, and from the center of the lake gushes a fountain of liquid asphaltum, in which there float and break bubbles containing most horrible gases.

The workmen go out on the surface of this lake and cut great slabs of asphaltum, which are carried away. But the next morning the hole they left is filled up again with a pitch which has risen during the night, so that the supply seems to be inexhaustible.

This curious lake was discovered by Sir Walter Raleigh when he landed at Trinidad in 1595 on his

way to the mouth of the Orinoco in search of El Dorado.

Another strange lake is situated on a peninsula which juts out into the Caspian Sea. The whole surface of this lake is covered with a soft crust of salt so thick and strong that a man can ride across it on horseback without any danger of breaking through.

THE DEVOUT WELSH.

IN hymns for devotional hours, the fervent Welsh poets have produced many that breathe the purest and highest spiritual longings of the human heart. Their lovely valleys, and the traditions of centuries of fightings and oppressions, but above all, the ardor of Welsh devotion, have inspired many of the most expressive and beautiful of hymns. A century and a half ago there lived the poet preacher, Rev. William Williams, who is said to have ridden ninety-five thousand miles on horseback during his forty years of ministry. His journeys took him over lonely mountain paths and through unfrequented woodlands, and through the dark Welsh valleys when the times were rude with highwaymen. As he was never molested, it was but natural that he should reflect on the providences and tender mercies of God. He became the Watts of Wales, and wrote that hymn that is now the heirloom of the Christian church,—

“Guide me, O thou great Jehovah,
Pilgrim through this barren land;
I am weak, but thou art mighty;
Hold me with thy powerful hand.”

The translation of the Bible into Welsh by Bishop Morgan in the sixteenth century, says Prof. William Sharp, marks an epoch in the life of the Welsh people and their literature. Therewith the history of the people begins.—*Selected.*

A NEW METAL.

PARTICULARS are out concerning the new metal discovered by the Tuscan engineers Travaglini and Fabiani. The discoverers have given the new metal the name radium argentiferum. The metal is composed of copper, iron and infinitesimal portions of silver, radium and phosphorus. The chief secret, it is said, lies in the phosphorus. It is claimed by the patentees that radium argentiferum is stronger than steel, does not oxidize, is a better conductor than copper and can be manufactured in large quantities at one-tenth the cost of bronze. Therefore they expect that it will be largely used in making cannon, munitions, etc., and that it will supersede copper in electric wires.

“LISTEN well; answer cautiously; decide promptly.”

HOW JIMMIE MASTERED THE "TABLES."

"JIMMY! Jimmy! Hi, there! Jim-my Smi-i-th!"

The small boy who was just entering the barn turned on the threshold and looked down the road to see another small boy of about his own age running toward him full speed, his bare feet raising the dust in little clouds that settled again on the white and yellow ragweed which bordered either side of the narrow wagon road.

"What you want?" he called, and started to meet the newcomer.

"Want you to go a-fishin'," was the breathless answer. "They're bitin'—oh, just like everything, down to the creek. Can't you go?"

"I'll go ask grandmother," said Jimmy eagerly. "I guess I can."

Back to the house he ran in hot haste. Grandmother was in the kitchen, and as soon as he caught sight of her knitting in the window he shouted:

"Oh, grandmother, may I go fishing with Charlie Brown? The fish are biting like everything, he says. Please, grandmother, let me go."

Now if Grandmother Smith had been like some grandmothers she would have said: "Why, yes, dear; run along and have a good time, only be careful and not fall in the water." But she wasn't like some grandmothers. She could repeat whole books of the Bible and was as good a Greek scholar as grandfather Smith, who was a minister. And there wasn't an event in the history of England or America, from the battle of Hastings down to the last presidential campaign, that she couldn't tell the date of and all the whys and wherefores. And as for mathematics—oh, dear! It was just because she knew all the possible combinations of 1, 2, 3, 4, 5, 6, 7, 8, 9, 0, that she insisted that Jimmy should learn the multiplication tables, forwards, backwards and hop-skip-and-jump—which made Jimmy wish sometimes that she was just kind, loving and indulgent like other grandmothers, and not so remarkably and uncomfortably clever.

Grandmother Smith's black eyes looked over her steel-bowed glasses at Jimmy's request.

"Have you learned your tables?" she asked severely.

"I—I guess I've got 'em," answered Jimmy cheerfully, though he was quaking for fear she would ask him to repeat them.

"No guess-work for me!" said grandmother. "Seven times seven are how many?"

"F-forty-seven," answered Jimmy.

"Humph!" said grandmother, and began knitting again. Then she spoke once more, her steel needles clicking a little tune about her words. Said she:

"Now, Jimmy, you've been three weeks learning those tables and you haven't got them yet. I'm

ashamed of you. No more playing for you until you have learned them, and no fishing, either."

If Grandmother Smith had been like most other grandmothers Jimmy might have thought he could gain his point by teasing, but as she wasn't, he turned and went slowly out to Charlie with a very doleful face.

He did want to go so much! The day was warm and cloudy and the wind "just right." Of course the fish were biting. Oh, those hateful tables! If it weren't for them he could go, and maybe catch a fish big enough to cook.

"Go in spite of them," said a voice. "Pitch in and learn them, and then you can go."

Could he? Could he? He stopped short in the path and did some rapid thinking. Then he shouted to the boy waiting at the gate:

"You go dig the bait, Charlie. Under the apple tree back of the barn is the best place. I'll be ready as soon as I get something done."

Dashing back to the kitchen, he seized the neglected book from the mantel and ran upstairs two steps at a time, while grandmother's thin lips parted in a kind of grimly approving smile. And while Charlie unearthed the wriggling worms from the mellow loam, Jimmy, flat on his stomach in the garret, his chin resting in the palm of one hand, was wrestling with the sevens and nines—the two tables that were the hardest for him to remember.

Only a little over half an hour had passed when he came down stairs as fast as he had gone up, and thrust the open arithmetic into grandmother's hands, saying:

"Now, grandmother, try me."

The old lady shut the book with a little sniff. She didn't need an open arithmetic to hear a boy's tables! Not she!

"Seven times seven?" said she.

"Forty-nine," answered Jimmy, without a moment's hesitation.

"Nine times nine?"

"Eighty-one."

Then forwards, backwards, and hop-skip-and-jump everywhere they went, and Jimmy stood the severe test without a mistake. At last grandmother stopped the trial and said:

"Well, it seems as though you have really learned those tables. Do you think you will remember them until to-morrow?"

"Yes, ma'am," answered Jimmy, standing on one foot with impatience as he saw Charlie coming from the barn. "May I go now?"

"You may go," was the reply. And Jimmy was out of the house in a twinkling.

As the two boys trudged off through the fields toward the creek Charlie asked:

"What'd you have to do?"

"Learn the multiplication tables," answered Jimmy.

"What!" Charlie stopped in surprise. "The whole of 'em?"

"Yes," was the reply. "That is, I had to fasten 'em all, 'specially the sevens and nines. I've been learning 'em for three weeks."

"And yet you really learned 'em in half an hour!" said Charlie. "Well, you are a goose!"

"I don't believe you could learn 'em in half an hour," said Jimmy, much offended.

"'Tain't that," Charlie said, with a shake of the head. "But what in the world have you been fussing along for three weeks for, when you could get 'em by a half hour's hard digging? That's why you're a goose."

"Oh!" said Jimmy. And in his heart he thought that Charlie was entirely right.

This is a true story, and now, when "Jimmy" wants to teach his own little boy the foolishness of dreading and dawdling over a disagreeable task, he tells him the story of how he mastered the "tables."—*Ira Reed Smith, Whitchall, Mich.*

CHARLES WARREN FAIRBANKS.

THE power of the senior United States Senator from Indiana, and now Vice President of the United States, to keep others from finding out what he is pleased to keep a secret, is a characteristic that is quite as irritating to the curious as it is unique.

"Who Senator Fairbanks is, and what he is, may be gathered from an appreciative article by E. I. Lewis in *Leslie's*, from which we learn that in the latter half of 1852, and in the year or two following, a plain countrywoman, the wife of a farmer and wagon maker of little worldly store, rocked a queer-looking cradle in a little log cabin back in the woods of Union county, Ohio. It was one of those modest little cabins, such as those in which were builded the sturdy characters of Lincoln, Grant, and Garfield. The cradle was a queer-looking contrivance—a sugar trough skilfully mounted on home-made rockers.

"The parents were poor, and the boy was put to work early. First it was the chores that he was delegated to do, then he gave assistance in the harvest fields, and was later advanced to work behind the plow, and to serving as an assistant to his father in wagon making. The parents were God-fearing Methodists, who, having endowed their son with massive physical frame and force, sought early to make him mentally and morally sound. The district school and the circuit church were the facilities at hand, and though the term of school was less than five months, and the preacher came at irregular intervals, these facilities, supplementing wholesome home training,

were effective in laying the foundation of sterling character and a strong, moral backbone.

"Young Fairbanks, by farm work and wagon making, had saved forty-one dollars by the time he reached the age of fifteen years. With it and one suit of clothes he traveled to Delaware, Ohio, where he entered Ohio Wesleyan University. The necessity of closely guarding his forty-one dollars led to a rooming and 'batching' alliance with another ambitious young man. Their culinary education was limited to the preparation of baked potatoes, mush, bread, and batter cakes. On this—mainly batter cakes—they lived. He turned to account his knowledge of carpentry by working on Saturdays for a local contractor for one dollar and twenty-five cents a day. His employer was a colored man, and all his coworkers were colored.

"A few weeks after young Fairbanks arrived at college, he fell and split his only trousers beyond immediate repair. It was necessary for him to borrow a pair from a fellow student, and the loan had to be continued because he was denied credit for a new pair at the stores in the town. He had to send home for his mother to make him another pair.

"Working in college during the college years and in harvest fields in vacation, he was graduated from the college and its law course at twenty, and went to Pittsburg, where he began reading law while supporting himself by serving the Associated Press. Later he entered a law school at Cleveland, supporting himself in the same manner. At twenty-two he was admitted to the Supreme Court of Ohio, and later he went to Indianapolis. There he rose steadily until he became one of the best railroad lawyers in the country.

"It was Fairbanks who succeeded Daniel W. Voorhees, 'the tall Sycamore of the Wabash,' in the Senate in 1897. Since that time he has been one of the conspicuous members of Congress. He was recognized as one of President McKinley's closest friends and ablest advisers. He has the reputation of being a millionaire. As a matter of fact he does not come in that classification. Among those who do not know him he has the reputation of being cold. His nature is the opposite. To friends he is a true friend. To enemies he is not treacherous.

"The Senator is of massive but well-proportioned stature, standing over six feet. He is a forcible speaker, but can not be said to be a popular one with the masses, his addresses being far too solid. There are few men who can so clearly define issues, and so ably defend or explain them."—*Instructor.*

"Do you know that it is not so much a task to get the Bible to the people as it is to get the people to the Bible?"

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

THE DEVIL'S WATCH CHAIN.

It may be that a great many of our readers had never thought of the devil having a watch chain, but he evidently has; not a watch chain in the sense that it is fastened to a watch or has any connection whatever with a timepiece; but the chain that he has is nevertheless used as a watch and a guard and therefore we call it a watch chain. In Rev. 20: 1, 2, we find mention of this chain and what it is used for. It is our purpose in this editorial to take a look at some of the links of which the chain is composed.

This chain has been in existence for a long time, for we find that a man by the name of Ezekiel, who lived five hundred years before Christ, talks about it in his prophecy (Ezek. 7: 23), where he says, "Make a chain: for the land is full of bloody crimes, and the city is full of violence." Now let us do the very thing he has asked us to do—proceed to make the chain.

Granting that he has a fastening for his chain we will first notice that intemperance is a crime against the body, the law, and God.

First Link.

The description of this first link is found in Hab. 2: 15, which reads, "Woe unto him that giveth his neighbor drink, and putteth thy bottle to him, and maketh him drunken also, that thou mayest look on their nakedness!" This is the saloon-keeper without any question or far-fetched arguments, and it is to be believed that if the saloon-keeper really knew that he was the first link in the devil's watch chain it would cause him to do some sober thinking, and every time he sold a bottle of the deadly stuff he would get a glimpse of that watch chain. Welded securely to this first link, the saloon-keeper, is the

Second Link

which is described in Isa. 5: 22, which reads, "Woe unto them that are mighty to drink wine, and men

of strength to mingle strong drink." This, without any conjecture, is the drunkard, for who is it that grows to be mighty in the drinking of wine and in the mixing of strong drink, except the miserable sot who is the possessor of an insatiable appetite, caused by strong drink.

Notice that a "woe" is pronounced upon the saloon-keeper for selling the stuff and a similar one upon the drunkard for drinking it. These two parties are the ones which are generally blamed for all the crime produced by the liquor traffic, but another party, in common with them, is the

Third Link

who finds his epitaph in Isa. 10: 1, 2, which reads, "Woe unto them that decree unrighteous decrees, and that write grievousness which they have prescribed; to turn aside the needy from judgment, and to take away the right from the poor of my people, that widows may be their prey, and that they may rob the fatherless!"

It is easy to be seen in this scripture that the law-makers of our land are deeply involved in the liquor traffic and the charges clearly stated which forever place the sentence upon their heads. It does not take a philosopher to see that whiskey will turn the needy from judgment, oppress the poor, rob the widows and take the fathers away from thousands of children. So the heaviest woe of the three rests upon the law-maker, for if he did not license the saloon the keeper could not sell liquor nor the drunkard consume it. But behind this contemptible murderer stands his associate and ally, the

Fourth Link

whom we will point out as the free American citizen, who, by his own dearly-bought ballot places said legislator in his position and asks him to place a price upon the souls of men and their bodies as well as that of their families, and to turn the money into the treasury, as is found in Hab. 2: 12, which reads, "Woe to him that buildeth a town with blood, and establisheth a city by iniquity!" Many a man is ready to jump upon Judas Iscariot with both feet because he sold his Master, and upon the Jews as well, but even they had the conscience to refuse the money and not place it in the treasury; but the citizens of our country take the price of the blood of husbands, widows, and orphans and with it build the streets of our cities and educate our children.

After all, the most surprise is occasioned when we find the

Fifth Link

to be the Christian; that is, at least the church member. In order that we might see him in his true light, read Ex. 21: 28, 29, which reads, "If an ox gore a man or a woman that they die: then the ox shall be surely stoned and his flesh shall not be eaten; but the owner

of the ox shall be quit. But if the ox were wont to push with his horn in time past, and it hath been testified to his owner and he hath not kept him in, but that he hath killed a man or a woman; the ox shall be stoned and his owner also shall be put to death." In this case the Christian knows that the ox of the liquor traffic has been hooking people for the last century, and he is perfectly willing to continue to let him hook. Preachers are afraid to preach against it; citizens are ashamed to vote against it; business men are afraid of hurting their business, and so the woe remains that the poor Christian has lost his life because of it. Here is your chain of five links; was Ezekiel wrong when he called it a chain of bloody crimes? Is the land not full of them? Are you one of the links of this chain? Which one? Which is the worst link in the chain? Do you remember what the devil is going to do with his watch chain?

CAPITAL PUNISHMENT.

A EQUALS B, B equals C, therefore A equals C; that is logic. Murder is wrong, everyone admits that; there can be no principle of right in it. Whoever commits murder has not only committed a great wrong, but has committed a great crime, and, according to the laws of our land, it is a crime punishable with death, which necessarily requires another murder. If the murder is wrong in one instance, it is wrong in another; since it is wrong in these two instances, it is always wrong, whether it be committed by a person, a corporation, or the government. If it is wrong to commit murder for murder, it is wrong to commit murder for any other reason. If murder is a crime in one State in the Union, it is a crime in all the States of the Union.

Two wrongs can never make one right; if A is wrong and B is wrong, and B and A are each equal to C, then C is wrong; then it follows that it is as vitally wrong for a person to kill another person, because he is a murderer, as it was for the first murder to be committed. Again, if it is wrong, for an individual to seek life as revenge for murder, it is wrong for a government to do so.

The crime does not consist in the fact that the murder was committed by an individual; neither is the murder a crime because it was committed by the government; but the crime consists in the very act itself—taking that which cannot be replaced. A government, a corporation, a clan, a body of anarchists, a group of highwaymen, and individuals are equally powerless when it comes to restoring life.

When any of the above commit murder they have committed a crime, simply because they have destroyed what they cannot create. It is one of those irretrievable mistakes that can never be corrected. Men who

undertake to punish murder with murder have not only committed a greater crime than the murderer, but they have presumed to supersede God Almighty in the penalty which he has placed upon the murderer. It is altogether within the province of man to punish murderers with any other punishment than the destruction of life. This belongs alone to the Creator who gave the life.

No nation can be a Christian nation and disrespect the law of God in this particular. In almost every case of murder the guilty party, when examined, shows weaknesses that are traceable to the liquor habit, and the crimes which are due to heredity and other crimes and sins, equally damaging in their character. The murderer is more or less circumscribed by conditions and environments, and, in that sense, to a certain degree, he is not responsible; but the murder committed by the government is altogether different. A set of men called attorneys, who boast themselves to be the smartest of men, do their utmost to bring every evidence to bear against the poor criminal. They do this in all deliberation. A judge, who is supposed to be a wise man, takes plenty of time in studying the question, and carefully charges the jury. Twelve unprejudiced, unbiased men are sought to render judgment upon the one who has taken life. They sit for days and listen to the evidence; they sit for nights and deliberate upon the testimony. One thing they never question, and that is, whether it is right to kill the criminal or not if he be found guilty. This is settled by the law previously, for no man can sit on a jury who will not give his voice to hang a man if he is proven a murderer. Only that kind of men are allowed to sit in the jury box, so at once it is demonstrated that murder committed by the law is always done in the greatest deliberation and premeditation, while other murders are committed through anger, lunacy, or other devilishness, brought about by conditions, hence the legal crime is the greater of the two.

So far as the crime within itself is concerned, it matters not whether it is committed by the jury or by the criminal. We know that the spirit of murder is in the criminal because he has committed murder; we know that the spirit of murder is in the jury because they have said so with an oath before they went into the box; we know that the spirit of murder is in the law because it demands life for life; we know that the spirit of murder is in the legislature because the law reads as it does; we have every reason to believe that the spirit of blood-thirstiness, as a relic of barbarism, rests and abides within the nation or such legislators would not be eligible to office, especially when placed there by the vote of the public.

"THE fate of empires depends upon the education of youth."

Current Happenings

A MONSTER LION.

BY S. Z. SHARP.

LAST Saturday, February 11, a monster mountain lion was captured near Sargent, not far from Salida, Colo., by Mr. J. E. Hicks. For the last five years this animal has been the terror of cattle and colts, as it is estimated that during that time he had slain over a hundred head. He was the recognized leader of a band of lions infesting the Saguache mountains and along the Continental divide about Marshall Pass. His long career of depredations obtained for him among stockmen the sobriquet, "Old Bob."

On the day mentioned, Mr. Hicks was out hunting and came across the carcass of a calf partly devoured. Knowing that the lions would come back again when they became hungry, he set three powerful steel traps around this carcass and on his return he found the old lion's mate and her two grown kittens in the traps and "Old Bob" standing guard over them. On seeing Mr. Hicks, he would not leave his charge, but growling defiantly he showed his teeth and took a crouching position ready for a spring, when a bullet through his head from Mr. Hicks' rifle ended his career. After dispatching the other lions, Mr. Hicks returned home with his trophies. "Old Bob" weighed two hundred and twenty-five pounds and when stretched out on the ground measured fourteen feet from tip to tip. This is an extraordinary length as the largest we ever heard of before measured only nine feet from tip to tip.

This old patriarch of the mountains was shipped to Salida and sold to J. A. Rogers who had his skin stuffed and mounted to be added to his fine collection of wild animals worth over \$10,000 and for which he received a medal at the St. Louis fair.

Fruita, Colo., Feb. 25, 1905.

A LIST OF FIRES.

Two large piers of the Hoosac Tunnel Company, along water front, Boston. Loss one million.

✱

THE Kentucky Wesleyan college, main school of the M. E. church. Loss seventy-five thousand.

✱

A FOUR story flat in Chicago. Twenty-four families were made homeless.

✱

AN eight story building of a hardware company, in Seattle, Wash. Loss four hundred thousand.

THE Battle House, Mobile's historic hotel. Loss four hundred thousand.

✱

A BRITISH submarine boat off Queenstown harbor; caused by an explosion. Two men killed.

✱

WINTON hotel of New York. One woman burned to death and fifteen persons injured.

✱

TWELVE buildings at Bryant, S. Dak. Loss sixty thousand.

STUDENTS in the biological department at the University of Pennsylvania are watching with great interest the discovered predatory habits of a pitcher plant, a native of the East Indies, which is a veritable trap for mice and insects. When these tiny animals try to taste the honey-like fluid in the pitcher of the plant, the hard spines on the leaf, which serve as a lid, throw them into the cavity, where, in due time, they are absorbed by the plant. Only the ant has been able to secure the liquid without danger by boring minute holes through the side of the plant.

THE census of the inhabitants of the Philippine Islands taken under the authority of the United States, shows the population to be 7,635,426. Of this number 647,740 are classified as wild and uncivilized, though with some knowledge of the domestic arts.

THE Russian population represents 110 nationalities, the three great stocks being Fins, Tartars, and Slavs.

MANCHESTER, with a population of one-sixth less than that of Liverpool, has a greater number of public houses, but whereas Liverpool has eight spirit licenses to every beer license, Manchester has four beer licenses to every spirit license.

THERE are now 124,062 Odd Fellows in Pennsylvania, 12,721 having been initiated into the Order last year. In the last thirty-six years the lodges in the State have distributed \$16,398,948 for relief and the prevention of distress and actual want. Nearly double that amount of money, however, has been drawn by the society from these very persons to whom relief has been sent. Half of it they have received in so-called charities, the other half goes to the support of salaried officers and the erection of great temples. Real charity is not paid for in advance at such a high rate, neither does she blow her own horn.

THE capital stock of railroads in the United States is more than \$6,150,000,000.

THE British Museum contains over two million volumes of printed books and manuscripts, which are stored upon forty miles of shelving.

LAST year Germany exported over \$30,000,000 worth of books and works of art. England and the United States were her best customers.

PRESIDENT HARPER, of the Chicago University, is in the hospital.

ON Washington's birthday Emperor William and President Roosevelt were given the degree of LL. D. at the University of Pennsylvania.

THREE hundred Philippine scouts, who have been at the World's Fair, have remained in the United States until the presidential inauguration.

GOVERNOR PENNYPACKER, of Pennsylvania, is in receipt of a petition at the hands of three women from Cleveland, Ohio, which is two miles long and weighs fifty pounds, and contains one hundred and seventy-five thousand names of men and women of Ohio. All the petitioners asked for is that Kate Edwards be sentenced to life imprisonment for the murder of her husband, which, in the opinion of the petitioners, was committed in self-defense.

THE navy department has awarded contracts for the shipment of sixty thousand tons of coal to be stored at the Cavite naval station for the Philippines.

A COMMITTEE of six of the most prominent school principals of Chicago, appointed by superintendent Cooley to investigate public complaints of the bad penmanship of school graduates, have reported; in their investigation they find that the vertical system has not been a success. It was shown that out of fifteen States, where the vertical system had been wholly, or partially adopted, there is now a tendency towards the slant system for the following reasons: The vertical system is too slow; too easily duplicated; not practical for business, and often results in back-hand style which destroys individuality.

THE Hebrews of Aurora, Ill., will build a synagogue in that city to cost \$10,000.

DURING the recent blizzards over central Texas, thousands of head of cattle were frozen to death.

NEAR Pottsville, Pa., Feb. 18, six miners were killed and thirteen seriously injured by a rock falling on a car in a shaft at the Lytle colliery.

SOFT wood is now artificially hardened and toughened by a system of vulcanizing.

IT is reported that the late James C. Carter, of New York, bequeathed \$200,000 to Harvard University, without restrictions as to its method of expenditure.

THE Minnesota Educational Association advocates the plan that the State should provide means for educating children under fourteen years of age, whose parents are too poor to keep them at school.

THE ladies who are wives of the Cabinet officers seem to differ in opinion concerning the desecration of the Sabbath. Some of them tolerate dancing, while others remonstrate against an indulgence of the sort on the Lord's day. The latter are supposed by the President and Mrs. Roosevelt.

IT is estimated that at least one hundred million dollars will necessarily have to be added to the cost of the Panama Canal in order to make it a sea-level canal. It is also estimated that at least fifteen years more time will be required than if a lock canal be built. The commission appointed by the government urges by all means the building of a sea-level canal.

IF you should notice that the little yellow slip on your paper does not say 1906, that is a gentle reminder that you have not renewed your subscription. Don't be the "last leaf upon the tree in the spring."

THE conflict at Manchuria, the civil war at home, the borrowing of a hundred million of dollars, the assassination of Duke Sergius, and the gentle love-taps of the revolutionists are all ingredients that go to make up the bitter dose which Nicholas is compelled to take before retiring and upon rising in the morning.

MISS ELIZA O'BRIEN LOOMIS, moderator of the society of Filiae Fidei, or Daughters of the Faith, has announced that the Pope granted his formal approval to the doctrine of ostracizing divorcees. Last fall Miss Loomis had a personal interview with the Pope, and of late has received the Papal Letter of Approbation. The members of this society, or Catholic organization, which is composed of women, propose to ignore socially any Catholics of their acquaintance who obtained divorcees.

HOME DEPARTMENT

BOYS WANTED.

SELECTED BY LOTTIE M. BOLLINGER.

Boys of spirit, boys of will,
Boys of muscle, brain, and power,
Fit to cope with anything,—
These are wanted every hour.

Not the weak and whining drones
Who all troubles magnify,—
Not the watch word of "I can't,"
But the nobler one, "I'll try."

Do whate'er you have to do,
With a true and earnest zeal;
Bend your sinews to the task,—
"Put your shoulder to the wheel."

Though your duty may be hard,
Look not on it as an ill;
If it be an honest task,
Do it with an honest will.

In the workshop, on the farm,
Or wherever you may be,
From your future efforts, boys
Comes a nation's destiny.

A COMPLETE CURE.

"I RAN away once," began the young woman in the rocker to some afternoon callers. "It was when I was eight. I was a terrible child, and as there were six others my mother had no time to reason with me. Anyhow I didn't deserve to be reasoned with this time, for I had walked deliberately over the lace curtains, which were pinned out on the floor to dry. I believed I was pretending I was Mary, queen of Scots, or some one equally above caring for lace curtains.

"As I had been reprov'd for doing the same trick before, I was whipped for it this time. It hurt my dignity, and I went upstairs and made a bundle of my best gown. Downstairs I hunted for a string, and when mother inquired what I was doing I said I couldn't seem to get along with her and was going away from home.

"I had a wise mother. She made no remonstrance. She merely said she hoped I'd find a place to suit me and helped me tie up my dress. I departed haughtily, my mind on the home of some old friends of ours, German people. I thought I could find the place if I followed the street car track, and I did.

"When I walked in they were glad to see me, and when I told them confidently I had come to stay be-

cause I couldn't get along with my mother they did not seem in the least surprised. I did not know mother had telephoned them of my probable arrival.

"They said I could stay with them always if I wanted to, but there was one thing I must remember—I must speak German all the time; no English would be allowed. As I knew about three words of German the prospect looked black; but, on the other hand, it was preferable to home.

"The family had company, so that night I had to sleep with the two grownup daughters.

"In the middle of the night I suddenly woke up with an awful homesickness. I tumbled and tossed till finally one of the young women, exasperated by my pranks, spanked me and ordered me to lie quiet and let other people sleep if I didn't want to myself.

"That was the last straw. Even here I was whipped. If I must be whipped let it occur in the seclusion of my home. If heaven permitted me to live till morning I would go home as fast as I could. I lay there seething with rage and wounded pride, and at the break of day I slid out carefully, dressed, grabbed my best gown and let myself out.

"Toward home I flew, and I shall never forget my awful sinking of the heart when I found the house still locked up and the shades down. I was an out-cast, a wanderer. In desperation I pounded on the door.

"After ages mother opened it. She looked at me as though I had been the veriest stranger.

"'What do you want, little girl?' she inquired.

"That was when I wanted to die right away. My own mother had forgotten me, and in so short a time!

"I managed to choke out in terror: 'Why, don't you know me? I'm your little girl. I'm Sue.'

"'Oh, oh!' she said in a puzzled way. 'But I thought you had gone away for good. I didn't suppose you were ever coming back.'

"I don't remember how many kinds of angel I promised to be before she relented and let me in. But I never ran away again."—*Youth's Companion*.

NO ROOM FOR THE CHILDREN.

IN olden times children were looked upon as a blessing, but how different now. Children are not wanted, and in New York you can see posted "for rent—those with children need not apply." What will become of the children? They are the hope of the nation. They will make our presidents, our politicians,

and hold many other positions. Last, but not least, they will make our preachers and will run our church. But to-day is a fast age and motherhood is looked upon as out of date, and the mother that stays shut in from the outside world and is the keeper of the home is looked upon as old-fashioned. Any woman has our sympathy who has no higher idea of life than to be willing to lead a poodle-dog around with her, and at the same time scorn the true mother who carries the sweet babe in her arms and is content to be what God intended her to be. For some day she expects that babe to rise up and call her blessed. But how different with the woman with the poodle-dog! She may be president of all the Woman's Clubs of the town and may be considered as a leader, but alas! What shall the harvest be, when time shall wind up and we will be weighed in the balances, and, I fear, some will be found wanting. We had rather be the mother of such men as Talmage, Wesley, Spurgeon and other great men than be president of all the woman's clubs in the world; and we could feel that after we had served our day and generation we had left something behind us that would live on, and our influence would be felt for years to come. Nothing is of more pleasure than to be a true mother; when the curtains of night have fallen, and she gathers her little ones around her and prepares them for their rest; when they kneel at her feet and bow their little heads with golden curls and say:

"Now I lay me down to sleep,
I pray the Lord my soul to keep
If I should die before I wake
I pray thee Lord, my soul to take."

There is room in that home for the children.—*Mrs. V. E. Pegue, Clay City Democrat.*

* * *

A CHECK TO HARMFUL WEEDS.

THE New Zealand laws regarding the spread of noxious weeds seem rather severe, but the results so far are said to be excellent. Three of the most troublesome kinds, which in that country are the black-berry, sweet briar and thistle, are placed on the black list, and landholders throughout the colony are required to clear their lands. The small patches must be destroyed at once. In the case of larger areas, a specified amount of clearing must be done each year, beginning at the boundary and working back until the whole is clear. Roads must be cleared up to one-half their width, and town or public lands must also be attended to by the proper authorities. The penalties for neglect range from \$2.50 to \$100. Another section of the law relates to about one dozen other troublesome weeds, mostly imported from abroad in impure grass seed. These weeds are on the optional list, and local authorities may, if they wish, have them treated

within their territories the same as the black-listed weeds.

The law also regulates the sale of grass seed, making it an offense to sell unscreened seed unless the buyer is made aware of what he is getting. Threshing machines and ensilage cutters are required to be thoroughly cleaned before proceeding to another farm. All these measures are very practical and are said to be greatly reducing the damage from many kinds of weeds. There is more or less complaint from those who own cheap lands badly infested who are put to considerable expense, but, as a general rule, the plan is reported to be working well.

* * *

THE SELFISH GIRL.

No matter how attractive a girl may be in face and figure, if she is thoroughly selfish all prudent people will shun her. No careful person is likely to be charmed with the girl—

Who never thinks of anyone but herself;

Who never makes an effort to oblige others and yet expects to be waited on hand and foot herself;

Who never will own that another girl is pretty, but who endeavors instead to find some defect in her to point out to others;

Who never does a stroke of housework, but selfishly indulges in gayety and amusement, while her mother slaves to keep affairs in order;

Who never takes any notice of children, but considers them "little nuisances," "plagues," who ought never to leave the nursery;

Who never confesses she is in the wrong, but sticks to her point through everything;

Who spends all her money on dress, sweets or some luxury for herself;

Who never bestows a kind word on those beneath her in position;

Who never, above all, could love or seriously consider the comfort of any other person but herself.

LIGHTNING INK ERADICATOR.

BY JOS. H. STARK.

ONE ounce of chloride of lime, one-half pint of soft water, shake together thoroughly and let stand twenty-four hours; strain through a cotton cloth, and add one teaspoonful of acetic acid to every ounce of chloride of lime water. In using, apply the liquid with a toothpick or match to the blot, without rubbing, and it will disappear. This will remove ink stains, or clean off a blot without injury to the paper.

Tadmor, Ohio, R. F. D. No. 1.

"BEGUN is half done."

Reading Circle and Christian Workers' Topics

By **ELIZABETH D. ROSENBERGER.**

FISHERS OF MEN.—Matt. 4: 19, 20.

For Sunday, March 19, 1905.

I. All Men as Fish.

1. All Need the Gospel.
2. The Gospel Suited to All,Acts 4:12
3. The Command to All Men,Acts 17:26
4. God Desires All to be Saved,1 Tim. 2:4

II. All Christians as Fishers of Men.

1. Seeking the Lost Ones,Luke 14:23
2. Helping Them to Christ,John 1:45
3. Should be Able to Use the Gospel Net.
4. No One Can Lead a Soul Farther than he Himself has Gone.

III. They Who Would Seek the Good of Others Should be—

1. Assured of their Own Salvation,John 7:17
2. Full of Faith,Mark 11:22
3. Bold,Acts 4:13
4. Humble,1 Peter 5:6
5. Consistent,Philpp. 3:17; Eph. 4:1
6. Prayerful,Luke 18:1
7. Loving,1 Cor. 13:1-3

Text.—And he saith unto them, Follow me, and I will make you fishers of men. And they straightway left their nets and followed him.—Matt. 4:17-23.

References.—Matthew 13:4-19; Acts 2:41; Acts 13:43; Luke 8:4-15; Acts 10; Acts 16:14, 15; Acts 9:3-18; John 4:28-42; James 5:20; Psalm 51:13; John 19:39; John 4:7; John 4:40; Matthew 8:19; Matthew 19:16; Luke 20:20.

They Followed Him.

THE waters are still as beautiful in their clearness as when the boat of Peter lay rocking on their ripples, and Jesus gazed into their crystal depths. The turtle-dove still murmurs in the valleys, and as you walk slowly on through the green fields, you pass palms and vines and fig-trees and gray heaps of ruins. But when Jesus stopped here to talk to Andrew and Peter, these waters were plowed by 4000 vessels of every description, and teeming life and industry were everywhere. Andrew and Peter had always lived by this sea of Galilee and experienced the varied fortunes of the fishermen, but when Jesus invited them to follow him they did so at once.

Our work is varied, we have our own difficulties and our own problems; but we must never forget that it is our duty to win souls for Christ. Other work may be important, but never is it to be forgotten that the souls of the unsaved people are more important than anything else under the sun.

One at a Time.

When we stop to think about it; it does seem as if

all denominations depend upon the preaching service to win souls to Christ, we hold revival meetings for that purpose. And we try to get the service of some minister who seems to succeed in getting a goodly number of converts. But when you recall the experiences of yourself and friends, how many of you were persuaded to become Christians by some friend? Among the early disciples, Philip found Nathanael; have you found one other disciple for Jesus? Beecher once said, "The longer I live the more confidence I have in those sermons preached where one man is the minister and one man the congregation." Let us go to work, using our talents, our time, the little influence we may have, with the utmost diligence, knowing that some good must result.

"Would you help to raise the fallen;
Help the lost to find the way?
Would you save a soul from error?
Do it now, make no delay!
Would you speak a word for Jesus?
Would you serve him while you may?
Would you gain his love and favor?
Do it now, make no delay."

How many have been Added to your Church?

When Jesus preached, his pulpit sometimes was a fishing-boat, sometimes a dinner table and once it was a well-curb. The heart of man craved the personal touch then, as it does now, modern inventions have not changed our methods of winning souls, a sincere interest in your brother's welfare will help to save him. If in your church, you are all trying to be fishers of men, your minister will feel the impetus of your earnest endeavoring, and he will preach better and reach more souls, than he could if he worked alone. There will be a warm atmosphere of loving concern in such a church, the soul is kept daily at a temperature of self-sacrifice for the sake of others. There are churches, God grant that they may be few, that are sparsely attended; churches which are Arctic seas, ice berg grinding on iceberg. As soon as you enter then the icy cold freezes you, until numb and torpid your own condition is alarming and you give no thought to those about you. No fishers of men in that congregation.

Trained Fishermen.

That individual work for individual souls is the most difficult form of Christian service is the testimony of those who are most active and constant and skillful in such service. These meetings are an opportunity for you to speak to your friends about their accepting

Christ. There are marvelous possibilities in the tender sincere question, "Are you a Christian?" Or in urging your friend to accept Christ now. The devil knows the supreme effectiveness of these personal questions, so he is always at hand to thwart them, if he can. Do not keep silent, Jesus will give you grace to witness for him.

"Christ for the world we sing
The world to Christ we bring,
With one accord:
With us the work to share
With us reproach to dare
With us the cross to bear
For Christ our Lord."

Topics for Discussion.

1. What preparation do we need to become fishers of men? 2 Timothy 2: 15; 2 Timothy 4: 2-13.
2. What should be the Christian's highest purpose? 1 Corinthians 9: 22.
3. When men come to Jesus they must walk in his way. Luke 13: 23; Luke 18: 26.
4. Does our personal influence count in winning souls? 2 Corinthians 3: 2; Luke 7: 4, 5.
5. Our Circle's part in winning souls. Philip-
pians 4: 11.
6. Is it a joy to speak of Christ to those who need him? 1 Thessalonians 2: 20; 3 John 1: 4.
7. It is easy to come to Jesus now, old people seldom join church. 1 Kings 18: 12; Ecclesiastes 12: 1.

EMPLOYMENT BUREAU.

Boys are boys. Girls are girls. Are we not glad they are? They think and feel as you did forty years ago; turn the years back and put yourself in their place, when you feel like finding fault with them.

Can you help a little? We need some helpers; some who will work, and not shirk. We are sure that there are many people in your church who know nothing about our Circle; they ought to be told about it. Will you please give them some circulars, and ask them to come in?

You would never think of choosing your own Sunday-school lessons for the Sunday-school, instead of doing that you have the Brethren's quarterly, and follow the lessons as they are given there. Do not try to choose your own lessons for the Young People's meeting. These programs are used in every part of our Brotherhood, you cannot get along without them.

Our Circle is under the direct care of Our Missionary and Tract Committee; it has brought sunshine into many a church where the clouds of indifference and selfishness were settling. Don't be afraid of it,

it will prove a safeguard to your young people, and a blessing to your older members.

ARE you out of work?

You say, you have all you can do; what keeps you so busy? Is it service for Jesus? You look as if you would rather not say much about it, and you say that you hope to do better this year. The trees this winter have pushed off their old, useless, disfiguring, dead leaves, and now their branches are bare. We might say that they would better hold on to their old leaves since they are all the covering they had, but God knew better. The old leaves must go before the new can come. Can we not have a new vision of God and our life-plan? Then you can make your pathway radiant with good deeds.

We are so anxious to see the Circle increasing in numbers. If in every Circle the secretary with the aid of a good committee would take the trouble to talk about the Circle and its work to those who do not belong, we could soon double our number. Such an increase would bring cheer, courage, vitality and new spiritual energy to all departments of the work. Every meeting would be improved, every committee would be strengthened, religious zeal and activity would be manifest in good works, and the result would be apparent in our most distant mission field. In one sense an increase in our numbers is at the basis of all other increase. Unless our workers look for new members, they are liable to grow cold and careless, and unless we have new members to influence we cannot help them; we should be busy training our younger members for active service. Unless new Circles are formed, all the spiritual results which have come to so many in these past few years, will be confined to those who have already enjoyed them, we should have new Circles so as to set the many church members to work, who have but little to do.

You say that the young people in your church are not active workers, they do not seem interested, and they lack spirituality. You add, that your older members do all the Sunday-school teaching, and singing, and they plan everything. Far be it from us to say one word against our faithful, older members who have so patiently borne the burden and heat of the day. But did you ever stop to think how magnificently Joshua led the Israelites after Moses was gone? Do not lose sight of the fact that as a young man Joshua was a captain, and an active soldier under the guidance of Moses; and when his turn came he was prepared to take up his work. How many young people are training for higher and better service in your church?

ORDER is heaven's first law.—*Pope.*

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XVIII.

Liverpool, Eng.

Dear Mr. Maxwell:—

I had intended as much as could be to enclose a little essay that Miss Gertrude had written to send along with my letter, that Mr. Maxwell might use it in the Times. She wrote it while we were sitting in the top of Walter Scott's monument, and so I enclose it now.

SIR WALTER SCOTT.

By Gertrude Merritt.

Abbotsford, the home of Sir Walter Scott, designed and constructed under the owner's supervision, is one of the shrines at which the English-speaking population of the world would worship, were that a custom of their religion. While the Christian appreciates the good and true in literature, science, and art, yet he is not one to bow in worship at the shrine of any of earth's men of genius.

Walter Scott was born in Edinburgh in 1771, the year in which Gray the poet, died. He was always proud of his descent from the Scottish wild border clan. Because of his delicate constitution and lameness, his education was left largely to himself. The poet's ambition to reach the heights was early set forth in a remark he made about himself when a boy of six—"one who wishes to, will know everything." His unrelenting study was the main secret of his speed and fertility. In a period of seventeen years Scott produced twenty-seven books, twenty of which were historical novels, demanding an intimate acquaintance with the history of the centuries from the eleventh to the eighteenth.

Toward the close of 1825, Scott suddenly discovered that the failures of his publishers threw upon him a personal responsibility of \$650,000. Though at the age of fifty-five, he determined to pay every penny with his "own right hand." Refusing all offers of service, excepting a grant of time, he set himself heroically to the task, and produced in three years' time, eighteen or twenty volumes, together with much miscellaneous matter. The effort of these three years brought him \$200,000.

The strain, of course, was more than he could endure, and he succumbed to failing health, dying in 1832. For some time previous to his death he became possessed of the happy belief that he had wholly cleared the debt. The world honored the will, even though the deed was not accomplished.

I am sorry that I didn't get this enclosed but probably it will be as well this week.

Although we have not come far from Edinburgh to Liverpool, yet the change is very marked. We have left the scenic, historic, educational center, Edinburgh, and have been thrown into the midst of the great commercial heart of an empire upon whose dominion the sun never sets, the kingdom of Great Britain. The city fairly beats like a pulse with activity. It is situated on the western shore of the Island and is separated from Wales by the river Mersey. From the docks we can see the New Brighton tower from which a splendid view of the city can be had.

Liverpool has eight miles of floating docks, which prevent overflow by the tide; for if the docks were stationary they would almost constantly be wet with the swelling tides which would be a great impediment to traffic. Wise heads of the commercial world have invented these floating docks which, automatically, rise and fall with the tides, which renders it possible for hundreds and thou-

sands of ships to conveniently load and unload their burdens which are borne upon the bosoms of many waters and which are brought from, and sent to, almost every port in the world. There is scarcely a flag in the world but what may be seen floating from the mast of some vessel in the harbor of Liverpool.

England, in itself, is exceedingly small, and, of course is altogether inadequate, so far as production is concerned, for home consumption. Her manufactured exports are counted by millions of dollars, but the agricultural products demanded by the people of England must be supplied by other countries. For this reason the ports of England place no duty on goods brought into their country, except upon tobacco, liquor and perfumery. It is quite different from our home country; in the broad acres of America are to be found almost every conceivable degree of temperature, every condition of soil, a desire and taste for each and every occupation among its eighty millions of inhabitants.

One is almost astonished beyond measure when he sees the volume of business done at one of these large ports of the world. After spending a day at the docks, and seeing the men unload ship after ship, which has been more than filled with everything of which the human family has need we were made to wonder how long that supply would last the people of England. But behold the next day's work was a repetition of the same thing, and so day by day, week by week, and year by year this great work continues; but when we arrive at the metropolis of the world and mingle awhile with the five million souls of the capital of England our wondering is changed and we no longer conjecture as to how long the supply will last, but we wonder that the supply does not have to be doubled. After all we are about to conclude that the law of supply and demand is automatic.

Among the many vessels in the harbor of Liverpool was one that we loved to look upon, which was the old "Celtic," which had been our home during our Transatlantic voyage; she was tied fast to the docks; she looked as peaceful and harmless as could be and seemed to possess no more life than the Sphinx of Egypt, but within her iron sides, hundreds of men were stowing away goods to be brought back to America. We retired from the scene feeling that we have, to-day, had the privilege of placing our fingers upon the great artery of the commercial world.

Miss Gertrude told the boys that we had seen more real geography of the earth, as the home of man, to-day than ever before in our lives, and now we start for the largest city in the world, where we expect to get our mail from home which we will be very glad to receive; but we confess it is with some degree of reluctance that we leave this great port of the world, full of fishing smacks, brig-schooners, sloops, steamers, sailers, freighters, mail-vessels, and the great passenger Leviathans of the sea.

Hoping that all are as well at home as we are, I remain

Respectfully.

Marie.

(To be continued.)

The Q. & A. Department.

Give some facts about the Panama Canal, its size, height, names of the Canal Commission and the chief engineer.

The first step towards the construction of a Panama Canal was the organization of a French company in 1879, with Ferdinand de Lesseps as head, to build it. They began work in 1881, and after spending \$156,600,000 the company became bankrupt. A new company was formed in 1894 and continued the work on a small scale. About two-fifths of the canal has been excavated. In 1902 the United States decided to complete it, and in February, 1903, secured the rights of the new Panama Company, and Nov. 18, 1903 a treaty was made with the new republic of Panama by which the United States secured absolute control of the canal and a zone of five miles on each side of it. Panama is to receive \$10,000,000 and an annuity of \$250,000, beginning in 1912. The canal is to be 85 feet above tide water, and will have five locks. It is to be 28 miles long, and its course will be from northwest to southeast. The time of transit will be from 10½ to 12½ hours for a ship of average size. It is estimated that it will cost \$144,000,000 to complete it, in addition to the \$40,000,000 paid to the French company, and it is expected that it will be finished by 1912. The cost of maintenance will be about \$2,000,000. The canal will shorten ocean travel between the Eastern and Western hemisphere about 8,000 nautical miles, and to the western part of South America about 4,000 miles. The Republic of Panama is about as large as Maine, having an area of 31,571 square miles, and a population of 300,000. Its chief seaports are Panama, the capital, with 35,000 inhabitants, and Colon, with 3,000. The Commission appointed by President Roosevelt to take charge of the construction of the canal consists of Rear Admiral John G. Walker, Chairman; Major General George W. Davis, Wm. Barclay Parsons, of New York; Wm. H. Burr, New York; Benjamin M. Harrod, Louisiana; Carl Edward Crunsky, California, and Frank J. Hecker, of Michigan. The chief engineer is John F. Wallace.

✱

What is meant by the "Land of Nod?"

It is the unknown land on the east of Eden, to which Cain fled, according to the account in Genesis IV. The name is also humorously applied to the state of sleep or nodding.

✱

What is the actual value of the gold in the five, ten and twenty dollar gold coins?

The face value.

What makes the sky blue?

The sky has long been a puzzle to physicists. There are two mysteries to explain about it—its reflection of light and its color. The old view was that the blue of the sky was due simply to atmosphere oxygen. Oxygen has a faint blue tint, and the idea was that several miles of the gas, even when diluted as it is in the air, would have a bright blue color. But this did not account for the intense illumination of the sky, and of recent years Tyndall's "dust theory," or some modification of it, has been generally accepted. This regards the blue color as an optical effect, like the color of very thin smoke, due to excessively fine particles floating in the air, which would also account for the large proportion of reflected light from the sky. Recent calculations by Prof. Spring, of Liege, Belgium, however, indicate that the dust in the air is not sufficient in amount, nor finely enough divided, to support this explanation, and he rejects it for this and other reasons. He has gone back to the old oxygen theory, and accounts for the general illumination of the sky on the hypothesis, first advanced by Hagenbach, that the intermingled layers of different density in the atmosphere give it the power of reflecting light.

✱

How do soldiers build camp fires in wet weather?

Even in a driving rain that has lasted for days, the clever woodsman can find bits of twig and other inflammable material that may be damp, but not sodden. He can always find perfectly dry stuff in hollow trees and under roots. He will spend perhaps half an hour, perhaps even an hour, looking for stuff of this kind, and will not dream of starting his fire till he has collected, at least, a hatful of tundry stuff and an armful of small twigs and branches as dry as any that can be found. Having deposited all this stuff under the best shelter possible, he drags a log to the place where the fire is to be and turns it over, when, of course, it exposes a dry side, in which the tinder may be placed without getting wet. Then other logs are piled to form a wall against the wind. Pile the tinder up, then with a sharp knife the driest sticks may be whittled so that a pile of shavings is accumulated. The more shavings there are the better. Then lay the driest sticks over these and set the shavings on fire. Carefully add wood as the fire burns, but never put enough on to smother the flame. One wet twig will blaze where two may choke the fire.

◆

Is the whale a cold-blooded animal or warm-blooded? Whales are warm-blooded and air-breathing animals.

MISCELLANEOUS

WHEN THE CLOCKS WENT ON A STRIKE.

"332i—Broad?"
 "Yes, Ma'am."
 "The Hills-Wayne Company?"
 "Yes, Ma'am."
 "Dry-goods, notions, etc.?"
 "Yes, Ma'am."
 "Well, then, I wanted to ask if you have any new styles in table-covers."
 "We carry most anything you want along that line."
 "Real pretty table-covers—centre-table, you know. You have those?"
 "We have all sorts."
 "How large are they? Could you tell me, do you think?"
 "We carry them in a number of sizes—all the way from the smallest up."
 "Exactly, I mean——"
 "Do you wish to know about the smallest or——"
 "I want to know the exact *size*—*exact*, you understand."
 "Certainly, Ma'am. We can give you a thirty by forty inch, a forty by fifty-six, a sixty by——"
 "Thank you *so much*. And the patterns? Are they nobby—with a nice finish and all?"
 "The very latest thing."
 "Lovely! Now, are they fringed or hemstitched?"
 "Mostly hemmed, I think."
 "I'm so sorry; I wanted some with fringe."
 "We handle a line of the fringed ones."
 "Yes? Ah, well, then, perhaps you can give some idea of the prices; this is Mrs. Westmoreland—Mrs. Lewis Westmoreland."
 "We have them anywhere from three dollars to twenty-five dollars, Mrs. Westmoreland."
 "According to the size, I presume?"
 "Y-yes, and the quality."
 "Could you tell me whether they are nice and heavy?"
 "Some are, Ma'am."
 "Real heavy?"
 "About as heavy as any that are made. Our line is unusually extensive, Mrs. Westmoreland. I am sure——"
 "Thank you. When does your next wagon go out?"
 "Right at once."
 "That's too bad; I've an engagement in an hour's time and——"

"We could send them at once, Ma'am."
 "Oh, at *once!* I thought you said '*not at once.*'"
 "Shall I——"
 "Why, I believe I'll not bother you to-day, as I must go out immediately on pressing business. Perhaps I shall ring you up later, or stop in. Thank you *so much!* And, by the way, won't you tell me the time? All the clocks on the place have quite stopped running. Thanks, *awfully*. Twenty minutes past one, did you say?"—*Nellie Cravey Gillimore, in February Lippincott's.*

* * *

A SELFISH MAN.

HE regarded his children as nuisances.
 He did all his courting before marriage.
 He never talked over his affairs with his wife.
 He doled out his money to his wife as if to a beggar.
 He looked down on his wife as an inferior being.
 He never dreamed that there were two sides to marriage.
 He had one set of manners for home and another for society.
 He never dreamed that his wife needed praise and compliments.
 He thought his wife should spend all her time doing housework.
 He never made concession to his wife's judgment, even in unimportant matters.
 He thought the marriage vow had made him his wife's master, instead of her partner.
 He thought he had a right to smoke and chew tobacco and drink liquor and be as boorish and brutal to his family as he chose regardless of the effect on them. Surely such a man needs regenerating to be fit to live with anybody.—*Word and Work.*

* * *

THE IDEAL MAN

Is a plodder.
 Has high ideals.
 Is always on time.
 Is frank and manly.
 Is thoroughly in earnest.
 Believes in the Golden Rule.
 Does his level best every day.
 Plans his work and works his plans.—*Anon.*

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground, others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

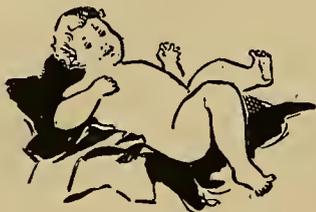

For booklet, information as to rates and all details address:

RESIDENT AGENT

Michigan Land Association.

How it has Grown In One Year!

All records for quick and substantial growth have been broken by **The Southwest Limited**, the electric-lighted train between Chicago and Kansas City via the

Chicago, Milwaukee & St. Paul Railway.

A year ago it made its initial run between Chicago and Kansas City. To-day The Southwest Limited is no baby. It ranks *first* among the trains between these two great cities of the west. It is the preferred train of discriminating travelers.

Inspection of The Southwest Limited will show the reasons for this marvelous growth. Electric lighted throughout, equipped with compartment-observation sleepers, standard sleepers, dining cars, chair cars and coaches, it is without an equal in excellence of equipment and service. The Chicago, Milwaukee & St. Paul Railway *owns and operates all the cars* on The Southwest Limited.

Leaves Union Passenger Station, Chicago, 6 p. m. Arrives Kansas City—Grand Avenue, 8.41 a. m.; and Union Station, 9 a. m.

Leaves Union Station, Kansas City, 5.55 p. m.; Grand Avenue, Kansas City, 6.07 p. m. Arrives Union Station, Chicago, 8.55 a. m.

F. A. MILLER,
GENERAL PASSENGER AGENT,
CHICAGO.

SPECIAL ONE WAY RATES TO THE SOUTHWEST.

Feb. 21st and March 21st, the C., M. & St. P. will sell special one-way second class Colonist tickets to the Southwest for one-half rate plus \$2.00. Call at Ticket Office for full particulars. J. B. Hopkins, Agent, Elgin, Ill.

The HOME GEM WASHER

AGENTS can make from \$600.00 to \$1,000.00 in one year selling this machine. Special introductory price where I have no agent. Address, **Wm. S. Miller, Meyersdale, Pa.**

just as illustrated. Burns hard or soft coal or wood. Has drawn cooler grate, corrugated fire pot, cold rolled sheet steel body, heavy cast base, large cast feed door, ash pit door and ash pan, swing top, screw draft-regulator. Polished urn, nickel top ring, name plate, foot rolls, etc. We have heating stoves of every kind. Hot blast, air tight, the kind that retails for \$3.00, for \$2.00. Base burners at 1/2 the regular price.

Write for CATALOGUE

OUR TERMS

are the most liberal ever made. We will ship you any range or stove, guarantee it to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it into your own home and use it 30 full days. If you do not find it to be exactly as represented and perfectly satisfactory in every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for double our price, you can return it to us and we will pay freight both ways, so you won't be out one single cent.

CUT THIS "AD" OUT tells you how to order. Don't buy a stove of any kind until you get our new large Stove Catalogue for 1904 and 1905 and see our liberal terms and the lowest prices ever made.

EQUITY MFG. AND SUPPLY CO., Chicago, Ill.

Brethren's Clothing

Our system of cutting and making Brethren's Clothing from measurements sent us by mail enables our customers to save from one-third to one-half from prices offered by local dealers or agents. While the prices of woolen or worsted goods have advanced from 20 to 25 cents per yard, we make no advance in the price of our suits.

OUR NO. 9778 SUIT, \$17.50.

A high grade, good weight, fine finished strictly all wool serge. Guaranteed fast black. Any merchant tailor would charge you \$30.00 for a suit of this material and our grade of workmanship.

OUR NO. 2163 SUIT, \$17.00.

As fine finished, all wool gray serge of medium weight as money can buy. The surface is rather smooth and the fabric soft and pliable. This makes a handsome suit and is well worth the price. Always looks well, wears clean and is excellent value.

OUR NO. 576 AND 177 SUITS, \$15.00.

Another excellent value. Two patterns of silk mixed cassimere, one ground color black, with gray mixture, the other with golden and blue mixture. Either of these numbers are very desirable patterns for old or young.

Send for our book of samples, giving prices and descriptions of these and many other excellent values in Brethren's Clothing, instructions for home measurements, tape line, etc.

Made Exactly as Represented in Cut.

— NOTICE —

To Sunday Schools

Perhaps you have not been in the habit of supplying your advanced classes with a good paper like you have been giving your juvenile and intermediate classes. There may have been a good reason for you not supplying them in the past. We see no good reason for not doing so NOW.

The young people of our Sunday schools (especially those from 14 to 20 years), need our especial care and training. We believe you are aware of this fact and are ready and willing to use your influence in favor of any movement that might aid materially in developing strong characters.

...THE...

Inglenook

Magazine, as now published, is just the help needed for this part of your Sunday school.

Brother Teeter Recommends it for the Young.

Dear Editor of the Inglenook:

So far as I have seen the magazine is moving well along the line of its original design. A study of its contents adds ballast to *steady the youth over the high tide of life.*

Parents make no mistake in subscribing for it for their children. It is more than a substitute for the trashy, immoral, slang journals of the day.

Fraternally,

L. W. TEETER, Hagerstown, Ind.

Good for Young and Old.

Dear Editor Nook:

The Nook is clean, its pages are inspiring, its contributors are many and competent, and the paper from start to finish is a good one. It is well edited and should find its way into every home. Good for the old and young alike.

Yours,

J. E. MILLER, Pres. Mt. Morris College.

You ought to have a number of

INGLENOOKS

for your more advanced classes as well.

Be sure to instruct your secretary to order at least a few copies of the INGLENOOK for the Second Quarter. If you do we are sure you will be well pleased with the results. Sample copies furnished upon application.

Price to Sunday schools, five or more copies to one address, 20 cents each per Quarter. Single subscription, \$1.00 per year.

Brethren Publishing House,
ELGIN, ILLINOIS.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

The Union Pacific Railroad

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

DARK DAYS.

We speak of the days that are dark,
The gloom that comes over the soul
When seasons of sorrow intense,
Like deluges over us roll.

We feel such a weight on our mind,
A burden that presses us down,
As if we were guilty of sin,
Or heaven upon us did frown.

How often adversity comes,
Affliction and sorrow and pain,
Like tempests that darken the sky
Till sunlight appeareth again.

How sadly we feel in the dark
When sitting or standing alone:
The gloom that surrounds us is felt
When no one is near that is known.

Misfortune that comes, like a cloud,
To darken our days for awhile,
Will leave us in poverty low,
When summer is come with a smile.

But he that has anchored in Christ,
Is firm on the rock of his faith;
When tempted and thunder burst forth
He moves not away from the path.

How many dark days there have been
Since Adam was tempted to eat!
How earth has been darkened by sin
No mortal can fairly relate.

—Jas. Y. Heckler.

THE GREATEST CANAL IN THE WORLD.—Part II.

BY D. L. MILLER.

THE plan of the Frenchman was voted impracticable by many leading engineers and public men. The

GREATEST CURVE IN THE CANAL.

politicians did all in their power to discredit the plan, and to hinder the construction of the canal. It seems strange indeed that England, the one nation of the world that was to receive the greatest bene-

efforts, and in 1856 he received from the Pasha of Egypt the exclusive right to construct a ship canal across the isthmus of Suez. When it was found that the plan was to be carried out public opinion gradually changed. A stock company was formed, and the funds necessary to carry on the work were soon at hand. Before any work could be done on the canal fresh water must be brought into the desert. A canal was opened from the Nile to Ismailia near the center of the proposed waterway, and from this point was carried south to Suez and north to Port Said. From the Nile to Ismailia and Suez the fresh water canal is large enough to accommodate small steamers and barges. From Ismailia the water was carried, at first, to Port Said through iron pipes, but later these gave place to a canal.

With the fresh water problem solved work on the great channel was pushed forward with great energy. The narrow body of land separating Lake Menzaleh, a shallow body of salt water, from the Mediterranean was quickly cut through, the lake dredged and the cutting begun at its southern end. Tensah lake at Ismailia and the Bitter Lakes twenty-five miles farther south were united, and as early as 1864 the Mediterranean and the Red Seas had been connected. The dredging machines and the diggers were kept constantly at work, and in March, 1869, the waters of the Mediterranean were admitted into the Bitter Lakes

A DREDGE ON THE CANAL.

fit from the canal, should have persistently opposed its construction. M. De Lesseps did the sowing and the planting and England reaps the golden harvest. Not a day passes in the year but that ships bearing the British flag pass through the canal, and it is practically under her control. She also receives an annual dividend of twenty-five per cent on nearly two hundred thousand shares of canal stock.

Opposition only spurred the Frenchman to greater

with complete success. In September of the same year M. De Lesseps passed through the canal on a small steamer, after which he announced to the world that the formal opening would take place on the 17th of November, 1869, and on that day amid great rejoicing the Suez canal was opened to the shipping of the world.

The Emperor of Austria and the Empress of France on board the Royal Yacht followed by a fleet of forty

vessels passed from Port Said, Nov. 17, to Lake Temsah in eight hours and a half, and were met by four vessels from Suez, the southern end of the canal. The fleet remained at Ismailia until the next day and proceeded slowly toward Suez, reaching the Red Sea on the 21st. This ended the opening ceremonies, and it

and thirty-two miles. Thus a saving in distance of nearly five thousand miles was made between the two ports. It needs only a glance at these figures to show the advantage of crossing the isthmus and saving time and coal necessarily used in making the longer voyage. Trade, like electricity, follows lines of least

SHIPS ON THE SUEZ CANAL.

must have been a glad time for De Lesseps. By his skill, energy and perseverance under great difficulties the work he had undertaken amid opposition was completed. The croakers were saying that his work would never pay operating expenses, that the sands of the desert would choke it up and that but a few ships would pass through before it would be in the condition

resistance, and very soon the canal grew in favor with the commercial world. It required constant care and the dredging machines were kept at work deepening it so that the largest vessel might pass through. The canal at the present time is four hundred and eighty feet wide, and vessels of a maximum draft of twenty-seven feet and three inches pass through. The total

SHIPS THAT PASS IN THE NIGHT.

of the old canal of the ancients. M. De Lesseps build-
ed better than he or the world knew as what follows
will show.

The distance from London to Bombay by way of
Cape Good Hope, at the southern extremity of Africa,
is eleven thousand two hundred and twenty miles, and
by the way of the canal six thousand three hundred

cost of the canal for enlarging, deepening and con-
structing piers for the harbors up to this time has
been one hundred and ten million dollars. Vessels
now pass through, in from fifteen to eighteen hours.

In his report to the directors of the canal made May
31, 1871, De Lesseps said that for the first eighteen
months that had then elapsed from the opening of

the waterway eight hundred and thirteen ships, of seven hundred and forty-five thousand eight hundred and thirty-seven tons passed through, carrying over forty-six thousand passengers. It was pointed out that

one hundred and thirty million dollars and the annual dividend paid to England from the earnings of the canal is over four and a quarter million dollars.

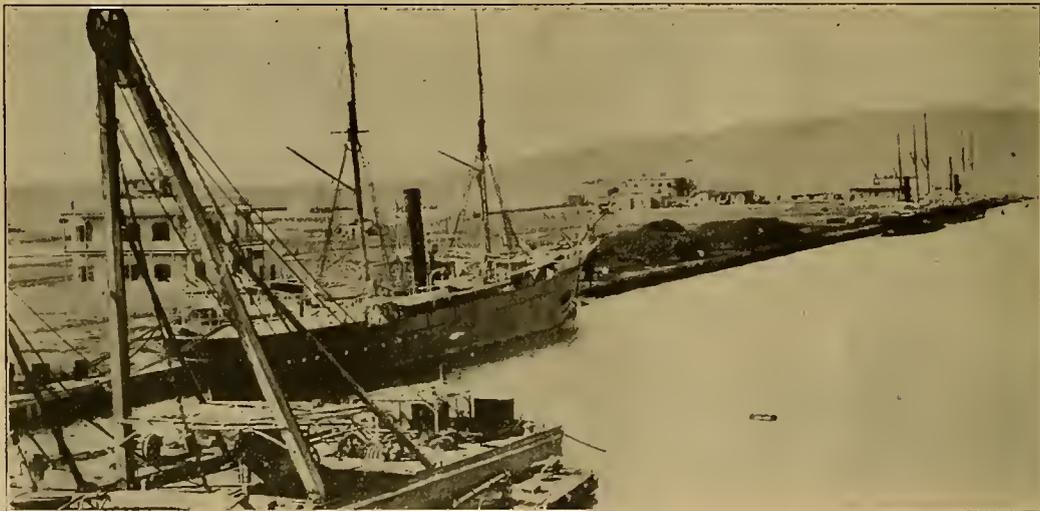

In 1901, three thousand six hundred and ninety ships

LAKE TIMNEH AT ISMAILIA.

the expenses were in excess of the income, but that it was confidently hoped that in the near future the income would at least meet the expense of operating and maintaining the canal. This hope was to be speedily realized.

passed through the canal with nearly eleven million tonnage. The income for the same year was over twenty million dollars and the dividend declared was twenty-five per cent on the investment. The immense profits accruing to the owners of the stock has created

THE DOCKS AT SUEZ, SOUTHERN END OF CANAL.

November 25, 1875, England, through the efforts of D'Israeli, her Prime Minister, purchased from Egypt for twenty-four million dollars, one hundred and seventy-six thousand six hundred and two shares of the stock of the canal company. It was a shrewd bargain. The market value of those same shares is now about

a feeling that another canal should be opened to share in the profits. The question is being agitated at this time, but as England is a large stockholder in the present channel and practically governs Egypt it will not be an easy matter to secure a concession for the opening of a rival to the Suez Canal.

“THE MAN THAT DIED FOR ME.”

MANY years ago I wanted to go as a foreign missionary, but as my way seemed hedged about, and as the years came and passed, I went to live on the Pacific coast, in California. Life was rough in the mining country where I lived with my husband and little boys. I heard of a man living over the hills, who was dying of consumption, and they said: “He is so vile, no one can stand it to stay with him, so the men place some food near him, and leave him for twenty-four hours;” and added, “They’ll find him dead some time, and the quicker the better. Never had a soul, I guess.”

The pity of it all haunted me as I went about my work, and I tried for three days to get some one to go to see him, and find out whether he was in need of better care. As I turned from the last man, vexed with his indifference, the thought came to me: “Why don’t you go yourself? Here’s missionary work if you want it.”

I’ll not tell how I weighed the probable uselessness of my going, or how I shrank from one so vile as he. It wasn’t the kind of work I wanted. At last, one day, I went over the hills to the little mud cabin. It was just one room. The door stood open, and up in one corner, on some straw and colored blankets, I found the dying man. Sin had left awful marks on his face, and had I not heard that he was unable to move, I should have retreated. As my shadow fell over the floor, he looked up, and greeted me with a dreadful oath. I stepped forward a little, and there came another oath. “Don’t speak so, my friend,” I said. “I ain’t your friend. I ain’t got any friends,” he said. “Well, I am yours, and ——” but the oaths came too thickly, as he said: “You ain’t my friend. I never had any friends, and I don’t want any.”

I reached out, at arms’ length, the fruit I had brought him, and stepping back to the doorway, I asked him if he remembered his mother, hoping to find a tender place in his heart; but he cursed her. I asked him if he had a wife, and he cursed her. I spoke of God, and he cursed him. I tried to speak of Jesus and his death for us, but he stopped me with his oaths and said: “That’s all a lie. Nobody ever died for others.”

I went away discouraged. I said to myself, “I knew it was no use.” The next day I went back again, and went every day for two weeks, but he did not show the gratitude of a dog. At the end of that time, I said: “I’m not going any more.” That night when I was putting my little boys to bed, I did not pray for the miner as I had been accustomed to do. My little Charley noticed it, and said: “Mama, you did not pray for the bad man.” “No,” I answered

with a sigh. “Have you given him up, mama?” “Yes, I guess so,” I said. “Has God given him up, mama?” “Ought you to give him up till God does?”

That night I could not sleep. That man dying, and so vile, with *no one to care*. I got up and went away by myself to pray, but the moment I touched my knees on the floor, I was overpowered by the sense of how little meaning there had been to my prayers. I had had no faith, and I had not *really cared*, beyond a kind of half-hearted sentiment. I had not *claimed* his soul for God. O, the *shame*, the *sham*, of a missionary zeal! I fell on my face literally, as I cried: “O Christ, give me a little *glimpse of the worth of a human soul*.” Did you, Christian, ever *ask that and mean it*? Don’t do it unless you are willing to give up ease and selfish pleasure, for life will be a different thing to you after that revelation. I stayed on my knees until Calvary became a reality to me. I can not describe those hours. They came and went unheeded, but I learned that night what I had never known before, what it was to *travail for a human soul*. I saw my Lord as I had never seen him before. I stayed there until the answer came. As I went back to my room, my husband said: “How about your miner?” “He is going to be saved,” I said. “How are you going to do it?” he asked. “The Lord is going to save him, and I don’t know that I shall do anything about it,” I replied.

The next morning brought a lesson in Christian work I had never learned before. I had waited on other days until the afternoon when, my work being over, I could change my dress, put on my gloves, and take a walk while the shadows were on the hill-sides. That day, the moment my little boys went off to school, I left my work, and, without gloves or shadows, hurried over the hills, not to see “that vile wretch,” but, *to win a soul*. I thought the man might die. There was a human soul in the balance, and I wanted to get there quickly. As I passed on, a neighbor came out of her cabin, and said: “I’ll go over the hills with you, I guess.” I did not want her, but it was another lesson for me. God could plan better than I. She had her little girl with her, and as we reached the cabin, she said: “I’ll wait out here, and you will hasten, won’t you?”

I do not know what I expected, but the man greeted me with an awful oath; but it did not hurt as it did before; for I was behind Christ, and I stayed there. While I was changing the basin of water and towel for him, things which I had done every day, and which he had used, but never thanked me for, the clear laugh of the little girl rang out upon the air like a bird note. “What’s that?” said the man, eagerly. “It’s a little girl outside who is waiting for me.” “Would you mind letting her come in?” said he, in a different tone from any I had heard before. Stepping to the

door, I beckoned to her, and then taking her by the hand, said: "Come in and see the sick man, Mamie." She shrank back as she saw his face, and said, "I'm afraid," but I assured her, "Poor sick man can't get up; he wants to see you." She looked like an angel; her bright face, her eyes tender and pitiful. In her hand she held the flowers she had picked, and bending toward him, she said: "I sorry for 'ou sick man. Will 'ou have a posy?" He laid his great bony hand beyond the flowers on the plump hand of the child, and the great tears came as he said: "I had a little girl once, and *she died*. Her name was Mamie. *She cared for me*. Nobody else did. Guess I'd been different if she'd lived. I've hated everybody since she died."

I knew at once I had the key to the man's heart. The thought came quickly, born of that midnight prayer, and I said: "When I spoke of your mother and your wife, you cursed them: I know now that they were not good women,—you could not have cursed a good mother." "*Good women! O, you don't know nothing 'bout that kind of women. You can't think what they were.*"

"Well, if your little girl had lived and grown up with them, wouldn't she have been just like them? Would you have liked to have her live for that?" He evidently had never thought of it, and his great eyes looked off for a full minute. As they came back to mine, he cried, "O, no! I'd *killed* her first. *I'm glad she died.*"

Reaching out and taking the poor hand, I said, "The dear Lord did not want her to be like them; he loved her even better than you did. He is keeping her for you. Don't you want to see her again?"

"O, I'd be willing to be *burnt alive* a thousand times, if I could just see my little girl once more, *my Mamie.*"

* * * * *

O friends, *you know* what a blessed story I had then to tell, and I had been so close to Calvary that night that I could tell it in earnest. The poor face grew ashy pale as I talked, and the man threw up his arms as if his agony was mastering him. Two or three times he gasped as if losing breath. Then clutching me, he said: "What's that, woman, you said t'other day 'bout talkin to somebody out o' sight?" "It's praying," I said. "I tell him what I want." "*Pray now, pray quick*. Tell him I want my little girl again. Tell him anything you want to."

I took the hands of the child, and placed them on the trembling hands of the man. Then dropping on my knees, with the child in front of me, I bade her pray for the man who had lost his little Mamie, and wanted to see her again. This was the prayer: "Dear Jesus, this man is sick: He has lost his 'ittle girl, and he feels bad about it. I'se so sorry for him, and he's

so sorry, too. Won't you help him? Do, please. Amen."

Heaven seemed to open before us. There stood One with prints of the nails in his hands and the wound in his side. Mamie slipped away soon, but the man kept saying, "Tell him more, tell him everything; but O! *you don't know.*" Then he poured out such a torrent of confession of his life that I could not have borne it but for the One who was close to us that hour. By and by, the poor man grasped the Strong Hands. It was the third day when the poor tired soul turned from everything, to him, the Mighty to save, "*the Man who died for me.*" He lived on for weeks, as if God would show how real was the change. I had been telling him one day about a meeting, and he said "I'd like to go to a meetin' once. I never went to one of them things." So we planned a meeting, and the men came from the mills and the mines, and filled the room. "Now boys," said he, "get down on your knees while she tells 'bout that Man that died for me."

I had been brought up that a woman shouldn't speak in meeting, but I found myself telling the simple story of the cross. After awhile he said, "O boys, you don't half believe it, or you'd cry; you couldn't help it. Boys, raise me up. *I'd like to tell it once.*" So they raised him up, and between his short breathing and coughing, he told the story. He used the language he knew.—"Boys," he said, "you know how the water runs down the sluice boxes, and carries off all the dirt, and leaves the gold behind. Well, the blood of that Man she tells about went right over me, just like that; it carried off 'bout everything. But it left enough for me to see Mamie, and to see the Man that died for me. O boys, *can't you love him?*"

Some days after there came a look into his face which showed that the end was near. I had to leave him, and I said: "What shall I say to-night, Jack?" "Just good-night," he said. "What will you say to me when we meet again?" "I'll say 'good-morning' up there."

The next morning the door was closed, and I found two of the men sitting silently by a board stretched across two stools. They turned back the sheet from the dead, and I looked on the face, which seemed to have come back nearer to the "image of God." "I wish you could have seen him when he went," they said. "Tell me all about it." "Well, all at once he brightened up 'bout midnight, and smilin', said, "I'm goin', boys. Tell *her* I'm going to see Mamie. Tell *her* I'm going to see the *Man that died for me*, an' he was gone."

Kneeling there with my hands over those poor cold ones, which had been stained with human blood, I asked to come to understand more and more *the worth of a human soul*, and to be drawn into deeper

sympathy with Christ's yearning compassion, "Not willing that any should perish."—*Mrs. J. K. Barney.*

"THE PAINTER OF LIGHT."

PETER PAUL RUBENS, the most celebrated of Flemish painters, and one of the great artists of the world, was born at Siegen in 1577. He came of good family, though during his boyhood his father incurred the displeasure of the Prince of Orange, and lived a practical prisoner in the town of Siegen for several years. The future artist was only ten years old when his father died, but he was fortunate in having a mother who had great strength as well as sweetness of character. The two were devoted to each other, and, in a picture which Rubens painted of his mother, his admiring affection seems to show in every stroke of the brush. Rubens' education was very thorough. He could speak five languages besides his own, and was, in addition, a good Latin scholar. His mother wished him to study law, but the boy's heart was so set on becoming a painter that at length she yielded to his desire. As soon as he began to study under competent teachers, his talent showed very plainly, and the wise mother made no effort to fight against nature.

After spending a number of years in the studios of the leading artists of Flanders, Rubens parted from his mother and went to Italy. Here he studied and painted, and had the good fortune to be appointed painter to the court of the Duke of Mantua. Like most who enjoy good fortune, Rubens had prepared himself to improve it when it came. He was well informed on most subjects, a young man of good habits and pleasing manners, with great tact in his dealings with others. It was not strange that he made a favorable impression on those he met. After eight successful years in Italy, Rubens was called home by the news of his mother's illness. It is a well-known saying that ill news travels fast, but such was not the case in those days before the railway and the telegraph had come into existence. He reached home to find that his mother had died before he had begun his homeward journey, and for a time he was inconsolable and very unhappy. His countrymen, proud of his talents and his fame, united their forces to keep him at home, and that their efforts were successful was due in part to a charming girl whom Rubens met about this time, and whom he married. He built a beautiful home, where he lived happily for many years, and where little children came to gladden his heart. Some of his best portraits are of these little ones.

It was probably largely due to Ruben's tact and fine manners that he was trusted with several important diplomatic missions. While in England on such an errand, a courier called on him and inquired if the diplomat was in the habit of amusing himself with painting.

"No," replied Rubens, "but the artist sometimes amuses himself with diplomacy."

Like most men who became famous, Rubens was industrious. He rose at four in the morning, worked hard, and lived plainly. He generally rode horseback for an hour or two each day, and the exercise helped to keep him in good health. Sir Joshua Reynolds called him "the best workman with his tools that ever managed a pencil." When one sees some of his great paintings, it is easy to understand how he won the title, "The Painter of Light." "The Descent from the Cross," now in the cathedral at Antwerp, is considered his masterpiece, and is one of the great paintings of the world.

Rubens died in Antwerp in 1640, and the whole nation mourned for him. Two hundred years afterward the city to which he brought so much honor, erected a monument to him in one of the public squares, but his best monument is his work which he did, and which brings increasing fame with every year that passes.—*Girls' Companion.*

WORLD'S SUPPLY OF RADIUM.

SOME time ago it was suggested that in attempting to explain the temperature of the interior of the earth the various radio-active constituents should be taken into account. Working on this idea, Prof. C. Liebenow has recently made an interesting calculation in which he shows that all the heat emitted by the earth may be explained by the presence of radio-active matter in its interior. He first computed the amount of heat given off in each second by the earth, which he found to be 10,000,000,000,000 gram-calories, a gram-calorie being the quantity required to raise the temperature of one gram of water one degree centigrade. Then taking the results already computed by Paschen, that to generate one gram-calorie per second 16 grams of radium would be required, it was found that the earth must contain about 200,000,000,000,000 grams, or somewhat more than 200,000,000 tons of radium, otherwise its temperature would be constantly increasing.

Now if this quantity of radium were to be distributed uniformly through the earth each cubic meter would only contain one five thousandth of a milligram of radium, but since certain muds found around hot mineral springs contain a thousand times as much radium as this it is quite evident that the distribution of radium is not uniform, and must be confined rather to the strata of the earth nearest the surface.

THE "botanical clock" is the name of a flower that is grown on the Isthmus of Tehautepec. It is said to change color three times a day, being white in the morning, red at noon and blue at night.

POLITENESS, OR COURTESY.

BY MARY E. HERTZLER.

POLITENESS should be accompanied by frankness, good-nature, unobtrusiveness and constancy, and should be uniformly exhibited to every class of men.

That style of manners which combines self-respect with respect for the rights and feelings of others, especially if it be warmed up by the fires of a genial heart, is a thing to be coveted and cultivated, and it is a thing that pays, both in cash and comfort.

"Men, like bullets, go farthest when they are smoothest," says Ritcher. The Encyclopedic Dictionary defines politeness in this manner: Politeness is polish or refinement in manner or behavior and is courteous, obliging, complaisant, well-bred, courtly. A polite man is, in regard to his behavior, a finished gentleman; but a rude person may be more or less polished.

A man is indebted to nature, rather than to art, for his refinement; his politeness or his polish is entirely the fruit of education. Politeness and polish do not extend to anything but externals; refinement applies as much to the mind as to the body.

"There is no policy like politeness," says Magoon, "since a good manner often succeeds where the best tongue has failed." Life is not so short but that there is always time for courtesy.

Matthew Arnold says, "Conduct is three-fourths of life." "Politeness has been compared," says George L. Carey, "to an air cushion, which, although there is apparently nothing in it, eases our jolts wonderfully."

The Bible says, "Evil communications corrupt good manners."

Christ was courteous, even to his persecutors, and in terrible agony on the cross he cried, "Father, forgive them, for they know not what they do."

The speech of Paul before Agrippa is a model of dignified courtesy, as well as persuasive eloquence.

Does it pay to be polite? Good manners often prove a fortune to a young man. Ross Winans of Baltimore, owed his great success and fortune largely to his courtesy to two foreigners. Although his was but a fourth rate factory, his great politeness in explaining the minutest details to his visitors was in such marked contrast with the limited attention they had received in large establishments that it won their esteem. The strangers were Russians sent by their Czar, who soon invited Mr. Winans to establish locomotive works in Russia. He did so, and soon the profits resulting from his politeness were more than \$100,000 a year. Courtesy pays.

Not long ago a lady met the late President Humphrey of Amherst College and she was so much pleased with his great politeness that she gave a generous donation to the college.

"Thank you, my dear; please call again," spoken to a little beggar girl who bought a pennyworth of snuff, proved a profitable advertisement and made Lundy Foote a millionaire.

We should show politeness at home. Confucius says, "Eat at your own table as you would eat at the table of a king." If parents were not careless about the manners of their children at home, they would seldom be shocked at their behavior abroad.

Show politeness on the street. President Jefferson was one day riding with his grandson, when they met a slave who took off his hat and bowed. The President returned the salutation by raising his hat, but the grandson ignored the civility of the negro. "Thomas," said the grandfather, "do you permit a slave to be more of a gentleman than yourself?"

We should be polite in church, at school, on the cars; in fact, we should be polite everywhere.

We should always apologize for our mistakes. An honest apology will make many a heart feel lighter and better.

We should always be considerate of other people's feelings. King Edward of England once invited an eminent man to dine with him. When the coffee was served, what was the consternation of the others to find that the guest drank from his saucer. An open titter of amusement went round the table. The King lifted his eyes, and, quickly noting the cause of the untimely amusement, gravely emptied his cup into his saucer and drank after the manner of his guest. Silent and abashed, the other members of the household took the rebuke and did the same.

Do manners make the man? Manners, while they are the garb of the gentleman, do not constitute or finally determine his character. Mere politeness can never be a substitute for moral excellence, any more than the bark can take the place of the heart of the oak. It may well indicate the kind of wood below, but not always whether it be sound or decayed. Etiquette is but a substitute for good manners and is often but their counterfeit. Sincerity is the highest quality of good manners.

The following recipe is recommended to those who wish to acquire genuine good manners:

Of Unselfishness, three drachms;
Of the tincture of Good Cheer, one ounce;
Of essence of Heart's Ease, three drachms;
Of the extract of the Rose of Sharon, four ounces;
Of the Oil of Charity, three drachms, and no scruples;
Of the Infusion of Common Sense and Tact, one ounce;
Of the Spirit of Love, two ounces.

The mixture should be taken whenever there is the slightest symptom of selfishness, exclusiveness, meanness, or I-am-better-than-you-ness.

Pattern after him who gave the Golden Rule, and who was the first true gentleman that ever breathed.

Elizabethtown, Pa.

TWO OLD LETTERS.

STOP, LOOK AND LISTEN.

(This letter to his wife by Cromwell was written the day after the battle of Dunbar.)
For my beloved Wife Elizabeth Cromwell, at the Cockpit:
These.
Dunbar, 4th September, 1650.

MY DEAREST:—I have not leisure to write much. But I could chide thee that in many of thy Letters thou writest to me, That I should not be unmindful of thee and thy little ones. Truly, if I love you not too well, I think I err not on the other hand much. Thou art dearer to me than any creature; let that suffice.

The Lord hath showed us an exceeding mercy: who can tell how great it is! My weak faith hath been upheld. I have been in my inward man marvellously supported; though I assure thee, I grow an old man, and feel infirmities of age marvellously stealing upon me. Would my corruptions did as fast decrease! Pray on my behalf in the latter respect. The particulars of our late success Harry Vane or Gilbert Pickering will impart to thee. My love to all dear friends. I rest thine,
OLIVER CROMWELL.

(The following is the only letter from Mrs. Cromwell to her husband in existence.)
The Lady Elizabeth Cromwell to her Husband the Lord General at Edinburgh.
"Cockpit, London," 27th December, 1650.

MY DEAREST:—I wonder you should blame me for writing no oftener, when I have sent three for one; I cannot but think they are miscarried. Truly if I know my own heart, I should as soon neglect myself as to "omit" the least thought towards you, who in doing it, I must do it to myself. But when I do write, my Dear, I seldom have any satisfactory answer, which makes me think my writing is slighted, as well it may; but I cannot but think your love covers my weakness and infirmities.

I should rejoice to hear your desire in seeing me; but I desire to submit to the Providence of God; hoping the Lord, who hath separated us, and hath often brought us together again, will in His good time bring us again, to the praise of His name. Truly my life is but half a life in your absence, did not the Lord make it up in Himself, which I must acknowledge to the praise of His grace.

I would you would think to write sometimes to your dear friend, my Lord Chief Justice, of whom I have often put you in mind. And truly, my Dear, if you would think of what I put you in mind of some, it might be to as much purpose as others; writing sometimes a Letter to the President, and sometimes to the Speaker. Indeed, my Dear, you cannot think the wrong you do yourself in the want of a Letter, though it were but seldom. I pray think of; and so rest,—yours in all faithfulness,

ELIZABETH CROMWELL.

—From Morley's *Life of Cromwell*.

It has been said on good authority that the highest price ever paid for a writing was given a lawyer in this immediate vicinity. A certain railroad company had lost enormous sums of money through damage suits instituted by those injured in grade crossing accidents. This company had been most particular in the matter of erecting signs at each crossing, but jury after jury decided that these were of small moment since the warning they conveyed was to "look out for the cars" or "look out for the engine," and in almost every instance it was conclusively proved that the damage was caused by that part of the train not mentioned! So with desperation the railroad commissioned a lawyer of wide repute to compose a sign that would "hold" in court. After some days the following sentence, written on a large sheet of paper, came from the man learned in the law: "Stop, look and listen."

Following this, came a bill for \$10,000. So when you hear some long tongued individual boasting about the dollar a word Mr. Kipling gets, or the surprising sum paid Richard Harding Davis for articles describing the war he didn't see, dismiss the being as a dealer in the hills, for the lawyer aforementioned, got a check for the amount named, and, as far as history enlightens us, no one ever before received so much as \$2,500 a word!

Before the end of the year the lawyer was informed by the president of the road that the new sign had saved many times its cost. And the point I am especially desirous of making in regard to this sign is its immense value to men and women generally, not only in the matter of saving life and limb, but in the higher sense of getting out of life all there is in it.

Stop, look and listen.

How many of us do any of the three? We rush, are blind and close our ears. Then we sue the world for damages. Do we get them?—*Philadelphia American*.

100,000 TELEGRAMS A DAY.

OVER a hundred thousand telegrams a day was the record of 1904, 557,040,072 for the year. Uncle Sam alone took care of 91,391,443 dispatches, the number of his offices being 23,567. The length of line in operation 196,115 miles, and the length of wire stretched 1,029,983. John Bull forwarded 92,471,000 messages, France 47,280,070, Germany 45,216,963 and Russia 101,639,642. There are 122,341 telegraph offices in the world, 1,072,345 miles of line and 4,065,552 miles of wire.

HE that gathers not for eternity lives unsavingly and dies a pauper.—*Matt. 12: 30*.

REMINISCENCES OF GRANDPA BLAIN.—Part 1.

BY NANCY D. UNDERHILL.

Ben Franklin.

WHEN Ben Franklin was sent as ambassador to France, it was customary in this country to wear knee breeches and long stockings; the latter being knit by hand from wool which was raised and prepared for use upon almost every farm. Nearly every family owned a few sheep, and the wives and daughters in every home had their spinning wheel, the same as we now have our sewing machines. The loom where cloth was woven for the family clothing was also a necessary piece of home furniture. However, in France, the knee breeches had ceased to be fashionable in that which is usually called "good society," and it was necessary for any one who wished to appear in Court there to adhere to the customs of that country, in dress as well as in other customs. It was also customary there for men to have their heads shaven, and wear powdered wigs. Accordingly, when Ben Franklin was chosen as minister to France, a barber was sent to shave his head and provide a wig. But he suggested that a wig be first procured which should fit his head, so the measure was taken, and the markets of France searched, but none could be found that would fit Franklin's head of brains. He therefore sent a petition to France to be permitted to appear in parliament in his own hair, and clad in American costume. This petition was granted. Upon entering, however, a certain lady, seeing his knee breeches and otherwise peculiar costume, laughed. A man standing near, awed her to silence by whispering, "Do not laugh, that is the man that drew the lightning from heaven."

It seems to us there is a lesson in this incident for ourselves. We cannot afford to judge a person by their apparel, because that man or woman, though differently clad from ourselves or from the fashion to which we are accustomed, may have the wisdom and power to draw lightning or mercy from heaven, and may be our superior, both intellectually and spiritually.

Collbran, Colo.

FIVE SIGNATURES.

WILLIAM SHAKESPEARE, after all his years of writing, left only five of his signatures. The *Boston Transcript*, referring to this interesting fact says: "These are appended respectively to the purchase deed of a house in Blackfriars, dated 1613, which since 1831 has been in the Guildhall; to a mortgage deed relating to the same house in the British Museum, and to Shakespeare's will. There are besides, of course, many books purporting to have trustworthy signatures.

Most notable of these is the 1603 edition of Montaigne's *Essays*, bought in 1638 for 140 pounds by the British Museum, after Sir Frederick Madden had unequivocally attested the genuineness of the signature. Many students, probably a majority even, now regard it as no better than an eighteenth century forgery, however. One hundred and two pounds was paid at auction six years ago for a philosophical work printed in Venice, 1565, with two Shakespeare signatures on the vellum cover, Sir F. Madden again having given his opinion that they were trustworthy. The history of the book was traced back to 1811; thirteen years thereafter it was sold for 6d; in 1845 for 21 gns."

Referring to a copy of the Holy Scriptures which is said to bear the signature of this great author, the *Transcript* writer further says: "The Bible now to be sold, part of the library of W. Sharp Ogden, Rusholme, Manchester, was discovered by the owner's grandfather, William Sharp, a collector of books and prints, near Manchester some fifty-four years ago. He gave a few pounds only for it, but later received an offer of 150 pounds. On the reverse of the title to the New Testament is 'William Shakespeare, 1614,' and on the end cover 'Willm. Shakespeare off S. O. A. (Stratford-on-Avon) his Bible, 1613.' The inscription on the final cover, 'John Fox off Warwick was the owner of this Bible Anno Dom. 1633,' proves it to have been in the Shakespeare country soon after the dramatist's death in 1616. In 1666 it belonged to William Bradshaw, in 1727 to Thomas Hall. Shakespeare's daughter, Susanna, married Dr. John Hall of Stratford, but there is no ground so far as we know for associating the one Hall with the other."—*Com-moner*.

OSTRICH PLUCKING.

OSTRICH plucking is an event which is advertised in the newspapers of California, and attracts crowds of visitors to the farm to witness the operation. The removal of the feathers is not really a "plucking," but is literally a "cutting." The bird to be clipped is coaxed into a corner, and a bag drawn over his head. The birds are so large and strong that careful handling is necessary, but an ostrich without sight is helpless, he offers no resistance after his head is covered. The big plumes are carefully cut away, leaving an inch or so of the quill.

After the feathers have been cut away, the head is uncovered, and the bird allowed to run off, and it is always amusing to see the air of shame a plucked bird has as he sidles back to his pen, as though he realized that he had lost his beauty and attractiveness, and felt a sense of mortification.

The birds live in captivity sixty or seventy years, and at a period of every nine months yield about thirty dollars' worth of feathers.—*Selected*.

A TRIP TO THE MOON.

BY BAXTER M. MOW.

A TRIP to the moon would be a most exciting tour, a grand outing, a luxury. You think it impossible. So thought the people four hundred years ago when Columbus wished to sail the great unknown ocean. He succeeded and so must this trip.

There are several things to be considered; the route, the ship, the supplies and the company. The last is not the least. It is important not about the getting scared, for there will be nothing to get scared at, but for the real enjoyment. The route we will take will be directly toward the sun. The distance is two hundred and forty thousand miles—nearly ten times as far as the distance around the earth. We must go eight hundred miles a day, thus taking three hundred days. Starting here when the moon is new in March, we will arrive when the moon comes new in January. Thus we need only to keep our course steadily toward the sun, coming up to the moon just as she crosses our path. This will afford us the advantage of the sun's direct rays and his attraction, and one unvarying day.

Being intensely cold after we leave the earth by one half a day's journey, our ship must be rigged with a large sun glass which will collect the sun's rays and focus them upon a plate of platinum. This will be for the purpose of heating our cabin, preparing our food, melting our water and diffusing our air.

By heading our ship with a powerful solar magnet we will need only enough motor to raise us above the earth's specific attraction when we shall need only a large parachute besides, to check our frightful plunge toward the sun.

Our provision will consist of six barrels of water, two barrels of baked beans and three hundred pounds of crackers also three hundred pounds of liquid air. This last will seem strange to you but you must remember that the earth's air is only fifty miles deep, then we must carry a supply to breathe. The liquid can best be carried as ship's crossing the ocean carry water to use. The best companion will be a sweet gentle heroine who has full confidence in the enterprise.

Now we are fully ready to make the start. Our machine is all rigged up and we shall cut loose from Earth March 6th at the earliest ray of the sun. Except the sense of starting there will be no perceptible movement. Suddenly the earth and her mountains will be seen rapidly dropping away from us. We look through the peep holes and see handkerchiefs and hats waving good-bye and children throwing kisses. As we now speed rapidly on we use our field-glasses and telescopes. What a sight to see the old, busy Earth, with her cities and swarming life, rolling majestically around and around.

After our first two days we turn our attention to the stars and the moon and we are acquainting ourselves with her movements and zones. We do not wish to land in any of her seas, her icy poles, or her ragged mountain tops. So as soon as we determine her rotation, zones and continents we shall direct our ship's course to the most desirable place. We shall, in all probability, find this with "The Man in the Moon," poor old fellow! He has been for many years a veritable "Robinson Crusoe." He had a cross old wife and she wished him to the moon. Not being able to wish himself back, he of course stayed there but every evening could be seen standing, looking this way where he saw only the scowling face of his irate old dame.

How glad he will be! How he will rustle his good things for us. Then he will take us to see the sights. The moon is not as large as the earth—about one-fiftieth its size. But rivers and lakes and seas, with grand divisions and islands and mountains and valleys are all just like ours only not so large nor plentiful. It will take us six hundred days to explore her and gather specimens of the lunar wonders, when we shall return and get rich selling the history of our trip.

Weiser, Idaho.

A VERITABLE "FLOATING ISLAND."

ONE often reads of "floating islands," especially in the tropic seas. A great many—most, in point of fact—of these floating islands are mythical, existing only in the imagination. Away up in the wild Sierra Nevada Mountains of California may be found a veritable floating island. This islet is small, but it is nevertheless a floating one. Surrounded by lofty mountains is a small lake known as Mirror Lake. The waters of this body are wonderfully clear and reflective, and the lake is very deep. Floating about on the surface is a mass composed of plants, roots, and earth. This mass is about twenty-five feet across at the top, and is nearly circular in shape. How far it extends downward is unknown. The roots of the plants are so interlocked and filled in with earth that the whole mass is firmly attached. Where the earth came from is largely conjectural, but it is supposed to be the accumulations of dust blown from the surrounding mountains. So far as known, this floating island has existed for an indefinite period.

A great many persons have been on the islet. The lake abounds in fine trout, and its waters are much fished. By means of long poles and oars, the island may be slowly "navigated" about the lake. Many fishermen get on the floating mass, drift about, and use their lines. Mirror Lake is much visited, and the floating island is one of the chief attractions of the scene.—*J. Mayne Baltimore.*

A BATH IN THE GREAT SALT LAKE.

A FEW days ago, in company with a brother of the Salt Lake City church, I had the privilege of a bath in the Great Salt Lake. From boyhood I had heard of this great inland body of salt water in the heart of Utah, in the midst of the great Mormon settlement, but never before had I the privilege of seeing it, and bathing in its waters.

The lake is about eighteen miles from the city, and is reached by steam cars, which make the trip in thirty minutes. The country between the city and lake is a vast alkali flat, and it is thought, was covered at one time by the lake. Of late years the shore line has been receding, and the lake has seemed to be gradually drying up. At Saltair, the great bathing resort, a huge pavilion has been erected, resting on twenty-five thousand piles. A few years ago, no doubt, this great building was over the water, and the piles were driven into the water but now, as the water has receded, it is quite on dry land. From the pavilion are two arms, one longer than the other, which in graceful circular form reach out to the deeper water. In here are the bath rooms in great number, the one assigned to the writer being eight hundred four.

In and about the pavilion are carried on all kinds of amusements to attract the people, who daily flock here by the thousands for fun and frolic.

On entering the water one is attracted by the beautiful bottom of the lake, which is of soft white sand, with no pebbles or rocks to hurt the feet. The water is very clear, and the bottom may be seen at the depth of many feet. A safer place to bathe could not be imagined, for the bottom slopes to deep water so gently that one could hardly get beyond his depth unless he purposed to do so.

Wading out about forty rods, we came to water that reached the breast, and concluded that we would strike out for a swim, as we had often done in fresh water, but at once found the limbs raised completely to the surface of the water, and the body placed in a horizontal position. This position in swimming, as all know, is unnatural, if not painful, so we turned on the back, as the remarkable buoyancy of the water keeps one at the surface without effort on the part of the swimmer. With a quiet motion of the hands to furnish propelling power, one can go into even the deep water with safety with but little if any danger of sinking; indeed, one could not sink if he tried, but might, if he were not careful, become strangled with the briny water entering the nose or mouth. A drop of the water in the eye, while possibly not dangerous, is quite painful, and will close the eyes for some moments. No living thing can exist in this lake, as the water is over twenty per cent salt.

In each dressing-room is a spray of fresh water, which is at once resorted to on coming from the bath,

to rinse the salt water from the body; but often persons forget this, and dress without using the spray; the face will then look as though one had been carelessly using complexion powder, as it will be covered with fine white salt.

A bath in this lake is very invigorating, and one does not tire or feel exhausted as he does in fresh water, and as the body is dried, there is a glow on the skin, similar somewhat to the salt glow after a treatment in one of our sanitariums.

One of the most beautiful sights I ever beheld was a sunset scene on the lake. The lake shone like burnished gold, the western heavens were aglow with the glory of the setting sun, and my mind was filled with the thought of what the sea of glass might be before the throne of God. Grand was this sight, but grander yet will be the things which await those who are faithful to God. Just a little longer and our eyes shall behold the King in his beauty and the blessed home of rest and peace.—*W. B. White.*

* * *

ALWAYS BE CHEERFUL.

AN odd looking boy went whistling along the street the morning after a big snowstorm. His hands were bare, his cheeks and ears were red with cold, his shoes were much too large, well worn at that, while his hat was only a hat in name. That he meant business was shown by his spry movements and the shovel that he carried.

Seeing a man at his door, the boy asked if he wanted the snow cleared away from the walks. "How much?" inquired the man. "Ten cents," replied the boy. "Too much; a nickel is enough," said the man. "There is plenty of work to-day," answered the boy, "and I must do the best I can while it lasts. Good morning."

But the man had just begun to admire the cheerful business air of the boy, and was also moved with pity for him. So he called the boy back, and told him to do the work.

The lady of the house looked out of the window a few minutes later, and said, "Just look at that little boy making the snow fly. Why he works like a snow plow."

Both the man and his wife watched the little "rag-tag" as though he were a new curiosity. They became interested as well as amused, and noted how well he did his work.

As he finished the job and came to the door for his money, the lady said to her husband, "Maybe he is hungry; bring him in."

The man asked him to come in. Yes, he was hungry, but he had only time to take a piece of bread. It was a good business day for him. Yes, it was

cold out, but he could keep from freezing by hard work, and he needed all the money he could earn.

"What do you want money for just now?" asked the lady; and the little worker replied, "I want to buy mother a shawl. She has to wear one that you can see through, and it isn't right." Then the lady took his name and address, saying, "We want some more little jobs done, and may want you again."

The boy thanked her in his cheerful way, and hurried on, whistling as he went. That night the mother had a warm shawl, and several other things that her new found friend could well spare. But, more than that, the next day the little snow-shoveler was dressed in a new warm suit from head to foot, and became the trusty office-boy of a leading lawyer. Cheerfulness and industry are sure to win confidence and success.—*Exchange*.

A HOT PLACE TO LIVE.

Their Needs Supplied.

THE hottest region on the earth's surface, says the *Christian Work*, is on the southwestern coast of Persia, on the border of the Persian Gulf. For forty consecutive days in the months of July and August the mercury has been known to stand above one hundred degrees in the shade, night and day, and to run up as high as one hundred thirty degrees in the middle of the afternoon. At Bahrein, in the center of the most torrid part of the most torrid place, as though it were nature's intention to make the place as unbearable as possible, water from wells is something unknown. Great shafts have been sunk to a depth of one hundred, two hundred, three hundred, and even five hundred feet, but always with the same result—no water. Notwithstanding this serious drawback, a comparatively numerous population contrives to live there, thanks to copious springs which burst forth from the bottom of the gulf more than a mile from the shore. *Machadores* (divers), whose sole occupation is that of furnishing the people of Bahrein with the life-giving fluid, repair to that portion of the gulf where the springs are situated, and bring away with them hundreds of bags full of the water each day. The water of the gulf where the springs burst forth is nearly two hundred feet deep, but these machadores manage to fill their goatskin sacks by diving to the bottom and holding the mouths of the bags over fountain jets—this, too, without allowing the salt water of the gulf to mix with it. The source of these submarine fountains is thought to be in the hills of Osmond, four or five hundred miles away. Being situated at the bottom of the gulf, it is a mystery how they were ever discovered, but it is said that they have been known since the dawn of history.

FLOURISHING RICE FIELDS.

So fast is the area devoted to rice culture in Texas and Louisiana increasing, and with such good results, that it is expected the domestic crop this year will for the first time be equal to the consumption. Enormous areas of swamp-lands along the Gulf coast, sold by the States for twenty-five cents an acre, are diked and drained and turned into flourishing fields. Two hundred and fifty thousand acres were planted in rice in Texas last year. Rice exchanges and rice mills are springing up all through southwestern Louisiana, and are creating an unusual prosperity. The Department of Agriculture is helping in many ways to advance the industry. One of the greatest troubles has been that the area one man could harvest was but a small part of that which he could sow and irrigate. Rice of a given kind tended to ripen at the same time, and the farmer found himself unable to gather the crops which he had raised. The department imported last year forty-one varieties of seed, which were planted in Louisiana, and from which thirty thousand bushels are now ready for distribution. By selecting varieties it has been made possible to plant all at the same time, and to stretch the harvest over nearly two months. The normal period from planting to harvest had been one hundred and three days. Some of the new varieties require a month, some fifty days longer than that. The annual crop is fast approaching two hundred thousand tons.—*Youth's Companion*.

BODIES DON'T FALL STRAIGHT.

No object can fall from the top to the bottom of one of the deep vertical mining shafts of the Lake Superior copper district except in a skip or cage. This has been shown by experiments, covering several weeks, conducted by United States government officials at No. 5 shaft of the Tamarack Mine, 4,930 feet deep.

Steel balls were suspended over the exact center of the shaft openings, brought to absolute quiet, dropped by burning with a candle flame the threads holding them, so that they started straight toward the center of the earth in the line of the shaft.

In every case, however, the balls swerved and lodged on the timbering after falling from 1,000 to 2,000 feet. Various theories are propounded to explain the occurrence, the most plausible being that the deflection of the balls is caused by the rotation of the earth.

ANY truth, no matter how beautiful, or saving, or abounding in rich possibilities, is valueless till we take it to ourselves; not simply to enjoy or marvel at, but to practice, to live, to *be* it.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglebrook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

DISCONTENT.

DISCONTENT is a habit most easily acquired. Energy, push, and hustle, qualities so characteristic of the American, are all commendable for the most part, and yet these qualities are largely responsible for the discontent of the business public.

The other day a large number of traveling men left Chicago for Cincinnati, over the Monon route on No. 33, which is the traveler's choice between the "City of the Lakes" and the "Queen City." The mercury stood twenty-four degrees below zero and there was a strong wind from the west. The dispatcher left us off on time; we ran our schedule a short distance, when the train crew saw that the iron horse was unable to hurl the great train against the storm and snowdrifts at a sufficient rate of speed to meet the requirements of the time card. A "helper" was hooked on in front, and plowed a furrow through the snow-filled cuts for his helpmate, but running at that rate against such a storm, as a matter of course, made the snow pour into the cab at a terrific rate, and the poor engineers, in spite of all their efforts, were almost frozen. The trainmen worked like heroes to deliver the passengers at their destination at the promised time, but all to no avail; we were slowly but surely losing time.

Occasionally an over-anxious "man of the road" would ask if we were making up time, only to be answered by a polite, regretful shake of the head, to the contrary. Finally the chief officer was accosted by an impatient son of the West, who said: "You're not gaining a second!" to which the man in blue replied: "My dear sir, you ought to be thankful that we're on the track," to which the passengers assented by a chorus of "Yes, or alive." Seeing that the sentiment was largely on the side of the men who were risking their lives for the convenience, safety and comfort of the passengers, he quickly ceased walking up and down the aisle and remained very quiet.

A general conversation followed, which was profuse-

ly illustrated by the recital of instances similar to the above, clearly demonstrating the domineering spirit of *discontent*, of which the following is the gist:

Discontent wages a warfare against happiness in the possessor and all those with whom he comes in contact; it is *very* contagious; it spreads like smallpox. Unavoidable lay-overs are incident to travel, and it is far more profitable to spend the time in reading, writing or meditating than to make the occasion a scene of uproar, confusion, dissatisfaction and discontent.

Contentment is a most admirable accomplishment. It never pays to worry or fret over things which cannot be avoided or remedied; and it certainly does not pay to growl and fuss about things that can be made better. Why not go to work and make them better, and be satisfied with the results? It has been demonstrated over and over again that worry is far more damaging in result than labor. The man who worries over his work unfits himself for his work; he who worries over his lot makes his own yoke heavier to bear. The one who has all the work he can do, and foolishly adds the unnecessary evil of worry, only shortens his days proportionately.

It is astonishing what a large number of people are prone to believe that the troubles and trials of others sink into insignificance when compared to their own; this is a hoax, and is one of the best evidences in the world of ignorance on the part of the one who thinks so.

An Allegory.

If Fortune would smile upon the world's populace and so decree that any and all who would might take-besetting affliction, whatever it might be (be it sickness, temper, mortgage, habit, deformity, poverty, wealth, crime, vice), and throw it down at a certain place in a great *plain*, with the distinct understanding that he must trade, swap, bargain, or barter with some other unfortunate, who is equally anxious to rid himself of his ailment, whether it be mental, physical or spiritual,—what a scene would follow! From the corners of the earth would come representatives of every nation, class and age, in innumerable bands, who with audible sighs of relief, would cast down their burdens, which, in their opinions, had been lifelong enemies. No sooner would the miserable bundle of regrets reach the earth than the slender cords, which bound them would be burst asunder and the real size and nature would be exposed. Memories of the past would magnify the contents until supreme satisfaction would take possession of the free individual. But his reign of absolute liberty is but momentary. He hears a voice saying, "Remember the contract," and he sets about making a selection from the thousands of cast-offs of his fellow-men. He sees artificial teeth, limbs and eyes; mortgages, funerals, and conflicts; scars,

wrinkles, and impediments of speech; labor, idleness and gossip; wealth, poverty and crime; politics, religion and nationality; infancy, youth and old age; gout, dyspepsia and rheumatism, store, shop, mine and farm; innumerable, immeasurable, illimitable—the prodigious mountain of imaginary proportions rises to fill the earth and the canopy. He is almost beside himself to see some of the trifling things that others had considered great afflictions. The crowd grew to millions; the mountain hid the sun from view. A great bell sounded, which was the signal to disperse. Oh, the decision of a moment! Each hurriedly selected the least objectionable thing in sight and disappeared, and the mountain went with them—but such a pitiful scene—he who had *laid down poverty*, selected distinction; one traded *heart trouble* for disgrace; a *disobedient son* was exchanged for a *mortgage*; a *wrinkled visage* for an *artificial hand*; gray hair for *bad temper*, etc.

Fortune could not refrain from smiling through tears of pity, to see short faces where long ones ought to be, long legs where bow legs would have been a credit; those who had been cultured, by imbecility, in a fit of anger. The pitiful wailing of the multitudes were multiplied by echoes until it reached the ears of Mercy, who at once appealed to Fortune, to once more decree that each might "seek his own" and, "in a moment, in the twinkling of an eye," the scene changed. A song of triumph was heard, the sky brightened, the birds sang, and for the first time in the life of each individual he was made to feel that each was asked to bear no greater burden than he was able to bear, and that each yoke was especially adapted to him who was compelled to bear it.

The moral is, "Be satisfied with your lot; don't pray for the removal of your weaknesses, but rather for grace to overcome them. Have compassion towards others. Be courteous and considerate. BE KIND."

IS IT YOU?

In these days of keen and bitter cold from the frozen lakes, where the mercury is ranging from twenty to fifty degrees below zero, even to the sunny southland, where cold seldom comes, but which is now learning what zero means, there is a general cry of cold and hunger.

When you shovel the hard coal into the furnace, turn on the electricity, and take up the evening paper or a book with which to rest the mind from the duties of office, farm or shop, and when you growl because there is one little cold corner in the house, do you think of the thousands of unskilled, uneducated laborers who are not only limited because of ordinary resource and of being able to cope with their fellows in other fields of labor, but are continually seeking employment in their own particular line because of the dozens who want the same job? Once out of a job,

because they must, they work at what they can get to do, and for such wages as they can obtain.

The laborer has as true a human nature as does the millionaire. He loves, woos and marries; he rears a family; they live in two small rooms in a damp cellar in the tenement district and are happy if they have enough to eat and can keep warm. He is not growling about the patches on his clothes, or the dents in his dinner pail; he works every day he has a chance, receives pay on Saturday evening and pays his bills, and is happy if he has enough to go around. You might talk yourself hoarse telling him to lay up something for the proverbial "rainy day," and it will do no good. With the wages he earns, the rent he has to pay, and the family he has to keep, he is kept at the extreme limit of his resources every minute, and how can he gain anything? There is a constant struggle for existence. Nature demands food, and society, climate and common decency demand clothes, and the law demands education. His meager income thus previously demanded, whether he sanctions it or not, and whether he has it or not, how can he get ahead?

That isn't the worst. How can he keep even? Provided he *keeps well every day* and his family keeps well every day, and he has work and wages every day, he may keep even; but if the shop shuts down, if some malady visits his dear ones, if a fire or flood comes his way—what then?

When the cold snap comes, when capital and labor get their horns locked—what then? Is he a criminal because he cannot provide? Should the landlord turn him out, and the law lock him up?

What do you think? What are you going to do about it? Are you satisfied for conditions to remain so? For the present are you willing to lend a helping hand by giving *cold cash* to relieve his immediate wants, and then for the future to labor for the following?

1. Establishment of industrial schools;
2. Abolishment of the liquor traffic;
3. Legislation against the manufacture of narcotics;
4. Spread of the Gospel of peace.

Did you say yes or no? Oh! you didn't say anything,—well, that's no. You cannot afford to be passive in this matter. Be active. Do not shut up your bowels of compassion against your less fortunate brother. However, some men do this. Are you one of them?

THE LAST CALL.

THE time has at last come when we must kindly ask all who have not renewed to do so at once. Sixty days have elapsed since the expiration of your subscription, and unless your renewal is received in the next few days we will be compelled to lift your name from the mailing list. Do not allow this to go longer.

Current Happenings

DR. PETER FAHRNEY

was born at Quincy, Pa., in 1840. He was the son of Elder Dr. Jacob Fahrney, and a grandson of the old Dr. Peter Fahrney. He lost his father at the age of eight, and spent the earlier part of his life on the farm and in the woolen factory; entered Jefferson Medical College in Philadelphia, and took special course in pharmacy at the Philadelphia School of Pharmacy, under the late Prof. Edward Parish in order to enable him successfully to prepare the famous

“blood purge” of his father and grandfather, in liquid form. Later in life he married and settled down at the old homestead in Connecticut, and commenced the manufacture of medicine. The Civil war and the burning of Chambersburg caused him to move west, settling in Ogle county, Illinois, in 1865.

The lack of shipping facilities caused him to move to Chicago in 1869, where he opened his laboratory on North Dearborn Street. The great Chicago Fire of 1871 consumed his entire business, but later he started a laboratory again on the west side, at which place he had remarkable success and his business became popular. With due foresight, in order to perpetuate the business he had established, he organized a close corporation in 1889, limited to members of the family known as Dr. Peter Fahrney & Sons Co., which organization has been in existence for sixteen years.

Dr. Peter Fahrney was the official head of the organization, yet active management was in the hands of his four sons, whom he had zealously trained and

brought up in the business; each one fitted for his part in the large enterprise. Thus did Dr. Peter Fahrney foresee, sixteen years ago, the necessity of making provision for such an incident as has now occurred.

Dr. Peter Fahrney was the direct lineal descendant of old Dr. Peter Fahrney. He was, at the time of his death, a great-grandfather. He was original in all his plans and actions, and looked upon imitators and simulators with abomination.

FIVE million three hundred thirty-eight thousand six hundred fifty dollars was the amount of a check recently issued in South Africa, by a London company, to some diamond miners who discovered the largest diamond in the world. The diamond weighed three thousand and thirty carats, which sum was more than the combined weight of all the noted diamonds in the world. It has created a great deal of excitement in the diamond market. It is not only the largest diamond in the world, but caused the largest check to be drawn that was ever made of which we have any record. It was insured for two and a half millions before it was shipped.

LONG ACRE, the center of the motor car and carriage industry of London, was the scene of a disastrous fire Feb. 22. Hundreds of automobiles were burned, and there were some exciting escapes of tenants occupying flats above the warehouses. About \$1,250,000 worth of property was destroyed.

A REMARKABLE religious revival movement is now being experienced at Louisville, Ky., which began about the middle of February. Four thousand converts have been announced.

IN a terrible accident which occurred at Birmingham, Ala., recently, 150 of the best miners in that district were killed by the explosion of gas in the Virginia mines. Seventy-five of the bodies have been recovered, but there is no hope of finding any of the men alive. Although three men have been discovered whose hearts were still beating, when brought to the surface of the mine, they ceased immediately upon reaching the outside air.

THE university at Washington, which, from 1821 until recently, has been known as the Columbian University, was formally dedicated Feb. 22 under its new name,—The George Washington University.

THE naval bill got through congress with two battleships, at last.

THE Isthmian canal engineers decided on a sea-level canal, to cost \$230,500,000, and to be completed in the next ten or twelve years.

* * *

CHRISTIAN SCIENCE practice has been declared illegal in Ohio.

* * *

THE half-fare law for school children was sustained in Massachusetts.

* * *

THE czar has issued a call to his people to save the throne.

* * *

THE Sultan of Turkey has something with which to occupy his mind these days. The revolution of the Arabians in the province of Yemen has become serious. Many Turkish troops are said to be deserting him.

* * *

PROFESSOR PERRINE of Lick Observatory has discovered the seventh satellite of Jupiter.

* * *

ANOTHER great fire occurred in St. Louis, in the Adolphus Busch glass works, recently, entailing a loss of \$75,000. The fire is believed to have been started by electric wires. The loss of the plant throws 500 employés out of work.

* * *

MISS ANNA SULLIVAN, who became world-famous as the teacher and companion of Helen Keller, who was graduated from Radcliffe last June, has become engaged to John A. Macy, a Harvard instructor, and one of the editors of the Youth's Companion.

* * *

A FLORIST at Los Angeles, Cal., after six years of experimenting, produced a green carnation. The flower is like other carnations, except that its petals are tinged with vivid green, which radiates from the center to the edge in deep stripes. He refused to disclose his method.

* * *

THE Booth Line steamer Hubert, from North Brazil ports, has arrived at New York with 7,000 cases of crude rubber, valued at \$2,500,000.

* * *

PRESIDENT HARPER of Chicago University is convalescent, and has already resumed active connection with the University administration before leaving the hospital.

* * *

THE action of the United States supreme court, in declaring the Kansas anti-trust law constitutional, opens the way to the prosecution of the coal trust of that state, which will be commenced at once.

AT Tuskegee, Ala., last week the annual negro conference in session asserted that in the forty years of emancipation the negro race in the United States has saved more than four hundred million dollars worth of property; has organized twenty-eight thousand churches; has bought one hundred and seventy-three thousand three hundred and fifty-two farms; has helped to support many industrial schools, beside the hundreds of common schools. This record ought to establish the fact that the colored man has some ability.

* * *

RECENTLY exhaustive trials of a new smoke consuming device, at Westminster, England, are said, by the *American Inventor*, to have proved conclusively that coal of the worst description can be burned in an ordinary furnace without black smoke and with considerable saving. The invention consists of a system of tubular fire-bricks built of prepared material so that the fire from the furnace must pass through the screen. The screen becomes incandescent and ignites the gas thus preventing the formation of carbon.

* * *

THE New York Rapid Transit Commission has authorized the construction of a vast network of subways extending to all sections of Greater New York; some to be built by the city and some by private capital, altogether aggregating a cost of \$250,000,000.

* * *

THE B. & O. Railway Co. has purchased one hundred and seventy-five freight locomotives, thirty-five passenger locomotives, forty switch locomotives, and ten thousand freight cars at an expense of \$12,000,000.

* * *

WIRELESS telegraphic service, under the auspices of the navy department, has made a new long distance record for overland wireless telegraphy by establishing communication between the station of Key West, Fla., and Chicago, Ill., a distance of 1060 miles. The best results were obtained at night. The department has now twenty-nine stations established and many more are in prospect.

* * *

THE members of the German Automobile Club of Berlin, Germany have formed themselves into an army corps, pledging service during the war and peace; in time of peace they must take part in army manoeuvres; in times of war they probably will be fixing the automobile some place where it is exceedingly warm.

* * *

IT is bad enough to have the Duke blown to atoms by bombs, but it is worse to know that conditions are such that a funeral is impossible at the present. Royal families are kept in seclusion. The entire country is in readiness for a general outbreak at any moment.

HOME DEPARTMENT

GLORIFY GOD IN YOUR BODY.

BY HOWARD H. KEIM.

EXHILARATING health is a luxury enjoyed by few. A glimpse at the passing multitude, evidences the fact that most of the human family are under the hand of affliction. To be *well* seems to be the exception. To be ailing, the rule. Saint Paul lived in a time when physical culture was receiving much attention. Many of his most sublime illustrations are drawn from common customs of his day. "Know ye not that they which run in a race run all, but one receiveth a prize? So run, that ye may obtain." How many middle-aged readers of the *Nook* really enjoy *a run*? Children love to play and when they are out of doors are always playful and healthy. They *enjoy* health. By and by they get too big to play—especially girls. Prudery steps up and dictates weakness and misery. No one can do his best unless he is well. He can not be well unless he lives close to nature. To have a "conscience void of offence toward God and man" he must have a healthy body. God made the air to breathe and men shut themselves up in close houses—away from the element designed for them. The blood is slowly poisoned, the cheek grows pale, strength wanes. The whole "temple of the living God" is in bad repair in consequence.

When we do have a chance at the fresh air most of us learn to use as little as possible by not breathing fully. Strike a trot—run a quarter or a half or a mile if you can. If you can't you must be "getting old." One of the happiest and best old men, the writer has even known, was fond of helping his seven boys play "leap frog" when he was nearly three score years and ten. That man never died. After eighty years' residence here he fell asleep and went to Glory.

Ladoga, Indiana.

WINTER EVENINGS.

BY MRS. M. M. BOLLINGER.

DURING the long winter evenings many of us ask ourselves the question, "What shall we do?" and some of us have so much to do that we are puzzled which to do first. Now is the time when we all can gather around the cheerful, blazing fires in our sitting room and spend an enjoyable time with our loved ones at the same time engaged in some work, perhaps for ourselves, or sewing, knitting or crocheting for

some over-burdened mother, or garments for some poor and destitute family; or we can take a sleigh ride to carry food and provisions to such; help care for the sick; cheer up the weary invalid by carrying her flowers or some luxury she cannot afford or reading to her: we none of us need to be idle, we can always find something to do if we will and we can cultivate ourselves so that all duties will be pleasures.

Then, we sisters, if industrious or ambitious now bring forward the sewing that has been laid aside during the busy summer and complete the garments; we bring out all the old cast-off garments sort into carpet and paper rags; then we tear the carpet rags into proper size and sew and soon have a number of bright balls waiting to be made into carpet or rugs, or perhaps some save all the bright woollen rags and cut into strips two inches long and draw through canvass into patterns and so have another kind of rug.

We may hunt up all of our calico pieces and make into patchwork, or our woollen pieces into crazy work; but we should all of us be as busy as the bees so when next summer rolls around with its many cares, and we are ready to clean house we will have all of our light work done and our rubbish ready to be removed, leaving us free to work in the garden, among the fruit, or anywhere else we choose.

This is the time to brighten father up and recruit him up so he can enter his next summer labors with more courage and zeal. After he has been in the cold all day have his easy chair by the fire, his newspaper handy, allow him a quiet hour to read to himself if he wishes, or request him to read aloud and explain what he reads, but by all means give respectful and dutiful attention and during the reading do not have frequent interruptions, then have him join in your games and music; bring out your apples, pop corn and nuts and all join in crunching the apples and cracking the nuts and amidst this chatter and glee father will forget himself and become a child again, in your enjoyment.

Vestaburg, Mich.

HUNGRY FOR KISSES.

Two young girls had gone to the orphan asylum one Sabbath afternoon to teach in the Sabbath school there as substitutes for regular teachers who were absent. One of them taught the infant class, and when the lessons were over, a little blue-eyed tot caught hold of the girl's dress, and, looking up,

whispered pleadingly: "Please teacher, won't you kiss me?"

"To be sure I will, you dear baby!" the girl cried, and, dropping down on one of the low benches, she drew the child close and kissed her again and again. In an instant the others swarmed about, boys and girls alike holding up hungry faces for kisses. The girl's eyes filled with quick tears as she looked into the eager little faces.

Her friend who had taught an older class, stood at the door of the infant room, looking on, half-laughing, half-impatient.

"Do come along, Helen," she said at last, and, as Helen gently put aside the little, warm, clinging fingers and joined her, the other girl exclaimed, with a touch of scorn: "I don't see how you could have all those mussy little things hugging and kissing you? See how they've tumbled your dress!"

Helen glanced down at her dress; it surely had suffered from the little loving hands, but her eyes were shining through a mist of tears as she gently answered: "You know they have no mothers to kiss them, Gertie."

Somehow Gertie could find no answer to that, and as the two reached the street, Helen went on: "Did you notice Sadie Burns, the little brown-eyed thing with the blue veins on her forehead?"

"The one that clung to your dress to the last minute?"

"Yes, that was Sadie. The matron told me that one day when Sadie was sick, a lady who is very fond of her, and who often visits at the asylum, came to see her, and brought her a little puppy, which she thought would amuse her. Of course, the child was delighted with the puppy, and at last the lady said to her: 'If you could have just what you want most of all for yourself, Sadie, what would it be?' She thought the little thing would like the puppy, and she meant to give it to her, if the matron was willing; but Sadie put the dog down at once, and, stepping close to the lady, leaned on her knee, and looking up at her with those big, solemn brown eyes, she said: 'I'd like most of anything to sit in your lap a few minutes just as if I was your own little girl.'"

Gertie turned impulsively to her friend. "I never imagined they felt so, Helen," she said, remorsefully.

"They don't all, of course," Helen answered; "but I know that some do, and I can not bear to think of little children going hungry for kisses. I can't give them mother kisses, but I do the best I can, even if my dress does suffer a little."—*Christian Endeavor World*.

FOR in that he himself hath suffered, being tempted, he is able to succor them that are tempted.—*Heb. 2: 18*.

STRAWBERRY JAM.

THE newspapers report that the State chemist of Nebraska has analyzed a sample of commercial strawberry jam, and found that it was no such thing. It was made chiefly of pumpkin, tinted with coal-tar dyes, preserved in benzoin, and the seeds that were intended as evidence of the presence of real berries were grass seeds. This does not account for the flavor; but everybody knows that flavors may be artificially stimulated by chemical processes. Confident reliance on the manufacturer and the shopkeeper has induced housewives to forego the trouble of making their own jam and preserves. We mean housewives who know how to do it,—a kind that is diminishing, because the art is not regarded as a necessary accomplishment in modern days. The factory-prepared article is often cheaper, as well as more conveniently obtained. When it is compounded as this alleged strawberry jam was, why shouldn't it be cheaper? It is a great satisfaction, when invited to partake of table condiments and confections, to have the hostess say, "I made these myself."—*Boston Herald*.

Not only are jams adulterated, but also nearly all prepared, preserved and canned foods. It view of the conditions that exist so largely it will be wise to use little or none of any of the prepared commercial foods. Why not use the fruits, etc., as nature prepares them, uncooked?

"OLD" AND "NEW" WOMEN.

NOWHERE outside of an old-fashioned romance is there a spot in the world where the incapable woman can to-day maintain a foothold. In the leisurely three-volume novel dear to our grandparents, Arabella and Araminta, gentle, pallid, timid, submissive creatures, faltered and gasped and fainted gracefully in their chairs at the slightest excuse for such behavior. To swoon with ease was regarded as a proof of elegance, and as a distinctive line marking the difference between the milkmaid and the lady born and bred. Possibly the tight lacing then in vogue aided the lady in her ability to perform this part of her role to the satisfaction of the spectators who were usually within the receding vision of the fainting and fragile being whose delicate nerves were proof against neither terrors by night nor shocks by day. Frankly, we doubt whether the old novelists were quite fair in their portraiture of the current life of their times.

LET knowledge grow from more to more.—*Tennyson*.

A WISE man will hear and increase learning.—*Proverbs 1: 5*.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

THE BEST AIM.—1 Cor. 10: 31.

For Sunday, March 26, 1905.

I. Poor Aims.

1. To Injure Others,Acts 14: 19
2. No Aim,1 Tim. 5: 13
3. Selfishness,2 Peter 2: 10
4. Using Religion for a Cloak,Matt. 23: 5, 28

II. Better Aims.

1. To do Good to Others Without Sacrifice—the Selfish Preacher.
2. To Die for One's Country—the Soldier.
3. To Die for One's Friends,John 15: 13

III. The Best Aims.

1. Sacrifice for Others—Jonathan, 1 Sam. 20: 14; John the Baptist,John 3: 30
2. Develop the Christian Graces,2 Peter 1: 5-7
3. Honor God,1 Cor. 10: 31
4. Exalt His Church,Rom. 1: 16
5. Give One's Life for the Faith of Jesus, Acts 7: 60
6. Give the Gospel to the World Unhindered,Acts 28: 31

Text.—Whether therefore ye eat, or drink, or whatsoever ye do, do all to the glory of God. 1 Cor. 10: 31.

References.—Psa. 72: 19; 104: 31; Isa. 6: 1; Psa. 24: 8, 9; 96: 3; Exodus 40: 34, 35; Jer. 13: 11; Isa. 62: 3; 66: 18; Hab. 3: 3-5; Ezek. 43: 4; Rom. 11: 36; Eph. 1: 6; Philpp. 2: 11; Rev. 15: 8; 21: 23.

In the Beginning—God.

When Garibaldi stood out and called for his young compatriots to follow with him to free his land from the slavery of popedom, he told them that following him they would get but rags and hunger and thirst; they would be degraded altogether, but they would be going on for freedom. And when young Christians resolve to seek first the kingdom of God, to deny self, to do what Jesus asks them to do, the conditions are not much better than those laid down by Garibaldi. "Let him take up his cross and follow me," said Jesus. If in all things we do we aim first to do it unto the glory of God, then there is but little time or disposition left to advance our own interests, or our ambitions.

Our Helpers.

Suppose an angel would come to us and say that he had been sent to take all our work in his charge to-day, that we need not worry about it, as his strength and wisdom were greater than ours, and he would make it prosper more than we could. What a holiday it would seem if we accepted the offer, and we should accept it for we have the command, "Commit thy works unto Jehovah!" If you do this the burden of the work is no longer upon you; you leave it with

God, he will keep it in the hollow of his hand while you do your part calm and serene, believing him when he says, "Thou art my servant in whom I will be glorified."

"Only an instrument ready
His praises to sound at his will;
Willing should he not require me,
In silence to wait on him still."

Fruitless Work.

Unless we do our work to the honor and glory of God it will pass away; it will prove fruitless. And it may be work that we are doing for him, it may be deeds of charity, or some teaching. If we are anxious to get full credit for every dollar we give, and if we look for praise and appreciation in return for our teaching, and warm thanks for any deed of kindness we may do, then it may be said to us, "Be glad and rejoice for great is your reward upon earth." A rich man tried to fill the almsbowl of Buddha, he threw in thousands and thousands of flowers but to no purpose, the bowl remaining as empty as at first. Then a poor man with a sincere heart threw in a handful of flowers, and lo! the bowl was full and overflowing.

"For the Sake of My Lord."

I know of no picture more pathetic than that of Mrs. Judson standing in the doorway of her Burman home by the sea, watching the ship sail away that was carrying her children to America for their education. The most dreaded hour in the life of every missionary mother had come. She had to choose between leaving her husband alone, in Burma, surrounded by dangers and perils, and permitting the children to go home without her; she decided to give up her children. And after many a long, tender caress, she had bidden them good-by, and the great steamer was sailing out toward the open sea. The almost broken-hearted mother stood and watched the vessel until through the mist in her eyes it had ceased to be even a speck on the horizon, and then turning into her room sank into her chair and exclaimed, "All this I do for the sake of my Lord."

Jesus Only.

Aspiration, not contentment, is the law of life. Boys and girls should early learn to choose high ideals. Then aim to do all your work, and to live your life for the glory of God. There is nothing possible to a human soul nobler or greater than simple faithfulness. There is a field for better living right at home, room in the home not only for fidelity but downright heroism. You are looking to the far-off mountain peaks

where there is nothing whatever for you to do, while right at home are neglected duties that you can do to the glory of God. Common, ordinary people can be faithful, and so live heroic lives. To lose your ideals is the greatest tragedy that can befall you; Jesus alone will lead you into the ideal life.

"Your Trophies at His Feet."

When we think of David Livingstone, converted at twenty, for thirty-two years a missionary in Africa, we see one who lay royal honors at the feet of Christ. Think of him, decorated by geographical and scientific societies, honored by courts and by parliaments, offered the freedom of cities, and yet sleeping on the coarse, damp grass, eating birdseed and roots and African maize, forty times scorched with the fever, his arm torn by the teeth of a lion—"he stands before me transfigured, like one of the tall angels whom Isaiah saw next the throne of God." His heart remains in Africa, buried beneath a tree. The wretchedness of those poor people so appealed to him that nothing could turn him away; he gave his life that we might carry the Gospel to them.

Topics for Discussion.

1. What is the result of exalting ourselves? Obadiah 1: 3, 4; Luke 14: 11.
2. Was Paul ready to suffer for the glory of God? Acts 21: 13.
3. What was Joshua's aim? Josh. 24: 15.
4. Paul's grand aim. Philpp. 3: 12-14.
5. David gave all the honor to God for his victories. Psa. 44: 5-8; 32: 7.
6. Where are we to declare his glory? Psa. 96: 3.

EMPLOYMENT BUREAU.

Brother M. B. Knop, our secretary at Waterloo, Iowa, is one of our faithful workers. He reports that some of their Circle are completing the course, and he hopes to send us some new names.

*

Sister Mary Vancil, of Girard, Ill., says: "We have organized our Missionary Reading Circle now, and have held two meetings; we all think they were good meetings for the first ones. And we hope that the interest manifested at these meetings may continue. I am glad to send you three new names for the Circle."

*

Sister Mary L. Cook, of Prairie Depot, Ohio, says, "I enclose one new name; how I would like to send in a number, but this seems to be a difficult place to work in, yet if we can enroll some, it may create an interest in others. I often think of this quotation that I came across sometime ago, 'The church that is not a goer, is a goner.' It is mission work that shows the life of a church. In our home congregation we have

twenty some members of the Circle, and our church is pledged to give forty dollars a year for foreign missions, besides the other freewill offerings. Our elder is one of the active members of the Circle, and his influence is ever on the side of mission work. We pray that God will give his choicest blessings to the cause for which we are working."

*

You need a constitution and by-laws. If you have none, we will be glad to mail you one that is in general use in many of our Circles. Write to us enclosing four cents to pay for mailing it, and we will gladly send you one. Address, OUR MISSIONARY READING CIRCLE, Covington, Ohio.

*

We have had an active, working Circle at Lancaster, Pennsylvania, for a good many years. They have had many good Circle meetings in that church, and the members have read many books on missions. Sister Emma C. E. Landes our secretary there, sends us three new names for the Circle.

*

We are anxious to hear from more of our Circles. Please write to us, and give a report of your work for this page. Other Circles will be encouraged by what you are doing. We know you are busy, but send us at least a short report. We are interested in you.

*

Since you have given us permission to ask questions, and tell our experiences, I want to ask you about something that I have been puzzled about. Some of our meetings are good, and we enjoy them, then at other times, it seems as if there is "no go" to them, they are dead. Only a few will take part, and they don't do very well. I half believe that the leader has a good deal to do with it, to make it a success. What are the duties of a leader?—*A Reader.*

NEW NAMES.

- 2700 Alva Brubaker, Virden, Ill.
- 2701 Otis Stutzman, Girard, Ill.
- 2702 Amy Ohmart, Girard, Ill.
- 2703 Mabel Caskie, Longley, Ohio.
- 2704 Emma S. Kraatz, Lancaster, Pa., 250 W. Orange St.
- 2705 Charles Bower, Lancaster, Pa., 420 Lancaster Ave.
- 2706 Walter E. Stump, Lancaster, Pa., 547 E. Orange St.
- 2707 Pearl Mishler, Collamer, Ind.

RECEIVED CERTIFICATES.

- Martha E. Lear, Cerrogordo, Ill.
- Ella Heckman, Cerrogordo, Ill.
- Etta Wheeler, Cerrogordo, Ill.
- Florence Mohler, Cerrogordo, Ill.
- J. Wilbert Miller, Waterloo, Iowa.

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XIX.

London, England.

Dear Mr. Maxwell:—

Here we are sure enough in the largest city in the world. We are stopping up at Russel's square. The first and best thing that met our eyes was a large package of letters from home. No sooner had the boys found the hotel and arranged for our baggage than they went down to Thomas Cook & Son's, at Ludgate Circus, and called for our mail, and sure enough there were letters from many of our friends at home; some addressed to the party, some to Miss Merritt, and others to other individuals of the party. As a matter of course the letters which we received from our parents are of such a domestic nature that we would not care to have you publish them, but there were some things in some of the other letters that I mention because we want you to realize how much we appreciate them.

For instance, in Raymond Tracey's letter we received the intelligence of Grandpa Steven's death and how that Mirandy had gone to Baltimore to live; I suppose he is missed greatly by you all, and I am quite sure we will notice the vacancy more keenly when we return. How well I remember the speech he made in the high school chapel about our coming to Europe. We are glad to know that the new chain factory has come to Mayville and hope that the enterprise may be successful, and that it will furnish employment for a lot of our young people, besides adding to the stimulus of the business life of the city.

Elsie Mills, in her letter, told us all about the surprise on Brother Dawson and how he was presented with so many nice books, maps and charts, which will certainly be a very helpful addition to his library. We are glad to learn that the Christian Workers' society and the Sunday school both have adopted the Inglenook. By receiving it in clubs each of us will be able to receive our paper at a reduced price, and we can use the other twenty cents apiece in a helpful way by allowing the treasurer of the society to order as many extra copies as he can for the money, and thereby do a great deal of good. We received the last four numbers to-day.

I think Verne Williams just tried to see what he could do when he wrote his letter. He wrote a great lot of stuff about Old Blossom, Agnes' pet cow, and about Daisy, Roscoe's favorite mare, until he had them pretty nearly homesick enough to start for New York. There is hardly a day passes anyhow but what Roscoe makes mention of Daisy; she is always used as a basis of comparison when judging the horses of this country.

It remained for Esther Norris to tell us about the remodelling of the schoolhouse and the progress of the literary society, and the way things were going in a social way. It seems there have been a wonderful sight of deaths and marriages in the short time we have been away. But I am constrained to think that the jolliest letter of the lot was written to the party by James Maynor, Jr. In his artistic way he hauls us individually to a convenient spot on the green carpet and gives us a

respectful individual investigation, and, from a phrenological standpoint, shows us our powers and weaknesses, and points out to us in unmistakable terms how we can make the trip a success or failure. In fact he almost assigns each of us a work to do in a specific way, because of our individual talents. He does not forget to advise us carefully concerning the study of the people, as to their religion, politics, business and nationality. He said we were studying geography and that "geography is a description of the earth as the home of man." Many practical suggestions were offered by him that will materially aid us in our sojourn here, and I am sure will be quite beneficial to the rest of you when we return. He has traveled so much that it comes very handy to him to suggest to us the most helpful and needful things.

It was quite a surprise to us to find that England is so rough, in a physical way, and that there were so many coal mines, stone quarries and lime kilns. We will probably have more to say of the country later. We are wholly absorbed now with the study of the metropolis of the world. It is generally known that more than five millions of people call this their home, among them are the richest of the rich, and the poorest of the poor; the millionaire and the multimillionaire are found living within a very few blocks of the vendor and the beggar; all are here within a radius of a very few miles; hundreds throw away pounds and guineas in extravagance, which is the result of aristocracy, while thousands beside them struggle to eke out a very miserable existence. The rich look down upon the poor to that extent and degree that they are now trying to legislate the street cars from the principal streets to prevent the poor from coming among them.

In the struggle of the populace to get from one point to another in the city the municipality has been compelled to build railroads overhead so as to relieve the congested condition of the street as much as possible. Besides the elevated railroads the surface street cars are double-decked; passengers ride within for four cents, and those who sit on top pay a two-cent fare. The ascent is made by means of a spiral stairway at the rear of the car, and the descent from the front end of the car. Of course those street cars only follow the straight, broad streets; the crooked and narrow streets are supplied with double-decked omnibuses which charge the same fare as the street railways, and make their regular stations and stops as if they were guided by a track. It seems that with this service the people might be satisfied, but a few moments is sufficient to convince the stranger that this is wholly inadequate to the demands of the public. We found that another system of transit was carrying its thousands beneath the surface of the earth. Indeed there is an almost perfect system of railroads traveled by steam cars at a depth of thirty feet under the city, and while the service is good and cheap, yet one is impressed that it is quite dirty and smoky on account of insufficient ventilation.

The most novel thing in the entire city along this line is what is called the two-penny tube; it is ninety feet

(Continued on page 264.)

The Q. & A. Department.

Who was "Old Hickory," and how did he get his name?

This sobriquet was conferred upon General Andrew Jackson by his soldiers in 1813. First one of the soldiers remarked that the General was "tough," referring to his pedestrian powers. Another soldier declared he was as "tough as hickory." Then he was called "Hickory," and later the affectionate adjective "old" was prefixed. The above origin of the name is given by Mr. Parton, but General Jackson is said to have told the following account of it: "During the Creek War he was suffering from a bad cold and his officers improvised a tent for him, covered with flakes of hickory bark. The next morning a drunken hanger-on of the camp spied the odd tent, and not knowing who was in it, gave it a kick that tumbled it over. As the General struggled out of the ruins the toper cried out, 'Hello, Old Hickory! come out of your bark and join us in a drink.'" General Jackson joined in the laughter at the incident, and as he stood shaking the bark from him the soldiers gave a hearty "Hurrah for Old Hickory!" and the name clung to him.

❖

How much liquor and wine is produced in the United States in a year? How much imported? How much consumed, and what were the revenue receipts of the United States from spirits and liquors last year?

For the year, ending June 30, 1903, 112,905,399 gallons. Imported in 1904, 4,665,717 gallons of malt liquors, 3,020,814 gallons of spirits and 4,823,671 gallons of wine. Amount consumed in the fiscal year 1903, 1,605,851,455 gallons. This includes 114,812,613 gallons of domestic spirits, 2,439,535 gallons of imported spirits, 32,631,154 gallons of domestic wines, 6,088,201 gallons of imported wines, 1,445,675,414 gallons of domestic malt liquors and 4,204,538 gallons of imported malt liquors. The revenue on spirits, \$135,810,015 and on fermented liquors \$49,083,459.

❖

How many brothers and sisters did Jesus have?

It is not known that he had any. James and Joses and Simon and Judas are called the brothers of our Lord, but the Jews used terms of relationship loosely and the word "brother" was frequently applied to cousins and sometimes to second cousins. Some say they were half brothers.

❖

In what State was Admiral David Farragut born?

He was born at Campbell's Station, near Knoxville, Tenn., July 5, 1801, and died at Portsmouth, N. H., Aug. 14, 1870.

What are the principal railroad systems in the United States?

This is a hard question to answer. If there were only a few dozens or hundreds we might answer it, but when we name the Southern, Union, Northern, and Canadian Pacific, the R. I., Milwaukee and N.-W., we have only begun in the West. The Pennsylvania, Wabash, Big Four, C. H. & D. operate in the center; in the east are to be found B. & O., C. & O., Lackawanna System, N. Y. Central, etc. The better way is to get a railroad guide for a few cents, which will give you, not only the names, but all the desired information concerning them.

❖

Please give the correct pronunciation of the following: New Orleans, European, and Pierre.

New Orleans is pronounced (New Or'-le-ans); European (Eu-ro-pe'-an), and as for Pierre, the Century Dictionary pronounces it (Pe-air'); the Webster's 1903 edition gives (Peer). Both of these are authority, but such things have local changes and probably the only real way to find this out would be to ask some native of the town how the people pronounce it, who live there.

❖

How many Bible Biographies have been written by Bro. Galen B. Royer?

Joseph the Ruler; Samuel the Judge; David the King; Daniel the Fearless; Moses the Leader; Jesus the Savior, Vol. 1 and 2; Ruth the Truehearted; Esther the Queen, and John the Baptist.

❖

Who was the world's greatest orator?

Some say Cicero, and some say Demosthenes. It is said that Cicero's audiences would exclaim at the close of his lectures, "What a grand man." When Demosthenes finished, the people forgot the speaker but were filled with the subject.

❖

A request.—There is a call from one of our Nookers for the old poem:

"How big was Alexander, pa,
That people called him great?
Was he like old Goliath, tall,
His spear a hundred weight?"

Who can favor us with the entire poem?

❖

Who makes the printing of name cards a business?

Try Bro. H. C. Woolfington, Rossville, Ind.

❖

In what year did Mark Twain write "A Tramp Abroad"?

In 1880.

MISCELLANEOUS

THE GEOGRAPHY CLASS.—Chapter XIX.

(Continued from page 262.)

underground and is scrupulously clean and neat. It is called a tube because it is round and looks like a large sewer, walled up with white glazed brick. To avoid collisions two of these tubes are constructed side by side; trains all move in one direction in one tube. These cars, and the elevators that lead down to them, are operated automatically by electricity. This service is the quickest and the cleanest in the city, and perhaps in the world. The stations are farther apart than in the surface transit, and it only takes a moment, seemingly, to go from one side of the great city to the other.

The boys and girls are getting ready to go over to the art gallery, and I beg to be excused. The nicest thing of the whole lot was that pretty bouquet of flowers that little Susie sent us from home. Write some more letters.

Respectfully,

Marie.

(To be Continued.)

* * *

TWELVE VIEWS OF THE CROSS.

The soldiers saw in Christ a criminal, with cruelty.
The women saw in Christ a benefactor, with sorrow.
His mother saw in Christ a son, with anguish.

The disciples saw in Christ blighted hopes, with perplexity.

The first thief saw in Christ a malefactor, with hardness.

The second thief saw in Christ a king, with penitence.

The centurion saw in Christ divinity, with conviction.

The priests saw in Christ an impostor, with mockery.

Angels saw in Christ love, with wonder.

Devils saw in Christ "the seed of the woman," with dismay.

Jehovah saw in Christ obedience, with affection.

The passers-by saw in Christ nothing, with indifference.—*D. L. Moody.*

* * *

COFFEE PURIFIES THE AIR.

COFFEE is a fairly good air purifier. A little burned on hot coals will purify a sick room and abolish bad smells. Many physicians think highly of the bracing effects of coffee, taken before they visit cases of infectious diseases.

UNCLE NELSE'S DOG.

Is you-all seen a dawg roun' here

Dat don' belong to you?

I's huntin' mine—he's done been los'

For 'bout a day or two.

What kind er dawg?—now lemme see

If I can tell you dat;

Fust place, he's po', dough he sho' eats

Enough to make 'im fat.

His ha'r looks lak hit wuz put on

Des any which-a-way,

De color of it sorter mixed,

Lak dus' an' yaller clay.

He ain' no high-tone gent'man's dawg,

Ner thoroughbred, but des

A ev'yday bench-legged dawg

What looks lak all de res'.

Ef you-all sees him hangin' roun',

I hope you'll let me know,

Hit's funny how I wants dat dawg,

I miss him mo' an' mo.

Es far as acshul value goes,

I ain't got dat in sight,

Hit's des de wag er dat dawg's tail

When I comes home at night.

—Eloise Lee Sherman, in February Lippincott's.

GATHERING CLOVES.

CLOVES are now cultivated in many of the tropical regions of the earth. A clove tree begins to bear at the age of ten years, and continues until it reaches the age of seventy-five years. There are two crops a year, one in June and one in December.

The tree is an evergreen, and grows from forty to fifty feet high, with large oblong leaves, and crimson flowers at the end of small branches in clusters of from ten to twenty. The tree belongs to the same botanical order as the guava. The cloves, which are the undeveloped buds, are at first white, then light green, and, at the time of gathering, bright red.

Pieces of white cloth are spread under the trees at harvesting time, and the branches are beaten gently with bamboo sticks until the cloves drop. They are dried in the sun, being tossed about daily until they attain the rich dark color which proclaims them ready for shipment.

In this country and in England they are used almost wholly as a condiment, but in France they are employed in medicine for their tonic properties.—*Boy's World.*

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,

Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

BRO. JOHN A. MILLER,

Brethren, Mich.,

RESIDENT AGENT

Michigan Land Association.

RAW

MARCH

WINDS

and changeable April days frequently bring woe to young and old, and more especially those who, during the winter months, have been weakened by onslaughts of severe colds, la grippe, pneumonia and other ailments. Even those of us who are well frequently find the transition from winter to spring a trying season. Many of us have been penned up indoors, to a large extent, for months. We have lacked our usual exercise. Our blood has become thick and sluggish, our lungs weakened and our livers more or less torpid. We feel it by a sense of lassitude, and realize that our systems need a thorough rejuvenating. As all nature at this season begins to throw off its mantle of corruption, so too does the human system need to purge itself from accumulated waste matter, which clogs up the vital channels.

A man well advanced in years, yet in robust health, remarked not long ago that he attributed his splendid physical condition to his habit, for years, of giving his body a regular "house-cleaning" each spring by the use of a reliable blood-cleansing remedy. There was sound reason in the remark. The best of us need to do this at times. For the purpose there is probably no remedy that equals Dr. Peter's Blood Vitalizer. By its mild, yet invigorating properties, the vital organs are stimulated to natural activity. The system is freed from accumulated waste matter. The bile and uric acid are eliminated from the blood, the kidneys regu-

lated, and the body made to tingle with the glow of health, making life worth living.

ITS RENOWN SPREADS.

Sheboygan, Wis., April 23, '04.

Dr. P. Fahrney,
Chicago, Ill.

Dear Sir:—

Your **Blood Vitalizer** is in great and ever increasing demand as one person recommends it to another. It is used for rheumatism, stomach trouble, headaches and skin eruptions with wonderful success. This is my experience since I accepted the agency, now three months ago.

Yours truly,

626 End Ct.

THE BEST DOCTOR.

Lyons, Iowa, Dec. 17, '04.

Dr. Peter Fahrney,
Chicago, Ill.

Dear Sir:—

We would not be without your **Blood Vitalizer** in the house for anything and shall keep it as long as we live. It is the best family doctor we know. We use it for almost every ailment in the family and it has saved us many a doctor bill.

With kindest regards.

Yours very truly,

Mrs. J. Vermeersch.

Current testimonials, with a full description of Dr. Peters' Blood Vitalizer, showing how it acts upon the system, will be found in each copy of The Surprise, sent free on application. Address:

Brethren's Clothing

Our system of cutting and making Brethren's Clothing from measurements sent us by mail enables our customers to save from one-third to one-half from prices offered by local dealers or agents. While the prices of woolen or worsted goods have advanced from 20 to 25 cents per yard, we make no advance in the price of our suits.

OUR NO. 9778 SUIT, \$17.50.

A high grade, good weight, fine finished strictly all wool serge. Guaranteed fast black. Any merchant tailor would charge you \$30.00 for a suit of this material and our grade of workmanship.

OUR NO. 2163 SUIT, \$17.00.

As fine finished, all wool gray serge of medium weight as money can buy. The surface is rather smooth and the fabric soft and pliable. This makes a handsome suit and is well worth the price. Always looks well, wears clean and is excellent value.

OUR NO. 576 AND 177 SUITS, \$15.00.

Another excellent value. Two patterns of silk mixed cassimere, one ground color black, with gray mixture, the other with golden and blue mixture. Either of these numbers are very desirable patterns for old or young.

Send for our book of samples, giving prices and descriptions of these and many other excellent values in Brethren's Clothing, instructions for home measurements, tape line, etc.

Made Exactly as Represented in Cut.

TO ADVERTISERS DO YOU WANT TO INCREASE YOUR BUSINESS?

If so, use the **Ingleook** as an advertising medium. Read what one of our advertisers has to say. Others express themselves in a similar manner.

It is with the utmost gratification we state that having used the columns of your **Ingleook** for a number of years as an advertising medium, we are more than pleased with the excellent returns we have received therefrom. Furthermore, the subject matter of high quality, interesting and instructive; the neat appearance of the magazine, and the careful attention to detail in all matters pertaining to the production of same, could not fail to insure subscribers and conduce to the success of the advertiser as well as yourself. The above is an expression of our private opinion which you are at liberty to make public, if you so desire.—Dr. Peter Fahrney & Sons, Co., Chicago, Ill., Feb. 22, 1905.

— NOTICE —

To Sunday Schools

Perhaps you have not been in the habit of supplying your advanced classes with a good paper like you have been giving your juvenile and intermediate classes. There may have been a good reason for you not supplying them in the past. We see no good reason for not doing so NOW.

The young people of our Sunday schools (especially those from 14 to 20 years), need our especial care and training. We believe you are aware of this fact and are ready and willing to use your influence in favor of any movement that might aid materially in developing strong characters.

...THE ...
Inglenook

Magazine, as now published, is just the help needed for this part of your Sunday school.

Brother Teeter Recommends it for the Young.

Dear Editor of the Inglenook:

So far as I have seen the magazine is moving well along the line of its original design. A study of its contents adds ballast to *steady the youth over the high tide of life.*

Parents make no mistake in subscribing for it for their children. It is more than a substitute for the trashy, immoral, slang journals of the day.

Fraternally,

L. W. TEETER, Hagerstown, Ind.

Good for Young and Old.

Dear Editor Nook:

The Nook is clean, its pages are inspiring, its contributors are many and competent, and the paper from start to finish is a good one. It is well edited and should find its way into every home. Good for the old and young alike.

Yours,

J. E. MILLER, Pres. Mt. Morris College.

You ought to have a
number of

INGLENOOKS

for your more advanced
classes as well.

Be sure to instruct your secretary to order at least a few copies of the INGLENOOK for the Second Quarter. If you do we are sure you will be well pleased with the results. **Sample copies furnished upon application.**

Price to Sunday schools, five or more copies to one address, 20 cents each per Quarter. Single subscription, \$1.00 per year.

Brethren Publishing House,
ELGIN, ILLINOIS.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River,..... 25 00

Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

The Union Pacific Railroad

Which is known as "The Overland Route," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line. Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

ON TO CANAAN.

BY MARY C. STONER.

We are traveling on to Canaan
To our Father's happy land,
Just beyond the rolling Jordan,
There to join the angel band.
Where all trials will be over
And all tears are wiped away;
There with friends no more to sever
We'll enjoy the heav'nly day.

Come, O come, with us to Canaan
And God's blessings with us share.
Come, O come, ye heavy laden
Cast on him your every care.
For he says my yoke is easy
And my burden it is light,
See, the lovely land of Canaan
Now gleams brightly on our sight!

When we reach the glorious Canaan
And our burdens are laid down,
When we rest within the haven
And receive a starry crown;
Then we'll see our blessed Savior
See and greet our gracious King.
There forever in his presence
Glad hosannas we shall sing.

Ladoga, Indiana.

WIT AND WISDOM.

SELECTED BY MABELLE MURRAY.

Life's great opportunities are never labeled.

❖

College bred is sometimes a four year loaf.

❖

Contentment never accomplishes anything great.

❖

Things that are almost right are altogether wrong.

❖

The cigarette cough is the hack that precedes the hearse.

❖

You can't go forward without leaving some things behind.

Some men lose their own health drinking the health of others.

❖

There is no glue that will mend, in case a man goes to pieces.

❖

Shutting the eyes to the danger signal does not clear the track.

❖

When a man celebrates his birthday, he takes a "day off." A woman, a year.

❖

Some people who think only of themselves, don't have much to think about.

❖

Two swallows never made a summer, but a bottle full is sure to bring a fall.

❖

There is very little common sense in this world; most of it is decidedly uncommon.

❖

Natural genius consists of two per cent talent and ninety-eight per cent application.

❖

OUR INGLENOOK REUNION.

BY THE EDITOR.

It is always nice to have some date or occasion of special importance, to which one can look forward; somehow it drives a stake which enables us to divide up the time, and by so doing our duties are all divided and classified, which, as a matter of course, puts

the little juvenile Nooker, with the curly hair, to the Nooker of more mature age, whose hair has been whitened by the frost of many winters, will be an indescribable pleasure.

Our next General Conference will be held at Bristol, Va.-Tenn., one week earlier than the usual time. Calculating regularly, the business meeting would begin June 13, but on account of being so late the date has been changed to Tuesday, June 6. This means that

EAST ENTRANCE TO THE NATURAL TUNNEL.

them in shape to be executed so much more speedily, and life is enjoyed and the end is reached.

Birthdays, holidays, celebrations and reunions are days to which we look with no inconsiderable degree of anxiety. With the idea of reunion comes the thought of union and separation—the time when friends meet who have not met for a long, long time, perhaps never before, and may never meet again. The INGLENOOK family is to enjoy a meeting of this kind in the near future, and we have already begun to anticipate a good time. To meet Inglenookers from almost every State in the Union and of every age, from

the preliminary meetings will begin on Saturday, June 3, and these are the meetings in which all the people are interested. During these three days we will have the Sunday-school meeting, missionary meeting, Christian Workers' meeting, and educational meeting. The editor of the INGLENOOK has been promised that the INGLENOOK family should have one hour in the tabernacle, sometime during the Conference, for their reunion, and when the Committee of Arrangements has stated that particular time and has informed the editor, the whole INGLENOOK family will be immediately notified. At this reunion it shall be our purpose to have

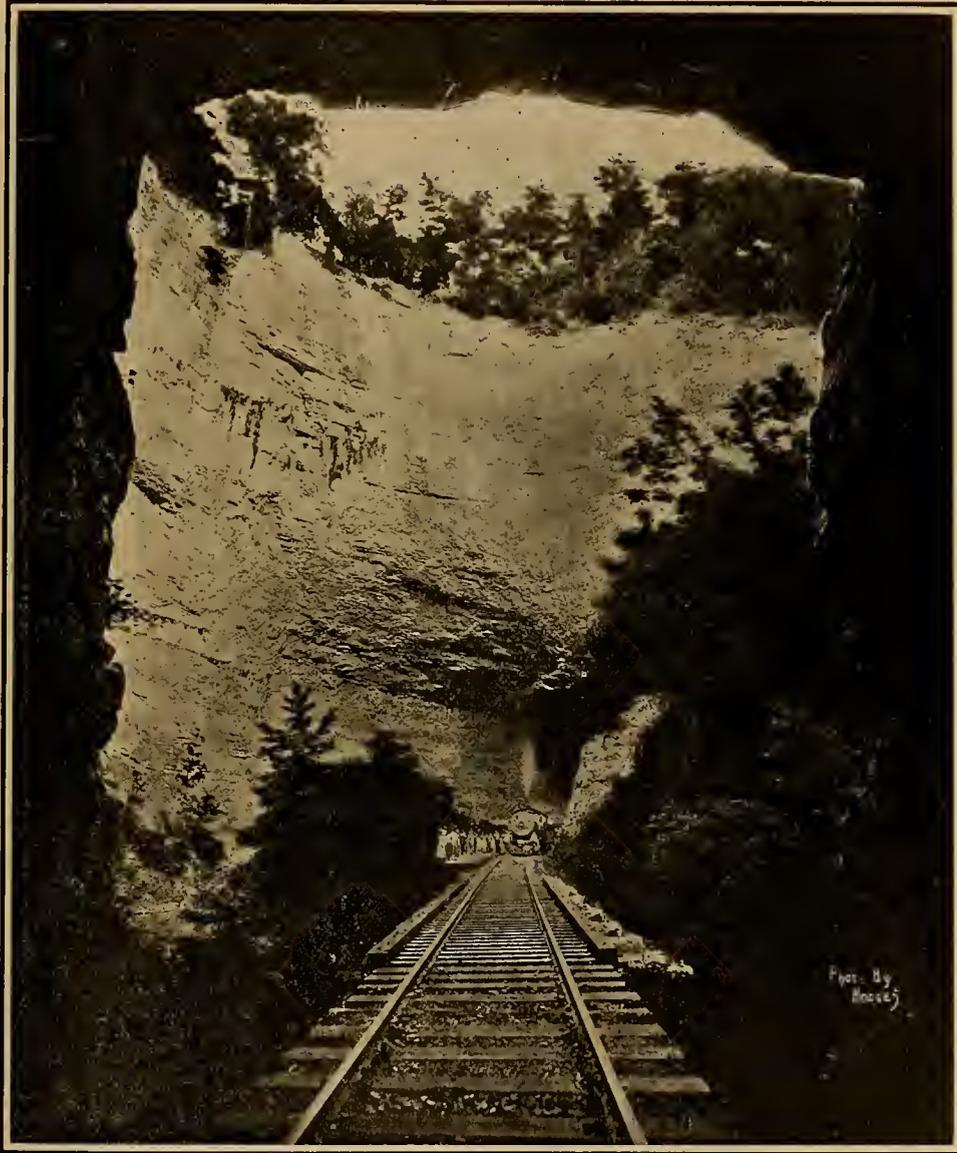

a heart-to-heart talk over the policy and scope of our little magazine, and ways and means by which we can increase its circulation. We will have the privilege of telling each other what good the INGLENOOK has done us and our neighbors in the past year.

The Conference will be farther south this year than it ever has been with one exception; in 1860 it was

ence, and we feel sure that our people will get good service in the way of daily news at the meeting, and those who cannot possibly come can be supplied with the news at home in a very satisfactory manner.

Bristol

is a city of 15,000 population and occupies a position at once unique and interesting. The conception of

ANOTHER VIEW OF NATURAL TUNNEL, SHOWING AMPHITHEATER.

held in the next county south. This will be a fine opportunity for the Nook family and everybody else to visit the "land of the sky."

We are indebted to the *Bristol Courier* for the following historical data which will show to the reader that the city of Bristol is a wide-awake, enterprising city of the southland, and that it will be an inspiration to be among the people of this city for one week, whose courtesies we hope to be able to reciprocate. The *Courier* is to be the official organ of the Confer-

establishing a commercial town on the site where the present progressive city stands assumed tangible form just fifty years ago. Prior to that time this immediate locality was but a strip of meadow land gracing the valley on each side of Beaver Creek, while the great forests, undisturbed by the woodman's ax, extended from the surrounding uplands to the border of the meadows.

More than a century ago, when this section was known as the territory south of the Ohio river, countless herds of deer and buffalo were drawn hither be-

cause of easy access by nature's viaducts through various mountain defiles, and found in sulphur springs and salt licks suitable condiments for the luxurious herbage of the bluegrass region. Following the game trail came the Indian, and founded a village, where the squaws could cultivate corn and tobacco in loamy bottoms with stone implements that were useless in the adjacent clays.

Native copper, mica, flint, kaolin, asbestos and cryolite—in short, all aborigine legal tenders were secured in the neighboring mountains. The few and

with Bibles in their hands and undying hatred of tyranny in their hearts.

The site of Bristol, previously granted to the Loyal Company of England, was regranted to General Evan Shelby, Col. William Preston, administrator, and others by George III., king of England, upon receipt by his beloved agent, Robert Carroll, of fifty shillings for each one hundred acres in hand paid at the feast of Saint Michael.

The early grants made to the settlers covered the right to fish and hunt and released all mines discovered

WEST ENTRANCE TO THE HORSESHOE GORGE.
V. & S-W. Ry.

simple wants of the people were lavishly supplied by bounteous nature.

The village grew and prospered, as is clearly seen by bones, pottery and flints frequently unearthed within what are now the city limits of Bristol.

How long this prehistoric Bristol flourished will never be known. As it grew, game was driven to wilder regions, and about the year 1756 the Indian sold his birthright of fifty thousand acres to the Loyal Company of England (concessionaries of the crown) for horses, flintlock rifles, wampum and fire-water. It was then that large numbers of God-fearing men were driven from Ireland and Scotland by religious and political persecution, and settled in this region,

and undiscovered. These mines proved valuable. Cannon balls were made in the suburbs of Bristol, which were used in the battle of New Orleans, the last battle of the war of 1812.

Salt, hitherto supplied from Liverpool, was henceforth made where the wild game of the forest had licked. The waters of Beaver Creek were harnessed and crude mills, forges and furnaces were put into operation. Large shipments of salt, iron, and other products were made from Kingsport, which was the head of flatboat navigation, to the landing now known as Chattanooga. Stage roads were made, principally following the old buffalo trails which were in time supplanted by the iron horse, and Bristol was founded.

In Two States.

Queer as it may seem to the casual observer, nevertheless it is a fact, that to-day it is possible for a person riding on one side of the aisle in the street car to

a dispute between the two municipalities of Bristol as to the exact location of the state line, and it was not until recent years that the supreme court has finally decided that the survey of the commissioner of

RUSH CALL OF FIRE DEPARTMENT.

be in Virginia, while his friend sitting opposite is in sunny Tennessee. This is made possible by the fact that the state line between Virginia and Tennessee divides the city of Bristol on what has been called main street, for a number of years. There has been

1802 should be adopted as showing the correct boundary line. This did not settle the question as regards Bristol, for there was a dispute among the citizens as to where that survey placed the line. Virginia claimed the line in the middle of the street, while Ten-

SULLINS COLLEGE.

nessee claimed all the street, but to-day the center of the street is the recognized line, made so by the joint decision of the legislatures of Virginia, Tennessee and the National Congress, supported by the approval of the President.

In the fall of 1856 the Virginia and Tennessee

fields of southwest Virginia and the timber and mineral regions on all sides. Naturally Bristol was the gateway for the vast development which the future

railroad reached Bristol. This was the signal for commercial prosperity, the like of which could not possibly have existed prior to the coming of the railway. This road extended from Bristol to Lynchburg, and the first train entered Bristol in November, 1856; the next year marked the completion of the East

held for all this region; and advantage was taken of this point by shrewd men.

The Inglebookers

who attend this reunion will have the privilege of seeing one of the garden spots of the earth. Beginning at Roanoke, Va., running west from it, lie about

Tennessee and Virginia railroad as far as Bristol. The coming of the two roads was the one essential feature in determining the future of Bristol. It was manifest from the time the first railways were constructed into Bristol that this was going to be the distributing point for a large area embracing the coal-

twenty counties of Virginia with the farm lands at an average elevation of about two thousand feet, while the surrounding mountains rise four and five thousand feet high. Between these mountains, which run like huge veins northeast and southwest, lie the farms, and nestling up, even toward their summits,

are fertile coves of land. Everywhere is to be found the thickest of blue grass and the brightest of waters. There is no soil in America that can produce a greater

the sky,—sufficient in volume to turn millions of spindles.

This country has been settled up by the sons and

geous as a painter's dream, bathing all that goodly land in an atmosphere pure, dry and bracing. Everywhere throughout this favored spot are perennial water courses, fed by the tears of the everlasting hills,—kissed by the sun who always smiles on the land of

pitality shown to a greater degree than among the people of the southland, and I am sure our sojourn among the people of Bristol will be pleasant. They have thrown open their homes for our reception. The

doors of their many churches will stand ajar to welcome the strangers while in the city. Their institutions of education invite inspection as to their mechanical structure and the work done in their college courses. The street transit company will endeavor to serve the many thousands to the best of their ability. The beautiful grove and campus has been cheerfully set apart for the accommodation and convenience of the multitudes who may enjoy this meeting. A large tabernacle, dining hall, restaurants, etc., will be erected, each of which will be properly officered with men of executive ability so that nothing in this line will be lacking to make the Conference a success.

On the front cover page you will see a picture of the Union Passenger Station at which all trains arrive, and from which all trains depart. Mr. W. B. Bevill, G. P. A. of the Norfolk and Western railway, is making every possible arrangement for the convenience and comfort of the traveling public, en route to Bristol. The people from the east, of course, have

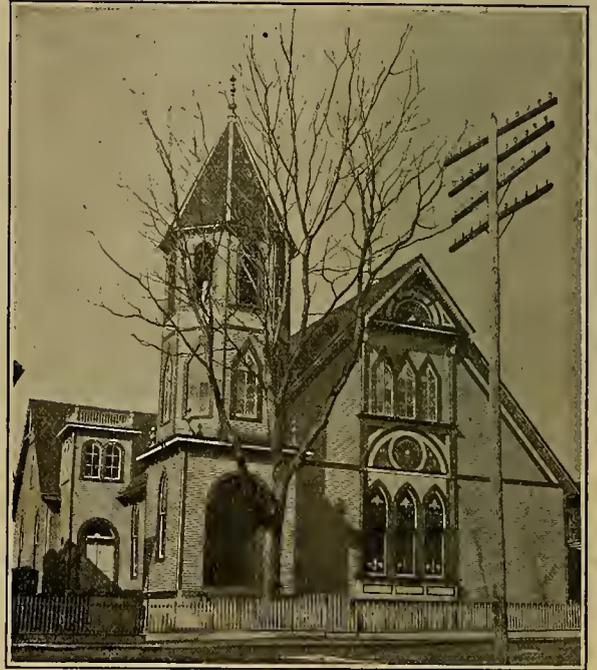

WINDSOR AVE. PRESBYTERIAN CHURCH

a direct line to the place of the Conference; the people from Ohio can reach this road at Columbus; the people from Indiana, Illinois, and the northwest can connect with the Norfolk and Western at Cincinnati. Mr. Bevill promises through train service over their well-ballasted roadbed and their scenic route. Mr. W. E. Allen of the Virginia & Southwestern railway is also perfecting arrangements with the Louisville and Nashville railroad, out of Cincinnati, which will serve the people from the west and south quite well, and give the people of the north and northwest a choice between the routes from Cincinnati to Bristol. Along this railroad is to be found the Natural Tunnel, Big Stone

Gap, and many other things of interest to the lover of nature.

This Natural Tunnel is about nine hundred feet long; at the east entrance it is fully seventy-five feet high and eighty feet wide. The railroad track makes a complete reverse curve inside of the tunnel, and a stream of water runs through the tunnel on either side

FIRST CHRISTIAN CHURCH.

of the track. This tunnel is considered by many to exceed the Natural Bridge in grandeur and natural curiosity. Big Stone Gap is one of the few natural passes, leading from the south Appalachian coal-fields to the great coalless area, stretching southeastward to the Atlantic ocean.

Proper railroad notices will be given in due time and a further outline of the work to be done by the INGLENOOK family at our reunion will also be arranged for. What we want you to do is to set your stakes now to come, make your arrangements accordingly and come prepared to have a good time and stay till the reunion is over.

AN OLD RULE.

BY ELIZABETH D. ROSENBERGER.

"TAINT no use lending them to that kid; he's always breaking his things and losing them!" And John Carson's black eyes snapped as he looked at Andrew Brandt, who, unconscious of John's thoughts, was absorbed in his geography lesson, as his puckered-up mouth plainly indicated. Andrew had just

got over the measles; he had also laid bare the fact that his skates were broken; that John Carson should lend him his followed as a matter of course, because they were inseparable friends; but John hated to do it.

"Take all the problems on page sixty-nine," said Miss Anne, "division of fractions will not be hard for you because you thoroughly understand all you have gone over so far," and she smiled *her* smile, that brought out the dimples in her cheeks and the light in her eyes and made the children her willing slaves, for they all adored her.

Almost before some of them were ready, Miss Anne tapped the bell to dismiss them and they marched decorously to the door. But for some reason or other John lingered a little, and then he saw Ploot give Andrew his skates, after which Ploot went whistling home, and John, feeling a little bit like a sneak, went home by himself.

There was but little time for study at home when one milked six cows and helped mother in the house, and John usually studied all of his lessons at school. When he worked, he worked with all his might, and when he studied, he did not dawdle over his books, but he squared his small shoulders and went at it with an energy that was good to see.

The next day when John opened his arithmetic on page sixty-nine it was with the feeling of a conqueror assured of an easy conquest. "I'll soon work all these and then get down to my history," he said to himself. He tried the first one, but it didn't come; he tried another with the same result; when the third one worked out like the other two there was a dreary monotony about it that oppressed John's spirits.

He looked at the rule—"Invert the divisor and proceed as in multiplication." He repeated this several times so that he could give it word for word, while chewing the end of his pencil with a relish. Then he raised his hand and Miss Anne responded as to a signal of distress. "How do we work these, please?" asked John.

"Oh, they are very easy, you remember how you multiplied fractions, now you invert the divisor and then solve just as you did these over here on page sixty-eight," and Miss Anne glided away feeling that she had nobly discharged her duty.

John returned to the charge in a determined, inflexible, cold-blooded way that should foretoken victory; but it was all in vain, the answer was wrong. Then he grew puzzled and grasped his forehead convulsively as he studied the problem. Light dawned—"the whole trouble lies with 'invert.' I must see what it means." He went to the dictionary and wrote down the meaning, "invert—to turn over; to reverse." To turn over, could that mean that he should write the figures upside down? He did it slowly and doubtfully, almost making a mulatto of himself by getting

the dirt of his slate into the pores of his skin, but that made no difference in the result, which was wrong again. In the next seat was little Peter Frey ciphering away busily and happily; evidently he knew how to invert the divisor.

The arithmetic class would soon be called. John looked straight at his arithmetic and set a determined elbow on either side of his slate, like buttresses for failing energy and tried to "reverse" the terms. Vain hope! He could not solve them; now there was just a straw to clutch at,—perhaps Miss Anne would call on some others first and then he could see how they inverted the divisor. Of course, this was uncertain, but it was hope enough to rescue John from a state of mental prostration.

"B Arithmetic class," said Miss Anne. With lagging, faltering steps John crossed his rubicon, and stood with the rest, ready for any fate. The worst befell him, he was told to place several problems on the blackboard, he wrote them down with a feeble attempt at a final flourish, and then he paused; he could do no more. While Sarah Traunn, the dullest pupil in the class, told with scholarly precision and with halting emphasis that division of fractions is performed by inverting the divisor and then proceeding as in multiplication.

Miss Anne was a very kind teacher, there could be no doubt of that, and John was duly grateful that she said no more. But he felt that he had suffered and endured much by the time the arithmetic lesson was ended.

"I just hate them rules," he said to himself half fiercely. "They're put there to mix up things for a fellow!" Then he looked across at Andrew, whose freckled face was all aglow with sympathy for his chum, Andrew who never even looked amused when he found that John did not understand the rule.

What was it mother so often told him to remember? Ah! he could repeat it now,—“Do unto others as you would that they should do to you.” Andrew always did that. But John grew warm all over as he thought of the many times he had been selfish; even last night he kept back his skates. I have a good deal of trouble with that rule, too, he thought humbly; but I am going to understand it better.

When school was out, John slung the skates across Andrew's shoulders, "I can't go skating myself this evening, I must hurry home," he said.

And he was so rejoiced over his ability to apply this old rule that he forgot what a mess he had made of his division of fractions.

Nor they who say, "Lord, Lord," are good, but they who do that which is right in the sight of heaven.
—E. P. Brown.

THE KNOWLEDGE THAT KNOWS.

BY LULU C. MOHLER.

WHEN people stand "where the brook and river meet," they still remember some of their childhood thoughts, and are able to understand more fully, and see as they are, those who are growing old.

We who are coming into our inheritance of the broad estates of maturity, can look, with all the enjoyment of those who see strange new things for the first time, on those who have traveled farther than we have; and we experience no little surprise and some changes of opinion.

I remember distinctly of the awe I felt towards the older ones. I wondered if I could have the wisdom to make things happen. Women seemed to be persons who could do wonderful things. How could they mix together certain things and by what magic nice cakes came from the oven? Friends came to visit them and they enjoyed it so much. They never needed to be told how to do things for they always knew. When small folks had troubles they knew just how to help out.

The men got together in the sitting room and talked about important matters. They were nice old men with beards, but they seemed somewhat stern, and never appeared to be persons who cared about children. I guess they never knew that children liked to be talked to and not treated like they were very small, which makes a child feel so silly.

But now since I am no longer a child, the thought that impresses me most, is how much like children these older folks are. True, they know many things and can converse very learnedly; but do you ever notice how much like children they are?

Many times the thought of people's helplessness and weakness is driven home. Some gain high rank in the world of knowledge; but even then they all come to places where they do not know where to go for guidance, and like a child they must have help out of the difficulty. Grown people don't know as much as children fancy they do.

A man who has a goodly amount of learning, may have a weakness in his nature that he would abhor in a child. He may be arrogant, selfish, fond of flattery, egotistic and not tolerating the society of humble folk who may not have much "book learning," but who can put him to shame when it comes to the wisdom of life and how to live.

All men dislike a narrow-minded person, and all think of themselves as having a broad understanding. When we hear him declare he is broad-minded, we think to ourselves, You made a mistake, for every man is limited. It is only the Divine Mind that can see all sides of all things. Every man is necessarily

narrow on some question, for he was not given the power to understand all things.

Let us look at one narrow view many persons take of a very important subject.

It was excusable in the past when people did not have the many ways of learning to know the world's different people. We are to-day brought in such close contact with the many races of men, and there is no reason for our misunderstanding any of them; for as Mr. Hamilton W. Mabie tells us, "They have come by different historic paths, but they have common affections and hopes. To know them is to lose the keen sense of difference and to gain a new sense of unity."

Just so, we may look out over the world and understand people better than ever before; but then with what a rush comes the revelation of humanity's wickedness, and with David we ask, "What is man, that thou are mindful of him, and the son of man, that thou visitest him?"

But oh remember this unwritten commandment. If God created man and loves him, pities, is merciful and just to him, and ye who know that fact and do not the same, you will be required to meet that charge in the solemn judgment.

What right have you to weigh this vast army called Mankind, and find it wanting? Are you a pure and supreme judge? Look over your past and bring to light some unspeakably contemptible act you have done, and then if you are honest and a Christian you will forever cease to feel that bitterness towards man's wickedness.

We must not ignore man's sinfulness, but learn to pity and sympathize, for no more true statement ever was coined than "He who condemns a brother because of some fault, can find that same fault in himself."

Note the following paragraph that tells it all in few words.

Charles Lamb was once asked if he did not hate a certain very unpopular person. "How can I hate him?" was the characteristic reply; "I know him." To know a person does not always involve the discovery of more attractive traits; but it does involve a comprehension of conditions and circumstances which throw a kindlier light on character.

Many have dared to do the right and faltered not; but we in our ignorance found much cause to censure. People are not altogether bad, but have much good. When some wrong thing has run a course and the people will endure it no longer, they rise with God in his might and stamp it out of existence.

If we will live according to St. John's doctrine and love one another, we will cease to blame, and will outgrow the petty confines of a little view of life and acquit ourselves like men: not as a child might who has not the wisdom to strike out and think and act. We have retained a child's selfishness and lost his faith.

If you would regain some of your childhood faith, try doing a kindness to someone and see how high your faith in mankind will rise.

To pass judgment on your brother is wrong and is displeasing to the heavenly Father: "Judge not, that ye be not judged," and "speak ill of no one."

Lecton, Missouri.

A WONDER—THE TRINIDAD PITCH LAKE.

It is not my purpose to weary readers with a subject worn out by many writers; yet I thought you would doubtless be interested in a report of a visit of our own missionaries to that quaint and only half-explained phenomenon, the "Trinidad Pitch Lake." Our usual duties having taken us within a few miles of the lake, we decided to take a half day and visit the wonder of which we had heard so much. At San Fernando we boarded the little coastal steamer "Paria" at nine in the morning, and were soon steaming away to the southwest, along the lowland which forms the peninsular extremity of southwestern Trinidad, whose flat top is but little higher than the sea. At one time these lowlands were cultivated for sugar, but now, for the most part, they form a wild jungle. Soon after eleven o'clock our little steamer stopped at the village of La Brea, the place that is usually connected with the pitch lake, but we were not to land here. Before the advent of one of those modern productions, "trusts," all pitch was shipped from this village. But the "Asphalt Trust," an English corporation run by American push, found that it was a waste of time and money to carry all the pitch over this long route, so cut a new way across to the beach, and built their own little village Brighton. Our next stopping place was opposite this village. We stepped down into a little rowboat, which was loaded down almost to the gunwales. In the moments we could snatch from anxiously watching the waves that continually threatened to swamp us, we saw, as we neared the landing-place, a long narrow wharf built out into the sea, at the end of which lay a steamer being loaded with asphalt for New York. Another steamer bound for London was anchored near by, awaiting its turn. Many of the large cities of Europe get their asphalt from Trinidad. The ships carrying pitch are loaded by iron buckets of about nine cubic feet capacity. These are strung one hundred and ten feet apart, on a cable which connects the vessel with the "works" one-half mile away. These buckets each hold about one thousand pounds of asphalt, and the cable that carries them is supported by iron pillars, and works on the principle of the endless chain.

Immediately on reaching the shore we found an asphalt path which led us up over the little hill along the line of the buckets. We followed this path through

the village, noting that each room had its garbage box, nothing being allowed to be thrown carelessly about to decay and threaten the health of the workers, a necessary precaution in the tropics.

We soon reached the top of the small hill, where, just before us, were the works. We found them to be low sheds—all the building required in this climate—with a few small houses where tools and other necessaries are kept. In these sheds are the engines with the appurtenances furnishing the power to run the endless chain conveying the buckets to the ship, and also to draw the cars from the lake. Only a small engine of thirteen horse-power is needed, as it is all down grade to the ships, the force of gravity being almost sufficient to carry the loaded buckets down, and at the same time return the empty ones. We passed on through the works as our interest was in the lake beyond and there it lay before us, a broad, black expanse of about one hundred acres containing millions of tons of asphalt, covered here and there with small islands of soil, with tropical vegetation growing upon them. We stood upon its brink with a feeling of wonder as to the origin of this great black lake, apparently solid, yet always in slow circular motion. There are different speculations as to the origin of the pitch. Some contend that it is due to some convulsion of nature, such as volcanic action; but to us this seems impossible, as then the pitch, which is rich in oil, would have been burned by the intense heat, and we would have only a charred remnant. It seems far more reasonable to regard the pitch as having been formed in the same way as were the great coal-mines, a portion of the great mass of vegetation buried at the time of the flood having in some way been changed to asphalt instead of to coal. We walked with some misgivings on to the black Stygian-looking pool, and found it hard and fully able to bear our weight. As to-day is comparatively cool, we found the "pitch" quite solid; but on a hot day, one could not stand long in the same place. There is a diminutive railroad in the shape of a horseshoe, with the two ends in the sheds, running out to the center of the lake. Each car of this railway carries two of the half-ton iron buckets spoken of before.

As the men were at work out at the center of the lake, we made our way along the little road to the spot where they were working. They were all negroes. The first we approached was hard at work with a pickax, digging up blocks of the brittle asphalt about one foot each way, and weighing perhaps seventy-five pounds. This was broken into smaller pieces and laid up on the bark for the loaders. This hole is about one hundred feet in diameter, and from three to five feet deep. Strange to say, to-morrow it will be filled up again, and the lake will be as level as it ever was, and the man will be able to dig as much asphalt from

the same spot as he dug to-day. Thousands of tons have been removed from along the side of this same railroad, and thousands of tons will still be taken, without moving the road, and the workman stands in precisely the same spot day after day. A digger gets from ten to fifteen cents a load, and the loaders get six cents an hour, very good wages indeed for the West Indies. Nearly every island in the West Indies was represented in the gang before us.

Small oval or elongated air-bubble holes in the pitch were noticed; their oval shape indicates the slow movement of the great mass. The motion is so slow as to be almost imperceptible, so that some writers have questioned whether there was any; but the little railroad has demonstrated it beyond further question. You may lay the ties and rails ever so straight every morning, but before night you will have it worked into innumerable forms of the letter S. Several men worked all day to keep this road sufficiently straight to be serviceable. It was formerly supposed that the lake was inexhaustible; but a commission of experts recently sent out from England to investigate the matter, have reported that while there is no diminution of the supply perceptible to the eye alone, careful surveys show us that the center of the lake is sinking in proportion to the amount of pitch taken out, so that the actual shape of the surface of the lake at the present time resembles a saucer. The manager, however, informed us that he had run a gas-pipe three hundred feet straight down into the lake, before it was broken off, so that there is no probability of a sudden failure of the supply. There is also connected with the works, apparatus for purifying the pitch. This is done by boiling it to a liquid form by steam running through coils. During this operation all sediment sinks to the bottom, and the liquid is run into barrels, where it hardens. Most of the pitch exported to America and Europe is sent in the crude state.

Instead of returning to Brighton, we took the longer route to La Brea. The lake has overflowed both above and below the surface of the ground; and as a result one can find pitch for miles around the actual lake. At La Brea, on the beach, are located the claims of all the private diggers of pitch. They own the land, having purchased it in the usual way, and in spite of all the concessioners at the lake can do, are still winning pitch from mother earth. A great hole is dug in the ground, perhaps one hundred feet square and from ten to twenty feet deep, then it is left for a few months, and lo it all fills up again, when it can once more be emptied of its valuable contents.

The lake itself is owned by the Trinidad government. The concessioners, or the company leasing the lake, who hold the sole right to win pitch from the lake, claim that this pitch came from the lake, and is theirs, although found on another's land. This has led to endless litigation in the courts as injunction after in-

junction has been served. Thus the lake has proved a valuable mine to the lawyer, the owner, and the government. The government owns the lake and gets a royalty of \$1.50 per ton from the concessioners. As one hundred thousand tons are shipped to the States every year, besides that going to Europe and other countries, we can see that it is a source of great revenue, and is rightly called "the black diamond mine." At the lake eight hundred fifty tons per day can be easily loaded on the steamers; nine hundred fifty-nine tons is the best record, but many days the workmen are idle.

There is a good lesson wrapped up in the history of this lake. It was discovered by Sir Walter Raleigh while he was searching for gold. He reported it to the English government, but could stop only long enough to note the fact, and then pushed up to the pestilential swamps of the Orinoco, vainly seeking the El Dorado, which was always just beyond, and always of untold wealth, rivaling the riches of the Aztecs of Mexico and the Incas of Peru. The El Dorado of his imagination was to him of much more value than the plain black expanse of pitch lying within his grasp. He died without realizing his El Dorado, while later generations have found it in the lake he treated lightly.

At three o'clock, after enjoying one of the large luscious pineapples for which La Brea is famous, we were taken to our little steamer, feeling well repaid for our five hours' visit. The next time you walk on your asphalt pavement, remember the great black lake surrounded by tall palm trees and jungle, beneath the blaze of a tropical sun, and remember that representatives of the third angel's message are here, and a people is being gathered out on the firm platform of the commandments of God and the faith of Jesus. "And this gospel of the kingdom shall be preached to all the world for a witness to all nations, then shall the end come."—*Geo. F. Enoch, in Instructor.*

* * *

ESKIMO DOGS.

You boys who have a favorite Carlo or Nero at home may like to know something about the Eskimo dogs; asking what they have to eat, and whether, like your own favorites, they get three meals a day and any number of intermediate lunches. No doubt you will think that they really should get ever so much more on account of their hard work in pulling the sledges in such a cold country. Yet, hard as it may seem, the Eskimo dog never gets fed oftener than every other day, and generally about every third day; while in times of want and starvation in their terrible country of cold, the length of time these poor dogs will go without food seems beyond belief.

I once had a fine team of fat Eskimo dogs that

went six or seven days between meals for three consecutive feedings before they reached the journey's end and good food; and although they all looked very thin and no doubt were very weak, none of them died; and yet they had been traveling and dragging a heavy sledge for a great part of the time. Other travelers among the Eskimo have given equally wonderful accounts of their powers of fasting. The Eskimo have many times of want and privation, and then their poor dogs must suffer very much. But when they are fed every other day on good fat walrus meat and do not have too much work to do they will get as fat and saucy and playful as your own dog with three meals a day. One of the very last things you would imagine to be good for them is the best food they get; that is, tough walrus hide, about an inch in thickness and as wiry as sole-leather. Give your team of dogs a good meal of this before they start, take along a light supply of it for them and you can be gone a couple of weeks on a trip; when you get back, feed them up well and they will be as fat and strong as ever in a very few days.—*St. Nicholas.*

* * *

TO MECCA BY RAIL.

MECCA is to be the Mecca no longer of the saintly pedestrians, but of steam-propelled passengers. The Germans have the steam in charge, and are building the Pilgrims Railroad from Damascus to Mecca, a distance of 1,150 miles. Under the German chief engineer are seventeen Turkish, twelve German, five French, five Italian, two Austrian, one Belgian and one Greek engineer. The southern terminus line is now on the desert. Locomotives have come from Munich and from Belgium, passenger cars from Frankfort-on-Main and freight cars from Belgium. The German engineers are also busy building a new railroad to Southwest Africa, with 750 Italians at work. An engineering party has been sent to survey a line for an extension of their two-foot gauge line to Windhook to a junction with the Cape Colony railroads. This extension will be three feet six inches,—the Cape Colony gauge.

* * *

KUROKI'S PHYSIQUE.

KUROKI, the Japanese General, is of middle height and robust frame. The soldiers love his unostentation. He dresses plainly in the loose-fitting dark blue uniform of the Japanese-officer. He is sixty-two years old and almost bald, but is as active and strong as the average man of forty. His face is tanned to the hue of bronze. He has a tight mouth and a firm chin. Once in a while he can smile. The crow's feet around his eyes indicate a sense of humor and a kindly nature.

CAN'T AFFORD IT.

"HERE, Dan, is something that may interest you," said farmer Brown, as he handed the boy a bulky letter.

"The postmaster missed his mark there, sure," said Dan, glancing at the untouched stamp.

"That will send a letter to your mother, Dan, and not make you any poorer either," answered the farmer.

"I dare say it will," responded the lad, as he proceeded to moisten it at the mouth of the steaming tea kettle.

"And you can have the two cents you thus save for marbles," suggested Mr. Brown, thoughtlessly.

"That would be cheating," whispered Dan's conscience. "The stamp has already done its duty in carrying one letter."

"It will carry another. It is not marked," argued Dan.

"But you know that was a mistake," urged the monitor within.

"That was the postmaster's fault and not mine," was Dan's inward reply. "It is a very small thing, and the Government will not miss it, no, not even know it."

"Will you not know it, and can you afford to be dishonest for so small an amount?" the small voice whispered.

Dan trembled, for it seemed that some one had spoken the words right in his ear. Flinging the stamp he had loosened into the fire, he exclaimed, "No! I can't afford to sell myself so cheap."

"What's wrong," asked the farmer, glancing up from his paper. "Lose the stamp after all your trouble?"

"Worse than that," replied the boy sheepishly.

"What! burned your fingers with the steam?" questioned his employer.

"No" said Dan, determinedly; "I sold my honor, or came near doing so."

"What do you mean, boy? The stamp is all right. It would never have been found out."

"But I knew it all the time, and two cents is a small amount to get for your self-respect; besides—"

"Besides what?" queried the man.

"God knows all about it, and he looks upon the heart," answered Dan.

"It's a mighty small thing to worry over, I am sure," replied Mr. Brown, "The post-office Department would not have been much the poorer, I assure you."

"It would have been I who would have been poorer. Had I sold my honor for two cents, I should have made the worst bargain I ever did."

And so Dan gained a victory, and he was never sorry that he obeyed the voice of conscience.—*Bella V. Chisholm, in Sunday School Times.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglebook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

BRISTOL.

You will notice that this issue of the INGLENOOK is a special one, devoted to the city of Bristol, Va.-Tenn., in consequence of the fact that it is the location of the next Annual Meeting. This special issue has been made possible through the kindness of the business men of Bristol. Your editor made an advance visit to the city for the purpose of gathering such information as would be interesting, entertaining and instructive to the INGLENOOK family. Every possible courtesy was shown and the people seemed to be very much elated over the prospect of the coming Conference. We are quite sure that the visitors will highly appreciate the hospitality of the people of this city. They have thrown open the doors of their homes and welcome is nailed above every threshold. The city officials, the street railway company, business men, railroad companies, and police department, as well as the residents are determined that a favorable impression of the city and its people shall be carried away by those who attend the meeting.

In the beautiful park, temporary buildings will be erected expressly for this Conference. An ample water supply is being provided.

This special issue has been copiously illustrated to give the reader a fair idea of the religious and educational endeavor of the people in the southland. It is regretted by the editor that we do not have a photograph of all the churches and all the school buildings in the city. The omission of some has not been the personal intent, but simply a thing unavoidable.

THE LAND OF THE SKY.

BEGINNING at Roanoke, Va., and traveling in a southeasterly direction, over a territory of thirty-five or forty counties is a country especially favored by nature, which admirers have called "the land of the sky." It is a place where the climates, products, customs

and manners, and seasons of the year of the North and South overlap.

This section of land is a good farming country; the soil is fertile and will produce any grain grown in the Ohio valley, or any crop grown in the southern States, with the exception of the tropical fruits. The climate is the conservative compromise between the extremes. The water supply is not only abundant, but of the very best. In many places in this section are to be found streams of water, with sufficient fall to supply a great deal of power. The wasted energy of nature might be harnessed by the ingenuity of man and compelled to serve his purposes admirably. A colony or neighborhood of people, in the immediate vicinity of such a waterfall, might supply every home in the colony with heat and light, through the medium of electricity, at a minimum expense. Furthermore, it could be utilized in such a way as to supplant the windmill, the horse-power and the gasoline engine.

A beautiful subsoil is found here which makes brick of the very finest quality and of which the most substantial homes could be erected. Having the raw material, by purchasing a brick machine and securing a man to operate the same, the building material of the colony might be reduced in price to a very small item.

Fruits and vines prosper superabundantly. It is the home of perfect garden vegetables. A fortune awaits some man or a set of men, with business ability, who will manage large canning factories, pickling establishments and preserving industries. The field is ready, the soil has rested since the war, the climate is unsurpassed, the mountain air is free, and the only thing wanting is the tenants to occupy it. It is to be emphatically understood that this has been written at the solicitation of NO ONE, but is the personal observation of the editor. What has been said, has been said with the full belief that ideal homes might be made by the score in this southland, which, up to this date, has been overlooked. While we are no prophet nor the son of a prophet, yet we predict that in the course of a very few years the wide-awake people of this country will not suffer this veritable paradise to remain unoccupied.

EDUCATION IN THE SOUTH.

AMONG the illustrations in this issue you will notice the Virginia Institute, Sullins College and King College. These are some of the most important workshops from which are turned out men and women who promise something in the future for the United States. These institutions are to be found in the city of Bristol.

There are many other cities in the South which are doing as much for their country as is this city. The people of the North who are unacquainted with the South will be utterly surprised when they learn of the

progress that the South has been making in the last few years. Development and growth are taking root on every hand, and in a few years the latent forces, latent talent and natural resources will be utilized. A gold mine is valueless until its wealth is disbursed among the nations. A piece of machinery is wholly unprofitable and exceedingly expensive unless the wheels are kept in motion. So it is with this great mine of wealth that is undeveloped upon our southern borders. When the army of occupation has seized their opportunity they will bless the day when their attention was called to the fact that there was a field open and ready for them.

Our prominent educators are studying to adapt and adopt our educational systems to the wants and needs of these people. The industrial school system is doing wonders for our age, and the South is not slow in recognizing the benefits arising from it. When schoolhouses and churches are successfully located all over our country, our efforts, as a nation, will be crowned with success. This will furnish for us a much stronger protection than all the armies and navies that Uncle Sam can create in the next twenty-five years. Educational institutions are a much better investment for any nation than the equipments of warfare.

RELIGION.

THE reader as well as the visitor will be inclined to observe that the people of Bristol are not irreligious, when you see the prominence we give to their churches; and as we have said above, we are sorry that we do not have pictures of all of them. The doors of these various churches will be thrown open to the Brethren while in the city, which courtesy will be highly appreciated. Almost all denominations are represented, and what is true here is true almost all over the South.

Of late years the South has been a great field for missionary work, and it is none the less so to-day. We could not help but think, as we were passing through the country, how highly beneficial it would be to have more churches and schoolhouses. As a matter of course, as the population increases there will be a demand for more of this kind of work, and with the demand will come the source of supply; and we look forward to the time when the beautiful valleys will be dotted here and there with schoolhouses, providing for the intellectual culture of the youth, and with churches dedicated to the great Creator.

RAILWAY SERVICE.

WE feel fully assured that the traveling public will be well taken care of by the railroad companies whose lines reach Bristol. The Norfolk & Western, which terminates here, will have connections with all lines

touching Cincinnati and Columbus, Ohio. The General Passenger Agent has promised special trains from the above-named points to Bristol. Their system passes through that portion of West Virginia which is just now becoming known to the world as the richest coal field in the Union. A few years ago the "Old Dominion" cast this territory away as being worthless, but her wealth is now being uncovered and utilized by the people. It will be interesting to make a tour through this section. To those who love mountain scenery, it certainly will be a treat.

The Virginia Southwestern Railway have arrangements with the Louisville and Nashville, out of Cincinnati, by which passengers may reach Bristol over this southern route. Among the accompanying illustrations is to be found the Natural Tunnel, which gives an idea of nature's scenic beauty along this route. As the service on all these roads is good and as there is very little difference in distance or schedule our people certainly will be amply provided for. Let everybody arrange to be at the INGLENOOK reunion.

ABOUT THAT COMMITTEE.

THE committee which has the general oversight of your society, has a difficult task; do what you can to lighten their labors. First of all they must keep a good lookout. Think of a dark night, and a schooner sailing before a brisk wind. Nothing heard for hours but the rushing of waves, nothing to be seen but the glimmer of a distant light. A sharp lookout is imperative, not once is the pilot's wheel left without a hand, not once do they relax their vigilance, all the night some one is looking out over the waves, in order to avoid possible dangers, and sail straight for the harbor.

I once heard of a young people's society that collided with the church. Where was the lookout committee? They should have been counseling and working with the church officials; and the church officials should have been watching and sheltering the society.

We heard of another society that ran into an iceberg, and stuck fast in the ice. It made no progress for many months, and every soul on board was cold and almost frozen.

Of course it was so chilly around there that people did not come near, and it looked as if all on board would perish. But somehow, at last, they drifted into the gulf stream of God's love, and the trouble was over.

There was another society that ran ashore, they were not watching for shoals, they felt secure, and suddenly they found that they were fast on a sandbar of lack of enthusiasm and the shoals of indifference and carelessness were about them. They had left the waters of a deep spiritual life, and drifted on these low reefs.

Current Happenings

THE students at an institution for the blind in Germany ran a foot-race not long ago. The goal was made known to the contestants by a bell which was kept ringing during the running.

* * *

A MAN has been arrested in Paris whose method was to tear a different piece off each number of bank notes, and then placing the pieces together, produce a complete bank note, which he was able to pass.

* * *

SAILORS on the steam dredge Texas, which foundered at sea, have been rescued and tell a terrible tale of the privations they endured. Twenty-two of their number were drowned in the wreck which occurred Christmas eve and the remainder of the crew were left without food or drink. They were compelled to drink seawater, which made terrible sores on their bodies, and they were just about to draw lots to decide which one should be killed to furnish food for his fellows when help arrived.

* * *

AT last a use has been discovered for the shark. A company, backed by American capital, has been formed to hunt the dreaded fishes in Central American waters and convert the skins into leather, which is said to be handsome and durable when properly finished.

* * *

THE population of Soudan is numbered at 3,000,000, nearly all savages.

* * *

MAJOR ROBERT CLARK, of Erie, Pa., is dead at the age of 89 years. Mr. Clark assisted in the laying of the corner stone of the Washington monument in 1848.

* * *

AN artillery volunteer won, recently, at a shooting match at Blackpool, England, a prize consisting of a wedding ring, gratuitous marriage ceremony, a wedding equipage, a polished cradle and a bassinet. But he must marry within twelve months to get the prize.

* * *

THE city of Glasgow, Scotland, runs its own street railways. Last year it made a profit on them of \$68,345, and gave good service for low fare.

* * *

DURING the great religious revival at Louisville, Ky., 6,500 people were converted.

* * *

BERLIN has ten homes for poor girls where the charge for lodging and light is \$1.50 to \$2.50 a month, and for board and lodging \$10 a month.

THE floor of an African Methodist church at Brooklyn, N. Y., gave way while the congregation was attending the funeral of an old member. Eleven people were killed and about fifty others were injured. The church structure was condemned several years ago.

* * *

BRITISH INDIA has the swiftest river in the world. It is the Sutlej, which in one hundred eighty miles has a descent of 12,000 feet.

* * *

THE volcano of Kilauea, near Honolulu, H. I., is again in action, and is reported to be just as active as it was in 1898.

* * *

BY the system in vogue in Germany a one hundred-ten-pound package of merchandise can be sent from one end of the empire to the other by mail at a cost of thirty cents. In America we pay at the rate of sixteen cents a pound.

* * *

THE business in children's tin soldiers has increased about fifty per cent in the last few months. War news caused the increase.

* * *

NATIVES of Uganda, Africa, use American oil for anointing their shiny black bodies.

* * *

DOGS serving as a blacksmith's assistants, by blowing the bellows, is an odd sight in an eastside street of New York. The animals walk in a large wooden treadwheel, and three of these dogs, at a cost of two dollars a week each, save the wages of a twelve-dollar assistant.

* * *

AN Englishman has invented a clock that will run for two thousand years. The motive power is a small piece of gold leaf which is electrified by means of a very small quantity of radium salt. The gold leaf bends away from the metal substance and keeps moving under this influence until it touches the side of the containing vessel. At the moment of contact it loses its electrical discharge and then springs back and is again electrified, and the process is repeated.

* * *

TWO French aeronauts, Faure and Lathom, have made a balloon voyage from the Crystal Palace, South London, to St. Denis, a suburb of Paris, a distance of 250 miles, in six and one-half hours.

* * *

THERE are three hundred ninety-one railway passenger stations within twelve miles of St. Paul's, London.

THE Czar has decided to make a direct, personal plea to his people for aid in continuing the war. A new army of 400,000 men will be raised and march east as rapidly as possible. Gen. Kouropatkin's resignation has been accepted and Grand Duke Nicholas Nicholaievitch is said to have consented to take chief command in Manchuria.

AMONG the personal possessions of the Pope is a magnificent sleeping car, constructed in 1868, when the railroad was opened between Naples and Rome, for the use of his predecessor. It has three compartments—a throne-room, a room for the guard of honor and a bedroom. The throne-room is richly furnished, and has a cupola engraved with the papal arms and the twelve apostles. It is so arranged that the Pope, when seated on his throne, can be plainly seen by the crowds who might be expected to throng the stations for his blessing. The car was never used, but was kept in the Vatican grounds.

THE revived popularity of the Tam O'Shanter, with the reported increased manufacture of this favorite headgear in the United States has led Nottingham hosiery makers to put in extra machinery for its production.

THE first independent school for wood workers was established in Germany about the year 1859.

THE Vicar of Burgess Hill, England, announces that when confetti is thrown on the occasion of weddings at his church an addition of \$1.25 will be made to the usual wedding fee to pay for the trouble of cleaning the paper away.

THERE are more blind people among the Spaniards than among any other European race.

LIEUTENANT GENERAL STÆSSEL, the hero of Port Arthur, arrived in St. Petersburg a few days ago. He was loudly applauded by the people, although there was a noticeable scarcity of military and naval officials to welcome him.

THE middle and lower class Russians chew sunflower seeds instead of tobacco or gum. The czarina sent a vast quantity of these seeds to the Manchurian army recently as a present.

DURING twelve hours an average of 60,750 foot passengers passed over Blackfriars Bridge, 95,330 over London Bridge, and 24,920 over Southwark Bridge, in England's metropolis.

IN the will of the late Mrs. Jane L. Stanford it is found that she leaves \$2,000,000 in trust for various relatives; \$1,000,000 to her brother, Charles G. Lathrop, and \$85,000 to San Francisco charities. The sum of \$15,000 is left to Miss Berner, the secretary who was with Mrs. Stanford at the time of her death, which was caused by strychnine poisoning. Smaller sums are left to other household servants. She was the widow of Leland Stanford, who was the founder of the Stanford University of California. President Jordan, of the University, says that she was the wisest as well as the most generous friend of learning in our time.

MEAT and faith are becoming scarcer and scarcer in Zion City every day.

FLORIDA orange growers are trying to fight off the frosts by using salamanders in their orchards.

JACOB H. SCHIFF has given \$100,000 to Columbia for the endowment of a chair of social work. The new professorship will be filled by Edward T. Devine, general secretary of the Charity Organization Society and editor of *Charities*.

FOR wandering dogs and cats an animal hospital and hotel has been opened by the Anti-cruelty Society of Chicago. A kind-hearted woman has donated the funds to maintain the refuge for a year, and others have promised to help carry on the work. A veterinary surgeon of high standing has volunteered to visit the hospital daily and provide relief for the suffering dumb creatures. Those beyond the hope of recovery will be put to death painlessly, while an endeavor will be made to find homes for those able to live.

WITH the breaking of the ice gorge in the Mississippi at St. Louis, and the passing of the last of the big floes, it was discovered that the new government dike, 900 feet long, had been completely demolished. The cost of the work was \$200,000. A protection dike at the East St. Louis, Ill., water works was also swept away by the outgoing ice, doing damage estimated at \$15,000.

OYSTERS grow on trees in New Zealand. Tree oysters thrive all along the coast, but the biggest bed is just outside of Auckland. Here the sea coast is low and covered with thousands of squat trees, which are submerged by every tide. At these times the oysters fasten themselves to the branches, where they wax big and fat, and from which they are picked in proper season by the men who ply their trade when the tide is out. The two owners of this bed are being made rich by it.

HOME DEPARTMENT

QUIT KICKING.

Grumbling again? Quit kicking, my lad,
For this old world is not so bad;
But good or bad, or glum, or glad,
Or mild or mad, my boy, egad!
It's the best old world we've ever had—
Quit kicking lad, lad, quit kicking.

Quit kicking, lad, when things annoy;
Life's part pure gold, and part alloy—
To-day it's grief, to-morrow joy,
And so it goes each day, my boy—
Quit kicking, lad, quit kicking.

Grumbling again? Quit kicking, my lad,
For this old world is not so bad;
But good or bad, or glum, or glad,
It's the best old world we've ever had—
Quit kicking, lad, quit kicking.

—New Orleans Times-Democrat.

WOODEN SWEARING.

BY MRS. M. M. BOLLINGER.

SMALL children especially, and some grown people, are quite addicted to this habit which once learned is very hard to break, sometimes taking years to entirely efface it. I will write this sketch in hopes that it will help someone and save them the shame and grief that I experienced in my childhood upon many occasions after I understood how wrong it really was; for I was addicted to its use and upon the slightest provocation used it to its fullest extent until fourteen years of age.

I had always thought it very wrong to swear and would not have really sworn for anything. About that time I heard a minister preach a sermon upon dumb or wooden swearing, as he called it. He put forth in the plainest language that it was against all of God's wishes, commands or example because he said that we should always act in love, and he himself conquered passion, so we too should conquer our evil nature.

Now I hear the question by some, "What do you mean by dumb or wooden swearing? I thought swearing was taking God's name in vain."

Well, it is, but people usually swear when they lose their temper or become angry. Now did you ever see a person who did not actually swear at this time in words, but slammed the door, knocked the chairs about, threw books or papers right and left, kicked the dog or cat, boxed the children, whipped or pound-

ed the horses and cows, in fact, knocked or kicked everything he came in contact with? This is dumb or wooden swearing, because the person usually thinks naughty words, but is too proud to say them or is afraid of someone near, and yet he vents his wrath upon inanimate objects or abuses some innocent thing for something they cannot help, and all because he cannot see himself or his rude actions.

I have often seen grown people tease children until they indulged in this spasmodic fit and then laugh at them and say that they had spunk, as if it was something pretty, cunning or bright, instead of a sad, sad spectacle leading to a habit which sometimes leads to crime, all because they were taught to give vent to their temper instead of controlling it.

The one who indulges in this kind of swearing lowers himself in his own estimation, loses the love and respect of his fellow-men, and allows his passion to gain control of his better nature, and when almost too late to remedy the evil, he finds himself the victim of vice and crime, brought on by these periodical or temporary fits of anger or insanity, for that is what it will become sooner or later if no check or restraint is put upon the passion.

To those who are addicted to this habit I would say, When your temper is roused, stop one moment and think, then sit down, place your feet firmly upon the floor, fold your arms, look up and count ten or a hundred or sometimes even a thousand, but always look up until your mind and attention are diverted from the cause of your anger and then, if after you have done this your anger should return, repeat again and again, but do not under any circumstance allow your hands or feet free play. Do this until you have conquered yourself enough to think. Ask God to strengthen you, and then if you are to blame for the outburst and have injured anyone, go to them, repair the injury as much as you can, and ask to be forgiven. And I would say to everyone: "Please do not injure one of these little innocent children by teaching or encouraging them to indulge in this kind of swearing."

Vestaburg, Mich.

TOMMY TUCKER'S SUPPER.

BY ADELAIDE M'KEE KOONS.

TOMMY TUCKER rushed home from school and flung himself down at the table with the remark, "Ain't supper 'most ready? I'm as hungry as a bear." "Ung'y as bear," echoed Tommy's baby

brother, and all the five little Tuckers, as they found their places at the table, and bowed their heads for the grace, without which no meal was ever begun in the Tucker family, felt that they were very hungry bears, indeed.

Mrs. Tucker helped grandmother and grandfather to their seats, and then took her place behind the coffee-pot, and holding one of baby Tucker's restless hands in hers, bent her head in prayer.

Tommy's round face bobbed up and beamed upon the table in joyful anticipation, but as he looked, his expression changed, and he said sulkily, "Is this all? I could eat all this myself."

Poor Tommy! No doubt he could. His father was dead, and Mrs. Tucker found her hands very full indeed, to provide for her five little children and the helpless grandparents, to say nothing of her own healthy appetite. And in truth the table did look almost as bare as "Old Mother Hubbard's cupboard," for the meal consisted of odds and ends, scraps of the Sunday's dinner, the heel of a boiling piece, lean and tasteless, a piece of Bermuda onion, left over from seasoning, a few sweet potatoes, a stalk or two of rusty celery, and an orange placed conspicuously in the center of the table. There was of course bread and butter, and coffee, for even the poorest family in America can have these one-time luxuries.

Mrs. Tucker got up hastily from the table and went into the kitchen. Presently she came back, her motherly face wreathed in a smile of triumph—she was carefully carrying a pie, a smoking-hot mince pie.

"I declare to goodness, I 'most forgot that mince pie that Mrs. Higgins gave me the filling for a-Saturday. And here I was savin' it all along for to-day, thinkin' the children would be so hungry comin' from school."

But Tommy was not satisfied. *One* mince pie, one *mince* pie, for all those hungry mouths. Oh, why was there never *enough* of anything? Tommy felt that it was adding insult to injury for his mother to exult over the possession of one mince pie—one paltry pie.

As he felt, so he spoke, in no uncertain terms, denouncing the inadequacy of everything upon the table to fill up him or the other little Tuckers,—“Tain't enough, there never is, of anything. We might as well be Digger Indians and live on roots, or be cannibals—I'd just like to be and get filled up once on something, I don't care what,” he finished, still sulkily; and feeling that his grandfather's eye was upon him, said no more. But the baby, as if suddenly presented with a vision of his tender body falling a victim to Tommy's ravenous cannibalistic tendencies, and divided between pity for himself and Tommy's pangs of hunger, burst into a howl of woe.

This diverted Mrs. Tucker's attention, and doubtless saved Tommy from the gathering wrath in her

eye, but Grandpa Tucker looked at the boy a trifle sternly. “Tommy,” he said, “where did this supper come from? Have you any idea of how many parts of the earth have yielded up this simple supper with which you are so dissatisfied? You are good in geography—look over the table and tell me where these things came from.”

Tommy looked, then being anxious to show that he did know his geography (wise old grandpa, to turn the current of his thoughts in this manner), answered: “The meat came from Texas, I suppose, Texas beef, you know; the onion came from Bermuda, the sweet potatoes from down south, the bread and butter from here, and—and—”

“Where did the rest come from, Tommy? That is not all.” Tommy did not know. Whereupon grandpa took up the parable. “The celery was grown in Michigan, the cranberries were brought from Maine swamps, the orange from California. But that is not all that is on the table, Tommy. There is sugar—”

“Cuba,” shouted Tommy.

“Salt,” went on grandfather, “where do we get salt?”

Little Dick, who had a great fondness for Bible history, said, “Maybe they cut Lot's wife up in little bits—” and got no farther for the laughter at his bad guess.

“Then there is the pepper, which came from Ceylon, and coffee from Brazil, and the mince pie, Molly, where did that come from?”

“Texas beef again,” answered Mrs. Tucker, “and the spices from India, the citron and cloves, the raisins from Algeria, the molasses—”

“Never mind; that's enough,” said grandpa with a laugh. “The children could never place all the things on this table in a week. Why, even the tablecloth was woven in Ireland; but I think we have gone far enough to convince Tommy that he is not eating such a plain or poorly furnished meal after all. The poor people nowadays eat better meals than did the kings of a thousand years ago, eh Tommy?”

But Tommy was subdued beyond the power of reply, and there was silence for a moment, broken only by the clatter of knives and forks, and the smacking of the baby's lips over some tid-bit.

Then Grandma Tucker lifted her dear old wrinkled face and said softly. “I think there is one thing we have forgotten—the most important seasoning, the best spice of all—contentment, which comes from heaven and our own hearts.”

Mt. Vernon, Ohio.

A RESOLUTION was offered in the Wisconsin State assembly, asking congress to investigate their agricultural implement trust. It is hoped that one trust after the other will be laid open to investigation before the people.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGER.

THE FOOL.—Psa. 14:1; 53:1.

For Sunday Evening, April 2.

I. The Worst Type of Fools is Self-made.

1. A Self-made Man Praises his Maker,.... Dan. 4:30
2. They are Egotistical and Prating,..... Prov. 12:15
3. Boast of their Wealth,..... Luke 12:16-21
4. Forget their God,..... Psa. 9:17

II. They are Noisy but Harmless.

1. They Blaspheme the Most High God,.... Psa. 14:1
2. They are Right—others Wrong,..... Luke 16:15
3. They take Pride in Meddling,..... Prov. 20:3
4. Their Voice is Known by Multitude of Words.

III. Conceit is their Principal Weakness.

1. The Foolish Build Upon the Sand,..... Matt. 7:26
2. Take no Oil in their Vessels,..... Matt. 25:3
3. Get too old to Learn.
4. See their Folly too Late.

“A Companion of Fools shall be Destroyed.” Prov. 13:20

Text.—The fool hath said in his heart, There is no God.
—Psalm 14:1.

References.—Psalm 55:5; Psalm 74:18; Proverbs 29:9; Ecclesiastes 7:9; Ecclesiastes 10:15; Proverbs 18:2; Proverbs 27:20; Proverbs 9:6-8; Proverbs 1:7; Proverbs 15:21; Matthew 7:26, 27; Luke 12:16-20; Proverbs 26:3-10; Proverbs 17:24.

No God.

A more foolish thing could not be said. Unbelievers who say there is no God, and who seek to rob Christians of their faith, always demand far greater credulity in the acceptance of their wild theories than is needed to believe in God.

“The wise men say that life's not worth a barleycorn when all is done.

Well then—and not till then—I'll try the granary behind the sun.

“‘Doubt everything,’ the thinker said, when I was parched with reason's drought;

Said he, ‘Trust me, I've proved these things, have utter faith in me,—and doubt.’”

To doubt God or his Word brings a hardness, a coldness into the life, a depressing sense of something lost and gone that makes true joy impossible.

The Lost Word.

In “The Lost Word,” the young man loses the word “God,” and when he experiences the greatest happiness his soul wants to praise God, he wants to voice his gratitude, but he has lost God and so he is driven back upon himself. When trouble and death come, he tries to pray, but it is of no avail, nothing can make up for the lack of God's presence and the abiding sense of his peace.

The Graveyard of the Atlantic.

It is Sable island; it lies so flat in the sea that unless the day is very bright you can hardly distinguish it from the ocean itself. All around it is a tanglework of shoals. Everywhere along these shores death lurks; two hundred lives were lost here in a single year. It seems as if this island almost draws ships into its fatal embrace. Leaving God out of the life is like this graveyard of hopes. It has done more to ruin the souls of men than any other cause in this world. Fools think that they can get along without God and so leave him out of all their calculations. Instead of seeking him first, they try to live without him. What wonder that the pleasures of this world are like ashes. That they echo the plaint of Solomon, “Vanity of vanities, all is vanity,” and there is no joy under the sun.

Carlyle says, “The most important thing in any person or nation is his religion.”

We Need God.

I wish that our boys and girls could all see their great need of God; he completes their lives. Only fools can get along without him; a strong man or woman who is doing something worth while in this world must have God to give them the needed strength and wisdom. When the first Continental Congress met in Philadelphia, those men first prayed to God; they were weak, but he is mighty. Washington and Lincoln trusted God and prayed to him for help and guidance to carry out their mission.

“The Song of Fools.”

It is a song of selfishness, of envy, jealousy and frivolity. It is better for our children to sing the songs of Zion than the song of fools. A man who had an abundance of wealth all his life lay dying. He had dwelt in the most fashionable hotels, and had known everything that travel under luxurious conditions at home and abroad could possibly bring to him in a worldly way; he was intelligent and enjoyed books and art, and yet his last words were, “I have never known happiness.” He had never become acquainted with God, and so life was empty, imperfect. Wealth, learning and pleasure cannot satisfy the immortal soul within us.

Fools.

They are wise in their own conceit; when parents and friends urge them to go to school and learn to use all the talents God has blessed them with, the foolish son and the foolish daughter refuse to go, and so they start in life only half equipped for its battles. How

can they run the race with those who have improved every opportunity to study and use every talent they possess to God's glory? The fool falls behind, he has no power to win the success the worker soon claims as his own. "A fool's voice is known by multitude of words," and again, "For as the crackling of thorns beneath the pot, so is the laughter of a fool," the fool foldeth his hands together and liveth in idleness. These are Solomon's sayings about those who are willing to believe that there is no God. And he concludes by warning us against associating with fools and being influenced by them. "He that walketh with wise men shall be wise: but a companion of fools shall be destroyed."

Topics for Discussion.

1. A meddling fool. Prov. 20: 3; 10: 23.
2. Fools are afflicted. Psa. 107: 17.
3. Conversation of a fool. Eccl. 10: 13, 14; Prov. 15: 7; 29: 11.
4. Association with a fool. Prov. 26: 8; 29: 9; 14: 7-9; 13: 20.
5. If we are wise in our own conceit we are in danger. Prov. 26: 12.
6. A foolish son. Prov. 19: 13; 17: 25.

EMPLOYMENT BUREAU.

"I wish we had a Missionary Reading Circle in our church, but I've had no success. I talked to some but they did not see any use in it. One said, 'We got along so far without it, I guess we don't need it now.' What can I do?"—*A Sister*.

We are sorry for our sister, and yet we are not sure that she needs our sympathy. There is a glorious work for her to do and God will give her strength and grace to do it. That church must be aroused. We doubt whether there is a contribution from that church for missions. When the roof of the meetinghouse leaks, and it is time to lay in another supply of coal, we suppose by repeated urging at council meetings, the money is raised. The necessary expenses are not high and some of these members are rich, yet it is difficult to keep any money in the treasury for none of them are willing to give a bit more than is needed for their actual expenses. There is an inward shrinkage in such a church that is alarming, the members seem to grow smaller instead of coming up to the full stature of Christ Jesus. This church is actually suffering from the lack of missionary interest, every bit of spiritual life and enthusiasm has drained out of it through the channel of selfish formality.

What can this sister do? She can only look over the congregation and get such workers as will work and begin with them. If she can find but one, let her consult with that one until they have plans for a Circle. Let these two work together and distribute cir-

culars until they get a start. If they keep at it a marvelous quickening of the spiritual life in their own souls will be the first result. The superintendent of the Sunday school and the teachers will be among the first to respond to the spirit of missions that will come as a life-giving blessing to this church living at ease. Coldness and selfishness will disappear and generous giving and praying for others will become the rule.

"How can we interest our Sunday-school scholars in missions?"—*A Circle Member*.

We are very glad that this question is being considered by others as well as ourselves. There must be a work of early seed sowing, and in our judgment the time has come when our Sunday schools should require some missionary instruction. Our Circle books should have a place in every library. Every teacher should belong to our Circle and read as many books on missions as he can. He should emphasize our duty toward the unsaved in his teaching. The children should be encouraged to join the Circle, and if you can enlist the children of our church in mission work, a glorious harvest awaits the faithful sower. Our books are adapted to Sunday-school children,—the Christian Workers' course was designed for them. Help us to place these books in their hands.

Large numbers are not a requisite for a successful Circle. You can begin with a very few who are deeply interested, and then increase the number as others will want to join. You, who are live, enthusiastic workers will draw others into your midst.

Readers should not be discouraged if the first two or three chapters of a book prove less interesting than they expected, because very often, in books on missions, these first chapters are the groundwork for the entire book, and after these you will find exceedingly interesting and inspiring chapters. The profit gained from mission study depends upon the amount of concentrated attention you can give to it.

The heart must be kept continually open for divine suggestions as to one's personal responsibility; often should the reader pray, "Lord, in the light of these new-found truths what wilt thou have me to do?" The Circle should become a praying band, and should pray earnestly for laborers, money and the missionary interests of the church.

"Does the old rule hold good in regard to the membership fee; that one not desiring "Do Not Say" can pay but twenty cents?"—*Amanda R*.

Yes, we find that some have already read "Do Not Say." When another member of the family has the book they prefer to pay only twenty cents, instead of paying twenty-five cents and receiving "Do Not Say." We send them their membership card in either case, and give them the same hearty welcome.

OUR YOUNG PEOPLE

GEOGRAPHY CLASS.—Chapter XX.

London, England.

Dear Mr. Maxwell:—

The more we see of London, the more we are constrained to say that it is a wonderful city. On her streets one may find more Jews than in Jerusalem; more Italians than in Rome; more Irish than in Dublin; and almost every language spoken on the face of the earth, is spoken here. Every language which supports a printed form, is represented by a newspaper in this great metropolis. A steeple from a churchhouse, of almost every denomination in the world, points toward the sky. It is a little beyond comprehension to continually embrace the fact that we are wandering amid a throng of five millions of people. While this is the largest city in the world, yet there are many other very large cities and as we think of the countless millions that wander to and fro upon the face of the earth, we wonder from whence they all come, and whither are they all going; where they all find shelter at night; who clothes them all, and what shall be their destiny.

As I said in the last letter, we had started for the art galleries, and believe me, it was almost impossible to get Agnes and Miss Gertrude away from them. As for myself, learning their natures as I did, I expected that before we came; but the boys could hardly conceal their impatience and kept constantly remonstrating against our slow progress through the halls, by using that forceful argument that they were only pictures, and pictures were all alike. I wish that Agnes or Miss Merritt might write a description of this visit because I realize my inability to do justice in the way of description. I dare say there are millions of dollars worth of sculpture and paintings displayed here in memory of kings and queens, lords, dukes, poets, musicians, humorists, novelists, soldiers, sailors, etc., from George I down to H. M. G. M. Queen Victoria.

There, in marble and on canvas, we saw Byron, Bacon, Tennyson, Knox, Shakespeare, a long list of queens, such as Elizabeth and Mary, barons and baronesses, dukes and duchesses, and last, but not least, our own beloved Washington. Many of these illustrious characters have climbed the ladder of fame and distinction by real merit; but as we studied their physiognomy and history we were impressed that heredity is the only possible avenue, through which some have gained their envied place; by this day's work we were taught a very valuable lesson, that a name, gained under false pretense, is like wealth gained in the same manner, is equally as hard to maintain and causes no less worry and trouble to keep the public from claiming it again.

On the Lord's Day we attended church services at the Presbyterian church at Regent Square. Rev. Prof. Morton of Edinburgh read a dry, scholarly essay on John 12: 36, to a good audience, whose pastor is taking a vacation at the seaside; and as Oscar said, judging from the atmosphere that pervaded the assembly, "the Holy Spirit had also gone on a vacation." Just as the services proper began, one hundred boys, about twelve years old, came into

the church in a body led by a soldier. The boys were dressed as soldiers, with a regalia, short skirts and were bare-legged. John Bull holds a tight rein upon the youths of England; here these little men of the future are being taught the art of war, given a taste for the shedding of blood, and drilled to accuracy and perfection in the art of taking life which they cannot give, right in the very temple, erected and dedicated to the Prince of Peace—the Lord Jesus Christ. It is a system hard to understand when we learn that the ministers of the church of England are government officers, commissioned and salaried the same as the officers of the army; and that the one is commissioned to teach and preach the peace principles taught by our Lord, while the other is to keep the kingdom in readiness to resent any insults offered to the crown, whether it be by individual, tribe or nation, or an alliance of nations.

We began the new week with a visit to the British museum which has long claimed the name of the greatest in the world. The buildings are immense, heavily colonnaded but plain; three stories above the ground and two stories below the ground; the buildings entirely cover a very large square. After walking for some hours through the libraries, Roscoe asked our guide how many volumes there were in the library, and he said, "Stranger, we do not count them by volumes, by hundreds nor by thousands, but there are simply acres of books." Afterward he told us that if the books were placed on one continuous shelf, it would necessarily have to be forty miles long. These books are arranged on rolling shelves in the vaults in the basement so that any book may be found when wanted and yet so that only a few hundred thousand are exposed to shelf wear and to light and dust. Old MSS. and letters, as well as addresses and correspondence of prominent men for ages past, are in perfect autograph and can be plainly seen. We saw copies of the Holy Bible, written prior to the time of Christ, and many papers of very ancient date. One interesting thing was the prayer book of Queen Elizabeth, written with her own hand—part when she was a little Princess, and part when she was the Queen of England. We saw an old German Bible, supposed to have been the first one printed in Germany, bearing the date of 1455; a copy of the Scripture, 166 B. C. But of all these, Miss Merritt became more interested in a record of the sale of a slave boy Eutychus, bought by D. Fabulus Maur, owner of the vessel Tigris. Boy seven years old; signatures and seals. There were stone pillars, spoken of in the Bible, as treaty stones or Ebenezers, land-grants, deeds and leases. The boys stood for an hour looking at the famous Rosetta Stone which was the key to all hieroglyphic interpretations; also an excavated tablet containing a hieroglyphic record of the building of the temple of Ur of Chaldees in 3400 B. C.; also sockets for gateposts, found at Damascus, which were set thirty centuries before the dawn of the Christian era; in fact the most famous pieces of sculpture from the chisels of the most famous sculptors in the world; utensils and relics from every country on the globe and the islands of the

(Continued on page 288.)

The Q. & A. Department.

What is to be the program for the Inglenook reunion?

There will be more said about that later, but rest assured that we will have some one to represent each department of the INGLENOOK. We expect to select such speakers as feel especially interested in a certain department, thinking that he can represent that department to a good advantage. For instance, let some one who is especially interested in the Q. & A. Department tell what benefits are to be derived from it. In this way each department will be impartially represented. The Christian Workers' and Reading Circle work will have a strong support.

❖

What is barium?

Barium is a crude material mined in Virginia, North Carolina and Tennessee, from which paint is made. The ore which is technically sulphate of barium is a whitish material of very high specific gravity, and is absolutely unaffected by acid. This quality renders it particularly valuable as a body for paint. There are large barium works at Bristol, Tenn. You may be able to visit this plant while at the Conference. No shipments less than carload lots are made from this factory on contracts ranging from hundreds to thousands of tons.

❖

Will there be any daily newspapers this year at the Conference?

Yes indeed. The *Bristol Courier* is to be the official organ, and our Brother James M. Neff is to be the Conference editor. The ability of Brother Neff is widely known and there is no reason why we should not have good service along this line.

❖

Give the names of the Committee of Arrangements?

D. F. Bowman, Chairman, Johnson City, Tenn.; R. D. Reed, secretary, Limestone, Tenn.; C. H. Diehl, treasurer, Jonesboro, Tenn.; Dr. S. J. Bowman, Johnson City, Tenn.; N. B. Sherfy, Blountville, Tenn.; P. S. Miller, Roanoke, Va.

❖

Who is to conduct the Bible School to be held in the tabernacle prior to the Annual Meeting?

Elder J. G. Royer, of Mt. Morris, Ill. Elder Royer resigned his position as president of the college at that place about a year ago; which position he had held for the last twenty years.

❖

Is there a river close to Bristol, Tennessee?

Yes. The beautiful Holston river.

I notice that sometimes Bristol is spoken of as being in Tennessee and sometimes in Virginia. Which is correct?

That depends. What used to be main street is now called State Street, which is the state line separating these two states. If your party resides on the Virginia side, he should be addressed Bristol, Va.; if in Tennessee, Bristol, Tenn.

❖

Will the Annual Meeting be in Virginia or Tennessee?

When the train stops at the Union Station and the people alight they will be in Bristol, Va., and when they cross State Street and proceed out to the Conference ground they will be in Bristol, Tenn.

❖

Will there be any side trips provided for this year from the Annual Meeting?

Yes. Amply provided for. There are so many people in the North and West whose relatives live in the East and South that they will demand a service of this kind.

❖

Why was the date of Annual Meeting changed from June 13 to June 6?

It was made on account of the fact that the people of Tennessee and Virginia feared a conflict with harvest, and avoided this conflict by changing the date.

❖

How much silver is there in a silver dollar, and what is its actual value?

412.5 grains, and its value in silver bullion is about 50 cents.

❖

On what day should the people arrive at Bristol?

By all means plan to arrive on Saturday. Avoid Sunday traveling as much as possible; besides you have advantage of the Sunday services.

❖

Will the Inglenook have an office on the Conference ground?

Most assuredly. It will be in the same building as the *Messenger* office.

❖

What rates will the railroads make to the Annual Meeting this year?

Nearly all the important roads have made a rate of one fare for round trip.

❖

What is the population of Bristol?

About 15,000.

MISCELLANEOUS

GEOGRAPHY CLASS.—Chapter XX.

(Continued from page 286.)

ocean; ruins from Assyria, Egypt, Greece, Rome, and many other places; busts of famous women and men; ornaments and idols of the millions; jewels, precious stones and gems from pole to pole, and sea to sea; sarcophagi and mummies from Rome to Egypt; costumes of the peoples from the Esquimaux and the American Indians to the Aborigines of Mexico and the ancient Antediluvians.

It is entirely beyond the power of tongue or pen, to give a description of the world's panorama displayed here on a very few acres of space. It would require months and even years to enumerate the specimens in this most wonderful collection. After all, though wonderful and incomprehensible as it seems, how vain the attempt of man, to collect a sufficient quantity of specimens of earth's antiquities and treasures to gain, even a superficial knowledge of it; and yet in one little volume, the wisdom of God has given an unparalleled history of the world and its people, and a splendid panorama of the great unknown city toward which we, weary pilgrims, are traveling.

Respectfully,
Marie.

(To be continued.)

* * *

PRINCIPLE.

STEPHEN GIRARD, the infidel millionaire of Philadelphia, one Saturday bade his clerks come the following day and unload a vessel which had just arrived. One of the clerks, who had strong convictions and the power to act upon them, refused to comply with the demand.

"Well, sir," said Mr. Girard, "if you can not do as I wish, we can separate."

"I know that, sir," said the hero. "I also know that I have a widowed mother to care for, but I can not work on Sunday."

"Very well, sir," said the proprietor; "go to the cashier's desk, and he will settle with you."

For three weeks the young man tramped the streets of Philadelphia, looking for work. One day a bank president asked Mr. Girard to name a suitable person for cashier for a new bank about to be started. After reflection, Mr. Girard named this young man.

"But I thought you discharged him?"

"I did," was the answer, "because he would not work on Sunday, and the man who will lose his situation from principle is the man to whom you can entrust your money."—*Youth's Friend*.

PERSONS WHO HELPED THEMSELVES.

DAVID LIVINGSTONE said, on graduating at Glasgow, "I never had a dollar that I did not earn." He used to carry his Latin book to his loom, and study. Yet he was buried in Westminster Abbey, and on the site of his hut in the heart of Africa's jungles is now a large town with electric lights and a railway.

Frances Willard and her brother Oliver started a paper at fourteen. They used to talk to each other about what they would do when they were grown up. Frances often went hungry and walked long distances, because she had no money to buy bread or pay car-fare; but she came to occupy a foremost place among women.

Lucy Stone, the great champion of higher education for women, made up her mind, when a tiny bit of a girl, that she would go to college. She picked berries and nuts and sold them to buy books; she lived on fifty cents a week, and at last she was graduated from Oberlin College.

Mary A. Livermore taught school for a little money to fit herself for life's work.

Emerson sawed wood to help himself through Harvard College.

Rev. Charles M. Sheldon worked as a waiter in a summer hotel to get money to complete his education.—*Junior Endeavor World*.

* * *

VENICE SINKING.

PROF. HERMANN BERDROW, of Berlin, one of the best living authorities on the geology of Northern Italy, says Venice is undoubtedly sinking, and nothing can save it from its coming fate. He has just returned from a prolonged and careful examination of the ground and has come to the conclusion that the decay will go on and increase, one building after another going, perhaps whole rows of buildings at once.

The foundations on which Venice is built, are, he says, not foundations at all, but water pillows, layers of earth and mud and seaweed, which hundreds, perhaps thousands, of years have formed. These layers are often from thirty to one hundred feet thick, but under them is water, often deep water. The inevitable tendency of these water pillows is to sink. The builders of Venice drove piles deep into these layers, and on the piles built palaces and churches, but knew nothing of the treacherous depths below.

Good Land Cheap

The basis of my business is absolute and unvarying integrity.
SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

RAW

MARCH

WINDS

and changeable April days frequently bring woe to young and old, and more especially those who, during the winter months, have been weakened by onslaughts of severe colds, la grippe, pneumonia and other ailments. Even those of us who are well frequently find the transition from winter to spring a trying season. Many of us have been penned up indoors, to a large extent, for months. We have lacked our usual exercise. Our blood has become thick and sluggish, our lungs weakened and our livers more or less torpid. We feel it by a sense of lassitude, and realize that our systems need a thorough rejuvenating. As all nature at this season begins to throw off its mantle of corruption, so too does the human system need to purge itself from accumulated waste matter, which clogs up the vital channels.

A man well advanced in years, yet in robust health, remarked not long ago that he attributed his splendid physical condition to his habit, for years, of giving his body a regular "house-cleaning" each spring by the use of a reliable blood-cleansing remedy. There was sound reason in the remark. The best of us need to do this at times. For the purpose there is probably no remedy that equals Dr. Peter's Blood Vitalizer. By its mild, yet invigorating properties, the vital organs are stimulated to natural activity. The system is freed from accumulated waste matter. The bile and uric acid are eliminated from the blood, the kidneys regu-

lated, and the body made to tingle with the glow of health, making life worth living.

ITS RENOWN SPREADS.

Sheboygan, Wis., April 23, '04.

Dr. P. Fahrney,

Chicago, Ill.

Dear Sir:—

Your Blood Vitalizer is in great and ever increasing demand as one person recommends it to another. It is used for rheumatism, stomach trouble, headaches and skin eruptions with wonderful success. This is my experience since I accepted the agency, now three months ago.

Yours truly,

626 End Ct.

THE BEST DOCTOR.

Lyons, Iowa, Dec. 17, '04.

Dr. Peter Fahrney,

Chicago, Ill.

Dear Sir:—

We would not be without your Blood Vitalizer in the house for anything and shall keep it as long as we live. It is the best family doctor we know. We use it for almost every ailment in the family and it has saved us many a doctor bill.

With kindest regards.

Yours very truly,

Mrs. J. Vermeersch.

Current testimonials, with a full description of Dr. Peters' Blood Vitalizer, showing how it acts upon the system, will be found in each copy of The Surprise, sent free on application. Address:

Preserve Your Eyesight!

Polk, Ohio, March 7, 1905.
Dr. J. L. Miller, Smithville, Ohio.
Kind friend:—

I want to say a few words in regard to the glasses I got from you a few months ago. I think they have done me a great deal of good, as I do not have headache now or the distress in the head that I had before wearing them. I was in bed four days in January with lagrippe which affected my eyes very much. I had to have the room darkened awhile, but after about ten days of your treatment, they were very much better again, and now I want to say to my friends, or to whom it may concern, that I feel I can recommend Dr. Miller for fair treatment and honesty, as he did just as he agreed with me, and I would say to any one in need of glasses, to write to Dr. Miller. He can do you good.

Yours very truly,
Annle E. Shoemaker.

Treatment sent on trial. Question sheet and testimonials free. Address,

DR. J. L. MILLER,
Wayne Co., Smithville, Ohio.

P. S.—Remember I never met Mrs. Shoemaker. This was all done by correspondence. See Nook of Dec. 13, page 2.

...Beautiful Stories... FROM THE GOOD OLD BOOK

By ISABEL C. BYRUM.

The story of the old Bible is told in such an interesting and simple way that it becomes intensely interesting. It is especially adapted for boys and girls of from 10 to 15 years old.

It is a new publication and one that will do much toward interesting the children in further Bible study. It is copiously illustrated and contains 311 large pages. It is printed in clear type on good book paper, and is substantially bound in cloth.

Send for a copy. You will be pleased with it. Price, prepaid, \$1.00.

BRETHREN PUBLISHING HOUSE,
Elgin, Illinois.

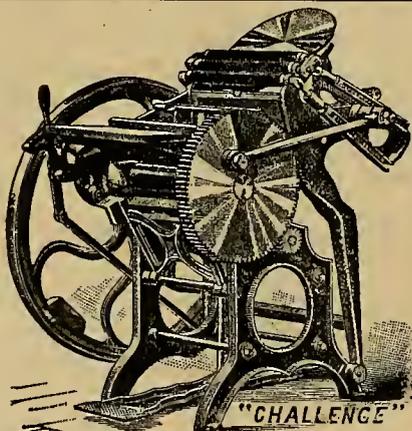

\$4.42 THINK **\$4.42**
OF THIS!

You are interested in saving money—compare this price with anything you have ever known. A watch that counts for something in time-keeping qualities yet at a price within the reach of everyone. 18 size, strong, durable, suitable for the farmer, mechanic or any person requiring a strong watch. The movement is a genuine Waltham 7 jewel, gift, cut expansion balance, patent Breguet hair spring, quick train and fully guaranteed. The case is a genuine Dueber silverine open face screw back and front.

You will not need to think long on this proposition before acting. The Waltham watches are well known. Your order will be appreciated and given immediate attention.

Order by Number 7A5.

Easter Cards

We have several designs of appropriate Easter Cards, which we feel sure will be enjoyed, especially by the children.

Sunday schools will do well to order enough to supply their primary and intermediate classes.

Numbers 7268 and 7004 are especially suitable for the little folks from 4 to 10 and 12 years old. Numbers 215 and 201 are very appropriate for larger children, and in fact would make very nice, inexpensive Easter Greetings for any one.

Our No. 201 are each placed in a separate envelope, are made up of four different designs and have the following Easter Greetings printed in silver: "Christ is Risen," "A Peaceful Happy Easter," "A Happy Easter-tide," "A Holy Easter."

7268 A substantial blue-tinted card. Embossed thereon are Chicks in their natural playful mood. One design shows the Chicks on the kitchen floor near a fireplace. On the other are two chicks holding a Basket of Beautiful Colored Eggs by a Cord of Blossoms. Beautiful colored effect. Two designs. Size, $3\frac{1}{2} \times 5\frac{1}{2}$. Six cards to a pack. Per pack, 10 cents.

7004 On these cards are Beautifully Embossed Chicks, emerging from Eggs with the shell only partly broken. Entwined about the Eggs and Chicks are Nasturtiums, Cyclamen and Poppies in natural colors. Embossed. This card will please the children. Three designs. Size, $3\frac{1}{2} \times 5\frac{1}{4}$. Six cards in each pack. Price per pack, 10 cents.

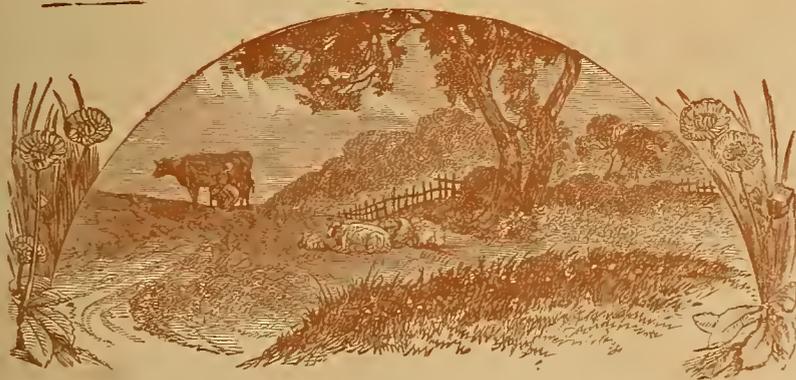

215 This dainty card has a deep embossed Scroll Border of Silver. In the center is a Beautiful Cross, printed in silver entwined about with Pansies, Violets, Easter Lilies and Lilacs in their natural colors. Each card has a suitable Easter Greeting printed in silver. Four different designs. Four cards in each pack. Size, 4x5. Per pack, 10 cents.

201 This attractive card is printed in a blue tint. The central scene is a Large Cross extending the full length of the card. The Cross is printed in Silver and Lavender and handsomely embossed in Scroll Designs and Flowers. In the center of the Cross is a Beautiful Angel. Four designs. Size, $5 \times 7\frac{1}{4}$. Price, 5 cents each.

Order cards by number. Packs not broken. No orders filled for less than 10 cents. Send your orders early, as our supply will not last long.

ART PICTURES

We have just received three new numbers of these "Fine Art Pictures" as follows:

- No. 125--MARRIAGE CERTIFICATE**
- No. 123--FAMILY RECORD**
- No. 121--MEMORIAL**

We have had a number of calls for the above numbers and are pleased to state that we are now prepared to furnish them.

The Memorial picture is printed on black paper, which makes it very appropriate, while the other two are printed on gilded paper in many beautiful colors.

No. 125.--Marriage Certificate.

We have sold more than **5,000** of these Pictures in the last two months and are still receiving many orders each day. A great many order from 12 to 25 at a time, and a number of orders are received for 40 and 50. Our customers are so well pleased that it is no uncommon thing for

the same person to send us two or three orders. Size of picture, 16 x 20 inches. **Former price, 25 cts.**

No. 123.--Family Record.

These numbers are all exceedingly fine. Send us an order and we are sure you will be delighted with them.

TWENTY SUBJECTS

Besides these we have 20 other subjects that are very popular.

From Chicago,\$33 00
From St. Louis, 30 00
From Missouri River,..... 25 00
Proportionate rates from all points East.

There are opportunities in Southern Utah and Nevada where homes can be had at little expense, where no heavy clothing and but little fuel is needed, where garden truck can be raised in abundance nearly the whole year, and where the people can live in tents throughout the year without suffering from heat or cold. The new line of the Salt Lake Route, now building through to California, will pass through several well watered valleys in these states, in which can be grown apples, grain, potatoes, figs, cotton, sugar cane, tobacco, peanuts and many of the semi-tropical fruits. These valleys are surrounded by hills and lofty snow-capped mountains, which furnish an inspiring background to the scene which greets the traveler who finds his way into the favored region. The climate is mild and delightful, and excessive heat and extreme cold is unknown. This is a good place for a poor man to get a home, the sick to find health and the capitalist to make good investments.

If you are interested in mining, manufacturing or agriculture, or seeking a new home in a new land, and desire to know more about the great resources of Utah, Nevada and California, write to Geo. L. McDonough, Colonization Agent, Omaha, Neb.

And then stop off at CALIENTES and LAS VEGAS, NEVADA, to investigate for yourself. Be sure to buy your ticket over

The Union Pacific Railroad

known as the "OVERLAND ROUTE," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line.

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

The Union Pacific Railroad

Which is known as "The Overland Route," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line. THE INFLUENCE OF A DREAM

We are all subject to dreams, humble and great, rich and poor alike. Many people attach considerable significance to them. Dreams have at times shaped the destinies of men and nations. In olden times, dreams were interpreted by the priests, and we read in the Old Testament the narrative of Joseph laying the foundation for his future greatness by interpreting Pharaoh's dreams.

Most every one has read the story of the wonderful dream of the Virginia girl, who saw old Dr. Fahrney in her dreams, and how she was cured by him after having lived the sad life of an invalid for years. In a letter from Mrs. Elizabeth Buening, of Purdy, Barry county, Missouri, the "dream story" is again brought vividly to mind. She writes under date of April 4, 1904:

Dr. Peter Fahrney, Chicago, Ill.

Dear Sir:—We would rather be without money than your **Blood Vitalizer**. We have a large family and have had occasion to use it, and we certainly know if it is good or not.

I was just like the girl referred to in the "dream story." I had passed many years in misery and suffered, it seems, from all imaginable troubles. One night I dreamed that your **Blood Vitalizer**, of which I had heard so much, cured me. In the morning I related my dream to my husband. He said, "Haven't you spent enough money already. That 'stuff' will be just like the rest." I finally induced him, however, to send for a trial box, and as much as we needed our hard-earned money, it was a splen-

did investment. It not only cured me, but did my husband a great deal of good which can not be paid with money. He used to suffer terribly with neuralgia and rheumatic pains, which almost set him crazy. In the winter, as soon as the weather became cold and raw, he could not go outdoors and was unable to work. Since using the **Blood Vitalizer** this has never happened.

Here is another case which I must tell you about. Our thirteen-year-old daughter had the scald-head two years ago. Her head was a terrible sight, almost sickening to look at. Three bottles of the **Blood Vitalizer** cured her in a short time. I could write you a great deal more and relate many other happy instances where the **Blood Vitalizer** has done wonderful things, but this will have to do for this time.

Yours truly,

Mrs. Elizabeth Buening.

The wonderful phenomena of dreams may or may not be explained; their value or importance may be questioned, but the fact remains that DR. PETER'S BLOOD VITALIZER was again the medium of restoring health and happiness to an otherwise unfortunate home.

Unlike other medicines DR. PETER'S BLOOD VITALIZER is not to be had in drugstores. It is not an article of commercial traffic, but is supplied to the people through special agents appointed in every community. If there is no agent for the BLOOD VITALIZER in your neighborhood, you can obtain a trial box containing 12 35-cent bottles, just now, at the special price of \$2.00. Address

Brethren's Clothing

Our system of cutting and making Brethren's Clothing from measurements sent us by mail enables our customers to save from one-third to one-half from prices offered by local dealers or agents. While the prices of woolen or worsted goods have advanced from 20 to 25 cents per yard, we make no advance in the price of our suits.

OUR NO. 9778 SUIT, \$17.50.

A high grade, good weight, fine finished strictly all wool serge. Guaranteed fast black. Any merchant tailor would charge you \$30.00 for a suit of this material and our grade of workmanship.

OUR NO. 2163 SUIT, \$17.00.

As fine finished, all wool gray serge of medium weight as money can buy. The surface is rather smooth and the fabric soft and pliable. This makes a handsome suit and is well worth the price. Always looks well, wears clean and is excellent value.

OUR NO. 576 AND 177 SUITS, \$15.00.

Another excellent value. Two patterns of silk mixed cassimere, one ground color black, with gray mixture, the other with golden and blue mixture. Either of these numbers are very desirable patterns for old or young.

Send for our book of samples, giving prices and descriptions of these and many other excellent values in Brethren's Clothing, instructions for home measurements, tape line, etc.

Made Exactly as Represented in Cut.

ALBAUGH BROS., DOVER & CO.,
341-43 Franklin Street -- Chicago, Illinois.

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

THE INGLENOOK

VOL. VII.

MARCH 28, 1905.

No. 13.

THE SUN WILL SHINE TO-MORROW.

What though our skies be overcast,
And clouds of trouble lower?
Though disappointments, crowding fast,
Beset our every hour?
Though trials throng upon our way,
Shall we succumb to sorrow?
No! Let us gather hope, and say,
"The sun will shine to-morrow!"

Though fickle Fortune hide her face,
Our brave endeavors scorning,
And rob us of some cherished grace
Without a moment's warning.
Let us not tremble at her frown,
Nor care and trouble borrow,
But say, though night is closing down,
"The sun will shine to-morrow!"

Beyond the shadow's threat'ning gloom
His welcome beams are shining;
The clouds that o'er our zenith loom
Have all a silver lining.
The darkest hour precedes the dawn,
And gladness follows sorrow;
The longest night will soon be gone,
The sun will shine to-morrow!

—Helen Whitney Clark.

All the flowers of human thought have tasted some-time of the light of heavenly truth.

❖

The true believer gives freely, because he knows that, in so doing, he irrigates the arid waste of his own soul.

❖

Some men don't know how to take the spice of life with a pepper shaker; they want the whole box at one swallow.

❖

It is the fruit of good works, and not the mere blossoms of good thoughts and good feeling, which God requires.

❖

Men who are willing to let you in on the ground floor usually have a trapdoor ready to let you into the basement.

❖

To-day, as in the times of the kingdom of Judah, men turn away from a merciful God, and walk on to their own destruction.

❖

We never try to eat strawberry shortcake at a restaurant without thinking we have grounds for charging the restaurateur with obtaining money under false pretenses.

❖

The distinction between Christianity and all other systems of religion consists largely in this, that, in these other, men are found seeking God, while Christianity is God seeking man.

CHARLES MILLER.

BY WALTON F. STOVER.

THE little village of Gainsville, which had never been heard of outside of a radius of six or eight miles, suddenly sprang into notice one day. In a speech by a gentleman on the floor of congress during a debate on the merits of a question of national importance, the speaker remarked that never before since he had left his humble cottage, among the rock-ribbed hills near Gainsville, did he act with more courage than he did in this matter. Although not essential to this sketch, it might be well to mention, by the way, that the above measure was carried by an overwhelming majority. The word *courage*—its force—was the lever with which Charles Miller was moving great things; and at the same time his allusion to his early surroundings was merely photographing the usual birthplace of success.

Charles Miller, whose name had earned a welcome around almost every American fireside, was born in 1840 in a very much out-of-the-way community. The old cottage, boarded up and down as we now call it, with its two small rooms still stands near the top of a large hill. The mother has long since passed away but the aged father may still be seen rambling about or sitting in the shade of the vine-clad porch, sometimes taking a nap and at other times reading a book or paper. Each week some metropolitan newspaper finds its way to this lonely habitation and in it the father learns of the great things his son is accomplishing. In his childhood Charles was not possessed of more than ordinary talent, in fact, he was about the slowest boy to learn of any in his community. True, he often ranked first in his class at school in the old log schoolhouse but he gained that much coveted place through his untiring energy and his self-reliance. The reader no doubt has often heard it remarked that a certain person knew no such word as *failure*. Not so with Charles Miller; he had had the word *failure* written across his experience many times but his dauntless courage always erased it.

The chances around Gainsville for an ambitious lad to advance were not at all promising, and when he was eighteen years of age he bade farewell to his relatives and friends went to Frankfort, a town forty miles north. This was not a large place, a town of perhaps 2,000 inhabitants, but it was as a new world to Charles and, of course, offered splendid opportunities for him to make his mark.

On his arrival at Frankfort Charles learned that a schoolhouse of eight rooms was being built and he went to see it the first thing. He thought he saw an opportunity not only for making a living but also for attending school during the coming term. The secretary of the board of school trustees was sought

and an application for janitorship made, having previously learned that the salary attached to this position was \$30 per month. In his application he explained how he could care for the schoolhouse and at the same time attend school. In the meantime this thrifty young man worked out time on the streets for business men, who could not spare the time from their business. In this way Charles had tolerably steady work for a month and earned about \$35. After paying for his board and lodging he had \$20 left. He put most of his money in the local bank keeping out a little for pocket change.

It was now but a week until school would open and as Charles had the schoolhouse in good condition for the opening day, he concluded that as he was out of anything to do he would visit his home for a few days. Accordingly, early the next morning he started for home traveling the first day on foot. As night approached he stopped at a farmhouse, where he remained until an early hour the next day, when he resumed his journey. This second day he traveled on horseback, the good natured farmer, who had given him his night's lodging, having tendered him the use of the old family horse. After a much needed rest of three or four days among his relatives and friends in and around Gainsville Charles returned to his new home at Frankfort, leaving his borrowed horse, of course, with its owner, John Drue, where he had pleasantly spent the second night on his return trip.

On his return Charles sought the superintendent of the city schools with whom he had a long conversation and in which he was advised to review some of the common branches and at the same time take up some special work in the high school. This course he followed throughout the term, when he passed a creditable examination. Although Charles experienced many hardships during the winter, sometimes having ill luck in making the fire in the furnace and often having to make great haste in order to get the several rooms ready by school time, his stay in Frankfort had been profitable to him not only in an educational way but financial way as well. When school closed his bank account showed a balance in his favor of about \$100.

A few days after school closed this never-tiring lad packed his books and wardrobe, and left for the city, where he entered the State University, after having successfully passed the entrance examination. His mind was by this time fully made up; he was determined to prepare himself for the teaching profession. His idea was that by teaching in winter he could save enough money to keep himself in college through the spring and summer terms, and thus attain a college education. This plan of course was tedious and required much time but it must be remembered that Charles Miller possessed unlimited courage. Accordingly, when the spring term was about half out he

THE MECKLENBURG DECLARATION.

BY J. G. FIGLEY.

THE first Continental Congress, representing all of the thirteen colonies but Georgia, met at Philadelphia, September 5, 1774, by common agreement, and fifty-three of the ablest men in the colonies, few of whom had any thoughts of independence, prepared a petition of grievances to the king, an address to the people of Canada, and to the people of Great Britain. Expressing loyalty to the king, they protested against the keeping of armed men in America without the consent of the people, to engender strife; and resolved to hold no commercial intercourse with England until a different policy should be adopted. The English king and ministry continued obstinate, and the treatment of the colonies grew worse and worse; finally the battle of Lexington, April 19, 1775, brought things to a climax. The news flashed from one colony to another, and a second Continental Congress met at Philadelphia, May 10, 1775, and issued a Declaration of Rights to the king, elected George Washington commander-in-chief of an army of 20,000 men, to fight for representation in Parliament and proper usage by the king and his ministry—not for independence.

The people of Mecklenburg county, North Carolina, met at Charlotte, May 19, 1775, "to adopt any measure that they thought necessary to defend the colonies' rights, in resisting the British tyranny," which was fast becoming unbearable. Even as they were deliberating, down the dust-covered street a horseman rode at a gallop. He reached the courthouse, and flung himself from the saddle, panting with his news. It was the news of the battle of Lexington, which had been fought just a month before; there were no railroads, no telegraph no telephone facilities in those days, and news traveled slowly by stagecoach or post-rider.

Instantly the hot southern blood of the convention was on fire. In a fury of excitement and enthusiasm a committee was appointed to prepare resolutions declaring the people of Mecklenburg free and independent. The next day, May 20, 1775, the convention re-assembled, and the following resolutions were read and unanimously adopted:

"RESOLVED, First, That whosoever directly, or indirectly, abets or in any way, form or manner countenances the invasion of our rights, as attempted by the Parliament of Great Britain, is an enemy of his country, to America and the rights of men.

"RESOLVED, Second, That we, the citizens, of Mecklenburg County, do hereby dissolve the political bands which have connected us with the mother-country, and absolve ourselves from all allegiance to the British crown, adjure all political connection with a nation that has wantonly trampled on our rights and liber-

ties and inhumanly shed the innocent blood of Americans at Lexington.

"RESOLVED, Third, That we do hereby declare ourselves a free and independent people, that are, and of right ought to be, a sovereign and self-governing people under the power of God and the General Congress, to the maintenance of which independence we solemnly co-pledge to each other our mutual coöperation, our lives, our fortunes and our most sacred honor.

"RESOLVED, Fourth, That we do hereby ordain and adopt as rules of conduct all and each of our former laws, and the crown of Great Britain cannot be considered hereafter as holding any rights, privileges and immunities among us.

"RESOLVED, Fifth, That all officers, both civil and military, in this county, be entitled to exercise the same powers and authorities as heretofore: that every member of this delegation shall henceforth be a civil officer and exercise the powers of a justice of the peace, issue process, hear and determine controversies according to law, preserve peace, union and harmony in the county, and use every exertion to spread the love of liberty and of country until a more general and better organized system of government shall be established.

"RESOLVED, Sixth, That a copy of these resolutions be transmitted by express to the President of the Continental Congress, assembled at Philadelphia to be laid before that body."

The Philadelphia Congress was a little embarrassed on receipt of this, the first Declaration of Independence, as at that particular moment that august body was preparing a conciliatory petition to the king, stating that "We have not raised armies with the ambitious design of separating from Great Britain and establishing independent states." The President of the Congress, however, sent a private note of approval to the delegates of Mecklenburg, but "deemed the subject premature to lay before Congress."

One hundred years after the people of Mecklenburg declared their independence of Great Britain, their descendants, as well as other patriotic residents of the county, met at Charlotte, and with the most appropriate exercises, celebrated the centennial of their county's independence. And they could point with pride to the patriots, Pickens, Sumpter, Lee, and Marion, the "Little Swamp Fox," who did yeoman service in their beloved southland in freeing it from British aggression and tyranny.

Bryan, Ohio.

THE sight of birds is extraordinary, and the simple fact that the eye of a hawk or pigeon is larger than their whole brain gives some idea of what their powers of sight must be, and of how easily they can fly hundreds of miles if they have marks to guide them.

REMINISCENCES OF GRANDPA BLAIN.—Part II.

BY NANCY D. UNDERHILL.

How the art of bleaching sugar was discovered. Many years ago, all our sugar was made from cane or maple sap, and it was brown. The people did not know that it could be made white. One day, a poor negro slave had been punished for some offense. Feeling very indignant, he sought some means of revenge. Over a fire, a large pan or vat of cane sap was placed, to be converted into sugar, by means of slow boiling until thick, and then gradually cooling. During the day a beef had been butchered that all might have meat. Now it was the duty of the slaves to attend to the sugar making, both day and night. So, in the night this angry negro gathered up the blood and filth where the beef had been killed, and threw it into the vat of syrup. In the morning, there was a great pan of sugar; and it was white. The owner, upon seeing this, was greatly pleased, knowing that it would increase his wealth greatly, if he could produce sugar so different from others. But the slaves were all very much frightened when they saw the sugar. They were afraid they would be severely punished. The man who was the cause of it all, was afraid that death might be his penalty, since his act of vengeance had been revealed. The owner called all his slaves together, and questioned them closely as to how the sugar had been made white. But none of them would tell. They were all very much afraid. No amount of coaxing or even of hiring, could extract from them any light upon the subject. At last, the owner promised to set free the slave who would tell how the sugar was made white. Then, the poor trembling culprit came forward and confessed all his guilt, and became a free man. Thus the art of whitening sugar, by the use of blood, was discovered. Thus was confession the means of obtaining freedom through blood. Does anyone see any connection between this poor negro's experience and ours?

Collbran, Colo.

BEGINNING LATE.

THERE are thousands of people who hold to the erroneous view that, at the age of forty or forty-five, it is too late for one who has failed to achieve success in a certain line of work, to begin a course in some other direction or calling. All through past history there are many striking examples of the fact that people of energy and good purpose, after failing in certain endeavors, have begun in middle life a new course of activity and carried it on with great credit to themselves. Dr. O. S. Warden, the brilliant editor of "Success," that popular periodical, says: "A great many men and women, who do not discover their possi-

bilities until late in life make the mistake of thinking that they are too old to learn, too old to start in a new calling, to attempt to improve or develop the new continent they have discovered within themselves. There is no time to indulge in regrets. Every moment is rendered more precious in proportion to the lateness of your discovery. Others have succeeded in educating themselves, in doing distinguished work in various fields, who did not find out their real bent or possibilities until youth had passed. History and biography are full of such examples. Andrew Johnson, the seventeenth President of the United States, did not know how to read or write until he had reached manhood. At the age of forty Ulysses S. Grant was regarded a failure. He had changed his occupation from that of tanner to soldier, and from soldier to real estate dealer, and in the latter calling found himself unable to support a family. The call of his country in arms in 1861 awakened him to a knowledge of himself, and the man who, at forty, was a failure, at forty-two was one of the greatest military commanders of the nineteenth century. It is a lamentable fact that the last half of the life of a large number of people has been comparatively fruitless, simply because those persons, having been disappointed in not achieving success in such directions as they at first started in, were unwilling to try again to find a sphere of labor to which they were adapted, and then engage in it with a determination to accomplish deeds that would bless mankind. It by no means signifies that because a young person has not succeeded in one calling he cannot make a noble success in another one. Even at the age of sixty an earnest person may do much good in a new line of endeavor."—*C. H. Wetherbe, in Instructor.*

CHINESE MAGISTRATES' OLD BOOTS.

VISITORS in China are particularly struck by the numbers of pairs of boots hung out in separate wooden cages in the archway of the main gate of Hsuan-Hua, says the *Lahore Tribune*, the valedictory gifts of beneficial prefects. It is an attractive custom in China to invite a departing magistrate whose rule has been popular to leave a pair of old boots for suspension in a prominent place as a hint to his successor to follow in his footsteps. It is a considerable honor to be asked to leave these boots, and the people make the request all the more eagerly because they believe in the efficacy of the hint.

IF you would know the value of money, try to borrow some.—*Benjamin Franklin.*

A HERO OF TO-DAY.

SOME time ago I spent a few months in a Western village. While there I met a prince and a hero. They were father and son. The father, a prince in disguise, was a tall, spare man, past middle age, with grizzled hair and seamed face. His stooped shoulders and toil-stained hands, his lack of education and culture, were a part of his disguise. But the tones of his quiet voice, his smile, his unfailing patience and kindness, the gentle touch of his rough hand, and even the look of pain that sometimes lay in the depths of his brown eyes,—these all were the insignia of a prince among men.

The son, a hero, was a well-grown boy about seventeen years old, a clear-eyed, brown-haired manly boy. But he was a helpless, hopeless cripple, having neither use nor control of his body from the waist down.

The first time I saw John—for his name is John,—he sat in his wheel-chair on the porch of their little home, singing a sweet, old song to a half-score children gathered around him. At that time I knew nothing of his story; but his calm, cheerful face, and gentle voice won me, and I made his acquaintance then and there. When I came to know him well, and learned the story of his sad condition, I gave him a place in my heart, that shall always hold a memory of him and his brave struggle against fearful odds.

Many years before, the father and mother came from Maine and settled in the central part of Missouri. They were fairly prosperous, owing largely to the discovery of small deposits of coal on their land. Three children came to the little, weather-beaten house, but two of them died of scarlet fever. John, the youngest, then a babe in arms, was spared, and they poured out on him the wealth of their loving hearts. When he was ten years old, the mother sickened and died, and the father and son took up their lonely life together. Having only each other, there soon came to be between them a bond of understanding and sympathy that made their busy, quiet life a fruitful, happy time.

John was to be a doctor. They discussed the matter through many a long winter evening, but at last it was decided—John was to be a doctor. And then every dollar that could be spared from their humble living was put aside—"doctor money," they called it.

The spring that John was sixteen the father contracted to furnish one hundred tons of coal to a dealer in the village twenty miles away. This meant a good addition to the "doctor money," and already they were planning for autumn and the coming of school days. John was to enter the high school then; and, as they worked, they talked of examinations and boarding-

places, and of that farther-off time when it would be John Ward, M. D., with a new diploma and a little office, waiting for his first patient.

The work was going well, and one-half the hundred tons of coal lay on the bank ready for hauling. The father and son were working in the pit a few feet beneath the surface, laughing and chatting, as they dislodged and broke in pieces the dull black lumps.

Suddenly, and without an instant's warning, the bank gave way, and buried them beneath a mass of rock and earth. Bruised and bleeding, the father dragged himself from the debris, and looked for his son. Frantic with grief and pain, he tore away the earth and rock with the strength of a madman, and soon he came upon the crushed form of the son whom he loved better than life. Tenderly he lifted him and carried him up the rude ladder into the light and warmth of the spring sunshine. A cry brought a neighbor hurrying across the fields, and together they bore the still form to the little home. A horseman went swiftly up the dusty road for the nearest doctor, while rough but gentle hands sought by every means to rouse the unconscious, or, perhaps, the dying boy. The doctor came, and a hasty examination told his practiced eye that life still lingered, but that the body was so crushed that there seemed small hope of recovery.

Late that afternoon John opened his eyes and smiled up at his father, who bent over him. He half raised himself, but sank back again unconscious. For days he lingered between life and death, sometimes conscious for an instant, but suddenly lapsing into unconsciousness again. Then he began slowly to mend, and the light of hope came sometimes into the father's eye. John made little complaint of pain, but told of a strange numbness from his waist down. A great surgeon was sent for. He came and made a careful examination of the white-faced boy, who bore the ordeal so patiently that he won words of praise from this man to whom patient suffering was no new sight.

The father met the grave, kindly man as he came from the room where the injured boy lay, with a question on his face that his lips feared to ask. The firm, white hand was stretched out to meet the calloused brown one, and together they passed out into the spring sunshine. Then the surgeon spoke:—

"I think the Father above will give you your son's life. But he will never walk again. His spine was crushed at the waist line, and below that point there is a complete paralysis. May he who was himself made perfect through suffering, grant your son and you strength for this great trial."

And the gray eyes were wet with tears as they looked into the anguished face of the father.

The sunshine lay warm upon the earth, the wind brought up from the bottoms the fragrance of early

summer flowers. A bird song trilled down from the tall cottonwood, and the piping of a quail came clear and strong from the stubble back of the barn. But the man who sat with bowed head on the doorstep of the little gray house neither heard nor saw nor felt these glad things. Something seemed shouting in his ears until it was burned into his brain: "Never walk again! Never walk again!"

The strength came slowly back to the crushed body, and the constant question was: "Why do I feel so strange? My legs feel as though they were asleep, and I can't move them. Why do they feel so strange?"

One day the sorrowing father, with a prayer for help, took the thin, white hand in his own, and told him what the great surgeon had said. With a well-nigh breaking heart he saw the light fade out of the boyish face, and the eyes flutter and close, while the great tears slowly forced themselves out upon his cheeks. The weak, clinging hand clutched the big brown one in an agony of despair. Not a word was spoken for many minutes, and then a choking voice cried: "O papa, how can I ever bear it?"

Those were dark days that came now to the little gray house by the road. The anguished father hovered near the bed where lay his only child, with quiet face, but with wild, staring eyes, in which the light of hope had gone out, and with a cry ever upon his lips that he might die. Never to walk again! Never to work or play! The school days were ended almost before they began. Never to be a doctor or to do any great or good thing! Always helpless! Such were the thoughts that thronged his brain every waking hour, and when he slept the fitful sleep of exhaustion, they came in his dreams and mocked him until he woke with bitter cries.

But the Father, who notes even the sparrow's fall, had not forgotten his child, and he gently led the wandering thoughts upward until they found rest.

Strength was coming back, and soon the father each day lifted him into a chair, and moved him about the house. Then a wheel-chair was procured, and John was able to move himself about. How deep and tender was his father's love, and what dear, kind friends he had! They brought him books and flowers and fruit, and they taught him to knit and sew, and many other useful things that busied fingers and brain, and helped to bring healing to his sore heart. The light of hope slowly kindled in his brown eyes, and the merry laugh sometimes rang out.

Then they began once more to plan for the future. The farm was sold, and they moved into a pleasant cottage on a quiet street in the village where I found them. And there John is facing life bravely and hopefully. Sometimes the pain comes until his lips grow white, and the beads of sweat stand out upon his fore-

head. But in the months I knew him, I did not hear him utter one word of complaint. When I last saw him, he was learning wood-carving, and his strong, skilful hands promised well for his success. The children love him, and he is never too busy to give them a kind word and a cheerful smile.—*W. R. Shaw, in Wellspring.*

DOGS WEAR MOCCASINS.

IN Alaska even dogs wear shoes—at least part of the time, says the New England Farmer. It is not on account of the cold, for a shaggy Eskimo dog will live and be frisky when a man would freeze to death! The dog does all the work of dragging and carrying, which in this country falls to the horses, and in trotting over the rough ice in the mountain passes his feet soon become bruised and sore. Then his driver makes him soft little moccasins of buckskin or reindeer skin and ties them on with stout thongs of leather. In this way he will travel easily, until his feet are thoroughly healed up; then he bites and tears his shoes with his sharp, wolf-like teeth, and eats them up.

Wonderful animals are these dogs of Alaska. Although they are only little fellows—not more than half the size of a Newfoundland—they sell from \$75 to \$200 each more than an ordinary horse will sell for in this country. They will draw two hundred pounds each on a sled, and they are usually driven in teams of six. They need no lines to guide them, for they readily obey the sound of their master's voice, turning or stopping at a word.

But the Eskimo dogs have their faults. Like many boys, they are overfond of having good things to eat. Consequently they have to be watched closely, or they will attack and devour stores left in their way, especially bacon, which must be hung out of their reach. At night, when camp is pitched, the moment a blanket is thrown upon the ground they will run into it and curl up, and neither cuffs nor kicks suffice to budge them. They lie as close to the men who own them as possible, and the miner cannot wrap himself so close that they won't get under the blanket with him. They are human, too, in their disinclination to get out in the mornings.

THE MOST COSTLY LEATHER.

It is said that the most costly leather in the world is known to the trade as piano leather. The secret of tanning this leather is known only to a family of tanners in Germany, though the skins from which it is made come almost entirely from America.

Joy, Temperance, and repose,
Slam the door on the doctor's nose.

—Longfellow.

THE WIFE OF LAFAYETTE.

A GREAT undying interest centers around the name of Lafayette, and the story of his life is a theme of never-ending pleasure. A foreigner, a nobleman of most ancient descent, with vast estates at his command, his ardent worship of liberty led him to our shores to become the intimate friend of Washington. In no small degree he served to comfort and sustain the "father of his country" in his times of sorest trial. The part he acted in the council was an important one, while his deeds of valor lend a charm of chivalrous bravery to his list of eminent virtues.

Of his wife, the cultivated and beautiful Countess Anastasie de Noailles, we know less, but that which is known is highly complimentary to her character. Womanly excellence has rarely exceeded the kindness, purity and heroism of the Marchioness de Lafayette. Her disinterested devotion to her husband, and patient submission to the manifold privations which attended such devotion, identifies her name with that of her distinguished lord. Charles James Fox, alluding to the admirable twain, has observed: "Such characters will flourish in the annals of the world, and live in the veneration of posterity, when kings and their crowns shall have moldered in the dust."

This noble woman was born of a distinguished family. The Chateau of Noailles, the cradle of the race, was built by her ancestor, Pierre de Noailles, before William the Norman conquered England. She was of high rank, and was a great heiress. When she was only fifteen years old, she was married to the young Marquis de Lafayette, who was also of patrician rank, and one of the greatest matches in the kingdom. He was only sixteen. The marriage occurred April, 1774.

They had seen each other very little before marriage; in fact, it was not their own doing, the whole thing having been arranged by their parents. Marriages among the nobility then, as now, were nearly always matters of bargain and interest, mutual love having very little to do with them. Of course, many such marriages must necessarily result unhappily, but in this instance the consequences were very pleasant and felicitous. The young couple loved each other with ardent and sustained affection, and their union of thirty-three years was unmarked by a single cross or repining word.

They had been three years married, and the young marchioness held in her arms their first child, that baby Henriette, who died during her father's absence, when Lafayette kissed his wife farewell to leave France for America. She was his confidant; a married girl of eighteen—the very age of romance—she sympathized from the very first with his purpose, and always kept his secret.

We are familiar with the young hero's career in this country. He won glory and honor here, while

his wife grew pale and thin in her anxiety for his welfare. It was the talk of two worlds, this generous heroism of a patrician noble for a people fighting for their liberties. Once at a great party at Paris, in 1778, which was attended by Madame Lafayette and by Voltaire, the aged poet, recognizing the marchioness among the noble ladies, went and knelt at her feet, congratulating her upon the brave and disinterested conduct of her husband in America. It was a very complimentary act, and the marchioness received it with the graceful modesty so natural to her.

Lafayette was absent seven years, returning but once to France in the interim. When he returned for good at the conclusion of the war, as might be expected, he was the hero of the hour. He and his marchioness were received at the court with flattering attentions. The marquis was promoted to the rank of a field marshal of the French army, and Madame Lafayette became a maid of honor to the queen, Marie Antoinette.

The seven years that followed were the happiest of the marchioness' life, living alternately at court or at Chavagnac, the old home of the Lafayettes in Dauphiny, and combining rural ease with the brilliancy of court life, the happy mother of three promising children, Anastasie, Virginie, and George Washington, possessing health, wealth, and the love of a queen, there seemed nothing wanting to her lot.

The French Revolution broke in upon and destroyed this almost idyllic happiness. Lafayette was a Republican, but he was not a Jacobin; he made himself suspected by saving the lives of the king and queen from the mob that had taken possession of Versailles, and as soon as Robespierre came into power, an order for the arrest of the marquis was issued. Arrest at that time was certain death. He fled, intending to take refuge in Holland, but was arrested by the Austrian government, and consigned to the damp and dismal dungeons in the citadel of Olmutz.

Meanwhile Madam Lafayette and her two daughters languished in prison at Paris, where they narrowly escaped the guillotine. After the principal instigators of the Reign of Terror had successively fallen, the prison doors of the city were thrown open, and the marchioness was restored to liberty. Under the assumed name of Mme. Motier, she journeyed to Vienna, obtained an audience of the emperor, and pleaded with singular eloquence for the restoration of her husband. "My hands are tied," was the only and heartless reply to her entreaties. She then solicited a participation in her husband's captivity, and this was granted. At the same time she was assured that her entrance to the prison was forever, but she hastened to join the marquis.

During twenty-two months, this heroic wife endured the horrors of captivity in the same cell with her

husband. This apartment was nearly eighteen feet in length, and fourteen in width, with a miserable bed of rotten straw, a broken chair, and a worm-eaten table for its furniture. The want of wholesome air and decent food, and the loathsome dampness and filth of the dungeon, brought on an illness, and so alarming was her malady, that once she was thought to be at death's door. When at last in 1797, the doors of the fortress were thrown open by command of Napoleon, and the carriage was brought which was to convey them to liberty, Madame Lafayette was so weak that she had to be carried to it.

The Marchioness de Lafayette will be revered so long as virtue and heroism command the merited respect and admiration of the world.

On their return to France the noble pair retired to La Grange, a fine old chateau near Paris, which the marchioness had inherited, and which ever after was the customary residence of the family. There they gave themselves up exclusively to the endearments of domestic life, the pursuits of literature and science, and the interests and improvement of agriculture. The noble and charming mistress of this beautiful home did not long survive her return. Dec. 24, 1807, Anatasie Marchioness de Lafayette, died. The disorders which she had contracted during her cruel captivity had proved fatal. She was forty-seven years of age. Her husband lived to mourn his bereavement thirty years.—*Fred Myron Colby, in Wellspring.*

SOME SAYINGS OF THE KROOS AND GREBÆS.

The Kroos.

WHEN a child is drowning, first take it out of the water before you spank it.—Meaning: If a person is in trouble, help him out and your advice will be heeded.

What is in the monkey's mouth is not his, but belongs to the hunter.—Meaning: While the food is in his mouth, unexpectedly it might be shot at any time by the hunter, and hence it is his; but what has been swallowed has served its purpose. Until food is digested, it does not belong to man.

There is no profit in the *butchering* of a monkey.—Meaning: The monkey has not as much flesh as most animals, so when you have finished cutting it, you are ready to beg for meat.

When you are in company with your mother and your wife and danger is near, which one would you first remove from the peril? After a long time, the Kroo man says remove your wife, because if you don't and she dies, the other women will fear to marry you, because they say the fate of one is the fate of all.

A sheep, noticing that a dog would howl every

time it would get a blow, but the sheep itself would only grunt and say no more, said to the dog: "Dog, since you are yelling 'bou, wou, wou,' will you not come this way again for crumbs? For my part I am coming back, that is the reason I don't make fuss when I get a blow."—Meaning: When you are directly dependent upon any source for a livelihood, be not so easily insulted by it, unless you can do without it.

A woman had a child which grew up to be very disobedient, so much so that he left home and went to live with his friends. In the course of his stay, he would go out and hunt and would bring the fruits of his labor to his friends, and never went to see his parents. On an occasion while hunting he was fortunate and shot an elephant. So he thought he would prove his friendship. On returning he brought a sorrowful countenance and said to his friends: "I have committed an awful act! I have killed a person!" Upon hearing this, the friend very quickly said: "If you have killed a person go outside." Being very disheartened, he resolved to go to his parents, and without telling them his friend's actions repeated the same words. Upon hearing the sad news, his parents replied: "Is it because you killed a person that you look so troubled? Come in and sit down." They quickly prepared water for him, and, after washing, food was set before him. After eating, he said to his parents: "I did not kill a person; it is an elephant. I did it to prove my friends."—Meaning: It is a child's first duty to obey its parents, for their love is greater than the friendship of others.

The Grebæes.

The squirrel says, "We walk in twain for advice."—Meaning: Two are better than one, for when the one mistakes, the other corrects.

The red ant says, "The world is so large that I cannot hear all the news."—Meaning: When you are in trouble, do not think that you are the only sufferer, for considering the size of the world, you cannot know of the troubles of all others.

The guinea pig says, "God has prepared my way before I was born."—Meaning: The world was made before me and the things therein, so I need not worry myself about the government of it.

ON a certain goose farm in the Middle West there is an incubator with a capacity for ten thousand eggs. These eggs are not, however, placed in the incubator at one time, but are so arranged that one section will hatch each day, being refilled as soon as the goslings are taken out. The geese are raised on this farm for their feathers alone, which are used in the upholstering business.

NATURE is a free domain.—*Humboldt.*

CULTIVATE CHEERFULNESS.

BY LUCY HIBARGER.

It will help us in learning the lesson of Cheerfulness, if we persistently train ourselves to see the good things, the bright things, in our common everyday life.

There are some people who seem to have eyes only for the unpleasant things. They find every bit of roughness, and hardness in their daily path. They see at once, and see it magnified, every disagreeable thing that comes into their lives. They remember all the unhappy experiences they have ever had. They hang on their heart's wall pictures of all their vanished hopes and joys. On the other hand they seem to have no place for the joys they did not lose, which have filled their lives with so many bright days.

There are few habits more common, even among Christians, than this of remembering the unpleasant things and continually looking on the dark side of every thing.

He who would be cheerful must train himself to see the beautiful things of life, and be blind to the disagreeable. The truth is there are, in the ordinary life, a thousand pleasant things,—joys, comforts, favors,—to one unpleasant thing.

It is a shame then to allow the one bit of roughness to spoil all the grandness of a thousand blessings.

Let us learn to look at life, not to find misery and discomfort, but to find cheer and beauty. A cheerful temper joined with innocence will make life itself beautiful, and create loveliness within ourselves.

Since God has strewn the earth and heavens with beauty and gladness, let us take into our hearts, into our home circle all innocent merriment, brightness and good cheer.

Dark and cheerless homes make bad boys and bad girls, in preparation for bad men and bad women, since we cannot expect the little feet to keep step to a dead march; let us not always keep the blinds turned the wrong way, but let the light and cheerfulness from the outside pour into our dwellings. "These things I have spoken unto you, that in me ye might have peace. In the world, yet shall have tribulations: but be of good cheer; I have overcome the world."

Wichita, Kans.

THE DAKOTA JACK RABBIT.

THE jack rabbit is a prairie institution that gives the settler's dogs plenty of exercise. When the settler sees a jack rabbit for the first time—starts him up suddenly on the prairie—he imagines that by a quick movement he can lay his hands on him.

The rabbit is awkward, appears to be lame in every joint, holds up one foot as though it pained

him, and altogether creates the belief that he is a dilapidated wreck of an ungainly, animate thing. The settler is surprised that he cannot "grab" him. The settler's dog, also, is confident that he can quickly make an end of the rabbit. He bristles, runs leisurely toward the rabbit, doubles his speed, doubles it again, triples that, quadruples the whole, when, lo! the rabbit disappears. There is some flying grass, a vanishing streak of light, a twinkling of two prodded feet extended rearward, and he is gone. The dog sits on his haunches and concludes that it was a dream, and that he did not see a rabbit at all.—*Exchange.*

AN INTERNATIONAL STAMP.

ONE of the latest ideas to be propounded, and which will be brought forward at a future international postal congress, is a suggestion for an international stamp. There is no doubt that such a label would be a very great convenience, for merchants and travelers often feel the want of a stamp which will serve equally well in all countries. When writing to a distant country it is very difficult to obtain stamps to forward in case a reply is needed and as a means of paying small sums. An international stamp would exactly meet the case, but even before the idea has been properly brought forward difficulties seem to have cropped up.

A French heraldic artist has designed a label which has on its face the armorial bearings of the countries of the Postal Union ranged in a circle in alphabetical order. So far so good, but the inscriptions are in the French language, which has offended some susceptible persons. Moreover, the arms are so small that it is almost impossible to make them out, and there is no room to add any more should other nations desire to join the union. But if the stamp is to be introduced all occasions of quarrel must be avoided and it will probably be found best to have the inscription in Latin, which can offend nobody, with the classical figure of Europa on the bull instead of the mass of armorial bearings.

THE TEACHER'S ATTITUDE.

THE teacher's attitude toward his pupils should be a perfectly frank, open attitude, that will beget confidence. It should be full of sympathy and should stimulate the child to do his best always. It should inspire respect for teachers and self-respect at the same time. Now, anything that prevents these things should be avoided. Sarcasm is one of the instruments sometimes used by teachers that will prevent the existence of good relations. It leaves a bitterness and stings that the pupil never gets over. Sarcasm has absolutely no place in a school. Anger is another attitude that should never be found in a school. Th

teacher who cannot control himself cannot hope to develop self-control in his pupil. The worst feature after all about the use of sarcasm or giving way to anger is, that it is generally the slow pupil that suffers. Teachers need to know that scarcely any credit attaches to teaching bright pupils. Of course there is satisfaction in seeing them grow, but they will grow anyhow. The teacher's greatest opportunity lies in awakening into life the latent germ of some slow soul. Patience, and kindness and sympathy, and encouragement are attitudes that must be constantly present in the schoolroom. The practice of keeping a "slow" class, or a "dummy row" in a room are relics of barbarism, and any teacher who resorts to them confesses his weakness and unfitness for the calling in which, unfortunately for childhood, he has enrolled himself. Study your children in school and out and you will be able to find in every one some dominant interest that is the avenue to his inmost nature, and that will furnish you the proper guide for his development.—*State Supt. Cotton, in Clay City Democrat.*

KILLED A THOUSAND STAGS.

THE Emperor of Germany has killed his thousandth stag. His courtiers and game-keepers have kept count of each one shot down by the emperor, and just recently, in one of his parks near Berlin, he shot the helpless animal that made the thousandth stag.

The emperor has numerous parks. In these parks small birds, big deer, wild boars and other animals are bred and cared for, even petted. They really become domesticated, are not like the wild animals of the forest, but being dependent upon their keepers, become very docile. The fawns play about under the trees, the fowls enjoy themselves roaming about in the grass. Happy, innocent, harmless creatures.

But his Majesty, the Emperor of Germany, is out for a holiday, looking for something to amuse him. He enters one of these parks, seats himself comfortably on a camp-stool, surrounded by his attendants, leisurely waits until the keepers of the animals drive the tame, harmless deer, one by one, within easy range of his rifle. Then as the beautiful deer, with big, pathetic eyes, goes trustingly toward him, the emperor raises his rifle and shoots the unsuspecting animal. More deer are driven by, the birds are brought within close range, and the emperor amuses himself by sending bullets through their living, sentient bodies. Helpless creatures! No chance to defend themselves or to escape.

His Royal Highness calls this fun. He likes to have the innocent creatures driven up before him that he may take their life. What would we think of a butcher who followed his trade for the fun of slaughtering the animals?

The whole thing is pathetic. We don't know whether we feel more sorry for the animals or for the man who can sit there comfortably on a camp-stool and kill the poor beasts. If a man went into his barnyard and wrung the necks of his chickens just for the pleasure it gives him, we would call that fiendish. But the emperor goes into his park and shoots down his animals and birds, and calls it sport. Bah! We call it savagery.

As the emperor shot down the helpless stag that made the thousandth, there was a shout of acclamation from his royal attendants and the emperor was flushed with pride.

It was such a brave thing to do, so noble, so glorious—the killing of a thousand innocent, harmless creatures—that a monument is to mark the spot where the thousandth one fell. A huge block of stone, five thousand pounds in weight, is to cover the blood-stained spot, and the monument is to bear this inscription: "Our most gracious Margrav and Lord, the Emperor William II, laid low at this spot his thousandth stag, a noble creature."—*From the National Humane Educator.*

WHY "NO" IS AN UNIQUE WORD.

"IT seems odd that the alphabet, out of which can be constructed several thousands of words, contains just one word formed by the letters in their present order," remarks an observant man. "That word is 'no.' You can look the alphabet over and you won't find any other combination of vowel and consonant characters that will form a word. The nearest approach is 'ab,' which by straining a point might be considered an abbreviation of 'Abraham,' or 'Hi,' which might answer as short for 'Hiram.' But 'no,' one of the shortest words in the language, is the only bona fide word formed in the arrangement of the alphabet's twenty-six characters.

THE KING OF MOLLUSKS.

THE king of mollusks lives in the Indian and South Pacific Oceans. He attains a weight of 500 pounds, and the shell is of the bivalve kind, and the shape is about the same as that of our common fresh water mussel. The gigantic *Tridacna* is the largest mollusk known to have lived on the earth since the Silurian age. It is found on the bottom of the shallow parts of the ocean, and the large individuals have no longer the power to move about. They lie on one side, and all about them the corals build up until King *Tridacna* is sometimes found in a well-like hole in the coral formation.

EVERY man has his own style, like his own nose.—*Lessing.*

A RULER OF 130,000,000 SUBJECTS.

THE Czar of Russia is at once the wealthiest and the mightiest monarch from a personal point of view in the world. He has under his sway some one hundred and thirty million subjects, and of no other Christian ruler can it be said that his word is law. The Czar's word is law, no matter what it may be. He stands on a pedestal absolutely by himself, an autocrat in every sense. In him is vested nothing short of the entire power of Russia.

As regards wealth, the weight of the Czar's purse cannot be estimated with any pretense to strict accuracy. It may not be boundless, but his yearly income must run into several millions sterling—three at the least. The Crown domains consist of over a million square miles of cultivated land and forests. On this vast tract are several gold mines, and every penny that they produce goes direct into the Czar's private pocket. No mention is ever made of it in the budget, for the simple reason that the property is regarded as belonging exclusively to the monarch.

The Russian Court is perhaps the most splendid in Europe. The entertainments are unsurpassed the world over; money flows like water; yet the central figure is rarely free from melancholy. The shadow of the assassin is ever present before the monarch's eyes. Since 1762 four rulers of Russia have met with violent ends—Peter III. in 1762, Ivan VI. in 1764, Paul in 1801, and Alexander II. in 1881.

Nicholas II. himself has narrowly escaped death on more than one occasion. Once when he was traveling by train he was all but blown up by a gang of Nihilists, and again when he was visiting Japan he was attacked by a fanatical policeman.

No one knows better than the Czar the dangers to which he is exposed. Keen-eyed criminal trackers patrol the royal residences, and so widespread is the fear of danger on the part of those whose duty it is to watch over the Czar that even this precaution is not considered sufficient.

The servants in the royal household themselves are not above suspicion. In order to render protection doubly certain the Czar passes the major portion of his working days in an assassin-proof chamber. The walls of his study are lined with sheets of steel, and the room has several secret doors, the purpose of which is to enable the monarch to beat a swift retreat should an emergency arise. Further, the locks of the doors are so constructed that no one not in the secret can gain admission.

As an additional safeguard, five writing-tables are in the Czar's study. These the monarch uses by turns, the object of the maneuver being to prevent persons not in the royal confidence from having the slightest inkling as to his Majesty's exact whereabouts in the room.

There are probably scores of fanatics who are ready to take the Czar's life, yet his Majesty personally is one of the most humane of men, gentle, patient, and charitable. In times of famine he contributes thousands to the sufferers, while as a worker he is untiring. By 7 A. M. he is invariably in his study, where he remains almost the whole morning wading through a mass of papers that can only suitably be described as appalling.

There are few state documents that do not filter through the hands of the Czar, but no matter what demands are made upon his time by his ministers he always readily and cheerfully responds. Even petitions from self-styled martyrs—and they number thousands in Russia—he reads through himself.

The Czar may be a despot, but he does not always exercise his rights as one. Peace, quietude, and the society of children are what he loves best, and it is in the bosom of his family that he finds the only rest from the care and anxiety arising from the war in the Far East.

He is not much of an athlete or sportsman, but he is a fair oarsman. When he was in England as Czarevitch he frequently went down to the Thames and hired an ordinary rowing boat to indulge in a little sculling.

The Emperor is an omnivorous reader. He is a fine linguist, and can both read and speak English, French, Italian and German with as much fluency as he can Russian. Of medium height, pale, delicate, and wearing a short beard, he resembles his cousin the Prince of Wales to a remarkable degree. Both he and the Czarina favor English methods, particularly in regard to cooking and the bringing up of children.—*American Boy*.

THE WRONG OIL.

It was a warm, sunshiny morning, and I did not wonder that the old man who was pushing a barrow with a load up the steep ascent to a village I sometimes visit, was tired. He sat down on a heap of whinstone to rest. I knew him as one clever with his tools when others failed. He was a watchmaker by trade, but he could turn his hand to many things.

"You have a sewing machine there?" I said.

"Aye."

He was getting his breath.

"Broken, I suppose?"

"The wheels won't work, they tell me. I've a notion to know why. This machine is like many a man. It's had the wrong oil, and that just spoilt it."

There was a twinkling in the gray eyes.

"The wrong oil!" I said. "What do you mean?"

"Why, it did harm instead of good. And that's how it is with those who take stimulants to make the wheels of life run easily. Strong drink spoils the

machine. It's a mistake to try it. Some day folks will be wiser."

I agreed with my friend, and I went on my way thinking about his words. How true they are! How many times men and women have had to call in a doctor, or go to a hospital, because, when power seemed to fail them, they used the wrong oil! It has even happened that the wheels have stopped altogether, and death has come through this sad mistake. The old watchmaker, during his many years of honest toil, had often known what it was to feel weary, but he had long ago learned the lesson that he was now so willing to teach. He did not use *the wrong oil!*

All strong drink contains the poison alcohol, and it is for the sake of this that men drink it. Yet this alcohol brings about many cruel diseases. It used to be thought that brandy must be given to people laid low with fever, but some brave and shrewd doctor who did not believe that this irritating poison could soothe or help the sick, put the matter to the proof; and more patients were cured out of every hundred who did not take brandy, than out of every hundred that did. To-day in our great hospitals they are using more milk and less strong drink.

We want our boys and girls to know that beer, wine, or spirits can easily make men ill, but cannot make them well. Dr. Norman Kerr tells us that in Great Britain alcohol kills at least two thousand people every week. In our country it is the greatest foe that those who love the health and happiness of their fellow countryman have to fight. War is a very awful curse; so is pestilence—strong men, and sweet children, and tender women cut down by some deadly plague; and so is famine—people dying for lack of food. Yet Mr. Gladstone once said that the evil doings of alcohol are worse than the effects of "war, pestilence, and famine combined." Foolish people sometimes call their favorite form of strong drink a "Pick-me-up." It is rather a "Knock-me-down." When the wheels of life and labor run only by an effort give them rest; but if you would have them by and by work as well as ever, be very careful, no matter who tempts you, to avoid giving them "the wrong oil."—*Exchange*.

AN EXAMPLE OF HORSE SENSE.

THE domestic animals of the Cumberland Valley lay claim to the greatest sagacity. Last summer a lad living on the road to Brown's Mills, near Greencastle, was seated on the wayside beneath a cherry-tree, eating cherries, when he heard the thud of an approaching horse trotting. As this was no unusual incident, Johnnie Terry straightened himself to see who was coming. Shortly the horse appeared without a rider, though he carried saddle and bridle. The horse stopped right over Johnnie and began to paw the

ground and snort, which the boy regarded as an invitation to take a ride and climbed on his back. The horse immediately galloped back in the direction from which he had come, and some two miles away stopped beside the prostrate figure of a man stretched on the ground with blood flowing from his head. Johnnie dismounted, got some water from an adjacent brook, and made the victim of the accident as comfortable as possible before going for assistance. Meantime the horse had trotted off once more, subsequently returning with a local physician driving in his buggy, who, knowing the horse and his master, carried the latter to his home. The horse's name is "Goodfellow." The sufferer had had a mild stroke of apoplexy, which was relieved by the blood flowing from his head. Though it is not claimed that this horse put the stone where his master would fall on it, yet he has been brevetted by the ladies as "Assistant-Surgeon Goodfellow."

"Goodfellow" is the great-great-great-grandson of a famous horse called "Naseby," which belonged to General Simpson, who was a warrior and also a strict Presbyterian. No work was permitted to be done in General Simpson's house on Sunday, and all the family rode ten or twenty miles to preaching. Within the ten-mile limit Naseby carried his master to preaching for many years, but with advancing age his master would no longer mount him, but as soon as the family procession got started Naseby would follow and walk the distance sedately, arriving an hour or so late, and browse around the meetinghouse door until the congregation came out. Naseby was known as a devout horse, and more than once was referred to by preachers as an example of consistent attendance upon ordinances.—*February Lippincott's*.

RICHES DO NOT SATISFY.

MR. GEO. M. PULLMAN, who was the possessor of \$50,000,000, once said to a correspondent, when asked how it feels to be a millionaire: "I have never thought of that. But now as you mention it, I believe that I am no better off—certainly no happier—than I was when I didn't have a dollar to my name and I had to work from daylight until dark. I wore a good suit of clothing then, and I can only wear one suit now. I relished three meals a day then a good deal more than I do three meals a day now. I had fewer cares; slept better, and, I may add, generally, that I believe I was far happier in those days than I have been many times since I became a millionaire."

BENEFICENCE is a duty.—*Kaut*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

E. M. Cobb, Editor.

The Inglenook contains twenty-four pages weekly, devoted to the intellectual, moral and spiritual interests of the young. Each department is especially designed to fill its particular sphere in the home.

Contributions are solicited. Articles submitted are adapted to the scope and policy of the magazine. A strong effort will be made to develop the latent talent of the constituency.

Sample copies will be furnished upon application. Agents are wanted everywhere, and will be awarded a liberal commission. Change of address can only be made when the old address, as well as the new, is given. Club rates for Sunday schools and other religious organizations. Address as above.

Entered at the Post Office at Elgin, Ill., as Second-class Matter.

KEEPING TAB.

THE practical business man generally has a slate, a little system of cards or a tablet of some sort by which he keeps tab of the amount of sales he makes, the amount of credits given, and other little items of memorandum which are absolutely necessary for him to have as reference. In a great many instances to-day, in fact, in most cases, the up-to-date business man of to-day has upon his counter a cash register which not only tells the total receipts of cash and the number of sales made, but it tells what cash has been taken from the drawer and stamps a record which can be used as reference in making weekly or monthly statements.

The careless business man orders his goods of the traveling man, orally, without any system and makes no record of the same, makes no invoices of his stock and keeps no cash book. An empty room soon becomes a monument dedicated, bearing the epitaph of carelessness and willful neglect.

In the larger business houses and factories, time indicators are placed upon the wall, which register the hour and minute when each employé enters the building to begin his day's work. Thus the manager keeps tab on the number of hours spent in his employ as well as the number of dollars that are being used in the business. All these are waymarks that point toward success; they are living testimonies of the fact that people to-day are required to have some system about life itself, to say nothing of business. The teachers to-day have printed programs governing the work of the day; farmers outline their work months ahead and follow up with a critical review.

Since it is so evident that it is profitable and necessary to keep tab on the income and outlay of physical and financial forces in the commercial world, how much more necessary that strict account be kept of the time we call our own. Men do not gain honor, and fame, and wealth in the regular hours of labor or study,

but it is the utilizing of the time which has not been sold to your employer. The use of spare moments has brought many a man into prominence. The saving of a few paltry pennies has accumulated fortunes. Great tasks have been accomplished through the careful use of little scraps of time. An indicator which keeps account of your own time is more valuable to you than the one which keeps account of the time at the factory in which you are employed.

It is a lamentable fact that few men keep tab on the expenditure of their vital forces. Children and young people should have an immense amount of time and opportunity to develop physically, by running, skipping, jumping and taking all sorts of outdoor exercise, but there are many ways in which vital forces can be spent in youthful days which, later in life, have a market value much above par. The first half of some lives is spent in anticipation of the second, while the second half is spent in regret of the first. Just as the vital forces are foolishly wasted, so the mental forces are being abused. Why not keep tab on the disbursement of this valuable wealth? Why stock the mind with a lot of useless stuff that can never be utilized by yourself or any one else? Are you keeping tab on what is being stored away in your mind and heart? Are you keeping tab on the reading matter that comes into your library? Are you keeping tab on the names and reputations of the young men and women with whom you associate? You may be keeping tab or you may not be, one thing is sure, the tab is being kept. If you do not keep tab as above mentioned, your friends are sure to keep it for you. Rest assured that some account is being taken of the books you read and the company you keep.

Day by day your character is being built, and, without your knowledge of it, your friends are taking note of the progress you are making and will use you sooner or later as a reference. Did it ever occur to you that your life becomes a reference book? In after years you will be referred to as a failure or a success. The events of your life will be used as illustrations in lectures and sermons. At that late date, in spite of your friends, your character is public property. Now is the only time you have any choice in the matter as to which kind of illustration you are furnishing.

KEEP TAB ON IT NOW.

HEROES.

THE House of Representatives has passed a bill to authorize the President of the United States to bestow suitable bronze medals upon persons who endanger their own lives in saving, or trying to save, the lives of others from any wreck or in preventing such wreck upon any railroad engaged in interstate commerce within the limits of the United States. The bill fur-

ther provides that a rosette of ribbon may be provided for the owner of the medal to wear.

Only those who have been fortunate in escaping from the dangers attending such wrecks are in a position to know the deep-felt gratitude one has when the train has been stopped just in time to prevent an awful collision; or to keep a train load of passengers from falling through the rotten timbers of the bridge, or a bridge that has been partly torn away by the flood, into the swirling waters below. Those who have been awakened from their slumbers in the middle of the night by the fire whistle or the breaking in of the door with the fireman's ax and have been carried out into the chilly night air, and down the fire escape, in the strong arms of the policeman, half-clad, may, in a degree, realize the worth of a hero. A mother's little infant had strayed away from home and was innocently picking up the pebbles on the railroad track; the mother wrung her hands and screamed at the top of her voice as the great dark locomotive turned the curve at lightning speed. The fireman, who saw that the engineer would be unable to stop his train in time to save the babe, hastily made his way alongside the wild engine to the pilot; reaching down at arm's length, realizing that he was taking his very life in his hands, he made one masterly swoop and saved the child which was later restored to the arms of the fainting mother. Do you not think that this mother knows the meaning of the word "hero"?

That such heroes merit recognition is unquestionable, but the manner of distinction may differ in the opinions of different individuals. Probably some of the bravest heroes in the world would object to wearing a medal of this sort, because they would feel that it might be boastful to do such a thing, for the greatest heroes in the world are they who are totally void of the boastful spirit. No doubt the genuine hero would feel that he had a greater reward in the manifested gratitude of those who had been benefited.

If all these, who heroically save the lives of their countrymen, are to be rewarded with medals, how about the hero who gives up his life of peace and plenty and of social pleasure and goes among the lower classes and rescues the drunkard from appalling danger, and not only saves his body from being literally burned to death, but saves his soul as well? How about the teacher who burns the midnight oil for the sake of a dull student who has been ostracized by his superiors? This teacher has bestowed an immeasurable amount of patience to qualify him for the stubborn battles of life. How about the boy who stands out prominently against all the sneering, scoffing boys who undertake to ridicule his ignorance and awkwardness, and manifests his heroic character by becoming guardian for the unfortunate? How about the man who provides his fellow-laborers with books and periodicals to read, when he knows that of himself he

is wholly unable to get any comfort out of life in that way? Or the woman who makes great sacrifices in her own life for the comfort of her neighbor? Or the men and women who are spending their entire lives for the rescue of the outcast, taxing their energies to the very limit for the sake of those for whom the world has nothing but a frown? Crowns are sometimes placed upon heirs instead of real kings. Badges are often placed upon aspirants instead of upon real heroes. Counterfeit dollars are made because good dollars have a value. Why should we confer medals upon one kind of heroes and not upon others?

LOYALTY.

No characteristic in an individual is of more value than loyalty. It is the one factor that makes friendship, home and brotherhood possible. When members of the family, for any reason, betray one another, in the slightest degree, disloyalty has taken root and, sooner or later, anarchy and rebellion follow as a result.

When a friend severs the tie of friendship it is generally, if not always, through disloyalty to contract, confidence or trust. The felicity of the brotherhood is destroyed most completely and irrevocably when one or more of the individual members prove unfaithful to the fraternity, be it in sympathy or service.

On the other hand, nothing perfects a union so quickly as loyalty. Loyalty means an interest that is lifelong and life strong. There are times, too, when it is particularly necessary that one be rigidly loyal. Just at this time of the year the INGLENOOK family should show their loyalty. To show the proper amount will require one dollar to renew your subscription or else get up a club to one address, for eighty cents a year; it also requires a little self-denial to go out of the way for your brother's sake in order that the church literature may fill its mission. More yet; it *requires* a *personal* effort to get it introduced in the Christian Workers' society as an organ, and in the Sunday schools for the advanced grades.

Many have shown a deeper appreciation of its merits by donating it to some one who is wholly unable to afford it. This is not only a beneficial work, but philanthropic as well. How many of our large family will renew as soon as they see this? Several thousand have already done so. Now if each one will see that he is a member of the family for another year, and then make himself responsible for one other subscription, either by securing it from some one or by donating it to some one,—if each one will do this our list will be doubled for 1905, and who can estimate the good? Think of the Christian Workers' and Sunday-school work that may be done, besides the encouragement of good reading. Let us hear from you at once.

Current Happenings

THE sea continues to eat into Coronado, Cal., and much alarm is felt. The great hotel is being threatened and a force of men is working night and day dropping bags of sand in front of the devastating waves. The boulevard has been eaten away and several dwellings are threatened. Some buildings are being moved in order to save them from total destruction. Seven thousand bags of sand have been tumbled over the bluff and 20,000 more are ready to be used. The highest tide is yet to come, Sunday being the maximum, six feet three inches.

ONE of the largest and most important fossil wonders ever unearthed has just been set up in the American Museum of Natural History, New York. During the summer of 1897, in the central part of Wyoming, Mr. Walter Granger, of the museum's fossil expedition's staff, while prospecting, discovered a few fragmentary bones which were exposed to the surface, but were only noted at that time as well as the locality. Later excavation began which revealed the complete skeleton of a prehistoric animal, known as brontosaurus, of the lizard type. The animal is thought to have been aquatic, feeding mainly on tender water plants, hundreds of pounds of which could have been easily retained in his ponderous stomach at a meal. The head is astonishingly small, in proportion to the huge body, having teeth of no importance and with limited masticating powers. The length of the animal is sixty-seven feet; its height fifteen and one-half feet. In life it is conjectured that he would outweigh several elephants of Jumbo size. This is the first great dinosaur to be mounted in the world.

THE report of the Russian treasury for eleven months of 1904 shows a marked decrease in revenue as compared with the previous year. The aggregate decrease is 35,000,000 rubles. The expenditure of the war is said to have amounted to \$400,000,000.

ON the Vanderbilt lines west of Buffalo plans for improved terminals have been adopted at a cost of \$30,000,000, being partly shared by the Pennsylvania Company. The Michigan Central and six other roads are to enter a fine union station at Detroit, through a tunnel under the river at an expense of \$10,000,000. A union passenger station will be erected at Cleveland, Ohio, at a cost of \$5,000,000, which track will be elevated for 6,000 feet. A station at Buffalo is to be built at a cost of \$15,000,000 and thirteen lines will enter this city.

THE king of Siam has decided to ask the United States and other Christian nations for permission to raise import duties in order that sufficient revenue may be collected to enable the king and his cabinet to dispense with the granting of licenses to gamblers. Thus it is hoped to abolish the national vice of the country. After the United States helps her to do this she may learn how to do that at home which would be an excellent thing for the American people.

OWING to the prevalence of safe burglary the chief of police of E. St. Louis, Ill., has been induced to offer a reward of one hundred dollars to any business man of that city that will kill a safe blower who may be caught in the act of blowing a safe. This may be an inducement to the owners of the safe, for perhaps a good many of them do not contain that amount and it will act on the principle of fire insurance.

IN northwest Canada, just beyond Montana, in the province of Alberta, oil of the highest quality ever known has been struck by prospectors and a development rush has begun in that section. The valley where the wells have been located is an enormous crevice, almost a canyon which has been caused, in all probability, by a volcanic eruption, forming great basins of oil under the rock formation at a depth of a thousand feet. The Great Northern Railway and the Canadian Northern are preparing to build branch lines into the new oil region in the near future.

EMPEROR MENELIK, of Abyssinia, has granted the national bank of Egypt a charter for a state bank of Abyssinia with a capital of \$2,400,000, contributed by British, French and Italian bankers.

A SEVERE storm swept over Los Angeles recently and much damage was done to telephone and telegraph service. A bridge was also washed away over the Los Angeles river, drowning two persons.

THE recent difficulty over the gubernatorial election at Denver, Colo., ought to satisfy politicians as well as all American voters of the supreme rottenness indulged in by the people who are supposed to deal out justice to the American people. It ought to be a lesson for Colorado and every other State in the Union.

FIRE destroyed the plant of the Grand Cross Tack Company, Chicago. Loss, \$500,000.

An entirely new plan for an adequate water supply for the great city of New York is under contemplation. It provides that the Erie canal be abandoned, utilizing the bed for a state railroad and a great pipe line in which to conduct the waters of Lake Erie to the great metropolis of the western continent, a distance of three hundred miles. This subterranean aqueduct will have a fall of five hundred eighty feet, which would give fifty pounds more pressure than is now possible for any part of the city. Engineers think it possible that some of the power might be utilized in illuminating the city.

REPORTS from Mombasa, British West Africa, say that 9,000 Somalis attacked the town of Merka and annihilated the inhabitants.

ANDREW CARNEGIE arrived in Cleveland, March 4, to appear as a witness in the trial of Mrs. Chadwick. The verdict of the jury found her guilty and Mrs. Chadwick will doubtless serve a term in prison.

THE Buckeye Powder company building at Edwardsville, Ill., was wrecked, caused by an explosion in the wheel house. The report could have been heard five miles away. Property loss, \$25,000.

SAMUEL HILL, of Seattle, Wash., subscribed the sum of \$50,000 to help relieve the annual deficiency existing at the Harvard University.

ON March 8 the largest oatmeal plant in the world was destroyed by fire at Cedar Rapids, Iowa.

SEVEN men were instantly killed in the Clear Springs colliery at West Pittston, Pa. The carriage which was being hoisted dropped a distance of two hundred fifty feet.

AN Indian, by the name of Klathla Harjo, of the Seminole tribe, died at Shawnee, Okla., March 5, at the ripe old age of 110 years. He first saw the light of this world down in the Everglades of Florida, fought in the war of 1812 against the United States and also served in the Seminole wars. He enlisted in the Civil war as a volunteer soldier of the United States and his service was marked with valor. Since then he has lived as a doctor among the Indians of his tribe.

SHIP owners at Chicago and students of natural phenomena are at a loss to explain the steady rise of the water level in the Great Lakes within the last ten years. Lake Superior is one inch higher than in 1895, while Lake Huron and Lake Michigan are eighteen

inches higher, Lake Erie twenty-one inches higher, and Lake Ontario has exceeded them all by a rise of three feet.

THE legislature of the State of Wisconsin, by vote of seventy-six to one, passed a bill prohibiting the sale or manufacture of cigarette papers.

THE coroner's jury of Honolulu, sitting in the case of the death of Mrs. Leland Stanford, returned a verdict that Mrs. Stanford came to her death by strychnine poison which had been introduced into a bottle of bicarbonate of soda with felonious intent by some person unknown to the jury. Only two minutes were required to return the verdict.

THE will of Mrs. Jane Lathrop Stanford has been filed at San Francisco. The Stanford University is the recipient of the bulk of the fortune, while charitable institutions and domestics will receive the remainder.

MRS. L. C. BOHLE, widow of former United States Marshall Bohle, while crossing a street in St. Louis, and in jumping out of the way of an automobile, dropped a package containing \$7,000 in currency. She did not immediately miss the package, but later discovering her great loss, notified the detectives who are now at work trying to locate the property.

THE seaport town of Pisagua, Chile, has been virtually depopulated by an epidemic of the bubonic plague. After hundreds had died from the disease the rest of the people fled in panic.

THE manufacturers of incandescent electric lamps have recently adopted filaments made of the metal tantalum, a rare element belonging to the same group as bismuth and antimony.

THE forty-foot twin-screw motor-boat *Napier II*, built to compete for the British national cup, has made the new world's record of twenty-six knots an hour, which is equal to 29.9 statute miles.

THE Pennsylvania Railroad Company is to construct a new sixty-mile line from Enon, Pa., east to Red Bank, Pa., at an expense of \$12,000,000. It will be virtually an extension of Pittsburg, Fort Wayne and Chicago Railway.

THE prospect of more trouble with Venezuela has been increased by Castro's attack on a French cable company.

HOME DEPARTMENT

WHEN THE HEART SINGS.

BY WILL L. NEWCOMB.

How can a feller help it when the heart bursts forth in song,
When the melody is tuggin' at his heartstrings all day long?
When the world is all in blossom and the grass is wet with dew,
And the bird song seems to whisper: "Why ain't you a-singin' too?"

My heart is full of gladness spite of all the cares and tears,
And I try to bury sadness and to sing the song that cheers;
But it comes in broken measure—jes' a stanza here an' there—
For the heart is full of music, but the voice can't catch the air.

Oh, my heart goes out in pity to the life that plods along,
That never stops the sighin' to attempt a verse of song;
That never cheers in silence, nor when the night is black
Puts forth a single note of love to coax the sunshine back.

How can a feller help it when the heart bursts forth in song,
When the melody is tuggin' at his heartstrings all day long?
When the world is all in blossom and the grass is wet with dew
And the bird song seems to whisper: "Why ain't you a-singing too?"

❖ ❖ ❖

A HOUSECLEANING FRACAS.

WHAT is the use of the periodical season of housecleaning anyway? Why not keep the house clean all the while? Why allow dirt to accumulate here and there, walls to get mangy, ceilings smoky, cupboards dusty, and corners sticky? Why not keep the house clean all the time?

The day was when the old-fashioned carpets were tacked to the floors, a litter of straw or paper underneath, and it was a great job to drag out the old rag carpet. It was such a great task that once a year was about all people could stand.

But the modern polished floor with portable rugs makes all this fuss unnecessary. Can any one give us a good reason why the house should not be kept clean all the year? Why should not the walls and the ceiling be kept clean? The rugs and the floors be scrubbed frequently enough to prevent the necessity

of having a drag-out and tear-down fracas every spring?

It may be we are wrong. We look at it from the standpoint of a man,—a man who has frequently suffered from these perennial pandemoniums. It seems to us perfectly feasible that the house should be kept clean all the while. Just as clean in the summer as in the spring, just as free from dirt and mold and cobwebs in the winter as in the fall.

Now this is the way we would go about it: Of course the house should be dusted every day, at least the rooms that are used; the floors swept and the rugs beaten once in a while, the clothing aired.

But this is not quite enough. Let us suppose that in addition to this the walls and ceiling need cleaning or scrubbing or paint or paper, or whatever needs to be done. Now why not go quietly about it and do it whenever it needs to be done? Not put it off until spring, then have the whole job come together. But at any season, one room at a time.

Suppose the house has twelve rooms, and one room is thoroughly scraped or scoured, or anything else that needs doing—one room a month. No one living in such a house would notice this sort of cleaning. And yet the house would be as thoroughly cleaned in this way as to put it off until spring and then dig out all the dirt as if the family had been hibernating like woodchucks or bears. There is no need for it at all, from our point of view.

The paper hanger could sneak into the house and paper a single room without disturbing the domestic economy. One room could be painted or the floor of one room polished, or anything whatsoever that needs to be done, a single room or even two rooms, without producing a ripple in the regime of the family comfort.

But not so, say some women. With all their fussiness and clutter during the whole year concerning dust and dirt spots, which occur every day, three hundred and sixty-five days in the year, in addition to this the women, at least the most of them, think there must be an annual tempest of tidiness.

Closets disemboweled and their contents dragged forth. Bedrooms butchered and brought out into the light and glare of the sun. Sitting room furniture scattered to the four winds of the earth.

All at once a gigantic jumble of household goods trundled out into the hallway or dumped into heterogeneous piles on porches. Weary men and women hazing here and there producing order and disorder,

cleaning up, tearing down. For one whole week, sometimes two, home is a memory, peace is a past experience. The erstwhile cheery and cheering hostess is haggard and disconcerted. The round-up at mealtimes is a lugubrious affair, and everything is sticky with paste, or tastes of paint.

What is the use of it? Are there not some women who have emancipated themselves from this sort of thing? Have we no subscribers who have a word to speak against this relic of former domestic management? Is there no escape from this regular intermittent cataclysm?

We are speaking now at a respectful distance from the event. For this year it has already passed by, a month or so ago. While the paroxysm was raging, we dared not trust ourselves to speak. We felt ourselves incapable of writing from an impartial standpoint. But now we have somewhat recovered our equilibrium, and the horrors of housecleaning is a memory sufficiently recent for the purpose of accuracy, but far enough away for unbiased judgment.

We do not exactly plead nor are we begging for mercy, but we are trying in the most reasonable way possible to analyze this question and discover if some mitigation can be introduced. May be not, but we are not inclined to give up all hope. A vague vision of something like a "Keep Clean Club" floats before our imagination. Keep clean every day, all day, the whole year round. Rugs clean, walls clean, ceilings clean. Patching, painting, puttying, done in small installments, so that the shock is distributed evenly throughout the whole year.

A bank balances its books every night. Why not a household? We invite discussion. Come over to Macedonia and help us.—*Medical Talk.*

DISHES MADE OF INSECTS.

How many of you have ever tasted cakes of ants? No, not the kind made by ants, but with ants. The children of other countries are as fond of cakes made of these insects as American boys and girls are of crullers.

In Africa the natives wash the ants and fry them in butter, very much as we would fritters. These cakes are regarded as great delicacies and in that land are said to taste like nuts.

In India ants are mixed in a batter and baked like cookies. In Brazil ants are grilled and the people eat them like marrons (chestnuts).

The Romans gathered white worms from the leaves and trees of the acacia plant and cooked them. These worms are eaten alive by some Australian tribes, who say they taste like eggs.

The Chinese fatten the white worms found on cabbage by feeding them apples and bananas. This diet is supposed to give them a better flavor.

Little peasant children in remote parts of Europe catch bees, pull them apart and suck the honey. They think if candy is flying about in the air they might as well help themselves to it.

WHERE COLORS COME FROM.

COCHINEAL insects furnish many of our most gorgeous colors—carmine, scarlet, crimson and purple. Cuttlefish give us sepia, which is nothing more nor less than the inky fluid which the fish discharges to fender the water black when it is attacked.

Ivory chips produce the ivory-black and bone-black.

Prussian blue is made with impure potassium carbonate. This most useful discovery was accidental.

Blue-black is the charcoal of the vine stalk.

Turkey red is the madder plant, which grows in Hindostan.

Raw sienna is the natural earth near Sienna, Italy.

India-ink is made from burned camphor. The Chinese are the only manufacturers of this, and will not reveal its secret.

CODFISH LOAF.

FLAKE two cupfuls of cold boiled codfish very fine; prepare an equal quantity of highly seasoned mashed potato and mix well while the latter is hot; fry a tablespoonful of minced onion in double that amount of butter until it yellows; add one teaspoonful of mustard, a dash of cayenne and a tablespoonful of lemon juice; add this sauce by degrees to the fish mixture; generously butter a round or oval pudding dish, fill with the mixture and bake half an hour. Take from the oven, let stand five minutes, invert onto a heated platter, garnish with sliced cold boiled eggs and serve with parsley sauce.

FIG PUDDING.

USE one cupful of suet chopped fine, one cupful of rolled crackers, two eggs, half a pound of figs chopped fine, one teaspoonful of baking powder in the crackers, one small cupful of sugar; add milk to make the mixture of the thickness of fruit cake batter; steam two hours. Serve with sauce made of two tablespoonfuls of butter, one tablespoonful of flour, one cupful of sugar; pour on two small teacupfuls of boiling water, let cook till done; then add the beaten white of one egg; flavor.

A GERMAN has discovered that the wearing of tight lace veils may easily produce skin troubles. The nets catch and hold dust and entrap all general impurities of the air, and endanger not only the complexion, but the lungs.

Reading Circle and Christian Workers' Topics

By ELIZABETH D. ROSENBERGEE.

THE GOOD CHOICE.—Luke 10:42.

For Sunday, April 8, 1905.

RELIGION IS THE ONE THING NEEDFUL.

I. It is a Matter of Choice.—Deut. 30:19, 20.

1. Principle Established in Eden, Gen. 2:16, 17
2. Gideon's Men were Tried, Judges 7:3
3. Baal's Prophets were Tested, 1 Kings 18:21-41
4. We Can Accept or Reject Christ.

II. It is a Good Choice.

1. Secures Present Happiness, Psa. 91:9-16
2. The Reward is Eternal Life, John 10:28
3. The Emblem of Victory is a Crown of Life,
. 1 Thess. 2:19

III. It is Enduring.

1. Friends May Fail, Prov. 20:6
2. Property May be Lost, Prov. 23:5
3. Health and Reputation be Impaired.
4. But Heaven Still Remains to us.

Text.—But one thing is needful and Mary hath chosen that good part which shall not be taken away from her.—Luke 10:42.

References.—1 Kings 18:21; John 15:4; Rom. 8:38, 39; Matt. 6:24; Luke 9:59, 60; Luke 9:61, 62; Josh. 24:21, 22; Ruth 1:16; Est. 4:16; Luke 18:28; 2 Chron. 11:16; 1 Chron. 16:15.

Mary's Part.

Mary came very close to Jesus. Like the beloved disciple, John, she reverently adored him as her Lord and Master. She forgot that there were hungry people, when Jesus was speaking; forgot that Martha was tired and needed her help, forgot that there were others there whom she might entertain. She was thrilled by his presence,—it was one of those moments when it was right to forget all these things and listen to the voice of Jesus, alone, while sitting at his feet. She was gaining love, patience and strength for many a day of hard serving. This was her time of quietness, when the Spirit of her Lord was enduing her with power for holy service.

"Sitting at the feet of Jesus
Where can mortal be more blest?
There I lay my sins and sorrows
And, when weary find sweet rest;
Sitting at the feet of Jesus
There I love to weep and pray,
While I from his fullness gather
Grace and comfort every day."

Martha's Choice.

Which will you have? What do you choose?
Which road will you travel? In answer to such

questions, you must make a decision and choose one thing out of several. Martha chose to be busy with much serving. There were many visitors and she wanted to make them comfortable; and I doubt whether Jesus would have said one word about her serving so busily, if she had not come and reproved her sister, who was absorbed in Jesus. It is the Marthas to-day, who are practical, busy workers; and occasionally they find fault with others, who do not work just as they do. Martha is found oftener in our sewing society than in our prayer meeting. When she is not cumbered with too many cares she makes a very efficient church worker.

No Compulsion.

There was a small box on the table in which I kept souvenirs, little things which I treasure, I went to open the box, but it was locked, the key was lost. Then we broke the box open and so obtained what we wanted. But the Spirit of God never does this with the human heart. Jesus says, Behold I stand at the door and knock. If you choose to close and lock the door of your heart against him, he must remain outside.

An Evil Choice.

Poe tells us of a man who in his early boyhood chose the evil instead of the good. His conscience would appeal to him, but he set it at naught. As he grew older the voice of conscience was heard less often. Then once when he committed a crime, it pursued him; he fled from its reproaches. From city to city he made his way, fleeing panic-stricken as from a pestilence, to the very ends of the earth. At last he deliberately resolved to destroy his conscience,—never again would he listen to its warnings. Then the last words of conscience were, "Thou art dead—dead to the world, to heaven, and to hope!" So to-day there are some who choose this living death rather than life. Cain and Absalom made this choice, and they were punished; God's laws never sleep.

All young hearts may well remember that it is safe always to do the right.

Choose the Best.

When Jesus was tested in the Wilderness, he stood firm and true. The tempter showed him all the kingdoms of this world and the glory of them and said, "All these things will I give thee if thou wilt fall down and worship me." To-day men make the choice for evil for just a tiny bit of the kingdom of this world and its glory or honor. The dust of gold

blinds them to every thing else, and they do not see the honors and royal favors that fall to the lot of a child of our heavenly King. This is a test that will come to every one of you. Which will you choose? Are worldly success, riches, and honor worth bargaining for? Lowell says:

“For a cap and bells our souls we pay,
For bubbles we give a whole life's tasking,
'Tis only God can be given away,
'Tis only heaven can be had for the asking.”

Topics for Discussion.

1. Matthew decided at once. Matthew 9:9.
2. How long should it take us to make the good choice? 1 Kings 18:21.
3. Can we make a half-way choice? Matthew 6:24.
4. What did Ruth choose? Ruth 1:15, 16.
5. Must we make a decided choice? Hebrews 10:23; Luke 11:23.
6. Caleb had the courage to choose hard things. Numbers 14:24; Joshua 14:12-14.

SERVANTS FOR CHRIST.

BY MRS. HENRY HOWER.

PHILIPPI was the first city in Europe where Paul preached the Gospel, the account of which is given in Acts 16:12-40. This epistle is of great value as a revelation of Christian experience. Paul, in this letter, speaks of himself and Timothy as the “servants of Jesus Christ.” Only those who have absolutely yielded to Christ as their Savior can ever know the full joy of Christian experience.

In the first four verses of this chapter the apostle indicates four motives to produce the Christian duties corresponding to them: First, comfort in Christ; second, consolation of love; third, fellowship of the Spirit; and fourth, tender mercies and compassion. Resulting from these motives is a fourfold experience, or an experience that is running over,—first, fullness of joy; second, likeminded; third, all of one love, and fourth, being of one accord. Paul says, “Let nothing be done through strife or vainglory; but in lowliness of mind let each esteem other better than themselves.” Then a willingness to help one another. “Let this mind be in you, which was also in Christ Jesus.” It is followed with a revelation of what mind is. Its examination should be made by each soul in solemn meditation. The one great principle revealed is that of *love*: First, as the motive of self-emptying; second, as the only reason for Divine exultation.

Divine nature has beauty in itself, and that beauty is the “form of God.” The word “form” is a gleam of light concerning the relation of the Eternal Son

to God. From that point begins the story of the Son's progress downward. Jesus did not count his equality with God something to be retained. He was willing to lay aside the form of divine authority and power and take up the form of a servant, for the purpose of working out the redemption of a lost race. This was done through love for his people.

In this descent, Jesus passed from the position of authority to that of obedience and service. In being “made in the likeness of man, he humbled himself, becoming obedient unto death, even the death of the cross.” Then follows the divine enthronement of the mind of *love*. “God also highly exalted him, giving him a name above every name,” with the purpose that all should look to him, believe and submit to him.

The apostle now passes to faithful obedience which means absolute submission to the Lord. In this obedience there is to be the working out of salvation. In this Paul makes the glorious declaration concerning the Holy Spirit who works in the believer for his own benefit,—discerning self; creating power; forming desire; empowering with courage; bestowing grace and tact; shedding abroad the love of God in all hearts; shine as lights in the world, and faithfulness, to the end.

North Manchester, Ind.

BISHOP McCABE once said, “Sitting on a back seat in church, I comprehended the reason of failure in a revival at that church at a glance. Young men were there; the members of the church passed them in the aisles without recognition. There was no cordiality, no hearty handshake and “God bless you.” Oh, what is the use of talking about a revival in such a church? Those young people will be welcome at the dance, welcome at the theatre, welcome at the card table, welcome at the rum-shop. Cordiality everywhere but in the church of God!” Such is not the case where members truly love the Lord, and like him are giving themselves in loving service to others. Circle members everywhere should stand ready to welcome each other, welcome the young people, welcome the children, welcome the strangers. A warm handclasp and a sincere interest in those who come to the church are potent factors in its upbuilding.

THE eye of the master will do more work than both his hands.—*Benjamin Franklin.*

EVERY time you doubt God, the devil is pleased with you.—*E. P. Brown.*

IT is always safe to expect great things from God.—*E. P. Brown.*

OUR YOUNG PEOPLE

THE GEOGRAPHY CLASS.—Chapter XXI.

London, England.

Dear Mr. Maxwell:—

Oscar has been reading in the morning paper some statistics that are actually shocking. One item states that last week there were 2,702 births and 1,817 deaths in London; in greater London, which is London and its suburbs, there were 4,196 births and 2,575 deaths. Statistics also say that 109,500 die annually of consumption. These figures certainly are appalling; to think that a town almost as big as Mayville could be taken right out of this city each week by the hand of death is remarkable; on the other hand to think that a great deal larger number of people are actually born into the city is more remarkable. Surely it is true that one-half of the world knows nothing of the other half. Roscoe just told me that he saw a statement somewhere that there were 587 distinct languages spoken in London.

We have been having some drives in the country, and we do enjoy the contrast between this country and our own. The boys can't get over the fact that they see no Indian corn; their harvests here are very late, as well as those of Scotland and Ireland. Miss Merritt says this is due to the volcanic disturbances in the ocean which retard the progress of the gulf stream; this of course is responsible for the decided fall in temperature, which makes the crops later than usual.

A visit to the houses of parliament was greatly enjoyed by us all. The magnificent structure, standing on the bank of the Thames, is certainly a beautiful picture of stately and colossal architecture and masonry. Miss Merritt said that in this building laws were made for a kingdom upon whose territory the sun never sets. We spent part of the day in the King's court, comparing favorably, in some respects, with our Supreme Court. The building is large and commodious, built in four large wings; well connected by pavilions and contains, all told, seven hundred rooms. There are ten courts of the King's bench; five courts of Chancery; two courts of Appeals; two divorce courts, and one probate court, making twenty in all. We were told to-day, by an officer, that in these halls are heard, daily, an average of fifty undefended divorce cases.

We have often heard and read of Westminster Abbey, but to-day we have had opportunity to see it; the grandeur and splendor of the exterior and the interior somewhat sink into insignificance, when we are informed that the pastor and many of his prominent members have gone to the sea for a summer vacation. Their zeal compares unfavorably with their attempt at display. This is where the King and many of the lords attend church. Rev. Dr. Farrar is their pastor. Of course this represents the High Church of England, and it is needless to say that the royal families take sacrament here. King Edward VII was crowned here in August, 1902.

The King's palace is called the Buckingham palace and is situated in the James Park; this is a most delightful place to visit, and we enjoyed a walk through the beautiful place very much. I believe I must tell you a little joke: When we were real tired walking around we came

to a series of nice benches, temptingly arranged so that one might look into the peaceful waters of the artificial lake, where dozens of beautiful swans were gliding around on the bosom of the lake and where a band of happy little maidens were enjoying a boat ride, and the hundreds of pedestrians were going hither and thither along the beautiful walks and drives. We had enjoyed the rest afforded by the comfortable seats about two minutes, when a uniformed officer approached and charged us two cents apiece for sitting upon these benches. It would have been worth a dollar if you could have seen the look upon Miss Merritt's face. "The very idea of charging us to sit down and to get up again," she said. When we started away we all noticed that Oscar held his hand over his mouth, constantly, without saying a word, whereupon we began to make inquiry as to why he did this. He removed his hand from his mouth long enough to say, "I really am afraid to breathe for fear some one will appear on the scene to collect revenue for breathing the pure atmosphere of heaven, which has been counterfeited about fifty per cent by the London fog and the black smoke from thousands of mills and factories." The tip business has certainly been reduced to a system here.

The plumed guards pace their beats reminding one of the supreme regal power of the British nation. Several companies of these guards are stationed here for the private use of H. M. King Edward VII. Retracing our steps somewhat we passed the royal guardhouse where these young men are kept and drilled. The regular beat, the daily drill, the aristocratic, scarlet uniform, the artificial, polished grace, formality, red tape, etc., all seemed foolishness to us, but it must needs be to constantly remind the British subjects of the strong arm of the government.

In the great zoölogical gardens of London we found what is said to be the largest collection of wild animals, birds, insects, reptiles and plants in the world. Earth's Flora and Fauna may be well seen here. In Aves we saw many specimens of Gallatores, Raptores, Scansores, Cursores, Rasores, Insesores, all in their proper apartments, arranged in a very convenient manner for study. The Carnivora, the Herbivora, the Mammalia and the Marsupialia were all very well classified and we spent three days to a very good advantage studying these. Ichthyology was given the weakest display. My! oh, my! I don't know what we would have done had it not been for our Inglenook Nature Study Club and the work we did in Mayville school, through the outlines of the Inglenook. We have just begun to realize the value of the time we put in on that, also of those regular weekly meetings we used to have, where we studied plants and animals. Every petal and sepal seemed to speak to us now, where, otherwise, we would have been groping in Egyptian darkness. The boys said to-day that we have taken a course in college in the last three days. By way of credit I will say it is the best garden of the kind we have ever seen, and you know we have been to New York, Cincinnati and Chicago. We had the pleasure of seeing the largest elephant, giraffe, zebra, snake and turtle we ever saw in the world.

(Continued on page 312.)

The Q. & A. Department.

[Below find a question which we submit to the Inglenook family. Please answer it to the best of your ability as soon as you receive this Inglenook. Don't give long answers. Make them short and easily to be understood. Write plainly and only on one side of the paper.—Ed.]

A. makes a few pounds of butter more than the family consumes, and sells it;

B. runs a dairy farm and produces a large quantity of butter for sale;

C. runs a dairy and ships milk to a city, daily, to a distributing dealer;

D. runs a dairy and supplies city customers direct, by delivery wagon, seven days in the week:

All do the necessary or usual work on Sunday. Which of these people are breaking the Sabbath? Give your reasons.*

*

What is a good preparation to clean zinc?

Mix one quart of sulphuric acid with twelve parts of water. Dip the zinc into it for a few seconds and then rub with a cloth. Small zinc articles can be cleaned by being pickled in hydrochloric acid, with water added, till the articles are nicely cleaned, in about three minutes, without being too strongly attacked. Then wash and dry them. To clean large articles, like refrigerators, rub with a swab dipped in raw spirits; then wash with water and finish with whiting.

*

What states in the United States, if any, allow equal rights of suffrage to men and women?

None; some States allow women to vote in municipal elections and upon certain general questions, but no State, as yet, will allow them to vote on all questions equally with men.

*

What is anise seed?

It is the seed of a plant which grows wild in Europe and North Africa. It is cultivated in Malta, Spain and Germany. It is used for flavoring candies, bread and liquors, and is made into a cordial.

*

Gladstone is said to have received double honors when graduating from Oxford. Explain the double honors.

He received the highest honors in both the Classics and Mathematics—a double first-class.

*

In Marie Stewart's letter she refers to Queen Victoria with initials H. M. G. M. What is this title in full?

Her Most Gracious Majesty.

*

How long can a polar bear remain under water?

About two minutes.

Which is the largest tunnel in the United States, and name some of the principal tunnels?

The Croton Aqueduct, which brings water to New York City, is the largest single tunnel, being thirty-three miles long. The tunnels which supply Chicago with water from Lake Michigan have a total length of 37.89 miles. The three principal railway tunnels of the United States are the Hoosac Tunnel, on the line of the Fitchburg Railroad, in Massachusetts, passing through the Hoosac Mountains, four and three quarter miles long, and cost \$11,000,000; the Stampede Tunnel, on the Northern Pacific railway, through the Cascade Mountains, is 9,850 feet long, and cost \$1,160,000, and the Cascade Tunnel, on the Great Northern Railway, in Montana, 13,813 feet long.

*

What denominations accept nothing but trine immersion as a valid baptism.

All the oriental churches except the Catholics. Among the western churches are to be found the German Baptist Brethren, the Progressive Brethren, the Old Order Brethren, the River Brethren, the New Dunkards, and the Christian Catholic Church (Dowie's church). The High Church of England, Episcopalian, when using immersion at all, also uses trine immersion. It is to be remembered that oriental churches which have congregations in the Western Hemisphere practice trine immersion also. There are many other denominations, in fact, almost all of them, accept it as valid, but the above are about all that practice it.

*

Was the rite of baptism practiced among the Jews before the time of John the Baptist? If so, what significance did it have, and where can you find the proof of it in the Old Testament?

Of the antiquity of ceremonial purifications by water among the Jews there can be no question, but it is not certain that baptism as an initiatory rite into the Jewish church was practiced before the Christian era, though some claim that it was in use before that time.

*

What are the Seven Wonders of the world?

Authorities differ. The ones generally given are, Colossus of Rhodes; Mausoleum, Greek; Hanging Gardens of Babylon; Pharos, in Alexandria; Statue of Zeus, Greek; Temple of Diana, Ephesus; Pyramids.

*

What is the war about between Russia and Japan?

It resulted from disagreement as to the rights of Russia in Manchuria and Japan in Korea.

MISCELLANEOUS

GEOGRAPHY CLASS.—Chapter XXI.

(Continued from page 310.)

We have walked, ridden, sat and looked to-day until we are completely worn out, and we are just beginning to be able to make our way through the city without much inquiry. I strained my left eye so that I did not dare to go out one day, neither did I dare to read nor write, and veritably felt myself in prison, yet I did not dare to envy the rest of the party who were having so good a time.

We will soon be compelled to leave the city, although we are not nearly ready to go. The itinerary which we had mapped out says that we must start for Paris day after to-morrow, and I suppose my next letter will be written from the French capital.

Respectfully,

: Marie.

(To be Continued.)

* * *

TREES IN WIRELESS.

ONE of the most interesting suggestions made recently in connection with wireless telegraphy is that of Major G. O. Squier, of the United States Army Signal Corps, who believes that for short-distance transmission trees can be used as substitutes for the aerial wires usually employed. Major Squier's plan is to connect the apparatus by wires to iron nails driven in the base of the tree from which the radiations would be emitted. While the tree would hardly be as satisfactory as a more permanent arrangement of wires, yet in a military campaign it might answer for many purposes where the distances were comparatively short. This, of course, involves a difficulty where the army is operating in a country barren of trees, but here a return may be made to the older method of employing jointed poles or kites or balloons to raise the wires. In connection with Major Squier's suggestion the point has been made that the difficulties of wireless telegraphy in transmitting messages overland would be increased by the presence of an intervening forest, and should this be the case the operation of wireless telegraphy may be restricted greatly. The subject opened up is one of considerable importance, and further tests from Major Squier will be awaited with interest.

FOLKS IN RUTS.

Th' world is full o' ruts, my boy, some shaller an' some deep;
 An' ev'ry rut is full o' folks, as high as they can heap.
 Each one that's grovelin' in th' ditch is growlin' at his fate.
 An' wishin' he had got his chance before it was too late.
 They lay it all on someone else or say 'twas jest their luck—
 They never onct consider that 'twas caused by lack o' pluck.
 But here's the word o' one that's lived clean through,
 frum soup t' nuts:
 Th' Lord don't send no derricks 'round to h'ist folks out o' ruts.

Some folks has staid in ruts until they didn't like th' place,
 Then scrambled bravely to th' road an' entered in th' race.
 Sich ones has always found a hand held out for them t' grab.
 An' cling to till they'd lost the move peculiar to the crab.
 But only them that helps themselves an' tries fer better things
 Will ever see th' helpin' hand t' which each climber clings.
 This here's the hard, plain, solemn facks, without no ifs or buts:
 Th' Lord don't send no derricks 'round t' h'ist folks out o' ruts.

—S. W. Gillilan, in *Baltimore American.*

* * *

HINTS TO PREACHERS.

MAKE friends with the children.
 Don't call on wash day.
 Take your heart full of sunshine with you.
 Don't whine, or growl, or flatter.
 Don't be afraid to preach the truth, no matter if you see people present who have a good deal of money.
 Take yourself to the thirteenth of Corinthians about once a week and ask the Lord to prune you.
 So carry yourself before your people that they will know you are interested in them.
 Wherever you go, go for Jesus, and expect him to go with you.

* * *

A millstone and the human heart are driven ever round;
 If they have nothing else to grind they must themselves be ground.
 —*Longfellow.*

WORK to-day for you know not how much you may be hindered to-morrow.—*Benjamin Franklin.*

Good Land Cheap

The basis of my business is absolute and unvarying integrity.

SAMUEL S. THORPE,
Founder of the Brethren Colony, Brethren, Mich.

Let us sell you farming land where the soil is productive and the crops dependable; where we have no drouths or failures; where grasshoppers are not; where we have few storms and no destructive winds; where products are greatly diversified; where the markets are as good as they are easily reached; where the climate is uniform and salubrious; where you will be cordially welcomed and helped along. We state without fear of contradiction that we have the best land at the least money, possessing more advantages and fewer drawbacks, than can be found in this country to-day. A few years' time is all that is necessary to prove that we are in one of the most productive areas for fruit, root crops and live stock. The **possibilities** are here, largely undeveloped as yet; all that we want is the **people**. Those we are getting are the right kind, **your own kind**, and the country will soon be dotted with green fields and cosy homes. Don't get the idea that you are going to a **wilderness**; not at all; on the contrary, we have sold lands in our **BRETHREN COLONY** to over 120 families, nearly half of whom are already on the ground,

others coming next spring. In the vicinity of **BRETHREN, MICHIGAN**, we have thousands of acres of productive soil, splendidly adapted for fruit, root and vegetable crops and live stock, at prices from \$7 per acre upwards, on easy terms. Our lands are sold to actual settlers.

BRO. JOHN A. MILLER, BRETHREN, MICH.,

is Resident Agent in charge of the work at our Brethren Colony. It will only cost you a postal card to drop him a line for our illustrated booklet, entitled "The Brethren Colony in the Fruit Belt of Michigan." This will give you an accurate idea of the lands and all conditions surrounding them. The booklet contains letters giving the opinion of many Brethren in regard to our lands and work. Every statement can be borne out by facts.

Reduced rates will be furnished homeseekers desiring to look our country over and every opportunity will be accorded them to conduct their investigations satisfactorily by Bro. Miller on their arrival at Brethren, Michigan.

For booklet, information as to rates and all details address:

SAMUEL S. THORPE,
Cadillac, Mich.,

DISTRICT AGENT

OR

BRO. JOHN A. MILLER,
Brethren, Mich.,

RESIDENT AGENT

Michigan Land Association.

Preserve Your Eyesight!

Polk, Ohio, March 7, 1905.
Dr. J. L. Miller, Smithville, Ohio.
Kind friend:—

I want to say a few words in regard to the glasses I got from you a few months ago. I think they have done me a great deal of good, as I do not have headache now or the distress in the head that I had before wearing them. I was in bed four days in January with lagrippe which affected my eyes very much. I had to have the room darkened awhile, but after about ten days of your treatment, they were very much better again, and now I want to say to my friends, or to whom it may concern, that I feel I can recommend Dr. Miller for fair treatment and honesty, as he did just as he agreed with me, and I would say to any one in need of glasses, to write to Dr. Miller. He can do you good.

Yours very truly,
Annie E. Shoemaker.

Treatment sent on trial. Question sheet and testimonials free. Address,

DR. J. L. MILLER,
Wayne Co., Smithville, Ohio.

P. S.—Remember I never met Mrs. Shoemaker. This was all done by correspondence. See Nook of Dec. 13, page 2.

A New Brethren Colony

Is now being formed along the Sacramento River, Glenn county, California. A number of families from this vicinity are going up to this country within a few weeks and all will have to build. We will need a number of good carpenters. There may be such in the East who would like to come to California with the intention of making it their home if it suits them. To any such I would guarantee \$100 worth of carpenter work at good wages, so that they would be insured the expenses of the trip even if they were not satisfied with the country. This is certainly a good opportunity for any carpenter, because we believe the location of the new colony to be one of the most favored in the State. As an indication of our confidence would state that at least a dozen families from this rich orange district of Southern California have bought land up there and will make it their home shortly. Any one interested in my offer may write me for further information at Covina, Cal., or after April 10th at Princeton, Cal.

CO., Ltd.

**935 First Nat. Bank
Building, Chicago.**

A PLACE TO LIVE

For years the writer has been looking for a place where the Brethren could find a good locality in which to settle. Every part of the country has been offered for sale, good, bad, and worthless, till it has become a serious question in the minds of those who have to do the buying.

In all this seeking there is one place that has been entirely overlooked. It is what is known as the Upper Peninsula of Michigan. Originally it was a land grant, and the native field of lumbermen, the delight of the summer camper, and now that it has passed into the market for agricultural purposes it affords an opportunity of a life-time to secure a home. About 800,000 acres are available for farming purposes.

It is unlike most other sections of country open to settlement. It has certain advantages utterly unknown to the great majority of localities open to settlement. One of these is that there is wood enough for fuel, good and cheap, for generations to come. Another is that the ground never freezes so as to injure root crops. The snow comes in the latter part of November, blanketing the grass, going in March, uncovering the growing crops of unequalled forage ready for immediate use. It is the greatest pea country in the world, forty bushels to the acre of shelled peas being better for all purposes than the same amount of shelled corn.

The ground is red with wild strawberries, certain cultivated ones yield from 6,000 to 7,000 quarts to the acre. All root crops run riot in size and quality. Hay is had for the cutting, and a timothy hay field has been cut for fourteen years and is as good now as when started.

Within easy railroad reach are the greatest iron and copper mines in the world, employing thousands of people, insuring the highest prices for all farm produce for many a year to come.

What does this land sell for? From \$5.00 to \$10.00 an acre, and four years to pay it in. You can buy a forty acre tract for \$10 down and \$10 a month. If you die before paying out, we give your money back.

Let us send you some descriptive literature. It's not what you think it is. It's not a chance that will last. Prices are going to be jumped before a great while. There is lots of work to earn money while your farm's coming on. We can't tell you a tithe of the story here. Let us send you the printed story of the land, and you ask any questions you want to, and we will give you the facts in the case.

HOWARD MILLER, Agent,
ELGIN, ILL.

ART PICTURES

We have just received three new numbers of these "Fine Art Pictures" as follows:

- No. 125--MARRIAGE CERTIFICATE**
- No. 123--FAMILY RECORD**
- No. 121--MEMORIAL**

We have had a number of calls for the above numbers and are pleased to state that we are now prepared to furnish them.

The Memorial picture is printed on black paper, which makes it very appropriate, while the other two are printed on gilded paper in many beautiful colors.

No. 125.—Marriage Certificate.

We have sold more than **5,000** of these Pictures in the last two months and are still receiving many orders each day. A great many order from 12 to 25 at a time, and a number of orders are received for 40 and 50. Our customers are so well pleased that it is no uncommon thing for the same person to send us two or three orders. Size of picture, 16 x 20 inches. **Former price, 25 cts.**

No. 123.—Family Record.

These numbers are all exceedingly fine. Send us an order and we are sure you will be delighted with them.

TWENTY SUBJECTS

Besides these we have 20 other subjects that are very popular.

OUR SPECIAL PRICE

For one or more and less than six, each,	15 cts.
For six or more, each, - - - - -	12½ cts.
One dozen or more, each, - - - - -	11 cts.

SEND FOR OUR ILLUSTRATED CIRCULAR OF 20 SUBJECTS

AGENTS WANTED No previous experience necessary. **Quick sellers. Good Commissions.** Our agents who are already at work are reporting excellent returns. **Write to-day for terms.**

C. S. Morey Makes Remarkable Prediction in Regard to Beet Growing Here.

"Colorado as a beet sugar producing state will soon leave Michigan far in the rear, if the present developments continue."

This assertion was made this morning by C. S. Morey, head of the Morey-Boettcher syndicate. He has just returned from a trip to the East. While there he made arrangements for the transfer of one of the largest Michigan factories from Saginaw to Sterling, Colo. The new factory will have a capacity of 600 tons and will give employment to hundreds of men.

This will make the seventh beet sugar factory in the South Platte Valley owned by this syndicate.

The Union Pacific Railroad

Which is known as "The Overland Route," and is the only direct line from Chicago and the Missouri River to all principal points West. Business men and others can save many hours via this line. Easter Cards

We have several designs of appropriate Easter Cards, which we feel sure will be enjoyed, especially by the children.

Sunday schools will do well to order enough to supply their primary and intermediate classes.

Numbers 7268 and 7004 are especially suitable for the little folks from 4 to 10 and 12 years old. Numbers 215 and 201 are very appropriate for larger children, and in fact would make very nice, inexpensive Easter Greetings for any one.

Our No. 201 are each placed in a separate envelope, are made up of four different designs and have the following Easter Greetings printed in silver: "Christ is Risen," "A Peaceful Happy Easter," "A Happy Eastertide," "A Holy Easter."

7268 A substantial blue-tinted card. Embossed thereon are Chicks in their natural playful mood. One design shows the Chicks on the kitchen floor near a fireplace. On the other are two chicks holding a Basket of Beautiful Colored Eggs by a Cord of Blossoms. Beautiful colored effect. Two designs. Size, $3\frac{1}{2} \times 5\frac{1}{2}$. Six cards to a pack. Per pack, 10 cents.

7004 On these cards are Beautifully Embossed Chicks, emerging from Eggs with the shell only partly broken. Entwined about the Eggs and Chicks are Nasturtiums, Cyclamen and Poppies in natural colors. Embossed. This card will please the children. Three designs. Size, $3\frac{1}{2} \times 5\frac{1}{4}$. Six cards in each pack. Price per pack, 10 cents.

215 This dainty card has a deep embossed Scroll Border of Silver. In the center is a Beautiful Cross, printed in silver entwined about with Pansies, Violets, Easter Lilies and Lilacs in their natural colors. Each card has a suitable Easter Greeting printed in silver. Four different designs. Four cards in each pack. Size, 4×5 . Per pack, 10 cents.

201 This attractive card is printed in a blue tint. The central scene is a Large Cross extending the full length of the card. The Cross is printed in Silver and Lavender and handsomely embossed in Scroll Designs and Flowers. In the center of the Cross is a Beautiful Angel. Four designs. Size, $5 \times 7\frac{1}{4}$. Price, 5 cents each.

Order cards by number. Packs not broken. No orders filled for less than 10 cents. Send your orders early, as our supply will not last long.

Preserve
Your
Eyesight!

Polk, Ohio, March 7, 1905.
Dr. J. L. Miller, Smithville, Ohio.
Kind friend:—

I want to say a few words in regard to the glasses I got from you a few months ago. I think they have done me a great deal of good, as I do not have headache now or the distress in the head that I had before wearing them. I was in bed four days in January with lagrippe which affected my eyes very much. I had to have the room darkened awhile, but after about ten days of your treatment, they were very much better again, and now I want to say to my friends, or to whom it may concern, that I feel I can recommend Dr. Miller for fair treatment and honesty, as he did just as he agreed with me, and I would say to any one in need of glasses, to write to Dr. Miller. He can do you good.

Yours very truly,
Annie E. Shoemaker.

Treatment sent on trial. Question sheet and testimonials free. Address,

DR. J. L. MILLER,
Wayne Co., Smithville, Ohio.

P. S.—Remember I never met Mrs. Shoemaker. This was all done by correspondence. See Nook of Dec. 13, page 2.

CHEAP RATES TO BLACK HILLS.

March 21-28 and April 4-11-18 and 25th, the C. M. & St. P. will sell one way settlers' rates to Wyoming and Black Hills district for \$19.00.

For full particulars call at Ticket Office.

J. B. HOPKINS, Agent,
Elgin, Illinois.

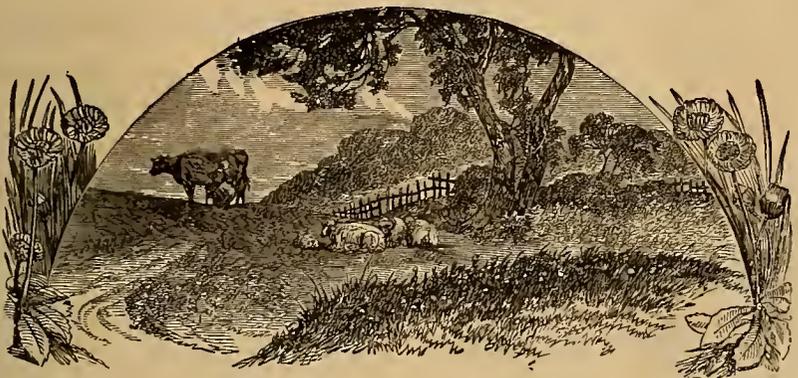

Real Estate in Kansas

If you are thinking of changing location you had better come to Kansas, where you can get land at reasonable prices and raise nearly all kinds of crops, fruit and vegetables, and be close to railroads, churches and schools. Farms from \$25 to \$60 per acre, according to improvements and locations. Write for full description of special bargains.

A SPECIAL TRAIN TO THE ANNUAL MEETING

Leaves Chicago, Friday, June 2, 1905

For the accommodation of our many friends among the Brethren, we wish to announce that for the Annual Meeting at Bristol, Tenn., to be held in June, the Wabash Railroad will run a special train of high-backed coaches and chair cars, through from Chicago to Bristol without change of cars, leaving Chicago, Dearborn Station at ten o'clock A. M. We invite all living in the city, or in the vicinity, to purchase tickets via the following route in order to take advantage of this special service: Wabash Railroad Chicago to Toledo; Ohio Central Lines Toledo to Columbus, and Norfolk and Western, Columbus to Bristol.

This special train will run through the rich farming lands of northern Indiana, picking up our friends who live in this district, arriving at North Liberty about 12:30 P. M.; Lakeville, 12:50 P. M.; Wakarusa, 1:15 P. M.; New Paris, 1:30 P. M.; Millersburg, 1:45 P. M.; Topeka, 2:00 P. M.; Wolcottville, 2:15 P. M.; arrive Toledo 6:00 P. M.; Columbus, 9:00 P. M., and arrive Bristol 2:00 P. M., Saturday, June 3. It is our desire that train reach the meeting grounds as early as possible on Saturday, to enable our patrons to get comfortably settled before dark. A special train will also be run from Bristol to Chicago at close of the meeting. Representatives of the different lines will accompany this train through to Bristol, thus insuring kind treatment and a comfortable journey, in a train occupied only by the Brethren and their families. A low fare has been named for this meeting as usual. Inform your local ticket agent that you wish to accompany this special train, and he will see that your tickets read as per above route. For further information write to,

Irrigated Crops Never Fail

IDAHO is the best-watered arid State in America. Brethren are moving there because hot winds, destructive storms and cyclones are unknown, and with its matchless climate it makes life bright and worth living.

We have great faith in what Idaho has to offer to the prospective settler, and if you have in mind a change for the general improvement in your condition in life, or if you are seeking a better climate on account of health, we believe that Idaho will meet both requirements. There is, however, only one wise and sensible thing to do; that is, go and see the country for yourself, as there are many questions to answer and many conditions to investigate.

Our years of experience and travel in passenger work teach us that a few dollars spent in railroad fares to investigate thoroughly a new country saves thousands of dollars in years to follow.

Cheap homeseekers' rates are made to all principal Idaho points. Take advantage of them and see for yourself. Selecting a new home is like selecting a wife—you want to do your own choosing.

100,000 Acres Now Open for Settlement at Twin Falls, Idaho, under the Carey Act.

Unlimited supply of water for irrigation and for power. A grand opportunity for the Homeseeker who locates on these lands. 10 years time given for payment for land and water after lands are sold. The canals and water belong to the settlers who will own and control the same.

Homeseekers' Round-Trip Excursion Tickets

will be sold to points in Idaho on the first and third Tuesday of February, March and April, 1905. The rate will apply from Missouri river points and from St. Paul, Chicago, Bloomington, Peoria and St. Louis. Tickets to Idaho points will also be sold by the Union Pacific from stations on their line in Kansas and Nebraska. Rate will be one regular first-class fare for the round trip, plus \$2.00, with limit of 15 days going. Return passage may commence any day within final limit of 21 days from date of sale of tickets. Tickets for return will be good for continuous passage to starting point.

COLONISTS' ONE WAY SECOND CLASS tickets will be sold to above points from March first to May 15th inclusive.

Alfalfa, Fruits, and Vegetables, Grow in Abundance. Fine Grazing Lands, Fine Wheat, Oats and Barley.

Arrived in Payette Valley Feb. 23, 1903. Settled on an 80-acre tract, covered with sage brush. Cleared 40 acres. May 25 sowed 10 acres to wheat. Yielded 30 bushels to acre. June 12 sowed 10 acres to oats, in the dust, not watered till June 20. Yielded 55 to acre. Had this grain been sown in February or March the yield would have been much larger.

Alfalfa was sown with the grain and in October we cut one-half ton to the acre of hay and volunteer oats.

Potatoes yielded 500 bushels to the acre and many of them weighed 3 to 5 pounds each, four of the best hills weighing 64 pounds. Quality prime. (Signed) E. L. Dotson.

No. 14.

WHEN GOD IS NEAR.

BY MARTHA SHEPARD LIPPINCOTT.

Though clouds arise to chill the heart,
And fill it with despair,
While happiness will soon depart,
As life seems so unfair:

Keep hope, fear not, for God is near
To drive the clouds away;
And when his soothing voice we hear,
Will dawn a brighter day.

The clouds will quickly disappear,
Beneath God's sunshine bright;
For faith beholds our Father near,
In darkness as in light.

Moorestown, N. J., Box. 3.

SNAPSHOTS.

Charity is an angel breathing on riches.

❖

The broader the smile the shorter the task.

❖

The man who saves his time saves his money.

❖

Marriage is a failure when one side is a cipher.

❖

Awkward deeds are better than eloquent dreams.

❖

The right to live does not exist apart from the duty
to let live.

❖

A faint heart sometimes wins a fair lady where a
braggart fails.

❖

Sometimes when silence gives consent, it proves an
extravagant gift.

❖

You'll never run up the hill of progress by running
down your neighbors.

❖

When a man makes a mistake in his first marriage,
the victim is his second wife.

*You can't love God with all your heart while the
devil has a garden spot in it.*

❖

*A great gain worth striving for is the respect of
your fellow-men by good conduct.*

❖

*God promises to forget our sins, but he will never
forget the smallest thing we do to please him.*

❖

*Ever notice that the greatest bargain is offered the
day after you have spent the last of your salary?*

❖

*There is worse money than that which is counter-
feit. It is the money you have not honestly earned.*

❖

*Whenever you ask God for anything that is good
for you he has already given it to you, by promise.*

❖

*We are not all superstitious, but we never see the
"sponge fail to rise" but what we look for trouble.*

❖

*The city of God slowly rises through the ages and
every true life is a living stone in some of its palaces.*

❖

*If you haven't got money, be thankful that you are
not bored by the schemers who would beat you out of
it.*

❖

*If there is anything in the theory of reincarnation,
many a man and his dog deserve to change places on
the next trip.*

❖

*There are three epochs in a man's life—the day he
catches his first fish, the day he hears the wail of his
firstborn, and the day he realizes the significance of
to-day.*

❖

*Phillips Brooks says that it is well to think of no
blessing as being really ours until we have passed it
along to some one else. There is nothing which we
can really enjoy for any length of time without shar-
ing it with others.*

THAT HOPELESS CASE.

BY OMA KARN.

"IN all my experience I certainly never came across a worse child."

"I simply do not know what to do with him," replied Miss Clemens, "he seems proof against every good influence that I try to throw about him. I really believe he comes for mischief more than anything else; he does vex me so sometimes, and yet with it all there is something about him so sharp and bright that I feel there is good in him somewhere. But how can I reach it?"

"Not much use to try," said her companion. "You can't expect anything else; he is the offspring of sin. His parents were people of more than average intelligence, but they used it all for evil. From earliest childhood Earl has been surrounded by unkindness and degrading influences. Is it any wonder he is what he is? Don't worry, my dear," she added, as she turned to ascend the steps of her residence, "such cases are really not worth worrying over."

"Ah, how can I help it when the Master himself bids us save just such souls? I believe I will make another effort."

"Good luck, my dear, but I doubt your success," smiled Mrs. Hinsch, as she disappeared within her own doorway.

Miss Clemens went on with a troubled look on her fair face. "I wonder why I am so interested in him," she thought. "It must be because he is unusually intelligent; there are other boys in the class to whom my sympathy goes out, but not with the same intense feeling that it does to Earl. How can I reach his moral nature?"

"Oh, Miss Clemens, look out! Don't you see that car coming?" and the troubled and perplexed young woman barely escaped the oncoming car.

"How careless of me," she said, turning to thank her preserver. "Why, Earl!" she exclaimed in surprise, as she saw before her the subject of her abstracted thoughts, "what are you doing down here? And what is the matter?" as she noticed the swollen and bruised condition of the boy's face.

"Nothin', only I've been in a fight, guess you'll hear more about it in the mornin'."

"Oh, Earl, my boy, how can I save you!" and there was a whole world of entreaty in his teacher's voice.

"Don't know, guess I'm not worth doin' anything for,—anyway everybody says so,—there comes a cop," and with a look of terror the boy bounded down an alley closely pursued by the irate policeman.

"He has been in mischief again," sighed Miss Clemens. "It does look as if what Clara says were true,—it is not worth while to try to save them."

"Good morning, boys! I am very glad to see so many of you here this bright, sunny morning,—but where are Earl and Ray?" she added as she looked around the group of bright-faced boys.

"Oh, Miss Clemens, haven't you heard?" exclaimed several voices. "Earl and Ray had a fight yesterday down by the old mill. The doctor thinks Ray is going to die; Earl cut him so with his knife, and to-morrow they are going to take him over to Mansfield to the Reformatory."

"He is down at the jail now," said one little fellow, pityingly.

Miss Clemens went on with the usual program, but her thoughts were far from her class, they were with the erring boy, over whom her heart yearned with more than usual longing.

Sunday school was dismissed. In spite of natural timidity and her loathing of the place, she turned her steps toward the lower end of the city where the jail was situated. She was taken to the youthful prisoner's cell. Earl looked up sullenly as his teacher entered. "Oh, Earl," she exclaimed, and burst into tears.

"Shut up," he exclaimed, angrily. "I ain't worth cryin' over; leave me alone. Everybody always told me I was goin' to the bad place, and I'm goin' too. What's the use to talk to me? Guess I'll get a sentence now that will keep me in some time."

"Oh, but, Earl," exclaimed Miss Clemens, through her tears, "you must not think so, there is good in you. I know there is; I have seen it sparkle in your eye many a time when I was talking to the class. The trouble is no one will believe in you. But, Earl, I do. I believe there is in you the making of a man. Everybody that comes into the world is born with the ability to make something of himself. You can do this; you have more than ordinary ability, but you must learn to govern yourself. And Earl," she added, earnestly, laying her hand upon his arm, "it is the hard and bitter trials that bring out the good there is in us, that make us strong, and perhaps the hard life of the prison to which you must soon go is the very thing necessary to teach you that control. 'It is never too late to mend.' Be a good, obedient boy in your prison life and when you are free again come to me at once."

Earl still sat in sullen silence, but, as his teacher turned to leave the cell he raised his head and looked at her with an odd gleam in his eyes. "Miss Clemens," he said, "I do believe you really think there is some good in me, and I'll not forgit what you've told me." And with this small comfort the devoted young Christian was obliged to be content.

By one of these strange changes of fortune that come into the lives of many of us, long before the erring boy was released Miss Clemens was far away, a missionary in a foreign land.

Years have passed. One bright summer morning a

lady, dressed in the sable garments of widowhood, is led into the operating room of the principal hospital of one of our eastern cities. That perfect peace, which only an unselfish life devoted to the good of their fellow-men can give, shone forth in every feature of her delicate high-bred face.

But why do the attendants lead her so carefully and tenderly? Alas, why? One glance is sufficient. She is blind. There is one chance in a hundred that the operation about to be performed will be successful.

Quickly and deftly the great surgeon, whose skill had restored sight to hundreds of the poor who otherwise would have gone through life in darkness, performed the delicate operation. Long before consciousness returned to the patient the white bandage had been bound upon her eyes and for long and weary days she lay helpless in one of the private wards of the hospital. Strange voices spoke loving words of hope, kind, gentle hands ministered to her wants; for every-body loved the gentle stranger.

"I have good news for you, mother," announced her son one morning. "To-morrow the bandages are to be removed from your eyes, and, mother, Doctor Stevens has requested, as a personal favor, that he be the first one to speak to you. I granted it willingly, for your own son could not have been more devoted and tender than he has been to you."

"I, too, long to look upon his face," replied the mother. "But, Arthur, no tongue could utter the heartfelt gratitude that I feel."

"Mrs. Hilton, allow me to congratulate you upon our success. I claim only half honor; for, were it not for your sublime patience and courage in lying here so long and so quietly, the operation would have been a failure."

Slowly the eyes that had been so long closed to the light of day, grew accustomed to the dim light. The words of gratitude that she wished to speak died on her lips. Bending over her was a handsome, intelligent face, bearing upon it the impress of a noble life well lived. Where had she seen that face before? Like a flash her thoughts went back to the little inland town where the days of her girlhood had been spent, and where she had labored so earnestly to gather in her first sheaves for the Master. Slowly a look of recognition came over her face. "Earl!" she exclaimed.

The great surgeon took the thin hand in his own. "Yes, Mrs. Hilton, this is Earl, the boy you saved. All that I am or may be in the future I owe to you. And," he added, with a trembling in his firm voice, "when those prison gates closed upon me, it seemed there never was a more superfluous, no-account individual than I was. With this was the torment of the thought that I had caused the death of my little playmate. For awhile after entering the prison I was very

rebellious, but I could not shake off the effect of your last words,—'I believe in you.' They followed me day and night. At last came your good kind letter containing the news of Ray's recovery. An impulse came upon me to lead a better life. Unknown to every one, I had cherished in my rough little heart an ideal, and that was to be a physician.

"The prison library made it possible for me to take the first step towards studying medicine. For a while after leaving the prison the way was dark, but your words still rang in my ears and I persevered. Once I heard of you—only once. It was when a little tract, 'The Lost Opportunity,' written by your hand, came by the merest chance into my possession. I recognized your name, and well knew that the original of the character portrayed was myself. To know that I still lived in your thoughts gave me renewed courage, and also the first impulse towards seeking the greater Physician by whom all can be healed."

Words are powerless to describe the look of joy that came over the happy woman's face. It was the indescribable joy of knowing that "thou hast saved a soul from death."

Covington, Ohio.

STONE SAWING BY WIRE.

STONE sawing by wire is now successfully accomplished in France, says E. Bourdon, of the Society for the Encouragement of National Industry. The complete plant comprises an endless wire passed round a series of pulleys, one of which is a driving pulley. This wire, driven at a given speed, is caused to press lightly on the stone, the necessary tension being obtained by a straining pulley working on an inclined plane. Between this trolley and the driving shaft is situated the saw frame, carrying the guide pulleys for the wire. The cutting is done by sand mixed with water, conveyed into the saw cut as the work proceeds. Although the operation appears simple various details render its practical application difficult. The force exerted by the wire to produce the cut must be uniform, capable of being readily varied, and proportionate to the length of the cut, and the wire of three steel strands twisted fairly tight should make one turn while moving 1.18 inches.

THE size of the Atlantic waves has been carefully measured for the Washington Hydrographic Bureau. In height the waves usually average about thirty feet, but in rough weather they attain from forty to forty-eight feet. During storms they are often from five hundred to six hundred feet long, and last ten or eleven seconds, while the longest yet known measured half a mile and did not spend itself for twenty-three seconds.

WHAT ARE YOU GOING TO DO?

BY LULU C. MOHLER.

NOT long ago something impressed me with the thought that the last four years held many sad memories, and four years is not a long period of time either.

Four years ago I was in school. Many who worked by my side have fallen to fight with us no more. Some are living such frivolous, useless lives that life surely cannot mean much to them. Most of them are married and by the vast majority I am forgotten; and some, I can sadly say, are forgotten by me. Only their faces sometimes shine out from memory's walls, but their names are gone forever.

The camp ground, too, has changed somewhat, until its dearness is all gone but the remembrance of what it was when it was a daily scene to me.

"Though the mills of God grind exceeding slow" they grind exceedingly sure.

I know a jolly crowd of young people, who enjoy pleasant association together; but with the restlessness and impetuosity of youth, they do not make the most of their companionship, and are not as kind to each one as in the years to come they will wish they had been.

I think of them sometimes and wonder how they will use their talents during the life God will give them and if they will work out the end God had planned they should.

"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

Too often the will of men is as the wind's will and they do not live out the long, long thoughts of their youth.

I wish I had the power to ask every young person and cause him to consider it with long, long thoughts—"WHAT ARE YOU GOING TO DO?"

Those words are written in living fire for every youth, but so many do not look up and see them. I wish that they might be burnt into their souls.

Some time the days will pass away, but you take no notice, because the mill of God grinds exceedingly slow. They are grinding exceedingly small, and with patience he stands waiting, for with exactness grinds he all.

How will you come out? With the worthless refuse or useful part that is of good for man? You seem to have convinced yourself that you will have a long time to get ready to live, but you have made a mistake, because the living time itself is very short. Then I would just like to know what you are going to do. If in four years' time you can be forgotten, you had better hurry up if you want to do something to leave here that you may be remembered.

Don't forget to do the best thing though, and that

is, living for Jesus. You will be remembered longer for that than any other thing. Nothing else pays your accounts as well when you will make out your balance of balances.

As the story-teller says, "That reminds me," and I will repeat the story just as I read it:

In the thirteenth century—so the story goes—Archbishop Conrad determined to erect a cathedral that should surpass any Christian temple in the world.

Who should be the architect? He must be a man of great genius, and his name would become immortal.

There *was* a wonderful builder in Cologne, and the Archbishop went to him with his purpose, and asked him to attempt the design.

"It must not only surpass anything in the past, but anything that may arise in the future."

The architect was awed in view of such a stupendous undertaking.

"It will carry my name down the ages," he thought; "I will sacrifice everything to success."

He dreamed; he fasted and prayed. He made sketch after sketch and plan after plan, but they all proved unworthy of a temple that should be one of the grandest monuments of the piety of the time, and one of the glories of future ages.

In his dreams an exquisite image of a temple rose dimly before him. When he awoke, he could vaguely recall it, but could not reproduce it. The ideal haunted him and yet eluded him. He became disheartened. He wandered in the fields, absorbed in thought. The beautiful apparition of the temple would suddenly fill him with delight, then it would vanish, as if it were a mockery.

One day he was wandering along the Rhine absorbed in thought. "Oh," he said, "that the phantom temple would appear to me, and linger but for a moment, that I could grasp the design."

He sat down on the shore, and began to draw a plan with a stick in the sand. "That is it," he cried with joy.

"Yes, that is it, indeed," said a mocking voice behind him.

He looked around and beheld an old man.

"That is it," the stranger hissed, "that is the Cathedral of Strasburg."

He was shocked. He effaced the design on the sand. He began again.

"There it is," he again exclaimed with delight.

"Yes," chuckled the old man. "That is the Cathedral of Amiens."

The architect effaced the picture on the sand and produced another.

"Metz," said the old man.

He made yet another effort.

"Antwerp!"

"Oh, my master," said the despairing architect,

"you mock me. Produce a design for me yourself."

"On one condition."

"Name it."

"You shall give me yourself, soul and body!"

The affrighted architect began to say his prayers, and the old man suddenly disappeared.

The next day he wandered into the forest of the Seven Mountains, still thinking of his plan. He chanced to look up the mountainside, when he beheld the queer old man again; he was now leaning on a staff on a rocky wall. He lifted his staff and began to draw a picture on the rock behind him. The lines were of fire. Oh, how beautiful, how grand, how glorious it all was!

Fretwork, spandrels and steeples. It *was*—it *was* the very design that had haunted the poor architect, that flitted across his mind in dreams but left no memory.

"Will you have my plan?" asked the old man.

"I will do all you ask."

"Meet me at the city gate to-morrow at midnight."

The architect returned to Cologne, the image of the marvelous temple glowing in his mind.

"I shall be immortal," he said; "my name will never die. But," he added, "it is the price of my soul. No masses can help me, doomed, doomed forever!"

He told the strange story to his old nurse on his return home. She went to consult the priest.

"Tell him," said the priest to the old woman, "to secure the design before he signs the contract. As soon as he gets the plan into his hand let him present to the old man, who is a demon, the relics of the martyrs and the sign of the cross."

At midnight he appeared at the gate. There stood the little old man.

"There is your design," said the latter, handing him a roll of parchment. "Now you shall sign the bond that gives me yourself in payment."

The architect grasped the plan.

"Satan, begone!" he thundered; "in the name of the cross, and of St. Ursula, begone!"

"Thou hast foiled me," said the old man, his eyes glowing in the darkness like fire. "But I will have my revenge. Your church shall never be completed, and your name shall never be known in the future to mankind."

The Cathedral of Cologne is unfinished, and its architect's name is unknown. It may harm the story, but it is but just to say that many of the old cathedrals of Europe are in these respects like that of Cologne.

So if you sell your soul for vain, worldly ambitions, you will have lost the lasting fame that is given to those who strive for heavenly things; and you will be forgotten forever and forever. Then, too, your work will never be complete like those who work with the plans and designs of heaven.

If a man like Longfellow, with a full and beautiful life, could regret a lost youth; how much more can we, who are doing so little, feel bitterly conscience-smitten when the old song rings in our ears.

"A boy's will is the wind's will,

And the thoughts of youth are long, long thoughts."

Lecton, Mo.

STRENGTH OF THE WELSH REVIVAL MOVEMENT.

THE vast congregations were as soberly sane, as orderly, and at least as reverent as any congregation I ever saw beneath the dome of St. Paul's, but was aflame with a passionate religious enthusiasm, the like of which I had never seen in St. Paul's. Tier above tier from the crowded aisles to the loftiest gallery sat or stood, as necessity dictated, eager hundreds of serious men and thoughtful women, their eyes riveted upon the platform or upon whatever other part of the building was the storm center of the meeting.

There was absolutely nothing wild, violent, hysterical, unless it be hysterical for the laboring breast to heave with sobbing that cannot be repressed, and the throat to choke with emotion as a sense of the awful horror and shame of a wasted life suddenly bursts upon the soul. On all sides there was a solemn gladness of men and women upon whose eyes has dawned the splendor of a new day, the foretaste of whose glories they are enjoying in the quickened sense of human fellowship and a keen glad zest added to their own lives.

Employers tell me that the quality of the work the miners are putting in has improved. Waste is less, men go to their daily toil with a new spirit of gladness in their labor. In the long dim galleries of the mine, where once the haulers swore at their ponies in Welshified English terms of blasphemy, there is now but to be heard the haunting melody of the revival music. The pit ponies, which like the American mules, have been driven by oaths and curses since they first bore the yoke, are being retrained to do their work without the incentive of profanity. There is less drinking, less idleness, less gambling. Men record with almost incredulous amazement, how one football player after another has forsworn cards and drink and the gladiatorial games, and is living a sober and godly life, putting his energy into the revival. More wonderful still, and almost incredible to those who know how journalism lives and thrives upon gambling, and how Toryism is broad-based upon the drinking habits of the people, the Tory daily paper of South Wales has devoted its columns day after day to reporting and defending the movement which declares war to the death against both gambling and drink.—From "*The Great Religious Revival in Wales*," by William T. Stead, in the *American Monthly Review of Reviews for March*.

WHAT WE SEE IN INDIA.

BY A. W. ROSS.

WHEN anyone goes into a new country he always finds something that is different from anything else he has ever seen, and so we find it here. The other day I was wanting an empty box and so I took down my English-Gujerati dictionary and looked up the words I needed—"pokel patee." Of course I found some empty boxes, but in most cases they were not what I could use and then, too, just because it was the Sahib they asked much more than what they could expect to get from any one else or would ask of them. While I did not get what I wanted I did see some of the town.

While the method of street sprinkling is very simple, yet it was quite interesting to me at first. The outfit consists of a large barrel-like tank with a leather hose of about three feet in length attached to the back end, and the whole laid on an ox-cart. Astride the tongue of the cart at the front end of the barrel the driver sits and following behind is a second man who holds his hand, or rather his fingers, over the end of the leather tube and with a jerking, swinging motion throws the water over the street. And he does not pay any attention either as to how many people, or who they are, that he sprinkles, unless he should see a European.

The stores here are all about nine or ten feet wide. Through the day the whole front is either removed and laid away, or the boards are folded together to the sides of the room. Generally the floors are up about three feet from the ground and form the only counter you will find. Into a great many of these stores or shops you are not allowed to set your feet and generally you have no occasion to do so as their goods are in plain view with their owner sitting on the floor in front facing the street.

The streets are crooked, dirty, dusty, and very narrow. In most places they are so narrow that when an oxcart is passing there is not much more room than is necessary to make one comfortably safe from the kick of the oxen or the hook of their big horns. In most places two carts can not pass each other.

Everything is carried on the head here with the exception of the baby, which is carried on the hip. Even the lightest and smallest bundle they will put on their head in place of taking it in their arms as we do. And it is remarkable what heavy loads they can carry on their heads and what small wages they get for it. A few days ago a coolie carried for me a large heavy box for nearly a half mile for one cent, the regular wage. In the same city we saw women coming down the street with baskets of roofing tiles of very heavy weight and as they passed, Bro. McCann said to me

that it was cheaper to have them moved that way than by carts.

There are two castes that use the pack mule. The animal is very small, weighing not more than five hundred pounds. The brickmaking caste have the female mules and the sweeper caste the males. What they want carried is placed into the two baskets that are hanging one on either side of the mule. The mouth of the basket is of a rectangular shape, made so by the angle at which the two half circular sticks are fastened. The rest of the basket is made of ropes woven together. In this way the little mule is sometimes made to carry what seems to us for their size very heavy loads.

Anklesvar, India.

WRONG SIDE OUT.

NOTHING seemed to suit Teddy that morning. There was a wee bit of a frown on his forehead when he came down to breakfast, and mamma, who noticed it, said with a smile that she was afraid he had got out of bed with the wrong foot first. That made the others laugh, but did not smooth away the tiny wrinkles on Teddy's forehead. He did not like being laughed at, and so he pouted more than ever. Then, not really thinking of what he was doing, he put a spoonful of very hot oatmeal into his mouth, which burned his tongue, and made him feel crosser than before. So, altogether, it was a very bad start that he made for the day.

After breakfast things went from bad to worse. A cold, drizzling rain began to fall, and then, indeed, Ted felt that everything was against him. It was not strange either, when you think of it, for even grown-up people have been known to act in a very disagreeable way when rain came in to spoil their plans, and to the thinking of a seven-year old boy, there are times enough when it can rain, without taking Saturdays and holidays.

But Ted made up his mind that he would not be cheated out of his good time, even if it was raining. He would put on his rubbers and his mackintosh, and go out for those nuts, any way. He wasn't afraid of the rain. But he got no farther than the door, on his way to the woods, for his mother saw him, and called to him:

"Where's my boy going?"

"T' the woods, after nuts." Teddy's hand was on the knob as he spoke, and he was all ready to slip out.

"To the woods? In this rain? Oh, no, Ted, that'll never do. I think you'll have to stop at home to-day."

"Oh, mamma, why? I don't mind the rain a bit."

"Don't you remember, dear, what an earache you had the other night? You know you couldn't sleep because it pained you so. If you should go out into

the woods in this rain, I am afraid we should have a very unhappy little boy in the house to-night."

Ted did remember that earache, very plainly, and so he began sulkily to take off his coat and rubbers. Mamma suggested that he might go over and see Willie Norris, who had a fine new tool-chest. But no, Ted wouldn't do that. He wanted to stay at home and pout.

"Teddy, dear, won't you just run up-stairs and see if I left my glasses there?" grandma asked a few minutes later, in her sweet, quavering voice.

"Teddy, dear, won't you just run upstairs and see he was so willing to go, but because he had quite lost his temper. It was really too bad to see how the little frown on his forehead had grown. His face looked almost as cloudy as the sky itself, which is saying a good deal.

"I wish grandma'd ever remember to bring her glasses with her when she comes down to breakfast!" he said, under his breath. "She's always forgettin' somethin'."

He thought that nobody heard these words, but Mamma Watson's ears were sharp; sharper than grandma's, who would have felt very badly had she known what "her dear boy" was saying.

When Ted came back and handed grandma her glasses, his mother said to him, "Now, Teddy, I want you to do something for me. I want you to go up to your room and turn your clothes wrong side out and put them on again. Then come down stairs to me."

Was there ever such a queer request? Ted stared at his mother in bewilderment. Surely she could not be in earnest. But she seemed to be very much in earnest, and so he went slowly upstairs, wondering what she could possibly mean.

In fifteen minutes he was back in the sitting room again. And such a queer little figure as he was! All seams and tags and flying threads. The frown that had clouded his face all the morning was quite gone now, swallowed up in an expression of wonder as to what all this might mean.

He was not left long in doubt. Taking him by the hand, his mother led him up to the long mirror that hung at one side of the room and told him to take a good look at himself.

"How do you like that side of your suit, Teddy?" she asked. "Do you think it is as pretty as the other side?"

"No'm," Teddy answered. "I don't think this side's a bit pretty. It's all seams and bunches."

"Then you'd think it very queer, wouldn't you, if a boy that had a pretty suit should choose to wear it wrong side out?"

"Yes'm." Teddy was trying to think why his mother should talk in this strange way. The very idea of a boy wearing his clothes wrong side out!

"Well, I know a boy who does it," his mother went on, "at least, he does almost the same thing. His name is Teddy Watson."

"Why, mamma!"

"Listen while I tell you how it is, dear. Of course you don't wear your clothes wrong side out, but you're wearing your temper that way to-day. Generally your temper is right side out, and then it is very sweet. You love to wait on grandma, and you do just as mamma tells you. We all like to see it that way, and we feel very sorry when you wear it wrong side out, as it is to-day, for then we see all the little rough places, and the parts that aren't so pretty. People don't laugh at us when our tempers are wrong side out, as they would if we wore our clothes that way, but it makes them feel very uncomfortable. Now, tell me, dear, don't you think that it is foolish for a boy who has a good, sweet temper to choose to wear it wrong side out?"

Teddy's answer was a rather faint "Yes," but he understood what his mother meant, and as he went upstairs to put his clothes on as they should be, he turned the matter over in his mind, and decided that he would try, after that, always to wear his temper right side out. Wouldn't it be a good idea for the rest of us to try, too?—*Ruth S. Graham.*

FLOATING MACHINE SHOP.

THE latest addition to the American navy is a floating machine shop for repair of warships at sea. This has been constructed and equipped with the necessities of the modern war fleet, far from its regular base, in mind. In the Spanish-American war many of our warships were sent from Cuban waters to Key West to coal. Since then improvements have been made that enable battleships and smaller vessels to coal at sea, a most important matter in time of war. If the new floating machine shop comes up to expectations a battle fleet may establish a temporary base near a scene of action and change it to meet the exigencies of an engagement.

THE BURMESE OATH.

PERJURY has been rife in Rangoon courts because no form of oath exists which the Burman considers binding. The government has now prescribed a formula which is a queer admixture of Buddhism, Brahminism and Shamanism. Here are phrases from it picked at random: "If an untruth passes my lips all the nats that live in lakes, ponds and brooks and the nats of the five great rivers of India destroy me. May curdled blood pass my lips rather than a lie, and may I die vomiting blood, my body bent in two."—*Rangoon Gazette.*

THE BIRDS OF THE UNITED STATES.

BY DOTTIE WHEELER.

THE United States is exceedingly rich in birds of song and beauty. No place on the globe can boast of such a large variety of birds as our country. Our birds are the true poets of the landscape. Their fine form and color, their innocent and happy life, their cheerful song, their rapid and graceful flight cannot fail to create a sympathetic sentiment in the heart of every sensitive man. A rich vegetation and an abundant supply of insects are necessary for bird life.

Every locality has its characteristic song birds. The thickets and honeysuckle of the garden are the homes of the catbird, while the bobolink sings merrily in the flower-adorned meadow. Through the gardens of the northern and eastern part of our country are the homes of a large number of songsters, but these cannot compare with the "King of Song" of the South Atlantic and Gulf States. He has been named the mockingbird and pours forth his sweet music from morn, until night and from night to morn. This bird is the jewel among our song birds, and, according to the best judges of bird songs in Germany, it does not find its equal either in this country or in any other. In the southern gardens, if they be extensive and well stocked with trees and dense ornamental shrubbery, we find another excellent songster, the cardinal redbird, though it is more common in the dark evergreen thickets of the hollies or in the entangled underwood on the edge of the forest. Many other birds combine with these to make southern gardens attractive and poetical.

As there are no large mountain chains running from east to west, our birds find no check in their wanderings from south to north. This absence of mountains is the reason why so many of the birds are distributed over such an immense territory. In the west the Rocky Mountains form a natural barrier to bird distribution. We find many of our eastern birds at the foot of these mountains. Among the birds characteristic of these mountain regions is the clarino, which makes the mountain sides reëcho with its sweet music. On the wild and roaring torrents which foam and thunder over the rocks are the dipper and the water ouzel. The familiar eastern bluebird is replaced by two nearly allied species in the West, and the Baltimore oriole is represented by Bullocks oriole and the Arizona hooded oriole. West of the Rocky Mountains a dozen or more species of humming birds buzz from flower to flower, while in the East one species occurs.

The American mockingbird corresponds to the English nightingale in beauty alone. It is also true that the comparative number of species which can properly be ranked as songsters belonging to the United States

east of the Mississippi river is about twice as great as that belonging to the entire extent of the British Islands, counting, in each case, every species, the male of which ever utters a song, however rude. Birds in England have for many generations been protected in numerous ways until they have almost absolute immunity from the perils to which they are constantly exposed in this country. Laws protecting all kinds of song birds and their nests and eggs are enforced with a strictness which is absolutely unknown in any portion of the United States.

In those parts of the United States where the woodland and open country alternate very many songsters are found. This applies to the large portion of this country situated between the Alleghanies on the one hand and the great plains on the other. Great concerts of bird music, which probably would challenge comparison, both to quality and quantity, with any to be heard in other portions of the world, excepting, probably, the highlands of Mexico, are heard. These highlands are said to be without a rival in number and quality of songsters.

There is no bird in England—not even the semi-domestic robin redbreast—which is more easily encouraged to seek human society than the bluebird; certainly none are so beautiful and none more lovable in every way. The house wren is, as his name implies, one of our semi-domestic birds. It, being exclusively insectivorous, is one of the most useful, and his cheerful, sprightly warble renders him excellent good company. The United States has song birds in abundance, but they are treated with indifference. Many people prefer the little English sparrow to the bluebird, the house wren, or purple martin. When that little vagabond was brought to this country, people began immediately to put up boxes for his accommodation. These same people, however, thought none of our native birds, no matter how useful, beautiful or melodious, was considered worth while. Attempts have been made to naturalize various European song birds, but they have all proven failures. The climate in Europe—especially the British Isles—is very different from that of our own land. It is characterized by milder winters and cooler summers. Birds in the mild climate of England are resident throughout the year. If brought to this country they would be forced to migrate or else perish. Migration being an inherited instinct, followed by the predecessors of existing individuals of each species for thousands of generations, this instinct serves them to no purpose in a strange country. On the other hand, it is apt to lead them to destruction, since, when the season for migration arrives they are likely to fly directly out to sea and thus be destroyed.

Our North American birds vie in brilliancy and splendor of color with the birds of the tropics. The

southern and southwestern portion of our country is richer in brilliantly-colored birds than the north and east. Arizona, which is the home of the cactus family, is also the home of a large variety of beautiful birds. Among these are the red-faced warbler and several species of humming birds. Along the lower Rio Grande in Texas are found four species of orioles. In the northern and eastern portions of the United States we not only find numerous songsters, but also many brilliantly-colored birds. The meadows of the north, adorned with lilies and other pretty flowers, are the home of the numerous bobolinks. The meadow lark, dressed in fine colors, is often the bobolink's neighbor. The warblers are all clad in variegated colors—always pretty and tasteful, and often strikingly brilliant.

Two of the most important occurrences in the lives of birds are their departure in autumn and their return in spring. Two causes may be given for these wanderings to the far south: scarcity of food and an unbounded impulse to move onward. With most birds migration is a necessity, a condition of life. But it does not originate in the experience of the bird when food and warmth are missed, it is simply what we term an instinct belonging to the nature of the bird. Young and old, wild or brought up in cages, they all feel this wonderful strong impulse to move away into the far-off land. Generally our small birds migrate at night, and then we see our caged prisoners becoming restless. This plainly shows that the migratory impulse or instinct has become a peculiarity of the bird with its birth. Most of our songsters migrate separately as regards sex, the males first, the females several days later. The land of their winter resort is to them a foreign land. Here they are sad and sorrowful, but they return to their native country with a new dress, cheerful and full of song.

Birds are the natural instruments for keeping insect life down to its normal level and proportion. But we have repressed the bird population in our country to such an extent that we have produced an enormous over-development of insect life. Besides their utility as insect destroyers, birds are among the most interesting and companionable of all living creatures. Few people in our country have studied the birds, but those who have, found that they have a great deal of individual character and a wonderful and most interesting kind of intelligence.

The history of this country, as is well known, is a record of unparalleled destruction of the larger forms of animal life. The fate of extermination, to the shame of our country, has already practically overtaken the bison, and will sooner or later prove the fate of our song birds as well as the larger animals and game birds. Birds are killed for food, for sport, for natural history specimens, to be stuffed as objects of curiosity or ornament, and for personal decoration. Many song
